THE OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 356—No. 1. TUESDAY, MARCH 1, 1927. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimers.

1,149,580.—*Fritz Hofmann*, Elberfeld, and *Kurt Gottlob*, Vohwinkel (near Elberfeld), Germany. CAOUTCHOUC SUBSTANCE AND VULCANIZATION PRODUCT THEREOF. Patent dated August 10, 1915. Disclaimer filed February 11, 1927, by the assignee, *The Grasselli Chemical Co.*

Hereby enters this disclaimer and disclaims:

(a) From the scope of said claims 1 and 4 of said Letters Patent, in the process of producing vulcanized rubber and the new article of manufacture, vulcanized rubber, therein set forth, the use of ammonia, dimenthylamin, and diethylamin, which are substances set forth in U. S. Patents 1,081,613 and 1,081,614, referred to in lines 11 to 17 of page 1 of the specification of said Patent No. 1,149,580.

(b) From the scope of said claims 1 and 4 of said Letters Patent, in the process of producing vulcanized rubber and the new article of manufacture, vulcanized rubber, therein set forth, the use of methylene bases as set forth in U. S. Patent No. 1,126,469, issued on application Serial No. 795,505, and U. S. Patent No. 1,130,903, issued on application Serial No. 795,506, which are the applications referred to in lines 18 to 25 of page 1 of the specification of said Patent No. 1,149,580, and the use of para-amino-dimethylanilin as a member of the group of substances so described as methylene bases in said Patents Nos. 1,126,149 and 1,130,903 and the applications therefor.

(c) The word "naphthylamin" in lines 35 and 36 of page 1 of the specification of said Letters Patent No. 1,149,580, which should have read "naphthylenediamin."

1,172,822.—*Philip Torchio*, New York, N. Y. PROTECTIVE DEVICE FOR ELECTRIC-CABLE JOINTS. Patent dated February 22, 1916. Disclaimer filed February 11, 1927, by the assignee, *Thomas E. Murray*.

Hereby makes disclaimer of the improvement described except for electric cables which comprise a line conductor, insulating wrapping permeated with insulating compound and a sheath of flexible inelastic metal constituting a unitary product of manufacture and commerce which is portable and capable of being drawn through conduits; and except as to an insulating liquid which is fluid at ordinary working temperatures of such cables and in quantity sufficient to supply at all times the demands made by the cable in use, and by the joint.

1,515,735.—*Charles L. Goodrum*, New York, N. Y., and *John N. Reynolds*, Greenwich, Conn. MACHINE-SWITCHING TELEPHONE SYSTEM. Patent dated November 18, 1924. Disclaimer filed February 8, 1927, by the patentees, assignee, *Western Electric Company, Incorporated*, consenting.

Hereby enter this disclaimer to the said claims of said Letters Patent which are in the following words, to wit:

"7. The combination in a switching system of incoming lines, outgoing lines, contact sets for said incoming lines, contact sets for said outgoing lines, an operating mechanism common to said incoming lines, an operating mechanism individual to each outgoing line, other operating mechanisms associated in common with said first and second mentioned operating mechanisms, the conjoint operation of one of each of said first, second and third mentioned operating mechanism being effective to actuate the contact sets of said incoming and outgoing lines to establish a connection between one of said incoming and one of said outgoing lines, said first mentioned operating mechanism being operable in conjunction with other of said second and third operating mechanisms to establish connections between other incoming and outgoing lines co-existing with the connection already established.

"20. The combination in a switching system of incoming lines, link circuits and outgoing lines, with means for establishing line-link-line connections comprising a set of incoming line bars, a set of link bars and a set of outgoing line bars, and means for preventing the simultaneous operation of more than one bar of each of said sets.

"21. The combination in a switching system of incoming lines, link circuits and outgoing lines, with means under the control of incoming lines for establishing line-link-line connections comprising a set of incoming line bars, a set of link bars and a set of outgoing line bars, and means to prevent interference between simultaneously calling incoming lines."

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

THE FIBERLOID CORPORATION *v.* MAYER.

Decided April 12, 1926.

1. TRADE-MARKS—CORPORATE NAME—"FIBEROID"—"THE FIBERLOID CORPORATION."

There is substantially no difference between the notation "Fiberoid" and the opposer's corporate name, "The Fiberloid Corporation."

2. SAME—SAME DESCRIPTIVE PROPERTIES—PYROXYLIN LACQUER USED AS VARNISH—MIXED PAINTS.

Pyroxylin lacquer which while a liquid waterproofing compound is mainly used as a varnish for finishing wood or metal possesses the same descriptive properties as ready-mixed paint.

3. SAME—DESCRIPTIVE NAMES—"FIBEROID."

The notation or term "Fiberoid" is descriptive of goods composed principally of asbestos fiber and gilsonite asphalt, the terminal portion "oid" of the word being quite common in descriptive names used for similar material.

APPEAL from Examiner of Interferences.

Opposition No. 6,147 to registration of trade-mark of David Mayer for ready-mixed paint, application filed November 29, 1924, Serial No. 206,016, published February 10, 1925.

Messrs. Chapin & Neal for The Fiberloid Corporation.

Mr. James Atkins for Mayer.

KINNAN, *First Assistant Commissioner:*

This case comes on for review on appeal of the opposer, The Fiberloid Corporation, of the decision of the Examiner of Trade-Mark Interferences dismissing the opposition and adjudging the applicant entitled to the registration for which he has applied.

The applicant seeks registration of the notation "Fiberoid" used upon ready-mixed paint. The specimen filed shows use of the notation upon roof paint.

The opposer bases its opposition on three grounds—first, that the applicant has adopted substantially the corporate name of opposer; second, that the applicant's notation is descriptive of the goods; and, third, that the notation used by applicant is so similar to the opposer's registered trade-mark "Fiberloid" and the goods are also so similar as to "cause confusion or mistake in the mind of the public or to deceive purchasers."

The applicant has taken no testimony and is in consequence restricted to his date of filing, November 29, 1924. Opposer has taken testimony and has established use by its predecessors of its corporate name, including the word "Fiberloid," and of its trade-mark for nearly thirty years. There is also some evidence as to extensive advertising of opposer's products, their sale throughout the United States and in some foreign countries, the advertising being alleged to have reached in the last five years something like a half million dollars. Under these conditions the opposer has established a considerable good will which is a valuable asset of its business.

[1] As to the matter of the corporate name, there seems to be substantially no difference between the notation "Fiberoid" and the opposer's corporate name. It is doubtful if the average purchaser of the applicant's or the opposer's goods could be relied upon to even note that the single letter "l" was present in one name and not in the other. It is thought a fair conclusion, since the word "Fiberloid" constitutes substantially opposer's entire corporate name and the notation "Fiberoid" adopted by applicant is so similar, that probable damage of reputation exists if applicant uses its mark in trade where the opposer corporation is known. In the recently decided case, *American Steel Foundries v. Robertson, Commissioner of Patents, and Simplex Electric Heating Co.*, 342 O. G. 711, the United States Supreme Court noted that—

> where the appropriation of the corporate name is complete, the rule of the statute, by its own terms, is absolute and the proposed mark must be denied registration without more.

[2] The court also held that where less than the whole name has been appropriated it was proper to consider the classes of goods to which the corporate name belongs and on which the applicant for registration uses its notation. In the case at bar the opposer has produced for the market articles made of pyroxylin, in the nature of celluloid advertising envelopes, toilet articles, calendars, calling cards, etc. None of these goods belong to the same class or possess the same descriptive properties as the ready-mixed paint upon which the applicant uses his notation. It does appear, however, that opposer began as early as 1923 to produce pyroxylin lacquer which while a liquid waterproofing compound is mainly used as a varnish for finishing wood or metal. It is thought this product possesses the same descriptive properties as the ready-mixed paint on which applicant uses his notation. Both products are used as protecting and beautifying coatings of wood and metal, both are sold in metal containers ready for use, and are applied in substantially the same way. In view of these facts it is thought the applicant should not be permitted registration of a mark so nearly identical with the entire corporate name of the opposer and so nearly identical with the trade-mark used by opposer. The *Duro Pump & Manufacturing Co.* v. *California Cedar Products Co.*, 344 O. G. 1058, — App. D. C. —, Feb. 1, 1926.

[3] Taking up the question of the applicant's mark being descriptive of his goods, which question may properly be considered here (*In re Herbst*, 141 O. G. 286, 32 App. D. C. 565), it is noted the applicant states in his answer to the notice of opposition that his product "is composed principally of asbestos fiber and gilsonite asphalt." Under these conditions it is quite evident the notation or term "Fiberoid" is descriptive of the goods. The terminal portion "oid" of the word is quite

common in descriptive names used for similar materials, such as celluloid, rubberoid, and many other materials. The holding in the case of *Standard Paint Co.* v. *Trinidad Asphalt Manufacturing Co.*, 160 O. G. 971, 220 U. S. 445, wherein the Court adjudged the word "Rubberoid" descriptive of the material, flexible roofing, to which it was applied, is persuasive of the view that fiberoid when used upon a paint having asbestos fiber as a considerable portion of its constituents is likewise descriptive. Clearly enough the purchaser would understand the paint sold under the notation was fiberlike or included some fibrous material in its composition.

The decision of the Examiner of Trade-Mark Interferences is reversed, the opposition is sustained, and it is adjudged the applicant is not entitled to the registration for which it has applied.

Court of Appeals of the District of Columbia.

IN RE DOBLE.

No. 1,887. Decided December 6, 1926.

INTERFERENCE—ESTOPPEL—RULE 109—FAILURE TO PRESENT CLAIMS WHILE INTERFERENCE IS PENDING.

It is the duty of a party to an interference to present for determination all of his claims relating to the interfering subject matter while the interference is pending, and when he fails to do so and furthermore fails to file any amendment containing additional claims he becomes barred and estopped from subsequently presenting such claims as a basis for another interference with the interfering application.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. C. E. Mehlhope for Doble.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and HATFIELD, Judge U. S. Court of Customs Appeals.

MARTIN, *C. J.*:

This is an appeal from a decision of the Commissioner of Patents rejecting, upon the ground of estoppel, certain claims presented as amendments to the application, after the dissolution of an interference.

On May 9, 1918, Doble filed an application for a patent for an improvement in steam-generator regulation. On September 23, 1919, an interference was declared between this application and one filed by Scott. On February 5, 1920, Doble moved to dissolve the interference upon the ground that Scott had no right to make the two claims corresponding to the issue, and on August 16, 1920, the motion was sustained by the Law Examiner and the interference was dissolved. Scott then cancelled the claims corresponding to the issue, and they were allowed to Doble. A patent was later granted to Scott on his application as thus limited [No. 1,385,845, July 26, 1921].

On June 6, 1921, about nine months after the interference was dissolved, Doble presented nine additional claims all copied from Scott's application and asked for another declaration of interference with Scott. Afterwards, to wit on October 21, 1921, Doble presented 13 more claims copied from Scott's application, and requested "that these claims be included in the interference to be declared with the Scott patent". The Examiner rejected all of these claims as unwarranted by Doble's disclosure, and also upon the ground of estoppel, because of Doble's delay in presenting the claims. The first of these objections was later obviated by the substitution of a new drawing for that first filed by the applicant. This was permitted by the Examiner in accordance with the recommendation of the Examiners in Chief, made upon an appeal to them. The question of new matter was thereby eliminated from the case, but the Examiner renewed his rejection of the additional claims upon the ground of estoppel, and this decision was successively affirmed by the Examiners in Chief and the Commissioner of Patents. This appeal challenges these concurring decisions.

We agree with the decisions. It was Doble's duty when the interference was pending between his application and Scott's, to present for determination all of his claims relating to the interfering subject mater, and when he failed to do so and furthermore failed to file any amendment containing additional claims, he became barred and estopped from subsequently presenting such claims as a basis for another interference with Scott's application. This conclusion follows the provisions of rule 109 of the Patent Office, as determined by this court *In re Capen*, 43 App. D. C. 342. In that case the court referred with approval to the following statement of the Examiner, to wit:

> The Examiner properly refused to redeclare the interference. It is not necessary to decide how long after the time fixed by rule 109 applicant could have presented other claims, with the request to have them made part of the issue of the interference, but certainly if such action was desired it should have been taken while the interference was pending, in order that the question of the admissibility of these claims could have been ruled on inter partes, and applicant can not now be allowed these claims.

We think this ruling is not inconsistent with any of the authorities cited by appellant's counsel. The decision of the Commissioner of Patents is accordingly affirmed.

PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

1,018,502, Just & Hanaman, Manufacture of incandescent lamps; 1,082,933, W. D. Coolidge, Tungsten and method of making same for use as filaments of incandescent electric lamps, etc.; 1,423,956, Mitchell & White, Tipless incandescent lamp, suit filed Dec. 11, 1924, D. C., S. D. TRADE-MARKS CANCELED.

114,418. Certain named foods. August F. Beckmann, New York, N. Y. Registered December 19, 1916. Canceled February 12, 1927.

180,716. Nonalcoholic, maltless beverages sold as soft drinks and sirups for making the same. Vess Jones, doing business as Whiz Company, New York, N. Y. Registered March 4, 1924. Canceled February 12, 1927.

192,317. Dry seaweed and sea moss. The Asia Company, Los Angeles, Calif. Registered December 2, 1924. Canceled February 12, 1927.

209,084. Butter. Miller-Rose Company, La Crosse, Wis. Registered February 16, 1926. Canceled February 12, 1927.

211,047. Plowshares. Crescent Forge & Shovel Co., Havana, Ill. Registered March 30, 1926. Canceled February 12, 1927.

216,657. Insect-repelling preparations (medicated) for personal use. Charles Dohrn Douglas, London, England. Registered August 17, 1926. Canceled February 12, 1927.

218,023. Hair colorings. Rap-I-Dol Co., Inc., Newark, N. J. Registered September 14, 1926. Canceled February 12, 1927.

ADJUDICATED PATENTS.

(C. C. A. N. Y.) The Gold patent, No. 925,896, for steam-heating system for railway cars, claim 5 *Held* invalid and claim 8 not infringed. *Vapor Car Heating Co.* v. *Gold Car Heating & Lighting Co.*, 16 F. (2d) 194.

(C. C. A. N. Y.) The Gold patent, No. 944,187, for heating system for railway cars, claims 12 and 20 *Held* not infringed. *Vapor Car Heating Co.* v. *Gold Car Heating & Lighting Co.*, 16 F. (2d) 194.

(C. C. A. N. Y.) The Gold reissue patent, No. 13,059, for heating system for railway cars, claims 1, 6, and 7 *Held* valid and infringed and claims 17, 18, 19, and 21 invalid. *Vapor Car Heating Co.* v. *Gold Car Heating & Lighting Co.*, 16 F. (2d) 194.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,383,254, C. H. Birdsey, Plaster board, decided January 21, 1927, claims 1 to 6, inclusive.

Pat. 1,472,888, C. B. Rose, Tractor attachment, decided January 17, 1927, claims 1, 2, and 4.

Pat. 1,477,161, B. S. Aikman, Unloader for compressors, decided January 21, 1927, claims 1 and 2.

Pat. 1,575,883, D. McC. White, Automobile construction, decided January 24, 1927, claims 1 and 2.

Pat. 1,584,838, A. P. Brush, Paste dispensing, decided February 12, 1927, claim 1.

Final decision in interference has been rendered against the following trade-mark:

T. M. 204,933, Face powders, face creams, toilet waters, rouges, perfumes, hair tonics, hair oils, dentifrices, tooth powders, nail polishes, etc., Norda Essential Oil and Chemical Co., Inc., New York, N. Y. Registered October 27, 1925. Decided January 18, 1927.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Feb. 17, 1927.*

Deane's Coffee Shoppe, Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Albert F. Muiter, sr., 611 Chillicothe Street, Portsmouth, Ohio, for registration of a trade-mark and trade-mark registered February 10, 1925, No. 194,787, to Deane's Coffee Shoppe, Inc., 701 Smithfield Street, Pittsburgh, Pa., and a notice of such declaration sent by registered mail to said Deane's Coffee Shoppe, Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Deane's Coffee Shoppe, Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Notices of Cancellation.

U. S. PATENT OFFICE, *Washington, Feb. 9, 1927.*

The Ohio Filler & Shield Co., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of The Ironsides Company, Columbus, Ohio, to effect the cancellation of the trade-mark registration of The Ohio Filler & Shield Co., Columbus, Ohio, No. 41,955, granted January 26, 1904. The Ironsides Company has placed of record an affidavit to the effect that a registered letter sent to The Ohio Filler & Shield Co. at its address of record has been returned by the post-office authorities with the remarks that said company is out of business, and that the president of said company, J. A. Mackin, 705 Gilbert Street, Columbus, Ohio, refuses to accept service of papers. In view of the foregoing, notice is hereby given that unless said The Ohio Filler & Shield Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Feb. 9, 1927.*

Howard Herman Ments, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Joseph A. Gardner, Memphis, Tenn., to effect the cancellation of the trade-mark registration of Howard Herman Ments, of Gustine, Calif., No. 158,354, dated August 29, 1922, and the notice of such proceeding sent by registered mail to the said Ments at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Ments, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Jan. 21, 1927.*

J. W. Rarity, trustee in bankruptcy of Associated Fruit Co., his assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of Badington Fruit Company, of Fullerton, Calif., to effect the cancellation of the trade-mark registration of Associated Fruit Co., of 200 Bedford Building, Miami, Fla., No. 167,966, dated May 8, 1922. The records of this Office show a transfer of title to J. W. Rarity, trustee in bankruptcy of Associated Fruit Co., of Miami, Fla. The notice of such proceeding sent by registered mail to J. W. Rarity, trustee in bankruptcy of Associated Fruit Co., at the said address, having been returned by the post office as undeliverable, notice is hereby given that unless said J. W. Rarity, trustee in bankruptcy of Associated Fruit Co., his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 1, 1927.

[VOL. 356. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 184,598. (CLASS 6. (CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CLEAR-O-WHITE LABORATORIES INC., Long Island City, N. Y. Filed Aug. 17, 1923.

CLEAR -O- WHITE

Particular description of goods.—Bleaching Preparation for the Skin.

Claims use since March, 1923.

Ser. No. 189,598. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NAOSABURO TATSUKAWA, doing business as Ono Trading Co., San Francisco, Calif. Filed Dec. 12, 1923.

The lines on the drawing indicate colors, the fish being lined to indicate blue and yellow. No claim is made for the word "Brand" and for the words "California," "White Meat Tuna," "Packed for," and "San Francisco, U. S. A." nor the representation of the fish apart from the mark shown on the drawing.

Particular description of goods.—Canned Tunny Fish.

Claims use since July, 1923.

Ser. No. 205,392. (CLASS 25. LOCKS AND SAFES.) THE CHAMPION HARDWARE COMPANY, Geneva, Ohio. Filed Nov. 17, 1924.

CHAMPION

Particular description of goods.—Barn-Door Catches, Chain Bolts, Foot Bolts, Surface Bolts, Elbow Catches, Transom Catches, Thumb Latches, Sash Fasteners, Chain Fasteners, Door Locks, Barrel Bolts, Door Bolts, and Cupboard Turns and Catches.

Claims use since 1885.

Ser. No. 205,500. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) VIRGINIA HARLAN COAL CORPORATION, Pineville, Ky. Filed Nov. 18, 1924.

Particular description of goods.—Bituminous Coal.

Claims use since Sept. 15, 1924.

Ser. No. 211,015. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EDWARD W. BROWN CO., San Francisco, Calif., assignor to Martin Camm Co., San Francisco, Calif., a Corporation of California. Filed Mar. 14, 1925.

ADVANCE

Particular description of goods.—Canned Fruits, Canned Vegetables, Fruit Preserves, Dried Vegetables, Catchup, Chili Sauce, Pickles, Dried Fruits, Nougat Crème, Table Sirup, Fresh Vegetables, Citrous Peels (Drained and Crystallized), Shredded Coconut, Apple Butter, Cranberry Sauce, Apple Sauce, Canned Fruits for Salad, Canned Vegetable Salad, Canned Berries, Canned Mushrooms, Canned Sauerkraut, Canned Succotash, Canned Pimentos, Fresh Celery, Fresh Okra, Rice, Mincemeat, Seeds for Seasoning, Marshmallow Topping, Dried Figs, Canned Tomato Purée, Canned Hominy, and Sago.

Claims use since 1917.

Ser. No. 213,264. (CLASS 12. CONSTRUCTION MATERIALS.) STANDARD CORK INSULATION COMPANY LIMITED, now by change of name Standard Cork Company Limited, London, England. Filed Apr. 24, 1925.

ELDORADO

Particular description of goods.—Boards for Heat-Insulating Purposes, Cork Being the Predominating Material of Said Boards.
Claims use since Nov. 28, 1924.

Ser. No. 214,372. (CLASS 15. OILS AND GREASES.) LOUGHBOROUGH OIL CO., (INC.), Washington, D. C. Filed May 15, 1925.

Particular description of goods.—Gasoline, Lubricants, and Fuel Oils.
Claims use since November, 1924.

Ser. No. 217,127. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) YAQUI FRUIT CO., Los Angeles, Calif., and Sonora, Mexico. Filed July 9, 1925.

YAQUI CHIEF

Particular description of goods.—Fresh Citrous and Deciduous Fruits, Melons, Lettuce, Tomatoes, Cucumbers, Eggplant, Peas, Bell Peppers, Grapes, and Cauliflower.
Claims use since Jan. 8, 1925.

Ser. No. 218,395. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GEORGE M. DOMENICE, New York, N. Y. Filed Aug. 5, 1925.

RUBY

Particular description of goods.—Toilet Creams, Toilet Powders, Shampoos, Preparations for the Hair, Lotions for the Skin, Depilatory Preparations, Rouge Preparations, Dentifrice, Perfumes, and Toilet Waters.
Claims use since Apr. 2, 1925.

Ser. No. 218,612. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) CENTRAL LABORATORIES CO., Wheeling, W. Va. Filed Aug. 10, 1925.

Auto EZE

Particular description of goods.—Tire-Preservative Coatings, Automobile Body and Furniture Polish.
Claims use since June 8, 1925.

Ser. No. 219,060. (CLASS 37. PAPER AND STATIONERY.) CONTINENTAL BANK-SUPPLY COMPANY, Mexico, Mo. Filed Aug. 19, 1925.

Continental
MEXICO MISSOURI

No claim is made to the exclusive use of the words "Mexico, Missouri" apart from their use with the mark as shown.
Particular description of goods.—Bank Supplies, Specifically Pass Books, Check Books, Coin Envelopes, and Blank Forms of All Kinds Used in Banking Business.
Claims use since May 29, 1925.

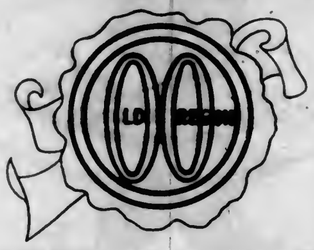
Ser. No. 221,772. (CLASS 37. PAPER AND STATIONERY.) REEVES & SONS LIMITED, London, England. Filed Oct. 15, 1925.

GREYHOUND

Particular description of goods.—Notebooks, Chalk Holders, and Ungraduated Wooden Rulers.
Claims use since Mar. 15, 1911.

Ser. No. 223,371. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) COXON CORPORATION, San Francisco, Calif. Filed Nov. 16, 1925.

Particular description of goods.—Candy Bars.
Claims use since Mar. 28, 1925.



Ser. No. 223,460. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BULLOCK'S, Los Angeles, Calif. Filed Nov. 18, 1925.

Trade-mark comprises a fanciful picture of a woman holding a red and gold Japanese parasol over her on a blue circular field with a red and gold inner margin and a red and blue outer margin.
Particular description of goods.—Candy.
Claims use since Sept. 1, 1925.

Ser. No. 223,869. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SANBORN-CUTTING COMPANY, Astoria, Oreg. Filed Nov. 25, 1925.

DOUBLE "O"

No claim is made to the word "Oregon" apart from the mark as shown.
Particular description of goods.—Canned Vegetables and Canned Berries.
Claims use since Sept. 8, 1925.

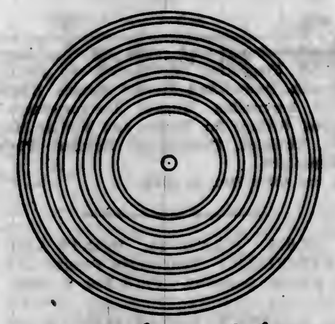
Ser. No. 224,792. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) WEIDLICH STERLING SPOON CO., Bridgeport, Conn. Filed Dec. 16, 1925.

STRATFIELD

"Stratfield."
Particular description of goods.—Silverware—Namely, Hollow Ware and Flatware.
Claims use since Dec. 9, 1925.

Ser. No. 225,033. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PILOT ELECTRIC MANUFACTURING CO., INC., Brooklyn, N. Y. Filed Dec. 22, 1925.

REACTOGRAD



Particular description of goods.—Electric Controlling Devices Particularly Reactors Applied in Radiocircuits.
Claims use since Nov. 4, 1925.

Ser. No. 225,616. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) LYON & HEALY, INC., Chicago, Ill. Filed Jan. 7, 1926.

AMERICAN
CONSERVATORY

Applicant is the owner of registration 49,385, renewed.
Particular description of goods.—Musical Instruments—Namely, Banjos, Tenor Banjos, Banjo Mandolins, Plectrum Banjos, Banjo Ukuleles, Guitar Banjos, Ukuleles, Tiples, Taro Patches, the Last Two Instruments Resembling Ukuleles, and Strings for Banjos and Similar Musical Instruments.
Claims use since Oct. 1, 1925.

Ser. No. 226,120. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) ALEX. E. AMBALOV, Seattle, Wash. Filed Jan. 20, 1926.

Alex. E. Ambalov

The name of the applicant appears as a facsimile signature.
Particular description of goods.—Educational Chart in the Form of Phonographic Records.
Claims use since Dec. 1, 1925.

Ser. No. 226,374. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROBERT JAMES RICHARDS, doing business as W. M. Watson & Company, Chicago, Ill. Filed Jan. 25, 1926.

MORRO ROCK

Particular description of goods.—Fresh Vegetables—Namely, Lettuce, Cauliflower, and Fresh Cantaloupes.
Claims use since July 1, 1924.

Ser. No. 226,758. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) MAY WATERSON, doing business as Universal Novelty Distributors, New York, N. Y. Filed Jan. 20, 1926.

Particular description of goods.—Musical Instruments and Supplies, Consisting of Player-Piano Rolls, Phonograph Records, Bowed and Fretted Strings, Brass, Wood-Wind, and Percussion Musical Instruments, Portable Phonographs, Strings for Violins and Similar Musical Instruments, Ukuleles, Phonograph Needles, Phonograph-Record Repeaters.
Claims use since Dec. 9, 1923.

Ser. No. 227,048. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) VEREINIGTE FARBEN- & LACKFABRIKEN, Munich, Germany. Filed Feb. 8, 1926.

Flamuco

Particular description of goods.—Water Colors of All Kinds in Pieces, Shells, Dishes; Colors for Ceramic and Photographic Purposes in Powder and in Prepared Form.
Claims use since Aug. 13, 1909.

Ser. No. 227,603. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) RECORD-O-PHONE COMPANY, INC., doing business as the Record-O-Phone Sales Company, Washington, D. C. Filed Feb. 20, 1926.

RECORD-O-PHONE SALES COMPANY

Particular description of goods.—Machines for Electrically Recording Sound on Metal and Electrically Reproducing Such Sound.
Claims use since Apr. 10, 1925.

Ser. No. 227,713. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) OLLIE H. BUCK, Kokomo, Ind. Filed Feb. 24, 1926.

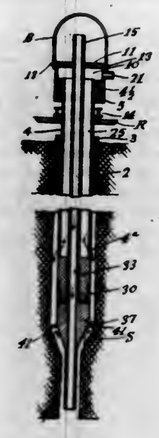
REISSUES

MARCH 1, 1927.

16,561. STUD. MOSES F. CARR, Lexington, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Oct. 31, 1924. Serial No. 747,123. Original No. 1,433,783, dated Oct. 31, 1922, Serial No. 450,751, filed Mar. 8, 1921. 4 Claims. (Cl. 24—219.)



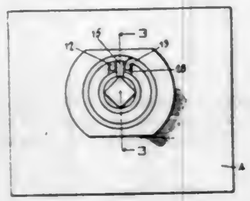
4. A stud for stud and socket fasteners comprising, in combination, a cap unit for engagement with a corporating socket and an attaching unit for securing the stud to a suitable carrying medium, said cap unit presenting a head, a base and a generally tapered wall connecting said head and base to provide a neck, said attaching unit having a threaded shank portion, a relatively short head, and a relatively thin portion between the head and shank of the attaching unit to which is secured the cap member by crimping a portion thereof beneath said relatively thin portion, and interengaging means cooperating between the head of the cap member and the head of the attaching unit to prevent relative rotation between the two units.

16,562. BUTTER AND CREAM TREATING PROCESS. ROBERT K. COONEY, Toledo, Ohio, assignor, by direct and mesne assignments, to Campbell-Cooney Patents Co., Homer, Mich., a Corporation of Michigan. Filed Oct. 11, 1926. Serial No. 140,765. Original No. 1,599,649, dated Sept. 14, 1926, Serial No. 758,876, filed Dec. 30, 1924. Renewed Feb. 24, 1926. 6 Claims. (Cl. 99—11.)

5. The process of treating sour cream for producing a uniform product comprising promoting separability by disseminating a reacting agent effective upon the nonfat solids of cream in decreasing the acidity of the cream, rendering the cream fluid and of even consistency including agitating and warming, and subjecting to centrifugal action whereby substantially all of the reaction products of the reacting agent are removed.

16,563. METHOD FOR MAKING PRODUCTION TESTS IN WELL DRILLING. GEORGE A. MACREADY, Bakersfield, Calif. Filed Feb. 8, 1926. Serial No. 86,945. Original application filed July 25, 1922, Serial No. 577,433. Divided and application filed Aug. 2, 1928, Serial No. 655,205. Original No. 1,522,197, dated Jan. 6, 1925. 10 Claims. (Cl. 166—21.)

1. The method of making production tests in deep wells which comprises lowering a tube into the well, forming a seal between the tube and the well wall so as to prevent fluid above the seal from entering the tube below the seal, withdrawing a sample of fluid from below the seal through the tube, preventing the tube from becoming stuck in the well while taking the sample by moving a



second tube in the well above the seal about the first tube, and withdrawing the tubes from the well after the sample has been taken.

16,564. METAL FLOAT. CLYDE C. MANCHESTER, Toledo, Ohio, assignor, by mesne assignments, to The Ayling & Reichert Company, Toledo, Ohio, a Corporation of Ohio (Incorporated 1926). Filed Aug. 13, 1926. Serial No. 129,064. Original No. 1,567,968, dated Dec. 29, 1925, Serial No. 17,468, filed Mar. 23, 1925. 5 Claims. (Cl. 137—104.)

1. The method of securing a spud to a thin metal float, which consists in forming the float with an inwardly flanged aperture of a dimension to closely fit the spud, placing a heavy washer around said flanged aperture, inserting the spud into said aperture, centering a riveting tool with respect to the inner face of the spud, the working face of said tool being adapted to spread radially outward the metal of the spud, and applying force to the tool to press the metal of the spud radially outward against the said washer with the flanges metal of the float compressed therebetween.

16,565. CLUTCH DEVICE. HUBERT A. MYERS, Toledo, Ohio. Filed Jan. 19, 1927. Serial No. 162,189. Original No. 1,534,804, dated Apr. 21, 1925, Serial No. 672,044, filed Nov. 1, 1923. 6 Claims. (Cl. 192—8.)

1. In a clutch device, a pair of members, one contained within the other and one rotatable relative to the other, a spring located between the members for normally frictionally engaging one of the members, one of the members having a recess and the spring having its ends located in the recess for positively engaging the said last named member; a third member located within the inner of the said members and having a flange part located in said recess for engaging the ends of the spring, either end of the spring engaging the member having the recess, for releasing the frictional engagement through the spring and rotating the last named members in either direction.

16,566. BATHING SHOE. EDNA SANGUINET WARD, Fort Worth, Tex. Filed Oct. 27, 1926. Serial No. 144,635. Original No. 1,593,889, dated July 27, 1926, Serial No. 45,099, filed July 25, 1925. 7 Claims. (Cl. 36—1.)

1. A shoe for bathing purposes comprising a body member of soft waterproof material, a sole of harder waterproof material vulcanized to said body, and a combined arch and heel of hard rubber vulcanized to said sole and body.

DESIGNS

MARCH 1, 1927.

72,077. CHANDELIER. HARRY AGLOW, New York, N. Y., assignor to The New York Lighting Fixture Mfg. Co., a Corporation of New York. Filed Dec. 23, 1926. Serial No. 20,120. Term of patent 3½ years.

The ornamental design for a chandelier substantially as shown and described.

72,078. LIGHTING-FIXTURE BACKPLATE. HARRY AGLOW, New York, N. Y., assignor to The New York Lighting Fixture Mfg. Co., a Corporation of New York. Filed Dec. 23, 1926. Serial No. 20,121. Term of patent 3½ years.

The ornamental design for a lighting fixture backplate substantially as shown.

72,079. SPINDLE FOR LIGHTING FIXTURES. WILLIAM BLOCK, Chicago, Ill. Filed Oct. 15, 1925. Serial No. 15,181. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures substantially as shown.

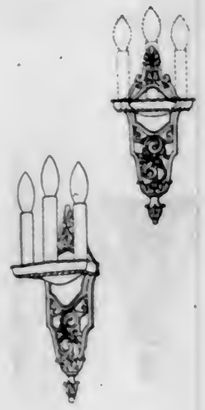
72,080. LAMP BRACKET. WILLIAM BLOCK, Chicago, Ill. Filed Oct. 15, 1925. Serial No. 15,182. Term of patent 3½ years.

The ornamental design for a lamp bracket substantially as shown.

72,081. LAMP BASE. WILLIAM BLOCK, Chicago, Ill. Filed Oct. 15, 1925. Serial No. 15,133. Term of patent 3½ years.

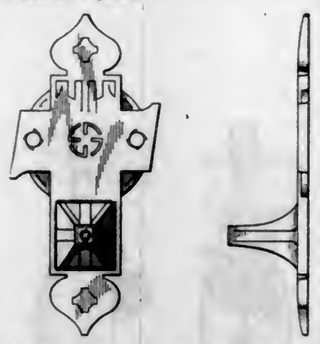
The ornamental design for a lamp base as shown.

72,082. LAMP BASE. WILLIAM BLOCK, Chicago, Ill. Filed Oct. 15, 1925. Serial No. 15,134. Term of patent 3½ years.



The ornamental design for a lamp base as shown.

72,083. CLOWN AND ANIMAL TOY. ERNEST BOCCHINO, Newark, N. J., assignor of one-third to Silvia Tolino, Newark, N. J. Filed Apr. 21, 1926. Serial No. 17,365. Term of patent 3½ years.

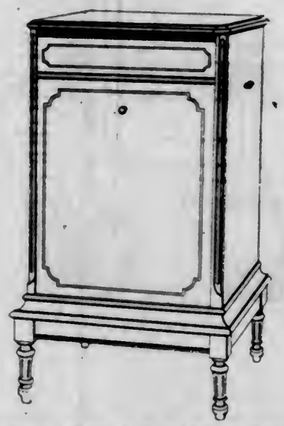


The ornamental design for a clown and animal toy, as shown.

72,084. LIGHTING-FIXTURE BRACKET. HUGO BOHL, Westfield, N. J., assignor to Radiant Lighting Fixture Co., New York, N. Y., a Corporation of New York. Filed Jan. 16, 1926. Serial No. 16,114. Term of patent 3½ years.

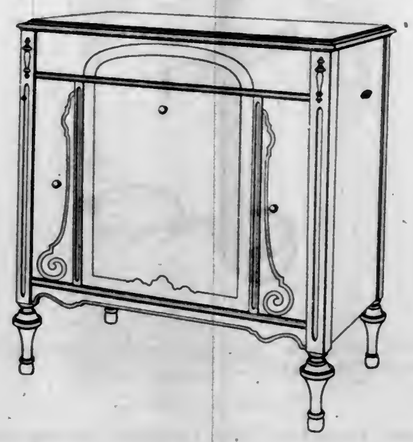
The ornamental design for a lighting fixture bracket, as shown.

72,085. ELECTRIC-LIGHT BRACKET. JEROME ROBINSON BUCHANAN and ROBERT HARRISON ABBOTT, Los Angeles, Calif. Filed July 3, 1926. Serial No. 18,247. Term of patent 7 years.



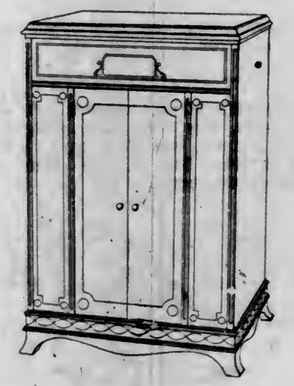
The ornamental design for an electric light bracket as shown.

72,086. BOBECHE FOR ELECTRIC-LIGHT FIXTURES. JEROME ROBINSON BUCHANAN and ROBERT HARRISON ABBOTT, Los Angeles, Calif. Filed July 3, 1926. Serial No. 18,248. Term of patent 7 years.



The ornamental design for a bobeche for electric light fixtures as shown.

72,087. CABINET FOR SOUND-REPRODUCING MECHANISM. CHARLES H. COWAN, New Rochelle, N. Y., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Nov. 11, 1926. Serial No. 19,683. Term of patent 7 years.

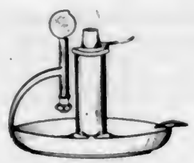


The ornamental design for a cabinet for sound-reproducing mechanism, substantially as shown.

72,088. CABINET FOR SOUND-REPRODUCING MECHANISM. CHARLES H. COWAN, New Rochelle, N. Y., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Nov. 11, 1926. Serial No. 19,684. Term of patent 7 years.

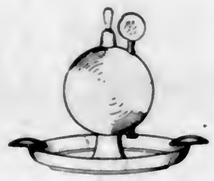
The ornamental design for a cabinet for sound-reproducing mechanism, substantially as shown.

72,089. CABINET FOR SOUND-REPRODUCING MECHANISM. CHARLES H. COWAN, New Rochelle, N. Y., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Nov. 11, 1926. Serial No. 19,685. Term of patent 7 years.



The ornamental design for a cabinet for sound-reproducing mechanism, substantially as shown.

72,090. AUTOMOBILE RADIATOR ORNAMENT. FRANK H. ELDRED and CHARLES HUTCHINGS, Morris, Ill. Filed Aug. 16, 1924. Serial No. 10,471. Term of patent 3½ years.

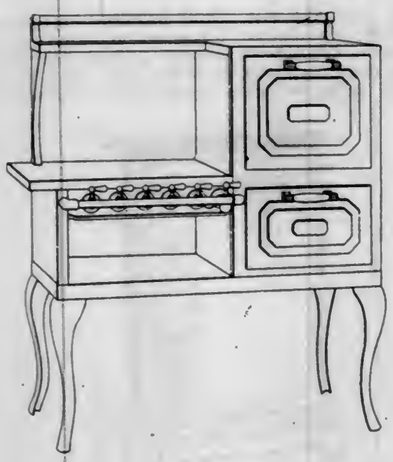


The ornamental design for an automobile radiator ornament as shown.

72,091. COMBINED CIGAR LIGHTER AND ASH TRAY. CHARLES GRAFF, New York, N. Y., assignor to Graff, Washbourne & Dunn, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1926. Serial No. 19,773. Term of patent 3½ years.

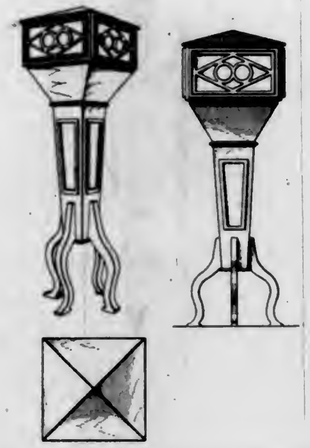
The ornamental design for a combined cigar lighter and ash tray as shown.

72,092. COMBINED CIGAR LIGHTER AND ASH TRAY. CHARLES GRAFF, New York, N. Y., assignor to Graff, Washbourne & Dunn, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1926. Serial No. 19,774. Term of patent 3½ years.



The ornamental design for a combined cigar lighter and ash tray as shown.

72,093. PERFUME BOTTLE. GEORGE GRUNBERG, New York, N. Y. Filed Oct. 19, 1926. Serial No. 19,420. Term of patent 3½ years.



The ornamental design for a perfume bottle substantially as shown.

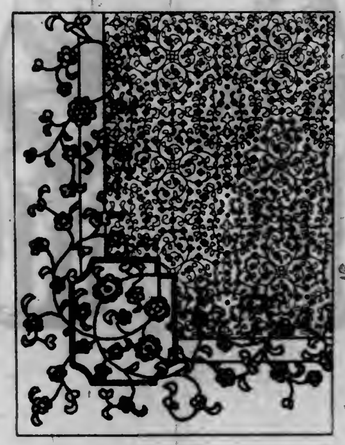
72,094. COMBINED GAS STOVE AND RANGE. STANLEY H. HOBSON, Rockford, Ill., assignor to Geo. D. Roper Corporation, Rockford, Ill., a Corporation of Illinois. Filed Jan. 7, 1925. Serial No. 11,955. Term of patent 14 years.

The ornamental design for a combined gas stove and range, as shown.

72,095. RADIO LOUD SPEAKER. JOHN M. HOFMANN, Brooklyn, N. Y. Filed Oct. 19, 1926. Serial No. 19,417. Term of patent 7 years.

The ornamental design for a rádio loud speaker as shown.

72,096. PERFUME BOTTLE. GEORGE GRUNBERG, New York, N. Y. Filed Oct. 19, 1926. Serial No. 19,421. Term of patent 3½ years.



The ornamental design for a perfume bottle substantially as shown.

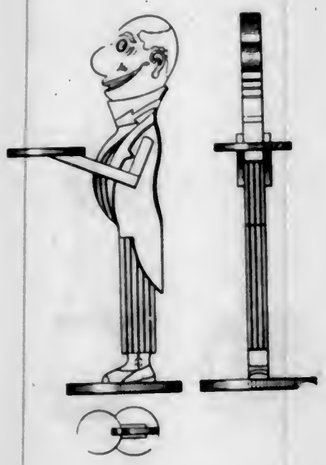
72,097. RUG OR SIMILAR ARTICLE. HARRY S. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Dec. 15, 1926. Serial No. 20,048. Term of patent 7 years.

The ornamental design for a rug or similar article, substantially as shown.

72,098. RUG OR SIMILAR ARTICLE. HARRY S. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Dec. 15, 1926. Serial No. 20,049. Term of patent 7 years.

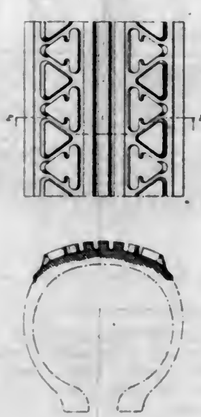
The ornamental design for a rug or similar article, substantially as shown and described.

72,099. STATUETTE. HOWARD L. KRATZ, Philadelphia, Pa., assignor to John Wanamaker Philadelphia, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 8, 1926. Serial No. 19,971. Term of patent 14 years.



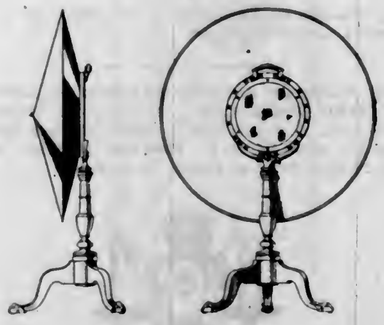
The ornamental design for a statuette, substantially as shown.

72,100. BACK OF A MIRROR OR SIMILAR ARTICLE. WALTER M. LANGSDORF, New York, N. Y. Filed Nov. 18, 1926. Serial No. 19,767. Term of patent 3½ years.



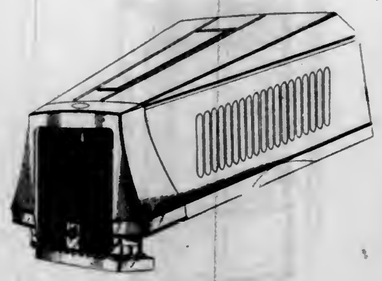
The ornamental design for the back of a mirror or similar article, as shown.

72,101. SMOKER'S STAND. HARRY F. LA RUE and WILLIAM ZIERLEIN, Fairfield, Iowa. Filed Nov. 18, 1926. Serial No. 19,772. Term of patent 14 years.



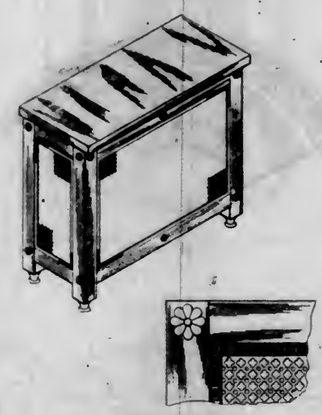
The ornamental design for a smoker's stand as shown.

72,102. TIRE CASING OR SIMILAR ARTICLE. FREDERICK LEOPOLD, Jr., Harmonville, Pa., assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Aug. 5, 1926. Serial No. 18,594. Term of patent 14 years.



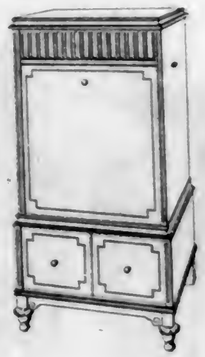
The ornamental design for a tire casing or similar article substantially as shown and described.

72,103. LOUD-SPEAKING SOUND REPRODUCER. GEORGE R. LUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 3, 1925. Serial No. 15,631. Term of patent 14 years.



The ornamental design for a loud-speaking sound reproducer as shown.

72,104. COMBINED RADIATOR AND HOOD FOR MOTOR VEHICLES. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 17, 1926. Serial No. 18,076. Term of patent 3½ years.



The ornamental design for a combined radiator and hood for motor vehicles, as shown.

72,105. RADIATOR COVER OR SIMILAR ARTICLE. JOHN MEIKLE, Chicago, Ill., assignor to Vaporator Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 2, 1926. Serial No. 18,565. Term of patent 7 years.

The ornamental design for a radiator cover or similar article, as shown.

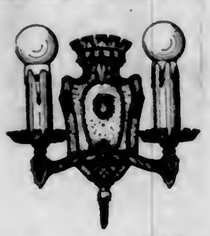
72,106. CABINET FOR SOUND-REPRODUCING MECHANISM. ALBERT C. MOWITZ, Philadelphia, Pa., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Nov. 6, 1926. Serial No. 19,627. Term of patent 7 years.

The ornamental design for a cabinet for sound reproducing mechanism, substantially as shown.

72,107. PLATE OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Jan. 5, 1927. Serial No. 20,285. Term of patent 14 years.

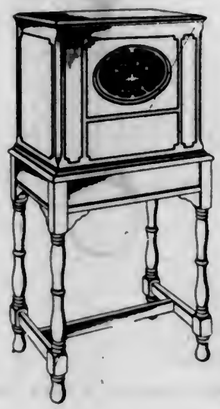
The ornamental design for a plate or analogous article, substantially as shown and described.

72,108. HEATER. MORTIMER L. PACKER, Columbus, Ohio. Filed Oct. 21, 1925. Serial No. 15,213. Term of patent 7 years.



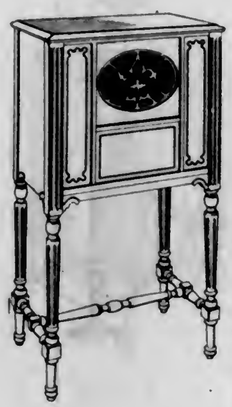
The ornamental design for a heater, as shown.

72,109. CHANDELIER OR ARTICLE OF SIMILAR NATURE. THORVALD J. PETERSEN, New York, N. Y., assignor to Globe Lighting Fixture Mfg. Co., Brooklyn, N. Y. Filed Dec. 27, 1926. Serial No. 20,167. Term of patent 3½ years.



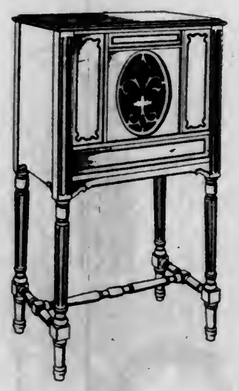
The ornamental design for a chandelier, or article of similar nature as shown.

72,110. LIGHTING-FIXTURE BRACKET OR ARTICLE OF SIMILAR NATURE. THORVALD J. PETERSEN, New York, N. Y., assignor to Globe Lighting Fixture Mfg. Co., Brooklyn, N. Y. Filed Dec. 27, 1926. Serial No. 20,168. Term of patent 3½ years.



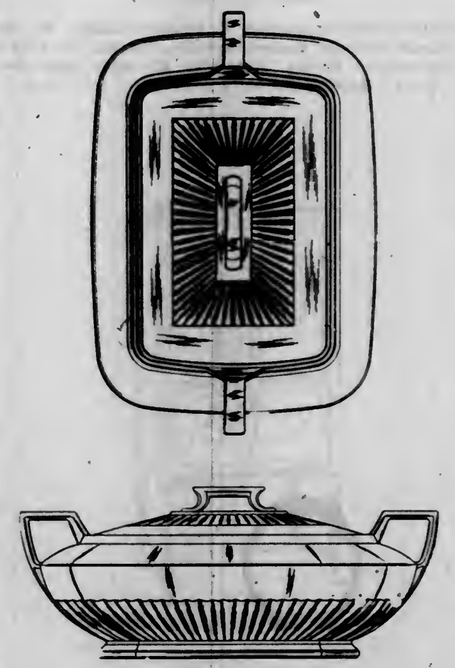
The ornamental design for a lighting fixture bracket or article of similar nature, as shown.

72,111. LOUD-SPEAKER CABINET. MAURICE C. RYPINSKI, Yonkers, N. Y., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Dec. 31, 1926. Serial No. 20,255. Term of patent 14 years.



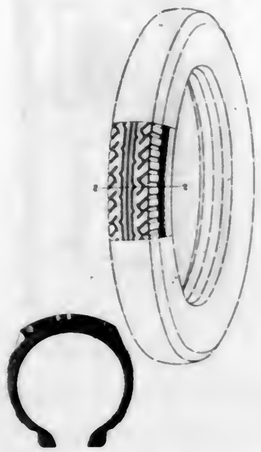
The ornamental design for a loud speaker cabinet as shown.

72,112. LOUD-SPEAKER CABINET. MAURICE C. RYPINSKI, Yonkers, N. Y., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Dec. 31, 1926. Serial No. 20,256. Term of patent 14 years.



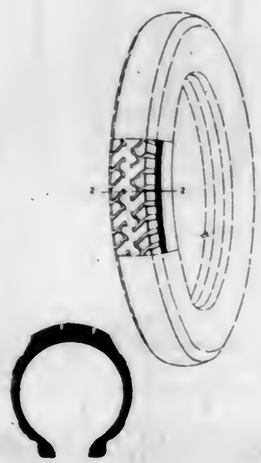
The ornamental design for a loud speaker cabinet as shown.

72,113. LOUD-SPEAKER CABINET. MAURICE C. RYPINSKI, Yonkers, N. Y., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Jan. 3, 1927. Serial No. 20,264. Term of patent 14 years.



The ornamental design for a loud speaker cabinet as shown.

72,114. COVERED DISH. ELLSWORTH H. SEBRING, Sebring, Ohio, assignor to The E. H. Sebring China Company, Sebring, Ohio, a Corporation of Ohio. Filed Dec. 2, 1926. Serial No. 19,903. Term of patent 7 years.



The ornamental design for a covered dish, as shown.

72,115. TIRE. LAWRENCE E. SEXTON, Chicago, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 22, 1926. Serial No. 17,008. Term of patent 14 years.

The ornamental design for a tire as shown.

72,116. TIRE. LAWRENCE E. SEXTON, Chicago, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 23, 1926. Serial No. 17,021. Term of patent 14 years.

The ornamental design for a tire as shown.

72,117. FINGER RING. EDMUND T. SOMMER, North Attleboro, Mass. Filed Dec. 2, 1926. Serial No. 19,901. Term of patent 3½ years.

The ornamental design for a finger ring, substantially as shown.

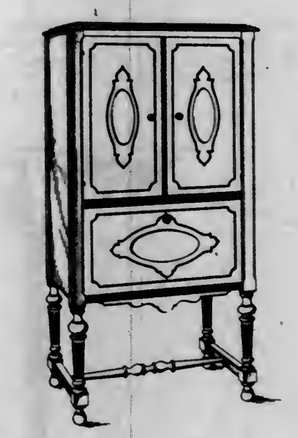
72,118. LOOP ANTENNA. MAURICE W. STAVRUM, Chicago, Ill. Filed Jan. 4, 1927. Serial No. 20,280. Term of patent 7 years.

The ornamental design for a loop antenna as illustrated.

72,119. BEVERAGE MIXER. ERSKINE B. VAN HOUTEN, South Nyack, N. Y. Filed Dec. 18, 1926. Serial No. 20,087. Term of patent 14 years.

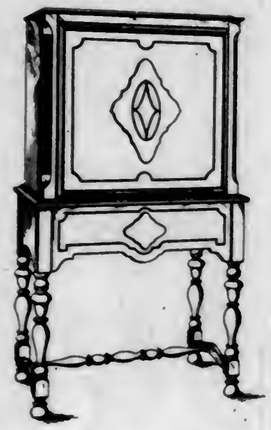
The ornamental design for a beverage mixer as shown.

72,120. CHANDELIER OR ARTICLE OF SIMILAR NATURE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Globe Lighting Fixture Mfg. Co., Brooklyn, N. Y. Filed Dec. 27, 1926. Serial No. 20,164. Term of patent 3½ years.



The ornamental design for a chandelier or article of similar nature as shown.

72,121. CHANDELIER OR ARTICLE OF SIMILAR NATURE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Globe Lighting Fixture Mfg. Co., Brooklyn, N. Y. Filed Dec. 27, 1926. Serial No. 20,165. Term of patent 3½ years.



The ornamental design for a chandelier or article of similar nature as shown.

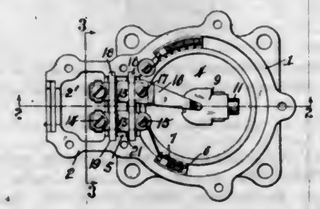
72,122. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Dec. 6, 1926. Serial No. 19,947. Term of patent 7 years.

The ornamental design for a radiocabinet, substantially as shown.

72,123. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Dec. 6, 1926. Serial No. 19,948. Term of patent 7 years.

The ornamental design for a radiocabinet, substantially as shown.

72,124. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Sept. 16, 1926. Serial No. 19,077. Term of patent 7 years.

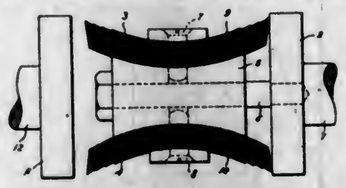


The ornamental design for a radiocabinet, substantially as shown.

PATENTS

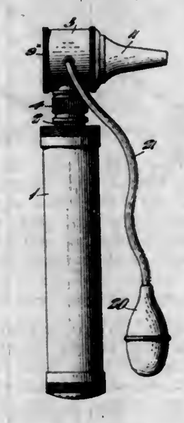
GRANTED MARCH 1, 1927.

1,618,967. RHEOSTAT. HARRY E. ADAMS, Toledo, Ohio, assignor to The W. G. Nagel Electric Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 14, 1925. Serial No. 56,114. 3 Claims. (Cl. 201—48.)



1. In a rheostat, a casing forming an open top casing, a cylindrical chamber for receiving rheostat contact parts and having a side opening therefrom, a pair of spaced parallel insulating strips mounted in said opening to close the same, electrical connecting member extending through said strips and the space therebetween, sealing material filling the space between said strips and closely enveloping the contact members, and closure means mounted over said chamber and strips.

1,618,968. WOOD-VENEER PROPELLER. NOBLE S. CLAY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 20, 1923. Serial No. 663,738. 14 Claims. (Cl. 170—59.)



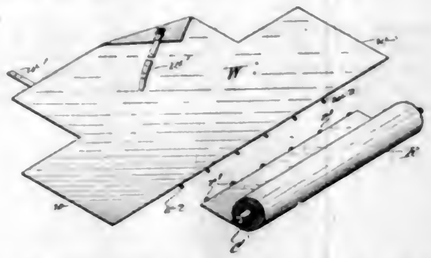
1. A propeller comprising impregnated laminations of wood veneer, said laminations being of less thickness than the depth to which the impregnating material penetrates, and a binder which hardens and becomes substantially insoluble and infusible upon the application of heat.

1,618,969. SWITCH CONTACT FOR CIRCUIT BREAKERS. DAVID REGINALD DAVIES, Manchester, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 14, 1923. Serial No. 645,228. 6 Claims. (Cl. 200—170.)

1. Switch mechanism comprising a pair of relatively movable conductor plates and a flexible contact brush comprising flexible laminated plates disposed between the conductor plates and making yielding contact therewith, respectively, at opposite edges of the laminated plates and adapted to be flexed or bowed under tension when the conductor plates are moved into engagement with the brush.

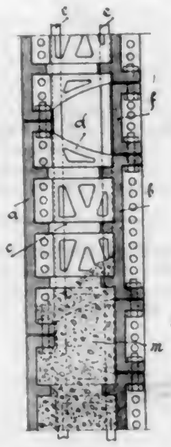
1,618,970. DIAGNOSTIC INSTRUMENT. HENRY L. DE ZENG, Moorestown, N. J., assignor to De Zeng Standard Company, Camden, N. J., a Corporation of New Jersey. Filed Feb. 17, 1923. Serial No. 619,552. 5 Claims. (Cl. 128—9.)

1. In a diagnostic instrument, a speculum barrel having an opening in one side thereof, a lamp cap having an opening in one side thereof and having a portion of its outer surface secured to the speculum barrel around the opening therein and having a portion of its inner surface threaded, a handle having a threaded portion adapted to engage the threaded portion of the cap, and a lamp secured to the handle portion adapted to fit into the cap and transmit light through the opening therein when the threaded portion of the handle is screwed into the cap.



1,618,971. DIAGNOSTIC INSTRUMENT. HENRY L. DE ZENG, Moorestown, N. J., assignor to De Zeng Standard Company, Camden, N. J., a Corporation of New Jersey. Filed May 18, 1923. Serial No. 639,738. 6 Claims. (Cl. 128—16.)

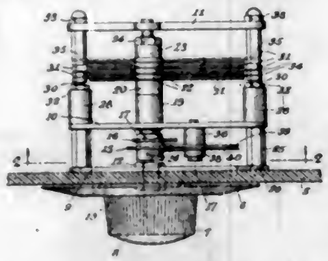
1. In an instrument of the character described, a head portion comprising a detachable handle connection, an inclined offset portion depressed toward the handle con-



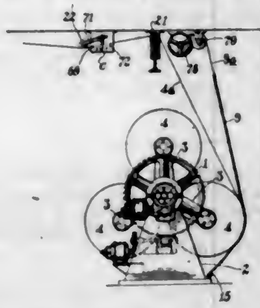
nection, having a lamp socket, a lamp in the lamp socket, a lens cell secured to the outside of the lamp socket, and a lens in the lens cell in front of the lamp.

1,618,972. MEANS FOR PACKING RUGS, ETC. MORDECAI BASSAN, Brooklyn, N. Y. Filed Jan. 30, 1926. Serial No. 84,952. 2 Claims. (Cl. 206—46.)

1. In combination with a core rod of the character designated, a rug formed with copulative means for attachment thereto, and a wrap sheet and copulative means for attachment to said rug, said wrap sheet being formed with lateral extensions, and with binding buckle straps, substantially in the manner and for the purpose set forth.



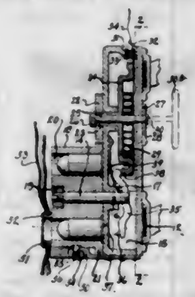
1,618,973. TUBBING. WILHELM BREIL, Essen-Bredeney, Germany. Filed Aug. 24, 1921, Serial No. 495,089, and in Germany Aug. 29, 1919. Renewed Jan. 18, 1927. 2 Claims. (Cl. 61—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a metal tubbing in combination, two concentric cylinder segments, open-work ribs connecting same and a continuous concrete filling in the space intermediate said concentric segments enveloping said ribs.

1,618,974. VARIABLE CONDENSER. CLARENCE N. CAHUSAC, Newark, N. J., assignor to U. S. Tool Company, Inc., Newark, N. J., a Corporation of New Jersey. Filed Apr. 16, 1925. Serial No. 23,471. 1 Claim. (Cl. 250—41.)

A variable condenser comprising a frame composed of a rear dielectric plate, front and intermediate metal plates, connections between said metal plates whereby they are firmly bound together, said connections comprising dielectric cylinders having nuts fixed in their ends, insulated bars engaging said nuts at one end, clamp screws holding the cylinders against the intermediate plates, stator plates fixed in uniform spaced grooves in the insulated bars, interjacent the rotor plates, and means for clamping the sections of said connections when in adjustment.

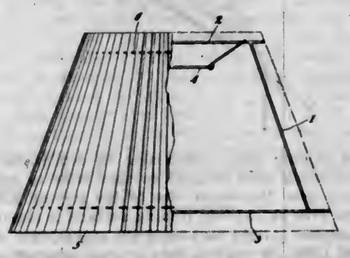


1,618,975. WEB-TENSION EQUIPMENT FOR PRINTING PRESSES. ALLAN J. CLINE, Chicago, Ill., and JACOB A. HOLLANDER, Forest Park, Ill., assignors to Cline Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1926. Serial No. 96,138. 18 Claims. (Cl. 242—75.)

1. A web-tension equipment for printing presses comprising a strap or friction apron pressing against the surface of a web-roll of paper from which web is to be drawn to press, a tension motor acting upon the apron to supply a continuous strain thereto for applying a braking force upon the surface of the web-roll, and means for regulating the tension applied by the motor.

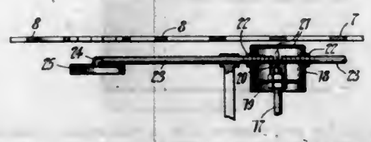
1,618,976. SELF-DEFENSE SHOOTING DEVICE. MARTIN HOFFMANN, New York, N. Y. Filed Apr. 13, 1926. Serial No. 101,821. 1 Claim. (Cl. 42—1.)

In a shooting device the combination comprising a housing, a stationary shaft secured to the front wall and projecting with its bifurcate end into the inside of the



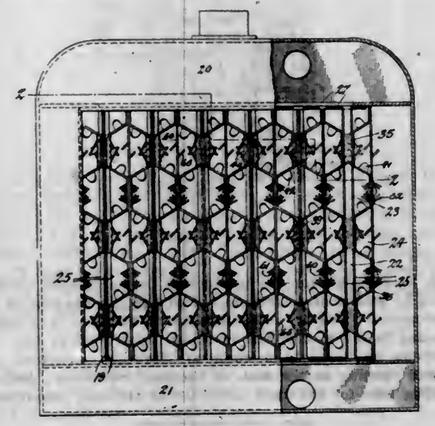
housing, a cylindrical magazine chamber, adapted to hold cartridges, rotatably arranged on said shaft, detachable means to hold the magazine thereon, an annular line of teeth secured to said magazine close to its rear peripheral edge, a toothed gear, with a hollow shaft rigidly secured thereto, rotatably arranged in and projecting beyond the front wall of the housing, a gear, having part of its peripheral face provided with teeth, rigidly secured to aforesaid hollow shaft at its foremost end, a winding shaft operatively engaged in the aforesaid hollow shaft and in the rear wall of the housing, a ratchet wheel secured to the said winding shaft, a pawl, secured to the said rear wall, engaging said ratchet wheel, a spiral coil engaging with its outer end the toothed gear and with its inner end the winding shaft, a cam on the front side of the peripheral face of the ratchet wheel, a recess in the face of the ratchet wheel closely after the cam, a double armed lever, pivotally secured in the bifurcate end of the stationary shaft, engaging with one arm the front side of the ratchet wheel and having a firing pin at the end of the other arm, a passageway for the said pin in the front wall of the housing, a spring secured above the stationary shaft within the housing and engaging the double armed lever opposite to the ratchet wheel, means to wind the spiral coil, means engaging the teeth of the ratchet wheel to stop the same, means to stop the magazine, and bullet proof means to hold the device to the body of the user.

1,618,977. CAPPED SWAB OR DAUBER. PETER CODINA, Chicago, Ill., assignor to Illinois Cork Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1925. Serial No. 705. 2 Claims. (Cl. 91—67.2.)



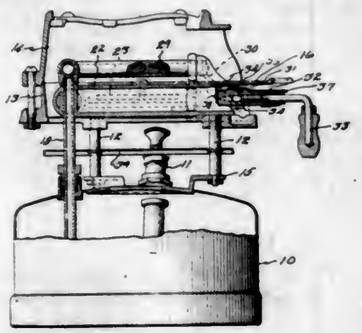
1. A capped swab or dauber, comprising a metal cap, a lining made of a liquid-tight material and provided with a central hole, and a dauber stem of metal having one end bent at right angles, said bent end located within the hole in the lining and secured to the cap by solder applied within the hole in the lining to said bent end and the adjacent portions of the cap, the hole in the lining serving to delimit the solder.

1,618,978. LAMP SHADE. ISIDOR DEMBITZ, New York, N. Y. Filed Jan. 30, 1926. Serial No. 84,948. 1 Claim. (Cl. 240—108.)



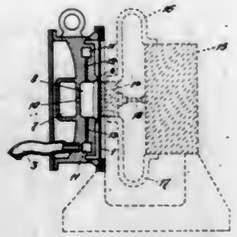
A frusto-conical frame for a plaited lamp shade comprising an upper cover support of wire formed as a circle, an inner circle of wire concentric with said support and adapted to seat on a lamp bulb, wires radiating from the inner circle to the outer circle and connecting the two rigidly to each other, a lower cover support parallel to the upper support, and corrugated to receive and space the plaits of the lamp shade cover, supporting means connecting the lower support with the upper support to suspend the former from the latter, and a frusto-conical plaited cover having the plaits thereof seated in the corrugations of the lower support, and means for fastening said cover to said frame.

1,618,979. SAFETY LIGHTER FOR GAS STOVES. WILLIAM F. DESTER, Newark, N. J., assignor to U. S. Tool Co., Inc., East Orange, N. J., a Corporation of New Jersey. Filed July 11, 1925. Serial No. 42,871. 2 Claims. (Cl. 158—115.)



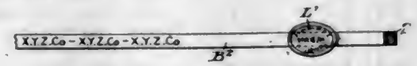
2. The combination with a gas stove having one or more burners provided with controllable gas inlets, and a cover having a substantially circular opening over each burner, said burner having vertical discharge openings and imperforate side walls of a pilot casing containing a constantly lit gas jet, an inverted shallow cylindrical cup over each of said burners, and a hollow connection between said pilot casing and inverted cup.

1,618,980. RADIATOR CORE. JOHN M. FEDDERS, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed June 11, 1925. Serial No. 36,583. 3 Claims. (Cl. 257—130.)



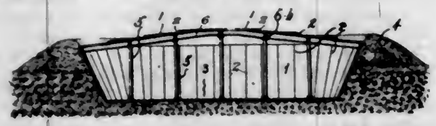
1. A radiator comprising a plurality of water tubes and a plurality of air passages arranged between adjacent water tubes, each of said water tubes having opposite sheet metal walls, two spacing strips of corrugated sheet metal arranged on opposite sides of each water tube and each spacing strip having alternating inner and outer summits, the inner summits engaging the opposite sides of said water tubes, and a plurality of radiating strips of sheet metal each radiating strip arranged between the outer summits of two opposing spacing strips and forming three plies therewith, and each of said plies being provided with a locking lug which interlocks with the remaining plies.

1,618,981. FIRE-POT CONSTRUCTION. OTTO J. GROEHN and WILLIAM BLASKEWITZ, Detroit, Mich., assignors to Clayton & Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 5, 1925. Serial No. 661. 12 Claims. (Cl. 158—32.)



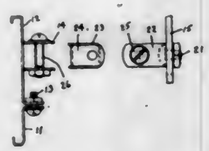
1. In a fire pot construction, a combustion chamber, a pair of opposed burners within said chamber, an intake manifold lying between said burners, a flame plate overlying the manifold and arranged to direct the flame from said burners inwardly of the combustion chamber, a source of fuel, and means for supplying said manifold with the fuel.

1,618,982. DEVICE FOR THE PRODUCTION OF MECHANICAL VIBRATIONS BY MEANS OF A CONTINUOUS STREAM OF FLUID. WALTER HAHNEMANN, Kitzeberg, near Kiel, and WILHELM RUDOLPH and ERNST WILCKENS, Kiel, Germany, assignors to Signal Gesellschaft mit beschrankter Haftung, Kiel, Germany, a Firm. Filed June 1, 1925, Serial No. 34,264, and in Germany June 13, 1924. 11 Claims. (Cl. 181—0.5.)



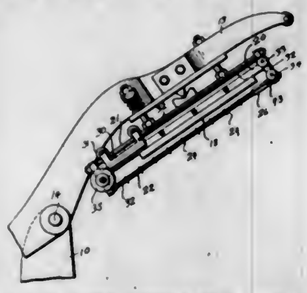
1. In a device for the production of mechanical vibrations by means of a stream of fluid the combination of a mechanical vibratory structure; a resonator; a nozzle opening in the wall of the resonator controlled by the vibrations of the said mechanical vibratory structure, a second opening in the wall of the said resonator; and a feeding tube for the fluid connected to the said resonator.

1,618,983. PROCESS OF BANDING CIGARS. WILLIAM INTEMANN, Brooklyn, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1925. Serial No. 26,624. 4 Claims. (Cl. 40—21.)



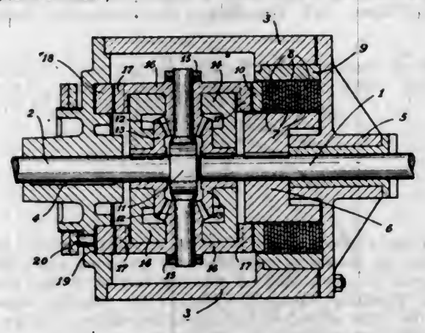
1. That improvement in the process of banding cigars comprised in encircling the cigar with a strip of paper in overlapping relation, securing by an adhesive one end of said strip to the overlapped portion, and attaching by an adhesive a legend carrying portion of paper to said cigar encircling strip.

1,618,984. OIL-STORAGE TANK. JAMES T. KAVANAUGH, Port Richmond, N. Y. Filed Mar. 9, 1926. Serial No. 93,449. 2 Claims. (Cl. 220—71.)



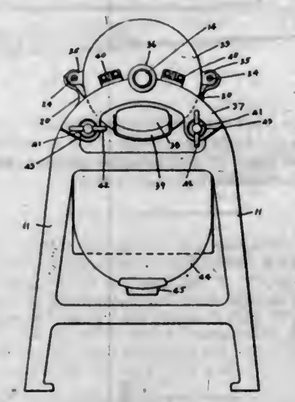
1. An oil storage tank having its bottom, side and end walls formed of joined sheet metal plates, said tank being of an oblong shape with its end walls curved to a semicircular contour, a main girder extending between the end walls of the tank in a median position with relation to the side walls of the tanks; transverse girders extending between the side walls of the tank and intersecting the main girder, a series of posts spaced apart along the bottom of the tank and supporting the main girder, and a cover of joined sheet metal plates mounted on the girders.

1,618,985. UNIVERSAL MOUNTING. BERT F. KELLY, ROBERT F. MILLER, and LOUIS G. WINKLER, Indianapolis, Ind., assignors to Parts Corporation, Indianapolis, Ind., a Corporation. Filed Oct. 17, 1925. Serial No. 63,067. 5 Claims. (Cl. 45—97.)



1. A universal mounting comprising a pair of oppositely disposed U-shaped metal stampings, said stampings being provided with suitable bolt holes and associated together to form a hollow block.

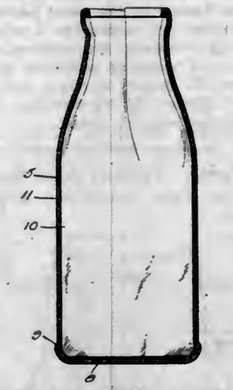
1,618,986. IRONING-PRESS BURNGUARD. JAMES CAMROD LEDBETTER, New York, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed May 2, 1925. Serial No. 27,412. 10 Claims. (Cl. 74—105.)



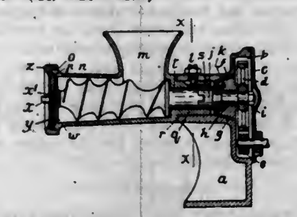
1. An ironing press comprising in combination, cooperating ironing jaws adapted to open wide to expose the work and close thereupon, one of the ironing jaws being provided with an exposed ironing surface, a pleated burnguard curtain carried on one of the press jaws, means to fold and pleat the curtain into a small compact space as the press closes to uncover the ironing surface, and means for unfolding and unpleating the curtain and stretching it across the ironing surface as the press opens.

1,618,987. VARIABLE SPEED GEAR. FERNAND LESCARTS, Brussels, Belgium. Filed Dec. 12, 1925, Serial No. 75,118, and in Belgium July 22, 1925. 8 Claims. (Cl. 64—106.)

1. In a variable speed gear, the combination of a driving shaft, a driven shaft, a friction clutch for coupling said shafts together, differential means operated by said shafts, and means actuated by said differential means for automatically controlling the operation of said clutch.



1,618,988. MIXING AND STRAINING MACHINE. STACEY B. LINDLEY, Indianapolis, Ind., assignor to Indiana Canning Machinery Company, Indianapolis, Ind., a Corporation. Filed Mar. 20, 1925. Serial No. 17,017. 2 Claims. (Cl. 146—174.)



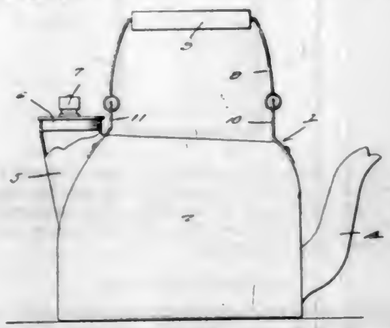
1. In a screening machine of the character described, the combination with a supporting frame, a substantially cylindrical screen, brushing members rotatably mounted within said screen, a shaft for rotating said members, and means for driving said shaft, of a unitary end mounting provided therefor, said mounting comprising an end plate adapted to close the discharge end of said screen and provide a discharge opening for the unscreened contents thereof, a support for said mounting adapted to be removably secured to said frame, and a bearing formed on said support for receiving one end of said shaft and supporting the same, whereby upon the removal of said unitary mounting the entire discharge end of said screen may be opened and the brushing members and screen removed.

1,618,989. SANITARY MILK BOTTLE. JOSEPH D. MCCUMPSEY, Altoona, Pa. Filed July 9, 1925. Serial No. 42,470. 1 Claim. (Cl. 229—5.5.)

A sanitary milk bottle of the class described including a strip of relatively thick paper material rolled only once to provide a hollow body having overlapping side edges sealed with paraffin, the bottom edge of the body being turned inwardly, a bottom applied exteriorly to the inturned bottom edge of the body and sealed in respect to the body with paraffin, a paper coating inside the body and bottom and coated with paraffin, and an outer paper coating on the outside of the body and bottom and coated with paraffin, said outer paper coating holding the bottom in place.

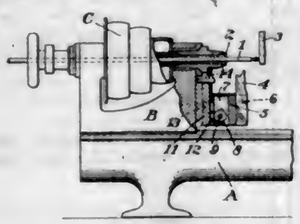
1,618,990. MINCING MACHINE. GORDON JOHN METTERS, Wayville, and KENNETH WILLIAM NOLAN, St. Peters, South Australia, Australia. Filed Jan. 15, 1925, Serial No. 2,556, and in Australia Sept. 4, 1924. 1 Claim. (Cl. 146—182.)

A standard for mincing machines having a bore in one side thereof adapted to receive the shank of a mincing machine, said bore terminating at its interior by a shoulder, a thrust bearing seated in said shoulder and concentric with the bore, a concentric bore passing through the thrust bearing and standard to receive a shaft, and a recess on the opposite side of the standard to receive the gearing.



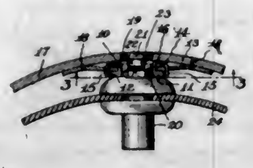
1,618,991. UNDERGARMENT. BENJAMIN MOSCOWITZ, Brooklyn, N. Y. Filed Nov. 12, 1925. Serial No. 68,510. 1 Claim. (Cl. 2—224.)

A garment having leg members of the character described comprising front and rear portions, the rear portions extending about the sides of the garment to the



front thereof, the front portion having a substantially wide abdominal band formed of folded material of double thickness and a lower panel secured between the folded material of said band, both band and panel being fastened to the front extending ends of the rear portion, rows of shirring formed on the panel adjacent said band, said garment being cut to provide a substantial space between said leg members, the contour of said space along said members being of relatively shallow arcuate shape and arcuately shaped members secured to extend along the inner side of the leg members for reinforcing the garment against wearing strain.

1,618,992. KETTLE. CHARLES PAGET, Santa Cruz, Calif. Filed June 23, 1925. Serial No. 39,083. 1 Claim. (Cl. 53—9.)



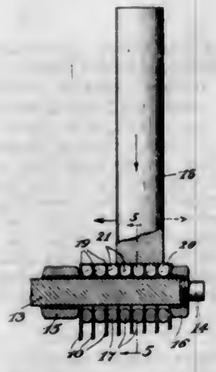
In a tea kettle, the combination of a body having a curved rear side and a closed top, said top sloping gradually downwardly toward the front side of the body, a pouring spout at the front side of the body, a cylindrical filling neck extending upwardly from the rear side of the body, said filling neck including a relatively short front portion, and a relatively long rear portion, the lower edges of the sides of the neck being curved to conform with the curved rear side of the body of the kettle, the upper end of the filling neck extending above the top of said body, a removable closure for the upper end of the filling neck, and a handle for the kettle.

1,618,993. AUXILIARY TOOL HOLDER FOR LATHES AND THE LIKE. JOSEPH E. PERRAULT, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Sept. 28, 1925. Serial No. 59,161. 1 Claim. (Cl. 82—24.)

In combination with the head stock of a lathe, a rotary head mounted therein, a vertically disposed undercut guideway mounted on said head stock below the axis of the rotary head of the lathe, a vertically movable recessed carriage member mounted on said undercut guideway, a toothed rack mounted on the guideway, a pinion meshing with the rack and located in the recessed carriage, a shaft extending through the carriage on which the pinion is mounted, a lever for operating the shaft, and a tool on the carriage which is moved towards and from the axis of the rotary head of the lathe by the movement of the carriage, substantially as described.

1,618,994. PLAYING BALL. GEORGE L. PIERCE and HENRY V. RAU, Brooklyn, N. Y., assignors to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Mar. 3, 1926. Serial No. 91,887. 2 Claims. (Cl. 276—65.)

1. In a playing ball, a cover, a bladder within said cover, an interiorly and exteriorly threaded valve stem carried by the bladder, a bushing carried by the cover and interiorly threaded to engage the exterior threads of the valve stem, and means for preventing rotation of the bushing relatively to the cover.



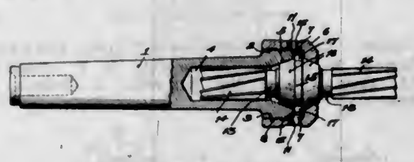
2. The combination set forth in claim 1, in which the bushing carries a flange and in which there is included an anchor washer having prongs that pierce the cover and engage the flange of the bushing to prevent rotation thereof relatively to the cover.

1,618,995. SPEED BOAT. JOHANNES PLUM, Washington, D. C. Filed Feb. 11, 1925. Serial No. 8,549. 13 Claims. (Cl. 114—66.5.)

3. A speed boat having a longitudinally concave bottom portion; a bridging portion; and a hydroplane secured at the rear of the bridging portion, said hydroplane being mounted to rotate freely.

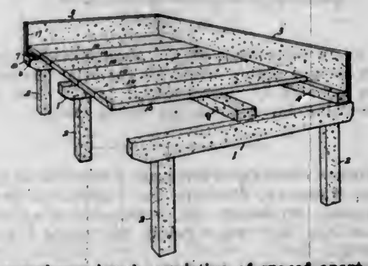
1,618,996. PROCESS OF CONSTRUCTING VARIABLE CONDENSER ROTORS. CHARLES PRIOR POWERS, Spring Lake, N. J., assignor to U. S. Tool Company, Inc., East Orange, N. J., a Corporation of New Jersey. Filed Aug. 7, 1925. Serial No. 48,909. 2 Claims. (Cl. 113—112.)

1. The process of uniting a series of aluminum plates along their juxtaposed edges which consists in clamping the plates together, heating the plates to a temperature



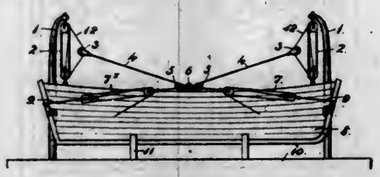
sufficient to melt tin, abrading the edges of the plates with a block of tin frictionally applied under pressure, raising the temperature of the clamped plates, and abrading the tinned edges with a block of tin and zinc alloy applied frictionally under pressure.

1,618,997. LOCK FOR TIRE RIMS. JOSEPH H. RANDT, Emmett, Idaho. Filed Mar. 20, 1926. Serial No. 96,242. 3 Claims. (Cl. 70—90.)



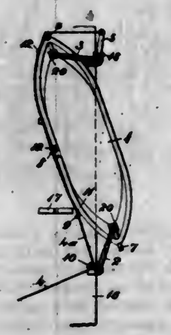
1. A padlock having an oscillatable and longitudinally shiftable hasp, a web extending upward at the rear of the padlock parallel to the hasp when the lock is in a closed position, said web having an aperture through which a bolt may be passed, the hasp carrying a shield adapted to cover the end of the bolt and the nut thereon when the hasp is closed and locked.

1,618,998. MILLING-MACHINE COLLET AND END MILL. JOSEPH M. REDINGER, Providence, R. I. Filed Dec. 3, 1925. Serial No. 72,943. 7 Claims. (Cl. 279—91.)



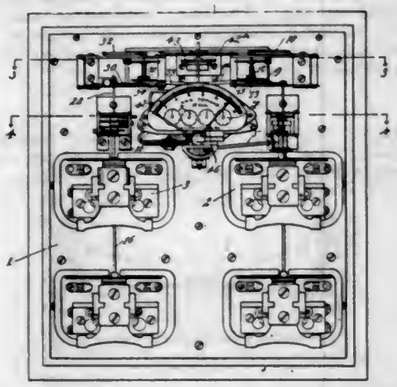
3. In combination with a holder having a head formed with a flared socket and having an outwardly opening cut-out in its end, a cutter having a wing received in said cut-out and having beveled parts on opposite sides of the wing and one of which parts engages the flared socket, and means on the head engaging the other of the beveled parts to secure the cutter to the head.

1,618,999. GREENHOUSE BENCH. CHARLES W. ROBERTS, Centerville, Ind., assignor of one-half to Joseph H. Hill, Richmond, Ind. Filed Mar. 8, 1926. Serial No. 93,120. 2 Claims. (Cl. 47—18.)



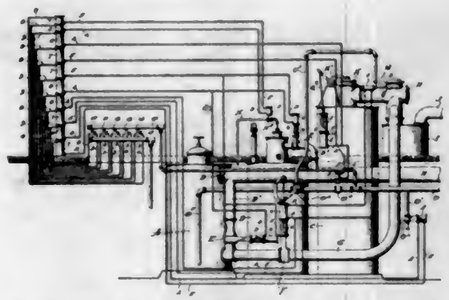
1. A greenhouse bench consisting of spaced apart sides, flanges extending inward toward each other from the bottom portion of said sides, end members connecting said sides, flanges extending inward toward each other from the bottom portions of said ends, with said flanges of the ends forming upper and lower shoulders, a center rail resting at its ends upon the lower shoulders of the ends, a plurality of bottom members resting on said flanges of the sides and on said center rail and extending over on the upper shoulders of the ends, means for supporting said parts above the ground line, and all of said parts formed of reinforced concrete.

1,619,000. TACKLE. PAUL W. SIEURIN, Gottenborg, Sweden. Filed Nov. 9, 1925. Serial No. 67,788, and in Sweden Dec. 5, 1924. 6 Claims. (Cl. 9—22.)



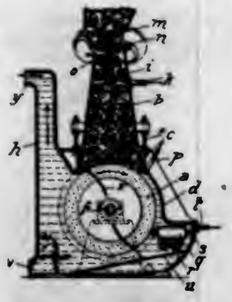
4. In combination, a pair of davits on ship board, a life boat, suspension tackles for suspending said boat from said davits, a set of pulley-blocks on the inside of said boat positioned at substantially the middle thereof, a tackle extending from each davit around the adjacent end of the boat and along the inner side thereof, a deflector rope extending from each of said tackles through one of said pulley-blocks, a deflector block, at the free end of each deflector rope receiving one of the rope runners of the respective suspension tackles, operation of either one of said swing controlling tackles causing operation of the respective deflector blocks to deflect the rope runner engaged thereby and to cause the respective suspension tackle to raise the respective end of the boat.

1,619,001. LIFEBOAT. SVEN A. SIEURIN, Gottenborg, Sweden. Filed Nov. 9, 1925, Serial No. 67,726, and in Sweden Jan. 9, 1925. 6 Claims. (Cl. 9—22.)



6. In combination, two davits on board a ship, a life boat suspended between them, an arm rigidly fastened to one of said davits and extending practically horizontally in a direction away from the other davit when the boat is in its swung-in or resting position, a rope fixed at one end to the free end of said arm, said rope extending along the inboard side of the boat, a sheave fixed to said other davit for receiving said rope, hauling means applied to the free end of said rope, a stop on said rope, a fastening device removably engaging said stop, an eye detachably provided at approximately the middle of the boat, and a stop on that part of the rope which is found between the first davit and the eye, said eye being located so that it abuts the stop at the moment the life boat has swung out.

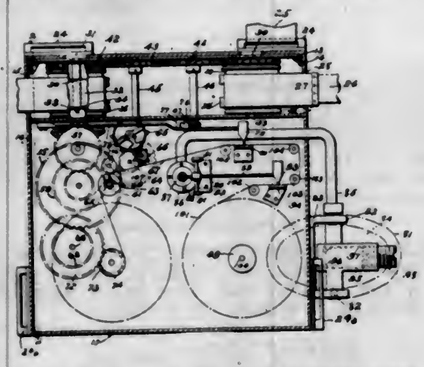
1,619,002. ELECTRIC METER. GEORGE SPERTI, Covington, Ky., assignor of one-fourth to Arthur F. Bleckswith, Dayton, Ky. Filed Feb. 16. 1922. Serial No. 536,956. 16 Claims. (Cl. 171—264.)



7. In an alternating-current circuit, the combination with a watt-hour meter and a driven member therefor, of a reactive watt-hour meter, a driven member therefor actuated in one direction irrespective of whether or not the current leads or lags the voltage of the circuit and a common member connected to said two driven members.

1,619,003. GATE OR VALVE OPERATING SYSTEM. GEORGE R. STEERE, Detroit, Mich., assignor to Steere Engineering Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 16, 1925. Serial No. 9,630. 5 Claims. (Cl. 137—144.)

2. In a gas apparatus having a shut-off for controlling the flow of fluid, means for operating said shut-off including a cylinder for liquid, a piston in said cylinder operatively connected to said shut-off for operating the same, a liquid chamber located at a point distant from said cylinder and in constant open communication with said cylinder at one side of the piston therein, a second liquid chamber located at a point distant from said cylinder and in constant open communication with the cylinder at opposite side of the said piston therein, said cylinder being filled with a liquid and said chambers being partially filled with liquid the cubic capacity of each of said chambers being greater than the cubic capacity of said cylinder, whereby the movement of said piston in said cylinder in one direction will force the liquid from said cylinder into one of said chambers and movement of said piston in an opposite direction will force the liquid from said cylinder into the other of said chambers, the space in each chamber above the liquid therein being adapted to receive steam under pressure for forcing the liquid from said chamber into the cylinder, and means for controlling the admission of steam into said chambers.

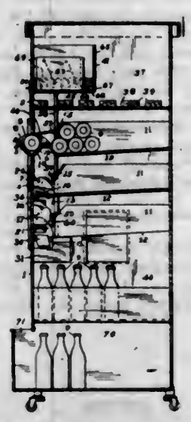


1,619,004. PROCESS AND APPARATUS FOR THE PRODUCTION OF WOOD PULP. CHRISTIAN JONATHAN STEANKOPF, Rittersgrun, Germany. Filed Sept. 28, 1925, Serial No. 59,090, and in Germany May 15, 1924. 5 Claims. (Cl. 83—75.)

1. A process for the production of wood pulp comprising continuously advancing the wood downwardly through a body of water into a grinding zone submerged in the water and simultaneously applying artificial heat to subject the wood to gradually increasing pressure and to heat treatment during this advance to the grinding zone.

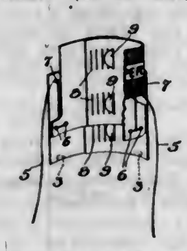
2. An apparatus for the production of wood pulp comprising a water-tight grinder casing, a grindstone in said casing, a water-tight magazine located entirely above the grindstone, a conduit extending from said casing for the discharge of wood pulp, and means for applying artificial heat to a point above the grindstone to heat the wood during its advance downwardly towards the grindstone and while being exposed to gradually increasing water pressure in said magazine.

1,619,005. RESPIRATION AND PULSE RECORDER. SAMUEL M. STRONG, Garden City, N. Y. Filed Jan. 11, 1922. Serial No. 528,485. 7 Claims. (Cl. 234—1.)



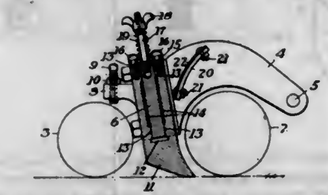
1. In an instrument of the class described having a record strip, a spring motor for operating the strip, and means operated by the movement of the chest incident to breathing for winding the spring motor.

1,619,006. COIN-CONTROLLED VENDING MACHINE. ROSS VAUGHAN, Pittsburg, Pa., assignor to The Ex-El Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Apr. 21, 1925. Serial No. 24,856. 8 Claims. (Cl. 211—8.)



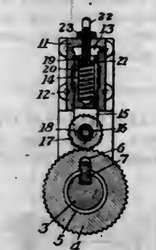
1. In a dispensing machine, a straw magazine having a bottom member movable lengthwise of the straws, means carried by the said member for moving a straw

therewith, an agitator for the straws carried by the said member and movable transversely thereof, a bottle-delivery device, means for operating the said device, a



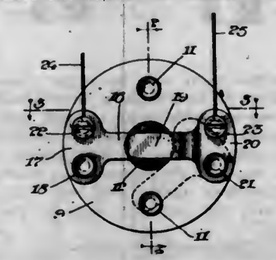
rock shaft operated by the said device, and connections whereby the operation of the said shaft operates the said member.

1,619,007. TELESCOPIC HATBAND. AUSTIN WALSH, New York, N. Y. Filed Sept. 22, 1926. Serial No. 137,114. 4 Claims. (Cl. 40—129.)



1. The combination with a hat, of a telescopic band, positioned thereon, means to secure the outer member of said telescopic band to the brim of said hat, and means connecting the telescope members of said band to move one member relative to the other.

1,619,008. SECTIONAL CHIP BREAKER FOR PLANING MACHINES. CLINTON G. WILDERSON, Leetonia, Ohio, assignor to The Crescent Machine Company, Leetonia, Ohio, a Corporation of Ohio. Filed Jan. 22, 1925. Serial No. 4,019. 5 Claims. (Cl. 144—244.)

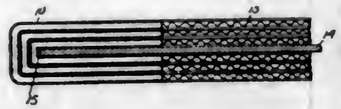


1. A chip breaker for planing machines, comprising a guide bar, a plurality of presser feet mounted on said bar, each of said presser feet having its upper portion bifurcated to straddle said bar, the width of the bar being less than the depth of the slot in each presser foot, a plate detachably secured to the upper bifurcated end of each presser foot and extending across the slot therein, a stem extending through each plate and having its lower end secured in the upper edge portion of the guide bar and its upper end screw-threaded, a nut mounted on the screw-threaded upper end of each stem, and a coil spring surrounding each stem between its nut and the corresponding plate, substantially as described.

1,619,009. SECTIONAL FEED ROLL FOR PLANING MACHINES. CLINTON G. WILDERSON, Leetonia, Ohio, assignor to The Crescent Machine Company, Leetonia, Ohio, a Corporation of Ohio. Filed Jan. 22, 1925. Serial No. 4,020. 2 Claims. (Cl. 144—250.)

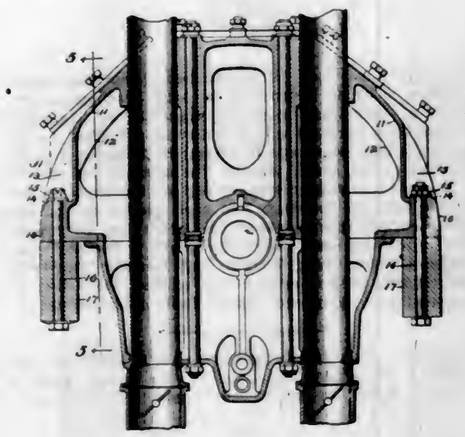
1. A sectional feed roll mechanism, comprising spaced bearings, a shaft journalled in said bearings, a plurality of cylindrical sections mounted on said shaft between said bearings and each having a toothed periphery and a bore substantially greater in diameter than the diameter of the shaft, whereby the sections are adapted to move independently transversely of the shaft, a connection between the shaft and each section for guiding the transverse movements of the latter and for causing the sections to rotate with the shaft, a toothed wheel arranged above each section and meshing therewith, and yielding means pressing said toothed wheel into engagement with its section, substantially as described.

1,619,010. CONTACT DEVICE AND INSULATION. HENRY WILHELM, Brooklyn, N. Y. Filed Sept. 9, 1925. Serial No. 55,253. 6 Claims. (Cl. 200—159.)



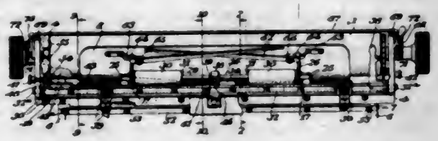
1. A contact device comprising a flat relatively thin insulating strip base having a hole therein, a flanged push button carried by said insulating member and projecting through said hole, the flange thereof maintaining the push button against displacement in one direction, a pair of spaced contacts each pivotally secured to one side of said insulating member at diametrically opposite points thereof with the free ends projecting toward each other and both overlapping the flanged portion of the push button thereby to prevent removal of the push button in the opposite direction.

1,619,011. SHIPPING MEMBER. CALVIN A. AGAR, West Orange, N. J. Filed May 12, 1925. Serial No. 29,667. 3 Claims. (Cl. 154—33.)



3. In the art of making a frame member having a plurality of sheets of corrugated paper and of uncorrugated paper, those steps which consist in directly and independently scoring the sheets of corrugated paper

along two parallel lines substantially perpendicular to the said corrugations and then gluing the said sheets of paper to each other while the sheets of corrugated paper are arranged between sheets of uncorrugated paper so

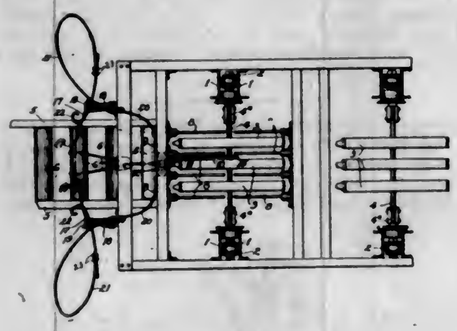


as to form a frame member having a substantially U-shaped transverse cross-section, the corrugations in the central leg of the said U-shaped member being maintained substantially unbroken.

1,619,012. CRANK-CASE CONSTRUCTION. GLENN D. ANGLE, Dayton, Ohio. Filed Dec. 30, 1920. Serial No. 434,130. 4 Claims. (Cl. 121—194.)

1. In an engine crank case, an upper crank case section comprising a substantially semicylindrical body forming the top and side walls of such upper sections supporting ledges extending from the bottom edges of said body inwardly and having their bottom surfaces in line with the center of the engine crank shaft, and webs extending transversely within said body and serving to tie together said top and side walls of the body and the said ledges.

1,619,013. TYPEWRITING MACHINE. FRANK H. ARMSTRONG, Auburn, N. Y., assignor, by mesne assignments, to L. C. Smith & Corona Typewriters Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 23, 1925. Serial No. 25,277. 26 Claims. (Cl. 197—138.)

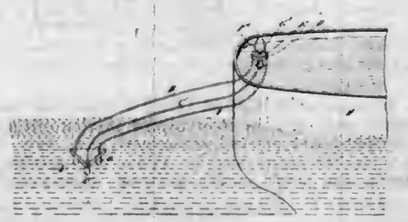


1. In a typewriting machine, the combination of a carriage support, a platen carriage mounted on the support to travel transversely of the machine, a platen rotatably supported on the carriage, a margin-stop-carrying bar rotatably supported on the carriage, front and rear paper feed rollers, means for yieldably supporting said rollers, manually actuated means operable on said roller supporting means to cast off the feed rollers, cooperating abutments on the bar and carriage for determining the normal position of the bar, and a coiled spring connected with said bar and the cast-off means normally yieldably holding the bar in normal position and urging the cast-off means in the direction of its cast-off movement into engagement with the roller supporting means, said spring being so arranged as to initially urge the cast-off means after a cast-off operation in the opposite direction toward normal position.

1,619,014. BRACELET HOOK. SIDNEY O. BIGNEY, Attleboro, Mass., assignor to S. O. Bigney & Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Apr. 27, 1926. Serial No. 104,919. 9 Claims. (Cl. 24—233.)

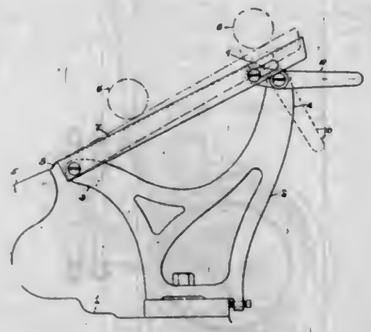
1. A bracelet hook comprising a body portion with a hook at one end and having an adjustable laterally-extending member cooperating with the hook for regulating the operating width of the engaging portion of the hook.

1,619,015. LOADING DEVICE. WILLIAM J. BOHN, St. Louis, Mo., assignor to Alvey Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 12, 1923. Serial No. 612,306. 6 Claims. (Cl. 198—26.)



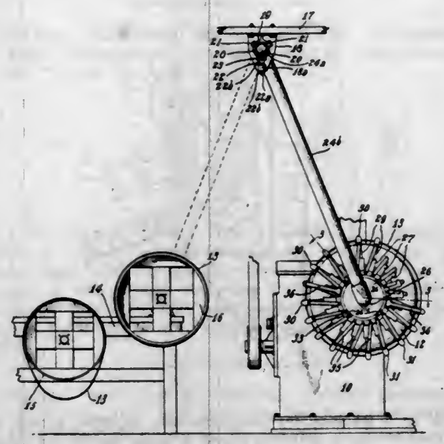
1. A loader for conveyers, comprising a feed-way terminating adjacent to said conveyer, gate members at the end of said feedway, said gate members being mounted on rock shafts vertically disposed on opposite sides of said feed-way to be operated thereby, spring members mounted on said rock shafts to permit passage of articles along the feed-way when the gate is closed and to prevent passage of articles when the gate is open, said spring members being in position to grip the sides of the next to the endmost article, and means for operating said rock shafts.

1,619,016. CLARIFICATION OF BEVERAGES. JACQUES DUCLAUX, Paris, France. Filed Dec. 5, 1922, Serial No. 605,086, and in France Dec. 6, 1921. 2 Claims. (Cl. 195—2.)



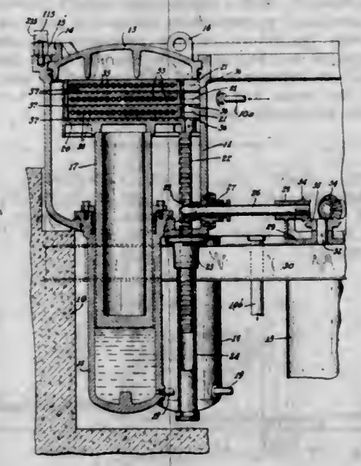
2. The method of clarifying and improving the keeping properties of fermented beverages containing material insoluble therein and living ferments which comprises passing the same through an ultra filter having a membrane containing nitro-cellulose.

1,619,017. MEANS FOR FINDING DIRECTION. RICHARD D. FAY, Nahant, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed June 8, 1918. Serial No. 238,839. 8 Claims. (Cl. 181—0.5.)



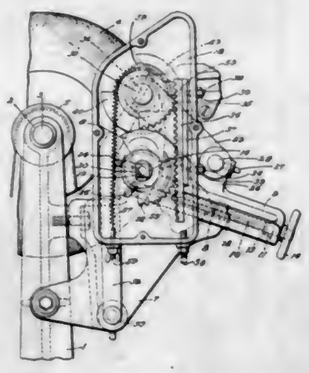
3. A mechanical sound direction-determining apparatus comprising a plurality of sound receivers, means for indicating to the observer the reception of sounds from any two of said receivers, and means located between said receivers and said indicating means and connected to both for selecting two of said receivers and equalizing the time of reception at said indicating means of the sounds from the selected receivers.

1,619,018. ADJUSTABLE ROLLER TRACK FOR GORDON PRINTING PRESSES. ROBERT J. FRACKELTON, Summit County, and FREDERICK C. SIXT, Cleveland, Ohio, assignors to The Chandler and Price Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 27, 1921. Serial No. 480,898. 4 Claims. (Cl. 101—342.)



1. In a platen printing press, the combination of a bed and a track for the passage of the inking rolls over the form, a second track independent of but adapted to form a continuation of said first-named track adjacent the ink-distributing disk, and means for raising said second track, said means also constituting a lock against accidental displacement.

1,619,019. TIRE-BUILDING METHOD AND APPARATUS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 11, 1922. Serial No. 574,227. 27 Claims. (Cl. 154—10.)

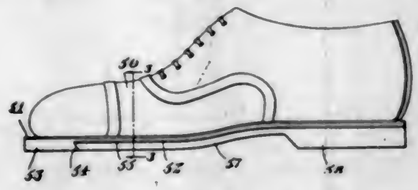


27. An apparatus for use in the manufacture of tires, comprising a drum and a tire form, an annular carrier movable from the drum to the form, and means associated with the carrier to hold a ring of tire material by its outer surface so as to leave its inner surface free to be placed over the form.

1,619,020. APPARATUS FOR VULCANIZING STRIP MATERIAL. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 29, 1924. Serial No. 689,235. 13 Claims. (Cl. 18—17.)

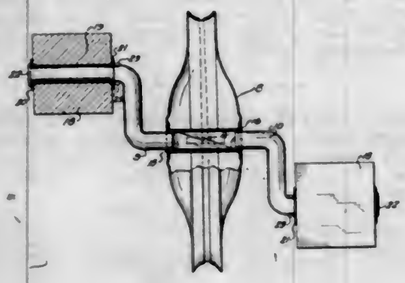
1. Apparatus for vulcanizing strip material, said apparatus comprising a vulcanizer casing providing an annular vulcanising chamber, an annular mold therein, means associated wtih said casing for holding said mold closed, and means for conducting a heating fluid into said chamber.

1,619,021. ABRADING MACHINE. JOSEPH GOULDBOURN, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 15, 1922, Serial No. 607,198, and in Great Britain Jan. 23, 1922. 21 Claims. (Cl. 57—92.)



1. In a machine for simultaneously grinding a pair of curved blades, a grinding wheel, a blade carrier for rocking a curved blade to be ground about its axis of curvature to present it in a predetermined relation to the periphery of the wheel, and a second blade carrier for rocking a like blade about its axis of curvature to present it in the same relation to the wheel at a different part of its periphery.

1,619,022. MANUFACTURE OF ALUMINUM CHLORIDE. FRANK W. HALL, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Dec. 30, 1921. Serial No. 525,876. 4 Claims. (Cl. 23—95.)

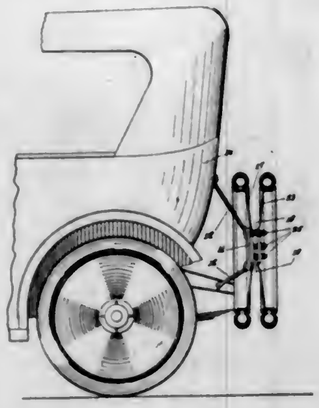


1. In the manufacture of aluminum chloride, the process that comprises passing an alumina-carbon mixture containing an excess of carbon through a retort, contacting the mixture with chlorin, continuously passing the excess carbon into a combustion chamber in free communication with the retort, causing combustion of the fuel thus admitted to the combustion chamber, and directing the resultant hot gases about the exterior of the retort to heat the same, and continuously removing from the retort the aluminum chloride vapors.

1,619,023. BOOT OR SHOE, COMPOSITE SOLE THEREFOR, AND METHOD OF MANUFACTURING SAME. BENJAMIN F. HARTWELL, Winchester, Mass. Filed May 27, 1926. Serial No. 112,150. 3 Claims. (Cl. 36—32.)

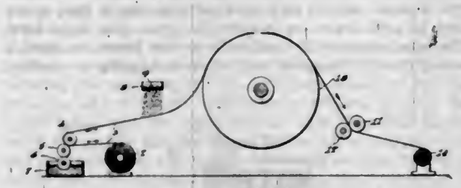
1. A composite sole, comprising a layer of rubber or rubber composition having a beveled reinforcing toe piece, a relatively thin midsole of crepe rubber adhered to said layer, and a crepe rubber outsole unified with said crepe rubber midsole, one end of the outsole being beveled to cooperate with the beveled end of the toe piece.

1,619,024. WHEEL AND CRANK. GOTTLOB F. HONOLD, Sheboygan, Wis., assignor to The Globe Company, a Corporation of Wisconsin. Filed Apr. 30, 1926. Serial No. 105,787. 4 Claims. (Cl. 208—68.)



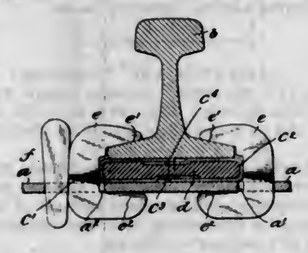
1. In combination, a wheel having a transverse opening, a pair of crank sections entering said opening and having a shouldered and notched engagement with each other, and a yielding sleeve member within said opening and enclosing the crank section portions therewithin.

1,619,025. HEAT TREATMENT OF STEEL. EDWARD F. KENNEY, Bethlehem, Pa. Filed Apr. 23, 1926. Serial No. 104,224. 2 Claims. (Cl. 148—13.)



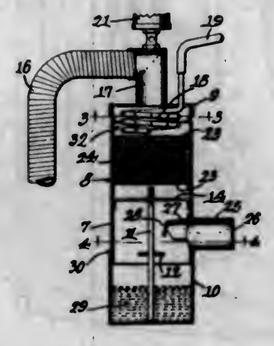
1. The process of heat treating a steel object which consists in rapidly cooling it from a temperature above to a temperature below the critical range, then equalizing at a temperature below the critical range but before the object has cooled to the blue-heat zone, and then cooling to atmospheric temperature.

1,619,026. CARRIER FOR SPARE DISK WHEELS. HERBERT V. LUDWICK, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 1, 1922. Serial No. 578,901. 4 Claims. (Cl. 224—29.)



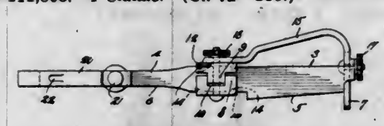
4. A combined spacing and securing member for spare disk wheel carriers or the like comprising a cap nut having a main body portion polygonal in cross section and provided at its open end with a convex face and at its closed end with a threaded pin in axial extension of the main body portion.

1,619,027. COATED PAPER AND PROCESS OF COATING PAPER. WILLIAM WALLACE MCLAURIN, Brookfield, Mass. Filed Mar. 31, 1922. Serial No. 548,817. 8 Claims. (Cl. 91—70.)



1. That improvement in the process of coating paper with an adhesive which consists in wetting the surface of the paper to be coated, and then applying to said surface a coating of powdered adhesive soluble in the liquid with which the surface is wet and then drying the paper.

1,619,028. SHOCK-INSULATED RAIL TRACK. ALFRED F. MASURY and EMIL C. FINK, New York, N. Y., assignors to The Rubber Shock Insulator Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 23, 1926. Serial No. 130,858. 5 Claims. (Cl. 238—283.)

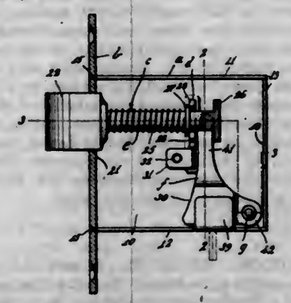


1. In a cushioning device between a rail and tie, a separate housing, a block of rubber completely confined by the housing and means to exert a force transverse to the axis of the rail to secure the housing between the rail and tie.

1,619,029. AIR WASHER FOR INTERNAL-COMBUSTION ENGINES. EARL V. MORRIS, Big Lake, Tex. Filed Sept. 21, 1926. Serial No. 136,885. 3 Claims. (Cl. 261—97.)

1. In a device of the class described, a receptacle provided at its upper end with an air outlet, and supplied near to its lower end with an air inlet, a filter in the receptacle between the inlet and the outlet, a distributing head in the receptacle above the filter, means for supplying vapor to the head, and a liquid container discharging downwardly on the filter, the head being centrally opened so that the container can discharge downwardly therethrough.

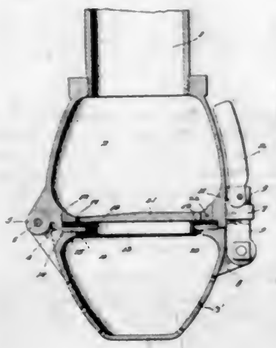
1,619,030. MASONRY JOINTING TOOL. NATHANIEL PAUL O'NEAL, Hope, Ark. Filed May 26, 1926. Serial No. 111,803. 4 Claims. (Cl. 72—138.)



1. In a device of the class described, a loop-shaped body, a collar about the body, means for securing the collar upon the body, a raker secured at one end to the collar by said means, the raker including an angularly disposed finger located transversely of the body, and means for securing the finger adjustably to one end of body.

1,619,031. WINDOW FASTENER. JOSEPH OSTROSKY, Jr., Duryea, Pa., and PAUL OSTROSKY, Detroit, Mich. Filed May 6, 1926. Serial No. 107,267. 3 Claims. (Cl. 292—240.)

1. A window fastener comprising a base adapted to be mounted on one sash, a member rotatably mounted upon said base and adapted to engage a keeper arranged upon another sash when rotated in one direction, and a gravity actuated lever pivoted on said base to cause one end thereof to slidably engage the bottom of the rotatable member when the latter is disengaged from the keeper, said lever having a lug adapted to engage an edge of said rotatable member when the latter is engaged with its keeper to lock it in engagement position.



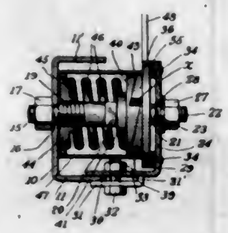
1,619,032. DOOR LATCH. STUART W. PARSONS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed May 21, 1926. Serial No. 110,792. 6 Claims. (Cl. 292—165.)

6. In a door latch of the character described and in combination, a casing having a face plate, a part formed of sheet metal and having side, top, bottom and rear walls and a removable sheet metal side plate; a bolt

slidably mounted in said casing and extending through said face plate; a sheet metal guide for said bolt and secured to said side wall; a screw for securing said side plate to said guide; a sheet metal lever having an arm operatively associated with said bolt; and a thumb piece engaging said lever.

1,619,033. VALVE. FREDERICK A. PERRENOT, San Antonio, Tex., assignor of one-half to Russell J. Kieffer, San Antonio, Tex. Filed Apr. 14, 1926. Serial No. 102,022. 2 Claims. (Cl. 251—123.)

2. The combination of a valve body, a member hinged thereto at one side and provided with a projection at its opposite side, a locking lug on the valve body, straps pivoted to the projection on the hinged member and adapted to extend therefrom at opposite sides of the locking lug and terminate above the locking lug, a lever pivoted between the upper ends of said straps and having a cam head to bear upon the locking lug, a gasket held by and between the hinged member and the valve body, and a valve disk mounted within the body to seat upon the gasket.

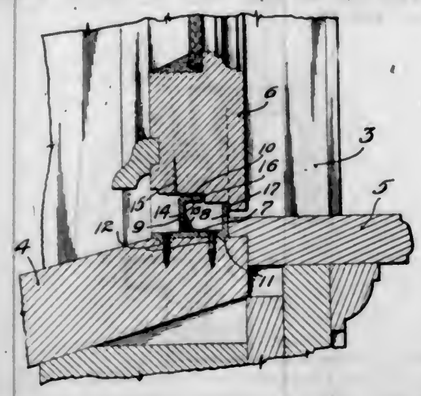


1,619,034. SECTIONAL CONDENSER. JOSEPH PRICE, New York, N. Y., assignor to The Griscom-Russell Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 29, 1924. Serial No. 740,440. 4 Claims. (Cl. 257—234.)

1. Heat exchange apparatus of the class described comprising a plurality of heat interchange units including an initial unit, an intermediate unit and an end unit, arranged one above the other, heat transferring tubes in said respective units for conveying one of the heat transferring fluids, baffles in said intermediate unit extending from the ends thereof toward the middle to thereby deflect the incoming fluid toward the middle of the unit in substantial parallelism with said tubes, inlets near both ends of the units on one side of said baffles, and outlets near both ends of the units on the opposite sides of the baffles so that the incoming fluid is led through the apparatus in a plurality of parallel paths.

1,619,035. SHOCK ABSORBER. ALBERT RAFTER, Newark, N. J., assignor to Rafter Machine Company, Newark, N. J., a Partnership comprising John Rafter, Albert Rafter, and John C. Rafter. Filed Dec. 15, 1922. Serial No. 607,025. 1 Claim. (Cl. 267—9.)

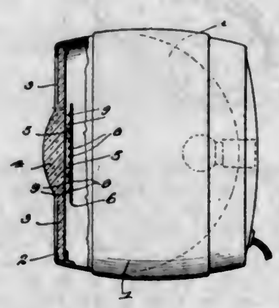
In a shock absorber, the combination with an axle having elliptic springs and a chassis frame supported by the springs, said axle provided with a housing, of a bracket fixed on said springs to engage said housing, a raised lug on said bracket, a link pivoted in the lug to extend substantially upright above said chassis frame, a lever pivoted to said link, said lever having a disc, a bolt fixed in said frame on which the lever disc is pivoted, a housing clamped by said bolt to the frame, a friction ring fixed on the outer wall of said housing to contact



with said disc, a plurality of cams on the inner face of the disc, a collar provided with a square opening and having complementary cams, said collar being slidable on a squared section of said bolt, a spring urging said collar towards the disc, means on said bolt to adjust the pressure of said spring, and a tubular casing interposed between said disc and frame to enclose all of said cams, the spring and its adjusting means.

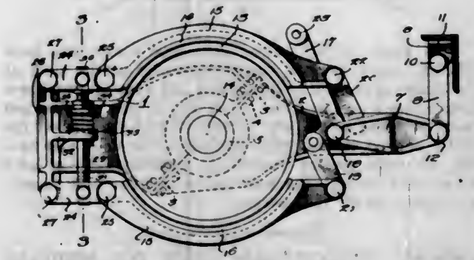
1,619,036. CLARIFYING AND PURIFYING LIQUIDS AND WASTE WATERS. ANDREAS JOHAN RAVNESTAD, Fredriksstad, Norway. Filed Oct. 26, 1923, Serial No. 671,052, and in Norway Sept. 28, 1920. 5 Claims. (Cl. 210—23.)

1. The process of clarifying and purifying liquids and waste waters containing suspended organic, mineral or colloidal substances comprising the addition of an organic colloid, and of a flocculating agent for coagulating said colloid, and of a settling accelerator.



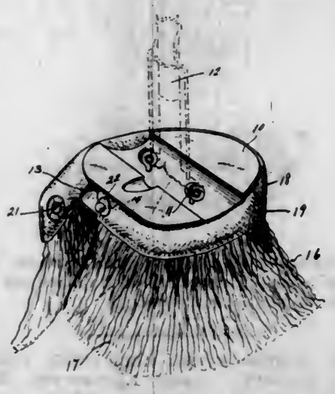
5. The process of clarifying and purifying liquids and waste waters containing suspended substances comprising the addition of alginates in the presence of sulphuric acid and a settling accelerator.

1,619,037. WEATHER STRIP FOR INSWINGING CASEMENTS. FRANK REESE, Minneapolis, Minn. Filed Sept. 11, 1922. Serial No. 587,529. 1 Claim. (Cl. 20—69.)



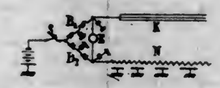
The combination with a window frame and a swinging casement, the former having a sill and a stool extending above said sill, of a one-piece metallic sill strip secured to the sill and a supplemental joint strip secured to the inner edge of said casement, said sill strip having upstanding inner and outer flanges, the former of which engages the outer edge of the stool and projects thereabove, said outer flange being located materially inward of the outer edge of the sill strip and the outer face of the casement and having a horizontal inward extension lying in a plane above the upper edge of the inner flange with its inner edge spaced materially outward thereof, screws securing the sill strip to the sill and extending through holes in said sill strip, certain of which are between the inner flange and the inner edge of said extension on the outer flange, the under edge of the casement having inner and outer rabbets, the former of which overlaps the inner flange and the latter of which overlaps the inner edge of said extension on the outer flange, said supplemental joint strip being U-shaped in cross section and arranged to engage said extension of the outer flange, and a drain hole in the outer flange.

1,619,038. AUTOMOBILE LENS. LOUIS E. RICE, New Martinsville, W. Va. Filed July 13, 1926. Serial No. 122,128. 3 Claims. (Cl. 240—48.4.)



2. A non-glare lens comprising a transparent body having an intermediate light focusing area, said body being provided at its side surface and adjacent the edge of the light focusing area with posts of transparent material, and a shutter plate having lugs engaging said posts, said shutter plate being provided with openings disposed opposite the light focusing area of the lens.

1,619,039. BRAKE. LESLIE W. RICHARDS, St. Louis, Mo., assignor to St. Louis Car Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 8, 1926. Serial No. 93,314. 5 Claims. (Cl. 188—75.)

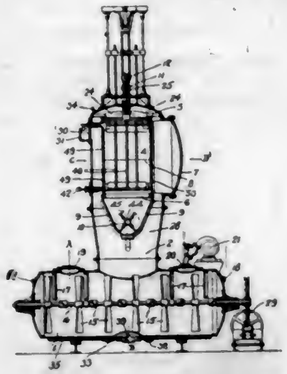


1. In a device of the character described, a drum, a bracket mounted concentrically with said drum, said bracket being free to rotate, a link connecting one end of said bracket to the frame of the vehicle, a pair of shoes pivotally mounted on said bracket, and an operating member pivotally mounted on said bracket and connected to the opposite end of said shoes.

1,619,040. MOP. PHOEBE M. ROCHE, Cleveland, Ohio. Filed Oct. 30, 1924, Serial No. 746,853. Renewed July 20, 1926. 2 Claims. (Cl. 15—229.)

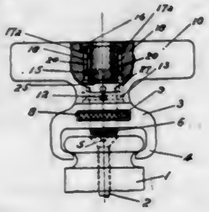
1. The combination with a mop head having formed therein a groove, of a mopping element having an enlarged band adapted to be positioned in said groove, a male fastener carried by one end of said band, a female fastener carried by the other end of said band, said female fastener having a socket and means upon the head at the base of the groove for entering the socket of the male fastener.

1,619,041. DUPLEX ARRANGEMENT FOR TELEGRAPH CABLES. HANS WERNER GEORG SALINGER, Berlin, Germany. Filed Feb. 8, 1926, Serial No. 86,954, and in Germany Jan. 31, 1925. 1 Claim. (Cl. 178—63.)



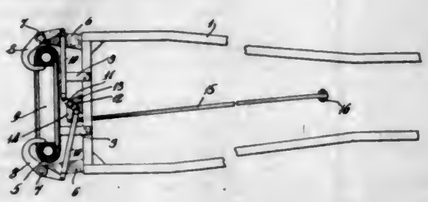
Duplex arrangement for telegraph cables comprising a Wheatstone bridge, the cable and an artificial line constituting two arms thereof and means capable of improving the shape of the transmitted current being inserted in the two other resistance arms of the bridge and being such that they allow the passage of transmitted currents of the desired frequency without substantially reducing the received currents of the same frequency and that they do not allow the passage of transmitted currents of undesired frequencies and form a short circuit for the receiver as regards these frequencies.

1,619,042. APPARATUS FOR TREATING LIQUIDS WITH DECOLORIZING, PURIFYING, AND FILTERING AGENTS AND FOR SEPARATING UNDISSOLVED SUBSTANCES FROM LIQUIDS. JOHAN NICOLAAS ADOLF SAUER, Amsterdam, Netherlands. Filed Nov. 2, 1921, Serial No. 512,355, and in Sweden Nov. 2, 1920. 12 Claims. (Cl. 210—182.)



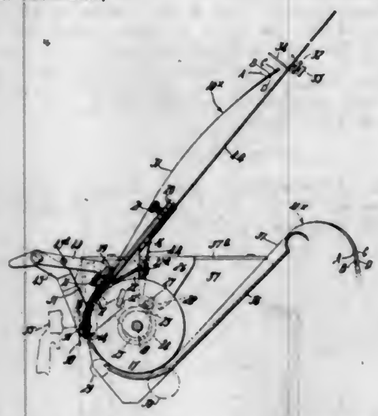
1. An apparatus of the class described, comprising a mixing vessel, a filter arranged above said vessel and com-

municating therewith, a collector located between the filter and the mixing vessel, a mixer in said collector, and



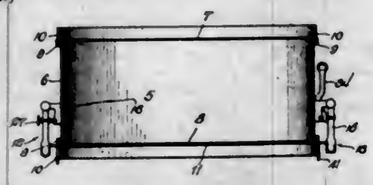
a pump having a connection to said collector, another connection to the upper portion of the filter, and a third connection to the mixing vessel.

1,619,043. SCREW-DRIVER MECHANISM FOR INSULATOR SCREWS. ALBERT T. SCHEIWER, Erie, Pa. Filed Oct. 25, 1924. Serial No. 745,781. 4 Claims. (Cl. 145—50.)



4. In a screw driver mechanism for insulator screws, the combination of a driver; a frame in which the driver is mounted comprising hooks adapted to engage an insulator; a screw thread formed on the driver; means for feeding the driver by means of the screw thread relatively to the frame; a handle; and a ratchet driving connection between the handle and driver comprising means for locking the handle with the driver and for releasing the handle from the driver in either direction.

1,619,044. SPARE-TIRE LOCK. KARL SCHEER, New York, N. Y. Filed Nov. 23, 1923. Serial No. 676,492. 3 Claims. (Cl. 224—29.)

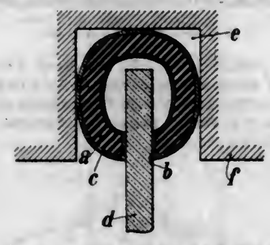


1. An automobile accessory comprising a cradle adapted to support a demountable spare tire, means for securing said cradle to an automobile, a hook-shaped lever swingably mounted in spaced relation to said means, said lever having its free end abut the demountable rim of said tire for securing the tire in the cradle, a hand lever adapted to be mounted adjacent the driver's seat, and means operatively interconnecting said levers.

1,619,045. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 10, 1924. Serial No. 725,129. 26 Claims. (Cl. 197—126.)

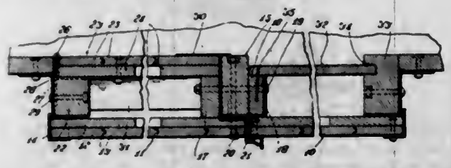
1. In a typewriting machine, in combination, a typewriter frame, a revoluble platen mounted thereupon, means on said frame for carrying a fan-fold web around said platen, a series of typewriter ribbons extending longitudinally of the machine through and transversely of the folds of said web, a series of blades supporting the ribbons and extending the length of the platen and also projecting through the folds of said web, each of said blades being arranged separately to support a ribbon and having means for securing the opposite ends of the ribbon thereon, means for removably securing said blades, each at one end only, upon said frame.

1,619,046. DRUM. JAMES H. WARD, Chicago, Ill. Filed Apr. 9, 1923. Serial No. 630,975. 9 Claims. (Cl. 84—415.)



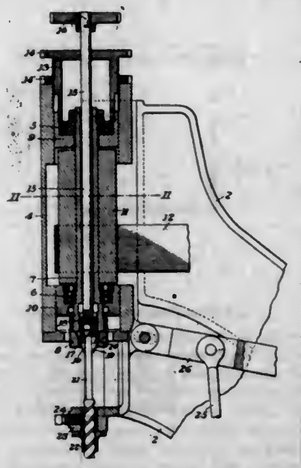
1. A drum having snares extending across one head thereof; snare-engaging members secured to the shell of the drum; a two-part strain hoop, the ends of which are spaced apart adjacent the snares and a pair of U-shaped snare bridging plates, one at each end of the snares, the major portion thereof extending above the hoop and having the ends thereof secured to adjacent ends of said hoop parts to join the hoop parts together and to provide openings for the snares.

1,619,047. WINDOW-GLASS GUIDE FOR VEHICLES AND THE LIKE. CHARLES TORRES WEYMANN, Paris, France. Filed Dec. 4, 1922. Serial No. 604,950, and in France Dec. 6, 1921. 2 Claims. (Cl. 296—44.5.)



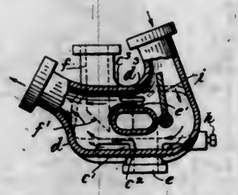
2. In combination, a window frame having a rabbet of uniform width, a slidable window glass, a substantial

cylindrical rubber tube having a longitudinal slot, said glass being gripped between the edges of said slots, the



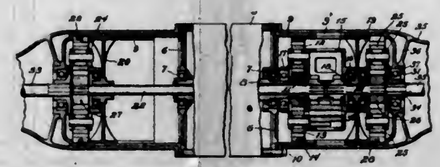
rubber tube being in engagement with the side walls of said rabbet and adapted to twist or turn therein when the window glass is displaced laterally.

1,619,048. RAILROAD-CAR-DOOR CONSTRUCTION. GORDON L. WHIPPLE, Omaha, Nebr., and LEWIS K. SILLCOX, Riverside, Ill. Filed Oct. 17, 1924. Serial No. 744,096. 8 Claims. (Cl. 20—22.)



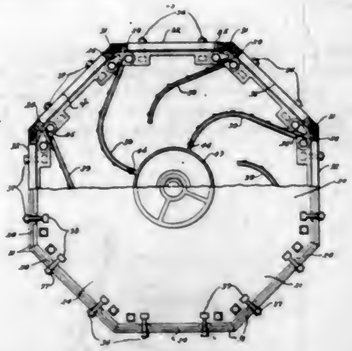
1. In a railroad car, the combination of a main door and an auxiliary door slidably mounted on the car exterior, a movable door-post carried by the auxiliary door, a spacing block secured to said movable door-post, with an inner door hingedly secured to one of the permanent door-posts of the car so as to swing inwardly into parallel relation with the car side wall, said inner door, when closed, being arranged in lapping relation with said permanent door-post and said spacing block.

1,619,049. MORTISING AND BORING MACHINE. CLINTON G. WILDERSON, Leetonia, Ohio, assignor to The Crescent Machine Company, Leetonia, Ohio, a Corporation of Ohio. Filed Oct. 10, 1923, Serial No. 667,658. Renewed Dec. 27, 1926. 6 Claims. (Cl. 144—78.)



1. In a mortising and boring machine, a support, a hollow spindle journalled in said support and having a chuck holder at its lower end, a chuck mounted within said chuck holder, an adjustable member mounted within said hollow spindle for operating said chuck, a hollow chisel carried by said support, a bit within said hollow chisel held by said chuck, and means for adjusting said chuck holder with respect to said support whereby to adjust said bit with respect to said chisel, substantially as described.

1,619,050. APPARATUS FOR VAPORIZING HYDROCARBON MIXTURES. GOTTFRIED WIRRER, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed July 27, 1923. Serial No. 654,099. 2 Claims. (Cl. 123—122.)

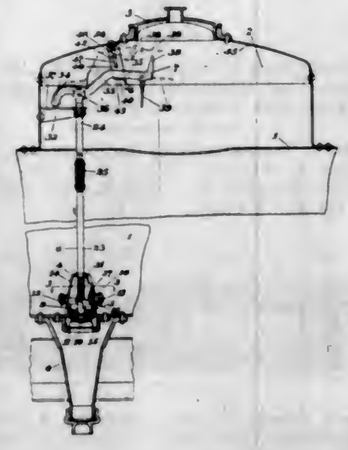


1. In combination with an inlet manifold and a metering device for hydrocarbon fuel, a collecting chamber having an inclined bottom wall, a passage for exhaust gases formed in said wall adjacent the extreme inclined portion thereof, a second passage formed in and adjacent to a wall of the chamber remote from first mentioned passage, a third passage substantially remote from a wall of said chamber and means to control the flow of exhaust gases in the second and third passage.

1,619,051. BALANCED REAR-AXLE DRIVE. AXEL HJ. ASPROOTH, Baltimore, Md., and ALFONSO M. LEONI, Philadelphia, Pa.; said Leoni assignor to Electro-Motive Devices, Inc., Philadelphia, Pa., a Corporation of New Jersey. Filed Sept. 4, 1923. Serial No. 660,714. 3 Claims. (Cl. 74—99.)

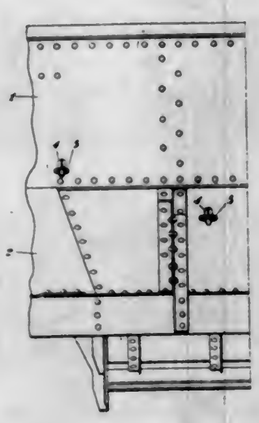
1. A rear axle drive including a motor, a first reduction gear set, a hollow shaft connecting it with the motor, a differential driven by said gear set and supported therewith, as a unit, independently of the motor support, second reduction gear sets, one on each side of the motor, driving connections between the differential and second reduction gear sets, and an axle housing with web extensions in which said driving connections are journaled and which carry one of the bearings for the differential and one of the bearings of the respective second reduction gear sets.

1,619,052. CYLINDER FOR PAPER-PULP MACHINES. NATHAN H. BERGSTROM, Neenah, Wis. Filed July 21, 1924. Serial No. 727,237. 2 Claims. (Cl. 141—12.)



1. A cylinder for paper pulp machines, comprising a rotatable polygonal frame, a cylinder member of double conical shape removably secured within said frame, spaced bucket members within said frame for directing liquid to the surface of said cylinder member, longitudinally extending grate members removably secured to the frame, and screen members removably secured to the frame and grate members.

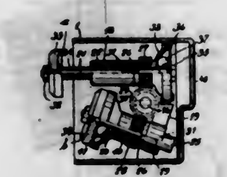
1,619,053. PILE. EDWARD BIGNELL, Lincoln, Nebr., assignor to Concrete Tiling Co., Seward, Nebr., a Corporation of Nebraska. Filed June 20, 1924. Serial No. 721,221. 2 Claims. (Cl. 61—80.)



1. In combination with a pile having a nozzle at its nose and a transverse socket at its upper end, tongs having jaws for engaging the socket, a jetting frame carried by the tongs and surrounding the pile, the jetting frame having communication with the nozzle, means for supplying water through the frame of the nozzle to remove material in advance of and around the pile and means for releasing the tongs from the pile so that the tongs can be withdrawn and remove the jetting frame.

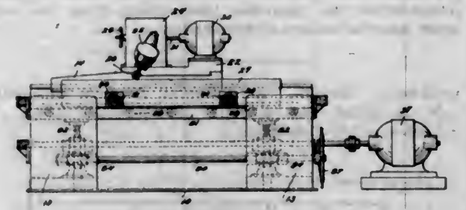
1,619,054. DISCHARGE DEVICE FOR TANKS. MINOT C. BLEST, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Dec. 13, 1921. Serial No. 522,076. 21 Claims. (Cl. 137—21.)

1. A discharge valve device for tanks comprising a valve seat member, a valve plug, a rod for operating said plug, a projection on said rod, and adjustable means on said valve seat member adapted to be engaged by said projection to hold said valve plug in closed position.



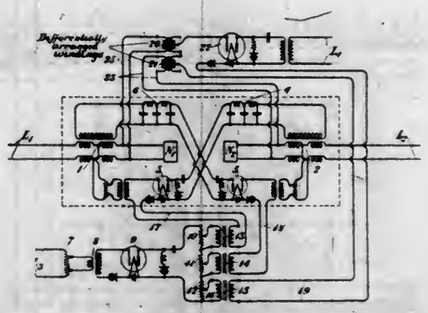
1,619,055. POKE-HOLE COVER. MINOT C. BLEST, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 28, 1924. Serial No. 695,636. 5 Claims. (Cl. 105—355.)

1. The combination with a car body having a "poke hole" formed therein, a bracket mounted on said body adjacent said "poke hole," a cover for said "poke hole"



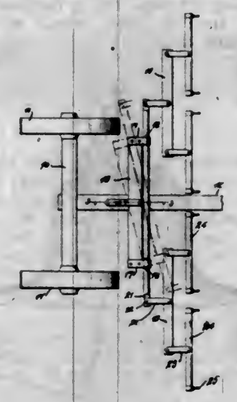
rotatably and slidably connected with said bracket, and means on said bracket adjacent the connection between the bracket and cover adapted to be engaged by said cover to lock said cover in closed position.

1,619,056. GRINDING APPARATUS FOR MEAT-SLICING MACHINES AND THE LIKE. VICTOR HERBERT MAGNUS BRUNSKOG and JOSEF AUGUST NORDIN, Stockholm, Sweden, assignors to Aktiebolaget Stille-Werner, Stockholm, Sweden. Filed Dec. 2, 1925, Serial No. 72,805, and in Sweden Oct. 24, 1925. 3 Claims. (Cl. 51—247.)



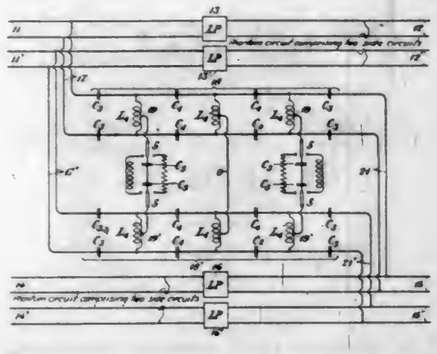
1. Apparatus for grinding the disc-knife of a meat-slicing machine, comprising grinding members, said members being positively driven by the driving means of the machine, the rotary velocity of the grinding members having a constant relation to the rotary velocity of the disc-knife, and movable members subjected to the action of centrifugal force, said movable members being arranged to automatically move the grinding members into their grinding position only when a predetermined rotary velocity is attained.

1,619,057. MILLING MACHINE. JOHN J. COFFEY, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Mar. 29, 1922. Serial No. 547,790. 8 Claims. (Cl. 90—15.)



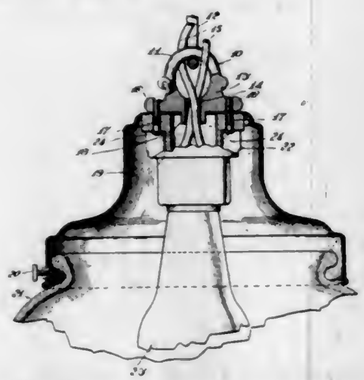
1. A milling machine comprising in combination, a stationary bed, a tool carriage movable longitudinally thereon and means for moving said tool carriage, including a non-rotatable threaded rod extending longitudinally of the bed, an internally threaded sleeve having threaded engagement with the rod and rotatably secured to the tool carriage, a rotatable shaft arranged parallel to said non-rotatable threaded rod, a motor for rotating said shaft, and change speed gearing movable with the tool carriage and operatively connecting the rotatable shaft and said rotatable sleeve.

1,619,058. TELEPHONE REPEATER STATION. GEORGE CRISSON, Hackensack, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 7, 1922. Serial No. 534,721. 8 Claims. (Cl. 179—170.)



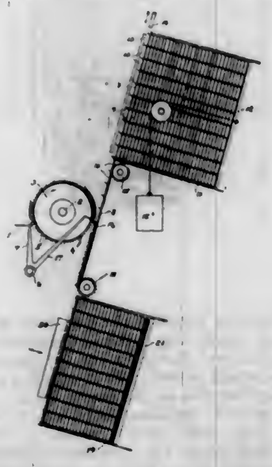
1. In combination with a transmission line including a two-way repeater and net-works for balancing the sections of the lines interconnected by the repeater, a listening circuit, and circuits bridged across the terminals of the networks associated with the line sections for associating said listening circuit with said repeater.

1,619,059. FOUR-HORSE-WAGON EVENER. WILLIAM M. CROW, Cole, S. Dak. Filed Oct. 26, 1923. Serial No. 670,909. 1 Claim. (Cl. 278—9.)



In a four-horse wagon evener, in combination, a wagon pole, a main bar centered crosswise upon the said pole and eccentrically pivoted thereto with its opposite ends terminating inwardly of the wagon wheels to clear the same when making a turn, a hollow pipe rotatably mounted on the main bar adjacent the forward edge thereof, said hollow pipe being of such length as to project an appreciable distance beyond each end of the main bar and said main bar being so mounted with respect to the wagon wheels as to space the said pipe a sufficient distance forwardly of the wagon wheels to avoid striking the wheels when making a turn, a forwardly projecting connecting member at each end of the said hollow pipe adapted to be normally maintained in a horizontal plane by the pull of the draft animals, a secondary bar centrally pivoted to the outer end of each connecting member, and a whiffletree centrally pivoted at each end of each secondary bar.

1,619,060. SYSTEM OF MULTIFREQUENCY CIRCUITS. RALPH W. DEARDORFF, Kensington, Calif., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 8, 1924. Serial No. 691,455. 8 Claims. (Cl. 179—15.)

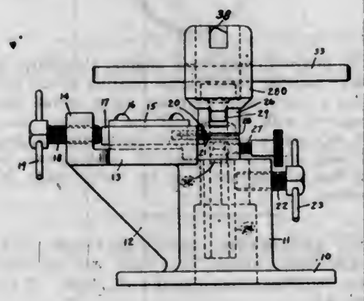


1. In combination, two phantom circuits each comprising a pair of side circuits, low pass filters interposed in said side circuits, and connections between the parts of the side circuits one way of one pair to the parts of the respective side circuits one way of the other pair, these connections each comprising a high pass wave filter and means to shunt out phantom currents across said high pass filters.

1,619,061. LIGHTING FIXTURE. ANTON DVORAK, Berwyn, Ill., assignor to Beardslee Chandelier Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed May 26, 1924. Serial No. 715,845. 1 Claim. (Cl. 240—78.)

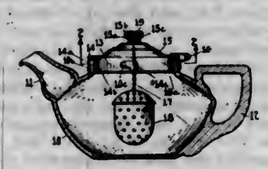
In a lighting fixture, a supporting member provided at top with a loop portion to receive a suspending element, the base of the member being centrally provided with an apertured boss on the lower face for the passage of electric wires, said base being extended on opposite sides of the central opening with a flat bottom face having a tapped opening at each end, a lamp holding socket member having an apertured laterally disposed upper portion, a shade or bowl-holding shell centrally apertured at top to receive said apertured boss and provided with openings on opposite sides registering with the tapped openings in the base of the supporting member, the top of said shell being clamped between the supporting member and said socket member, and fastening means disposed through the lateral portion of the socket member, the openings in said shell and the tapped openings in the bottom of the extended portion of said supporting member, whereby a plurality of independent suspension points on opposite sides of the median line of the supporting member are provided.

1,619,062. MEANS FOR PACKING CIGARETTES. GUNNAR CHRISTIAN EKSTRÖM and GUSTAF ÖRSTRÖM, Stockholm, and BROR ANDERS EMIL JOHNSON, Appelviken, Sweden, assignors to Aktiebolaget Gerh. Arehns Mekaniska Verkstad, Stockholm, Sweden, a Corporation of Sweden. Filed July 7, 1921, Serial No. 483,067, and in Sweden June 11, 1921. 1 Claim. (Cl. 226—5.)



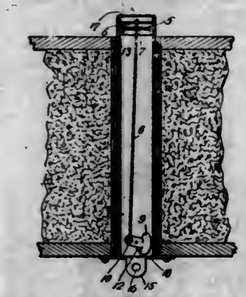
In a device for transmitting cigarettes, oval in cross section, from a cigarette making machine to a carrier, in which the cigarettes are held in a distinct position and by means of which they are moved to a packing device, the provision of a substantially horizontal, stationary support, on which the cigarettes are delivered from the cigarette producing members of the said machine, a member moving the cigarettes positively and transversely on the said support, a conveyer located at the side of the said support and provided with holders, in which the cigarettes are placed by the moving member, means moving the said carrier past the said conveyer, and a member transmitting the cigarettes transversely from the conveyer into the holders of the carrier.

1,619,063. VESSEL. ERIC HAROLD EWERTS, Elizabeth, N. J. Filed Nov. 4, 1921. Serial No. 512,862. 5 Claims. (Cl. 114—79.)



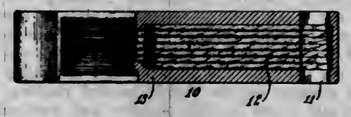
3. In a vessel, the combination of a keel member; a plurality of transverse frames each of which consists of a pair of aligned bottom angle members having their adjacent ends welded to the keel member, the leg portions of the angle members extending downwardly and the outer ends of the angle members being scarfed, vertical angle members having lower scarfed ends which fit the scarfed ends of the first angle members and are welded thereto, the upper ends of the vertical angle members being scarfed and the leg portions of said vertical members extending outwardly, transverse top or deck angle members having scarfed ends which fit the upper scarfed ends of the vertical angle members and are welded thereto, the leg portions of the last-named angle members extending upwardly; and plates welded to the leg portions of the bottom, the vertical, and the top or deck angle members of the frames; and to one another and constituting, with the keel member, the sole connecting means between frames, said plates being provided with inwardly-projecting flanges which extend longitudinally of the vessel, which fit in recesses provided therefor in the leg portions of the angle members and which constitute longitudinal stringers for the vessel, the edges of the plates adjoining the keel member being secured to the latter.

1,619,064. ROLLING DEVICE FOR BEADING OPERATION. DAVID FERGUSON, Indianapolis, Ind., assignor to Eclipse Tool Company, a Partnership of Indianapolis, Ind. Filed Feb. 23, 1923. Serial No. 620,748. 17 Claims. (Cl. 153—9.)



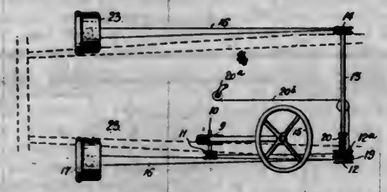
1. A rolling mechanism adapted to receive a sleeve shaped stationary piece of work and a sleeve type female piece of work engaged over said stationary work in free rotatable relation thereto, said mechanism having a relatively stationary roller means adapted to be brought into rolling contact with said female work; a headed rod means telescoped within said pieces of work, having a concentric groove within said stationary work, the head of said rod means engaging said female work; and a screw means threaded thru the wall of said stationary work and adapted to engage the lower corner of said groove and thereby cam said rod means longitudinally in said members for retaining said female work on said stationary work.

1,619,065. TEAPOT OR COFFEEPOT. SOLOMON FORMAN, New York, N. Y. Filed Sept. 17, 1924. Serial No. 738,122. 5 Claims. (Cl. 53—3.)



1. In a device of the character described, the combination of a vitreous dispensing container having a top opening, a demountable metallic closure member for said opening, said member comprising a base ring of U-shaped cross-section adapted to engage the rim about said opening and a cover hinged to said ring, said cover having a vertically perforated knob centrally mounted thereon, and a tea ball having a chain upwardly extending through said knob, said knob having a slot for engaging said chain lengthwise thereof for adjustably hanging the tea ball from said cover in the container.

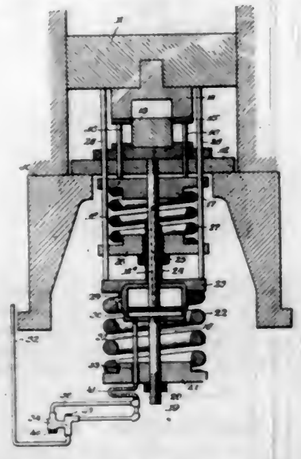
1,619,066. AUTOMATIC AIR AND GAS CHECK VALVE. JOHN M. FOTCH, Chicago, Ill. Filed Nov. 22, 1924. Serial No. 751,592. 8 Claims. (Cl. 98—51.)



1. A vent of the class described comprising a tube, a seat near the top of the tube, a disc cooperating with said seat, a weight pivoted in the tube, a connecting rod extending from the disc to one arm of the pivoted weight, a means for limiting the movement of the weight.

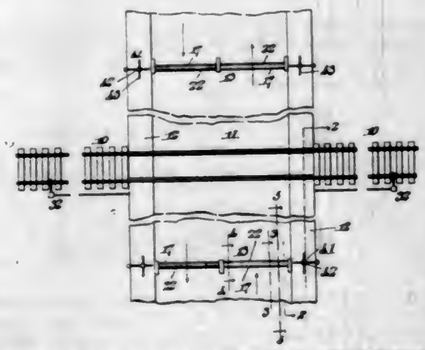
1,619,067. DOORCHECK STRAP. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 5, 1924. Serial No. 697,019. 1 Claim. (Cl. 16—82.)

A door check strap comprising a rubber structure having imbedded therein a single strand of material disposed in a plurality of adjacent longitudinally disposed, laterally abutting loops, said loops being open at the ends of the strap to provide apertures in the strap and having their intermediate portions all secured closely together throughout the rest of the strap.



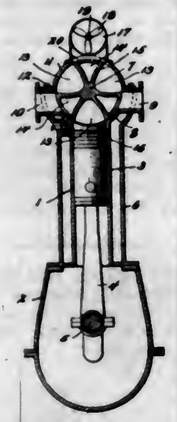
1,619,068. DIRIGIBLE HEADLIGHT. JAMES HYNDES GILLIES, Hobart, Tasmania, Australia. Filed Feb. 15, 1926, Serial No. 88,680, and in Australia Aug. 22, 1925. 2 Claims. (Cl. 240—62.)

1. In vehicle head lamps, a shaft on the steering worm wheel, a pulley on the shaft, a countershaft and pulleys thereon operated from said worm wheel shaft, flexible wire cords on the worm wheel and countershaft pulleys, lamps on pillars on the vehicle body and a pulley on each lamp pillar over which a cord passes from a countershaft pulley, brackets on the vehicle body, a lamp and pillar in each bracket, a pulley on each lamp pillar over which a cord from a countershaft pulley passes, a recess at one side



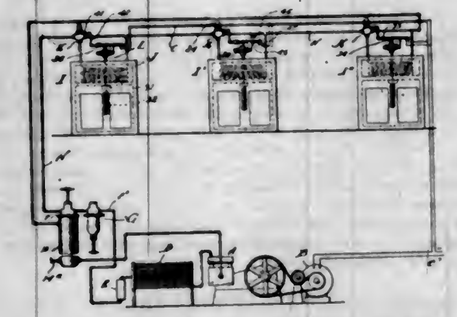
of each pillar, a reaction plate fulcrumed in each bracket and a spring held in each bracket that presses a plate against a pillar, the pillars that carry the lamps being made hollow to a point below the part recessed.

1,619,069. BLANK-HOLDING MEANS. RUDOLPH W. GLASNER and JOHN NELSON, Chicago, Ill., assignors to Marquette Tool & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 6, 1924. Serial No. 730,352. 23 Claims. (Cl. 113—46.)



1. A draw press including a forming die, a movable element co-operating with the die, a blank holding member, resiliently yielding means for resisting the movement of the blank holding member, a second resiliently yielding means also operable to resist the movement of the blank holding member, means responsive to the movement of the said movable element and operating to relieve the pressure of the second recited yielding means upon the said blank holding member, and fluid pressure means operating to retard the return movement of the said blank holding means when the said movable member recedes.

1,619,070. RAILWAY-CROSSING GUARD. WILLIAM H. GOLDING, Merrick, N. Y. Filed Feb. 28, 1924. Serial No. 695,769. 6 Claims. (Cl. 39—6.)

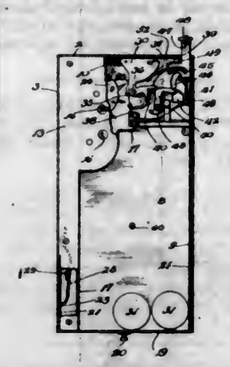


1. In a device of the class described, a barrier member mounted for oscillation upon a roadway, means normally and yieldably maintaining said barrier in obstructing position, a latch member for holding said barrier so positioned, and an electro-magnet for operating said latch member.

1,619,071. INTERNAL-COMBUSTION ENGINE. WILBURN H. HENDERSON, El Paso, Tex. Filed June 27, 1923. Serial No. 648,047. 7 Claims. (Cl. 123—78.)

1. In an internal combustion engine, a cylinder, a piston, a valve member rotatable in relation to the cylinder and having a combustion chamber which moves into and out of registry with the bore of the cylinder, means internal of said valve member for constantly cooling the walls of said combustion chamber, and means for inducing a flow of cool air over the outer walls of said valve member.

1,619,072. AUTOMATIC REFRIGERATION SYSTEM. GEORGE HILGER, Chicago, Ill. Filed Aug. 20, 1923, Serial No. 658,254. Renewed Oct. 6, 1926. 2 Claims. (Cl. 62—4.)

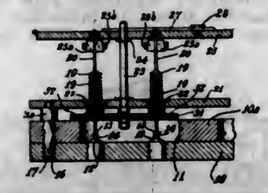


1. A refrigeration system comprising, in combination, a feed line, a condenser and compressor supplying liquid refrigerant to said feed line, a valve for expanding the liquid refrigerant into said line at constant pressure, a succession of refrigerating coils each having its inlet and outlet communicating with said feed line, individual thermostatic valves controlling the flow of refrigerant to each of said coils, a common return line leading from said feed line beyond the outlet of the last coil, and a control valve interposed in said feed line between said expansion valve and the first refrigerating coil, said valve being adapted to regulate the flow of refrigerant to all of said coils solely under the control of the temperature in said return line.

1,619,073. COIN BANK. JOSEPH B. INGALLS, Chicago, Ill. Filed Feb. 23, 1923. Serial No. 620,819. 6 Claims. (Cl. 194—61.)

1. In a coin bank, the combination of a counting mechanism, a trip at one side of the path of an inserted coin

for actuating said mechanism, means extending into the path of an inserted coin for operating the trip, means extending into the path of the coin for holding said trip normally inoperative, a pusher adapted to engage an in-

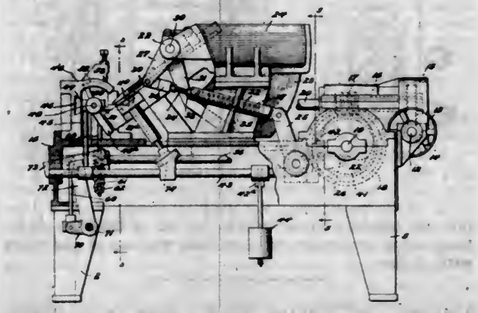


serted coin, and means for operating said pusher whereby the coin will be caused to release the stop device and actuate the trip whereby to operate the counting mechanism.

1,619,074. LUBRICANT. HERBERT L. JOHNSON, Brooklyn, N. Y., assignor to Standard Development Company, a Corporation of Delaware. Filed Nov. 24, 1923. Serial No. 676,853. 11 Claims. (Cl. 87—9.)

10. A lubricant which comprises a mineral lubricating oil containing a water-soluble sulfonic compound derived from mineral oils and an non-mineral oleaginous vehicle.

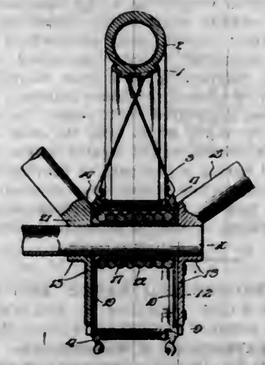
1,619,075. WASHER-FEEDING APPARATUS. WALDEMAR D. KMENTT, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1923. Serial No. 675,425. 7 Claims. (Cl. 18—1.)



1. Washer-manipulating apparatus comprising a frame structure, a washer-guiding pin mounted thereon and having a freely projecting lower end portion, and a pick-off device adapted to release in succession washers stacked on said pin while supporting the remainder of the stack, said pick-off device comprising three plates secured together in face-to-face contact, the upper and lower plates being adapted alternately to support a stack of washers mounted on said pin as the plates are actuated through successive movements, and the middle plate being so formed as to permit the free passage of washers from the upper to the lower plate.

1,619,076. CLEANSING AND POLISHING AGENT. RUDOLPH A. KUEVER, Iowa City, Iowa, assignor to Pepsodent Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 12, 1924. Serial No. 755,369. 5 Claims. (Cl. 167—9.)

1. A dentifrice comprising a cleansing and polishing agent consisting of calcium citrate.

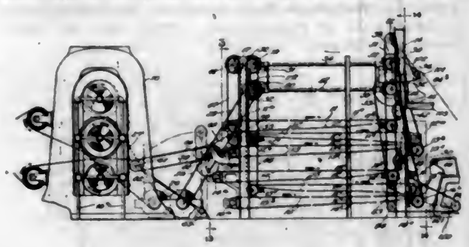


2. A dentifrice comprising calcium citrate and a substance having an acid reaction.

1,619,077. WORK-HANDLING MECHANISM FOR BOLT MACHINES. JAMES A. KINNEY, Lebanon, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Dec. 29, 1921. Serial No. 525,646. 19 Claims. (Cl. 10—169.)

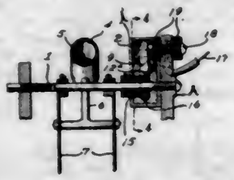
7. In a machine of the kind described, in combination, means for gripping a blank and holding the same in fixed position, an inclined chute for delivering blanks, a carrier for receiving blanks from said chute and delivering the same direct to said gripping mechanism, means for moving said carrier back and forth between said chute and gripping mechanism, a fixed cam, and means connected with said carrier and engaging said cam for moving said carrier into an inclined position when adjacent said chute and into a horizontal position when adjacent said gripping mechanism.

1,619,078. SHOCK-ABSORBING WHEEL. ISAAC MACHLIN LADDON, Dayton, Ohio. Filed May 11, 1923. Serial No. 638,249. 1 Claim. (Cl. 301—136.)



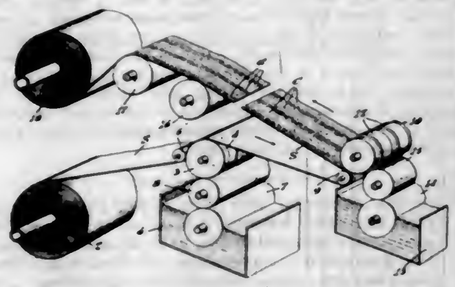
In combination in a resilient wheel, a cylindrical bearing member, spaced circular end plates fixed to opposite sides of said member, a supporting rod, a vertical slide in one of said end plates, a slide member guided in said slide, said rod being mounted in said slide member to move vertically therewith, a sleeve on said rod between said end plates, a semi-circular saddle device having a concave lower surface fitting said sleeve, means for rigidly attaching said saddle device to one of said end plates, and shock absorbing means wound circularly about said saddle device and said sleeve.

1,619,079. METHOD AND APPARATUS FOR PREPARING PLASTIC STOCK. CHARLES W. LEGUILLON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 26, 1923. Serial No. 653,910. 29 Claims. (Cl. 18—50.)



1. The method of preparing hard rubber stock for battery jars or the like which comprises calendering the

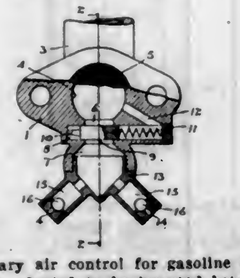
warm stock in a long strip, cooling and permitting shrinkage of the strip, and severing the strip transversely



into jar blanks with a beveled cut, all of the said operations being performed without interwinding of the stock with a liner.

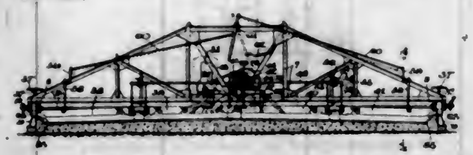
1,619,080. POLYPHASE RELAY. JOHN COLIN MCDONALD, New York, N. Y., assignor of one-third to William Norman Westerlund, New York, N. Y., and twenty-six per cent to Edward L. Corbett, New York, N. Y. Filed Mar. 24, 1924. Serial No. 701,349. 1 Claim. (Cl. 200—91.)

A polyphase relay comprising a polyphase actuator, an unrestrainedly rockable shaft member controlled by said polyphase actuator, a circuit closer operated by said shaft member, said polyphase actuator including a pair of bridge members adjacent opposite ends thereof, a tubular member carried by said polyphase actuator, said tubular member being supported with respect to said polyphase actuator by means which close the ends of said tubular member, a rolling weight located within said tubular member and having a free path of gravitation toward either of said supporting means upon reversal of phase sequence with respect to said polyphase actuator for effecting an opening or closing of said circuit closer.



1,619,081. STRIP-GUMMED PAPER AND PROCESS OF MAKING SAME. WILLIAM W. MCLAURIN, Brookfield, Mass., assignor to McLaurin-Jones Co., Brookfield, Mass., a Corporation of Massachusetts. Filed Oct. 8, 1924, Serial No. 742,375. Renewed Dec. 14, 1926. 6 Claims. (Cl. 91—68.)

1. That improvement in processes of strip coating paper which consists in applying coatings of substantially equal thickness of adhesive and non-adhesive material to adjacent portions of the paper.



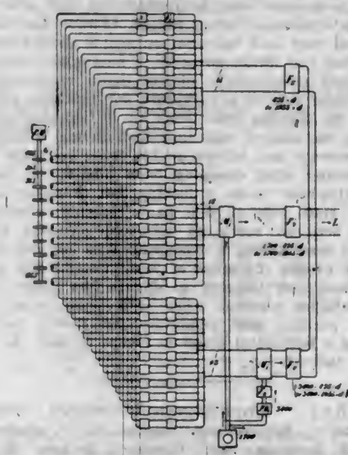
6. An article of the character described comprising a sheet of paper having a strip coating of gum on one face thereof, and a coating of non-adhesive material substantially covering the ungummed surface of said face, both of said coatings being of substantially the same thickness.

1,619,082. AUXILIARY AIR CONTROL FOR GASOLINE ENGINES. WILLIAM G. MARSH, Toronto, Ontario, Canada. Filed Feb. 9, 1925. Serial No. 8,079. 3 Claims. (Cl. 48—180.)

1. An auxiliary air control for gasoline engines, comprising a block adapted to be inserted between the carburetor and intake manifold of an engine and having a transverse passage therethrough extending between the carburetor and intake manifold, a passage extending outwardly from said transverse passage and communicating with the atmosphere, a cylindrical passage in said block intersecting said outwardly extending passage and being closed to atmosphere at each end, a piston in said cylindrical passage, a spring in said cylindrical passage pressing said piston to normally close said outwardly extending passage, and a suction passage connecting one end of said cylindrical passage with said transverse passage to effect the movement of said piston against said spring pressure to open said outwardly extending passage.

1,619,083. FINISHING MACHINE FOR CONCRETE ROADS. GLENWAY MAXON, Jr., Milwaukee, Wis. Filed Apr. 8, 1922. Serial No. 550,840. 9 Claims. (Cl. 94—45.)

2. In a road-finishing machine the combination with a frame, of a strike-off element having a strike-off surface engageable at its lower and forward portions with the paving material, struts connected to said element and universally pivotally connected to said frame at points above the road surface whereby to resolve a part of the lateral pressure exerted upon said element by the paving material upon which it is acting into a downward component upon said element to compact the material passed over by said element ,and means for moving said element transversely of the road.



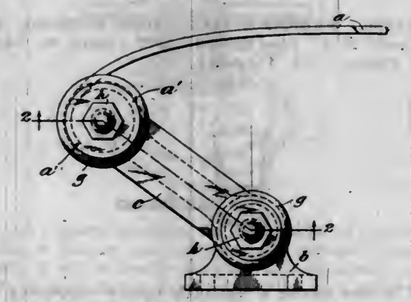
1,619,084. WIRE-CRIMPING TOOL. ALBERT W. MILLER, Nokomis, Ill. Filed June 6, 1924. Serial No. 718,300. 1 Claim. (Cl. 140—106.)

A tool for crimping fence wires comprising crossed limbs pivoted together at their point of crossing, the portions of the limbs at one side of the pivot constituting handles and the portions of the limbs at the opposite side of the pivot constituting mating jaws and terminating in elongated gripping heads, the head of one jaw being V-shaped in cross section to provide diverging side portions, the said side portions having flat edge faces disposed in a common plane and extending parallel to the longitudinal axis of the jaw and at their sides rounded into the inner and outer faces of the diverging portions, the head of the other jaw being rectangular in cross section and having flat faces converging to form a cen-

tral ridge extending parallel to the longitudinal axis of the jaw and adapted to fit between the side portions of the head of the first jaw with the outer side edge faces of the first jaw disposed beyond the outer side edges of the said converging faces of the second jaw whereby a wire disposed transversely between the heads of the jaws may be crimped when pressure is applied to the handles.

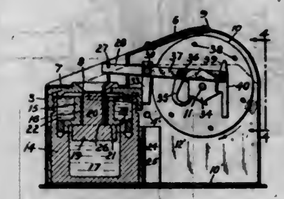
1,619,085. CARRIER-CURRENT SIGNALING SYSTEM. HARRY NYQUIST, Jackson Heights, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 29, 1924. Serial No. 696,050. 14 Claims. (Cl. 178—51.)

1. The method of generating and transmitting a plurality of currents of different respective frequencies, which consists in generating the currents of lower frequency in primary generators and delivering them to at least three multiple branch circuits and in certain of the multiple branches from each generator applying them to modulate other currents of different respective frequency values and separating out by filters the modulation product currents of frequency higher than those generated at the outset, and superposing the currents in all said multiple branches in a transmission line.



1,619,086. TERMINAL CONNECTER. BENJAMIN F. OLDMIXON, Pittsfield, Mass. Filed Sept. 20, 1920. Serial No. 411,619. 1 Claim. (Cl. 173—269.)

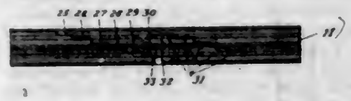
A terminal connection of the character described comprising a tube of conducting material having one end formed with an elongated slot closed at its outer end



to form a jaw and having a restricted inner end portion, the inner end of said conducting tube being threaded internally, a screw plug adjustably engaged with the internal threads of the conducting tube, an insulated electric conductor having an insulated portion secured in the inner end of the conducting tube and an adjacent bared end portion secured in the conducting tube in electric connection with the latter and the screw plug, a movable jaw slidable endwise in the outer end of the conducting tube and lengthwise of said slot toward and from the first-named jaw and provided with a serrated outer end face cooperating with said first-named jaw for gripping and releasing an electrical terminal between and from said jaws, a compression spring between the inner end of the sliding jaw and screw plug for urging said sliding jaw toward the first-named jaw with a force dependent upon the adjustment of the screw plug, and means on the sliding jaw projecting into the restricted inner end portion of the slot of the conducting tube for holding the second-named jaw against rotation and whereby the sliding jaw may be moved inwardly and thereby released by hand against the action of the spring.

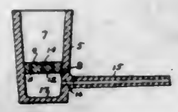
1,619,087. RUBBER SHOCK-INSULATED BUMPER. FRANK PAMPINELLA, Brooklyn, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 5, 1926. Serial No. 146,336. 6 Claims. (Cl. 293—55.)

1. In a bumper for vehicles and the like, a bumper bar, yielding, non-metallic means carried by the bar, yielding, non-metallic means carried by the body upon which the bar is to be mounted, a link, and means to connect the link to the bar and body through the yielding means.



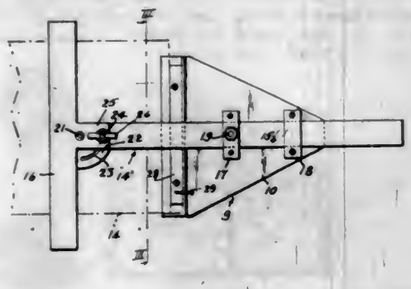
1,619,088. CHANGEABLE EXHIBITOR. GEORGE B. PENNEBAKER, Oakland, Calif., assignor to Fred Starr and William P. Green, both of Oakland, Calif. Filed Apr. 11, 1925, Serial No. 22,476. Renewed Dec. 6, 1926. 5 Claims. (Cl. 40—28.)

1. In combination with an inkstand of the "Sengbusch" type having a reciprocating pen-actuated float, a rotating drum having advertising matter around the



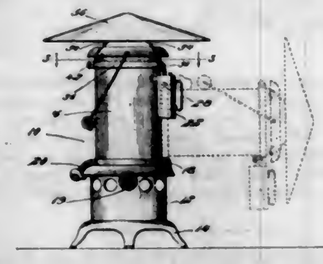
circumference of the same, a housing for the drum, a window in the housing for displaying progressive portions of said advertising matter, means connected to the float in the ink adapted to rotate the drum upon reciprocation of the float in one direction, and gravity-actuated means for arresting movement of the drum to align the advertising matter in display relation with said window.

1,619,089. INDEX. CHARLES T. RASCHICK, St. Paul, Minn. Filed Apr. 13, 1921. Serial No. 461,014. 2 Claims. (Cl. 283—38.)



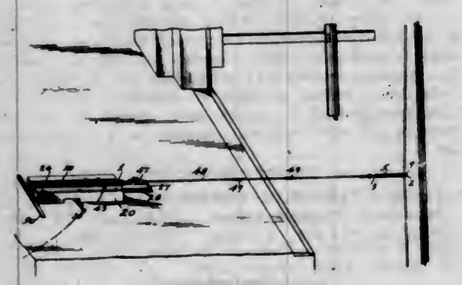
1. In combination with a plurality of sets of consecutively arranged members having different indicia thereon, a marginal slot formed along the edges of each of said sets of members, said slots being of the same width and length and being arranged to successively expose portions of the margins of said members, the length of said slots being equal to the length of several of the exposed marginal portions of said members whereby a continuous groove extends diagonally through said members.

1,619,090. SMOKER'S PIPE. JOHN A. REISER, Port Jervis, N. Y. Filed June 27, 1925. Serial No. 39,074. 2 Claims. (Cl. 131—12.)



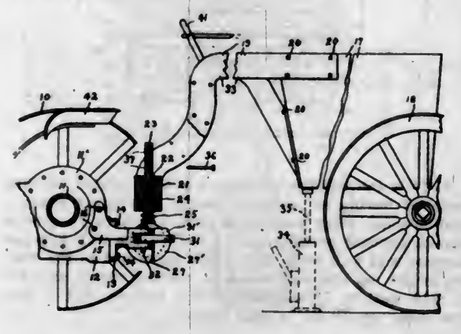
2. A pipe having a removable tobacco supporting barrier arranged in the bowl thereof and a removable plug in the bottom of said bowl and away from and independent of said barrier, the stem connection of said pipe being above said plug and below said barrier.

1,619,091. TOOL FOR MARKING TILES. WILLIAM RIESER, Newark, N. J. Filed Dec. 21, 1925. Serial No. 76,683. 4 Claims. (Cl. 33—174.)



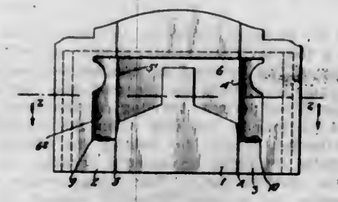
2. A hand tool comprising a supporting plate, guides on said plate, a ledge disposed along one side of said plate to receive an edge of a tile, a T-member comprising a shank movable in said guides in a direction transverse to said ledge, and an abutment at one side of said ledge to prevent lateral movement of a tile when held in a natural position in the hand during a marking operation.

1,619,092. HEATING AND HUMIDIFYING DEVICE. GEORGE E. RYAN, Taunton, Mass. Filed Mar. 2, 1926. Serial No. 91,704. 2 Claims. (26—96.)



1. A heating and humidifying device, comprising in combination, an upright heating unit of substantially cylindrical configuration, comprising a burner base, adjustable to produce varying amounts of heat and a substantially cylindrical drum hinged thereto and normally engaged with said base, but swingable away therefrom for lighting and filling purposes, a humidifier comprising an enclosed substantially oblong liquid receptacle having its inner side of a curvature substantially equal to that of the heating unit drum to lie substantially adjacent to the side of said unit and having a funnel on the top thereof and an eye on the inner top edge thereof, a circular split clamping band adapted to encircle said heating unit drum, a locking bolt to adjustably attach the split ends of said band together whereby its position may be vertically adjusted on said heating unit, said band having a depending hook adapted to substantially overlie the hinge of said burner drum to said burner base and adapted to engage the pivot eye of said humidifier whereby when said drum is swung to an open position said humidifier may freely swing to remain in a horizontal plane so as not to spill the liquid contents thereof.

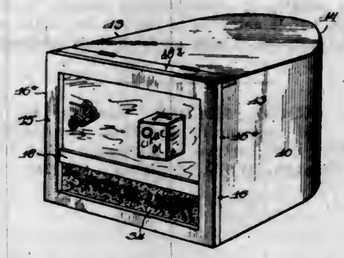
1,619,093. ROPE-TENSION-TESTING DEVICE. CHARLES C. SUNDERLAND, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed Dec. 22, 1922. Serial No. 608,410. 7 Claims. (Cl. 265—63.)



1. A rope tension testing device, comprising means for subjecting a rope to lateral deflection, means for measuring the lateral pressure exerted, and means for indicating the degree of lateral deflection produced by such lateral pressure.

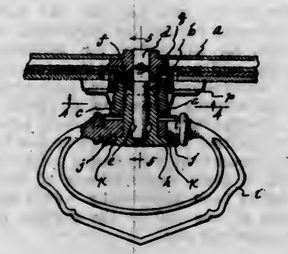
1,619,094. TRACTOR DUMP WAGON. ARTHUR C. THOMAS, Omaha, Nebr., assignor to The Little Red Wagon Mfg. Co., a Firm composed of A. C. Scott, W. R. McFarland, W. H. Jones, A. J. Cooley, and C. Mackey, Omaha, Nebr. Filed Nov. 28, 1925. Serial No. 71,899. 4 Claims. (Cl. 280—33.1.)

1. In combination a tractor, a wagon, a beam on the wagon, a shaft slidably carried by the beam, a universal ball carried by said shaft, resilient means interposed between said ball and beam and positioned to yieldably sustain the load and a universal socket on the tractor for receiving said ball.



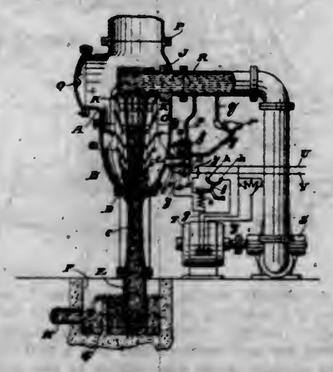
1,619,095. DISPLAY DEVICE. JOSEPH USOSKIN, New York, N. Y. Filed June 29, 1925. Serial No. 40,186. 4 Claims. (Cl. 40—140.)

1. A display device comprising a front member bendable along two fold lines so as to provide a front central portion and two front end portions, a rear member whose length is different from the length of the front member bendable along two fold lines so as to provide a rear central portion and two rear end portions, the two rear end portions being connected to the two front end portions, the fold lines of the front member being laterally spaced from the fold lines of the rear member, said rear end portions being inclined to said rear member when the device is set up, and said front end portions being substantially parallel to said front central portion when the device is set up.



1,619,096. ADVERTISING-PROJECTING DEVICE. HARRIE H. WALSH, Chicago, Ill., assignor to Kay Sign Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 30, 1925. Serial No. 19,304. 6 Claims. (Cl. 88—27.)

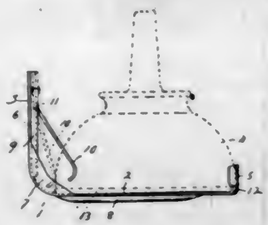
1. In a device of the kind described in combination with a casing having a front wall provided with a translucent screen, a cylindrical band within said casing made of heavy paper or cardboard having letters, characters and the like stenciled therein, means providing a central bearing support for said band by means of which it is made rotative about a vertical axis, a horizontal power driven shaft arranged radially with reference to said band in supporting engagement with the bottom edge of said band,



and a lamp located within the space occupied by the band and adapted to direct rays of light through the stencil openings in said band upon said screen.

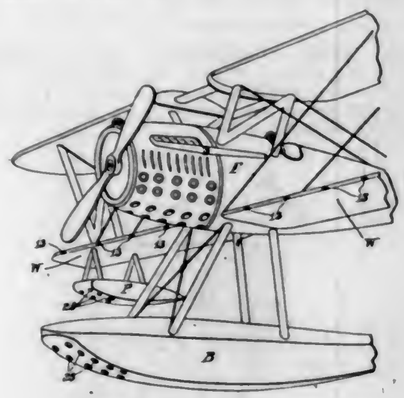
1,619,097. HANDLE ASSEMBLY. THOMAS P. ARCHER, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 24, 1925. Serial No. 51,984. 12 Claims. (Cl. 292—348.)

11. In a handle assembly, the combination of a spindle forming a journal and provided with journal bearing recesses, a nut rotatably mounted, on said spindle, and a grip member having journals positioned to rotate in said bearing recesses by said nut.



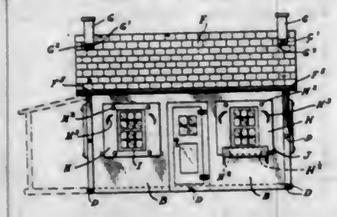
1,619,098. PUMP CONTROLLER. PAUL A. BANCEL, Nutley, and JOHN F. KIRGAN, Phillipsburg, N. J., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 27, 1923. Serial No. 627,990. 2 Claims. (Cl. 103—25.)

1. In a pump controller, the combination of a motor driven pump and discharge line, a spring pressed pressure responsive regulator connected on opposite sides to the



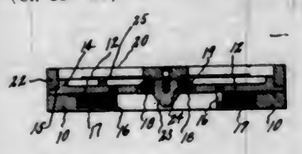
discharge line, a normally closed relief valve in that connection leading to the portion of the regulator containing the spring, and a circuit controller connected to be actuated by the regulator whereby the circuit controller is held in a given position by predetermined pressure in the discharge line, but is actuated to control the motor upon a decrease or increase of said predetermined discharge line pressure.

1,619,099. OIL-CAN HOLDER. CHARLES W. BECK, Toledo, Ohio, assignor to Beck-Frost Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 15, 1925. Serial No. 37,378. 2 Claims. (Cl. 248—2.)



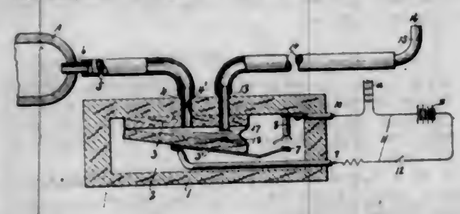
1. A holder for oil cans and the like having a substantially horizontal portion for supporting the can, an upright portion for supporting the horizontal portion, webs connecting said portions and forming therewith an intermediate channel-shaped portion, said upright portion having a longitudinally extending upwardly projecting corrugation provided with a transversely extending slot, said horizontal portion provided with spaced longitudinally extending corrugations cooperating wtih the corrugation aforesaid to resist any tendency of the horizontal portion to sag or bend downwardly, and a spring finger rigidly secured at one end to the upright portion and extending through the slot.

1,619,100. AIRCRAFT. MITTIE TAYLOR BRUSH, Dublin, N. H. Filed Aug. 4, 1922. Serial No. 579,570. 5 Claims. (Cl. 240—1.)



1. In an aircraft having an enclosed part, means for facilitating the handling of the same at night by lighting up the space outside, comprising a transparent surfacing material for said enclosed part and a plurality of incandescent electric lamps controllable by the pilot which are distributed within said enclosed part and are provided with reflectors adapted to reflect the light therefrom outwardly through the surfacing material.

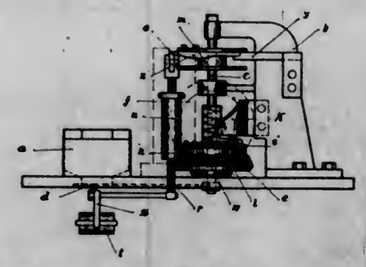
1,619,101. TOY BUILDING. HERBERT CHASE, Forest Hills, N. Y. Filed Mar. 6, 1925. Serial No. 13,431. 3 Claims. (Cl. 46—37.)



1. In a toy building a flooring a wall formed of sheet material having an opening therein, the edges adjacent said opening being bent back upon the wall to provide smooth exposed portions, and to stiffen the wall adjacent thereto, said wall being detachably connected to the flooring at the top and bottom, and a window casing attached to said wall in detachable relation thereto, and a window pane supported in said casing.

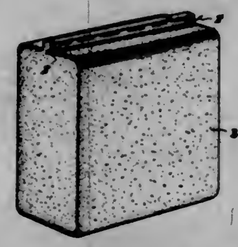
1,619,102. BEAD MOLD. CHARLES H. DESAUTELS, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 23, 1925. Serial No. 17,487. 1 Claim. (Cl. 18—16.)

A mold for pressing triangular tire bead fillers which comprises a disk having segmental shouldered portions defining parts of two walls of an annular molding cavity, members radially slidable on the disk and having segmental shouldered portions forming continuations of the shouldered portions of the disk when the members are radially extended, springs for holding the members normally radially retracted, an annulus forming the third wall of the molding cavity, and wedge means secured to the annulus and adapted to extend between the members to force them apart, whereby when the annulus and the disk are pressed axially together the members will be radially extended to form with the shouldered portions of the disk a continuous molding surface and when the annulus and the disk are separated the members will be radially retracted to permit the removal of a molded bead filler.



1,619,103. ENGINE-CONTROLLED PNEUMATICALLY-OPERATED CIRCUIT CONTROLLER. LEWIS B. DOMAN, East Syracuse, N. Y. Filed Mar. 4, 1922. Serial No. 541,116. 5 Claims. (Cl. 200—81.)

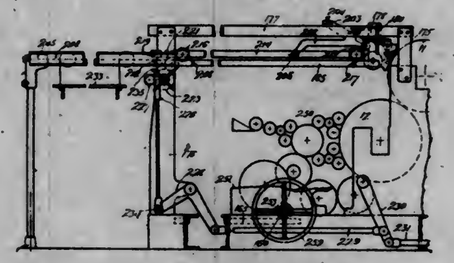
1. A circuit controller for internal combustion engines, comprising an electric switch, a pneumatically-operated device having a suction passage for communication with



the intake manifold of the engine and another passage for communication with the atmosphere, the atmosphere passage being adapted to be closed at will to cause said device to be operated by suction in the first-named passage to close the switch, and means actuated by said pneumatic device for closing said atmosphere passage.

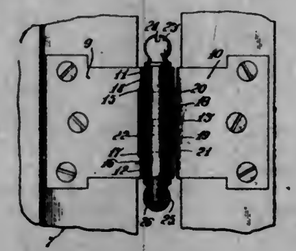
1,619,104. DOUGH-DIVIDING MACHINE. CARL DORN, Halle-on-the-Saale, Germany. Filed May 29, 1926, Serial No. 112,607, and in Germany May 17, 1924. 4 Claims. (Cl. 107—14.)

1. In a dough dividing machine, the combination with a hopper adapted to extrude a downwardly directed dough rod and with a vertical spindle having a fly-cutter for dividing said rod in sections, of a continuously rotated gear wheel mounted loosely on said spindle, a clutch element on the spindle engaging said gear wheel so as to impart rotation to the spindle when the latter is unrestrained, means for arresting the spindle, means for releasing the spindle by the gravital action of the extruded dough rod, and means for coupling the spindle positively to the gear wheel while the cutter passes across and divides the dough rod.



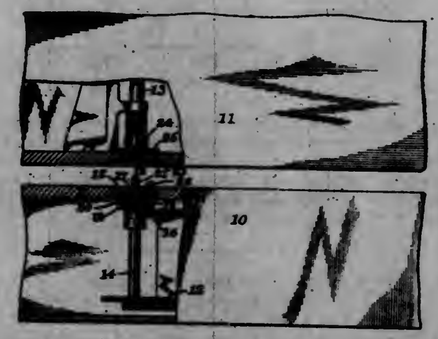
1,619,105. SOAP CONTAINER. ALFRED J. EGGAN, Chicago, Ill. Filed May 5, 1925. Serial No. 28,162. 1 Claim. (Cl. 87—23.)

As a new article of manufacture, jellied soft soap contained in a permanently closed holder coated throughout with paraffin wax to normally maintain said holder impervious, said coating liquefiable on the application of heat thereto, said holder formed of textile fabric of sufficient permeability to act as a feeder for the jellied soft soap when the coating has become liquefied.



1,619,106. SHEET-DELIVERY MECHANISM FOR PRESSES. FRED S. ENGLISH, New London, Conn. Filed Mar. 5, 1925. Serial No. 13,845. 13 Claims. (Cl. 271—77.)

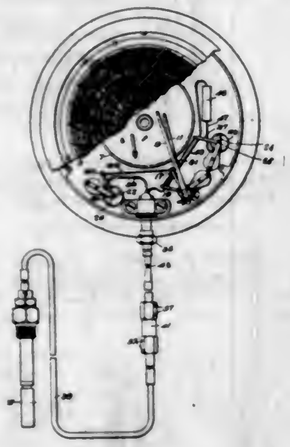
1. The combination of a press having a movable impression member for holding the sheet as it is printed, and means for delivering the sheets from said impression member, comprising a reciprocating carriage for carrying the sheets, and belts arranged to receive the sheets from said impression member and adapted to



transfer them to said carriage for delivery by the latter, said belts being adjustable to alter the position at which the sheet transfers from said belts to said carriage.

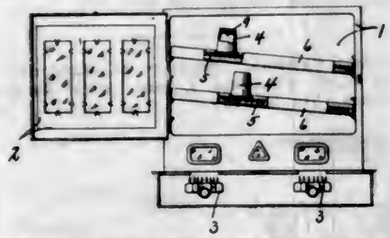
1,619,107. FRICTION HINGE. THOMAS P. ENRIGHT, Sterling, Ill., assignor of one-half to John H. Lawrence and one-half to Edwin F. Lawrence, Sterling, Ill. Filed July 1, 1925. Serial No. 40,753. 8 Claims. (Cl. 16—140.)

1. The combination with a leaf hinge, of bushings fitted in knuckles of the respective leaves and having annular flanges in frictional engagement with each other, said bushings being arranged to rotate with their respective leaves and one of said bushings being movable toward the other independently of the knuckle in which it is fitted, and means adjustable to vary the frictional engagement of said bushings with each other.



1,619,108. CAMERA. SHERMAN M. FAIRCHILD, New York, N. Y. Filed Mar. 1, 1923. Serial No. 622,033. 8 Claims. (Cl. 95—19.)

1. In combination, a camera body, a detachable magazine therefor, and separable driving and driven mechanisms for the camera body and magazine, adapted to be

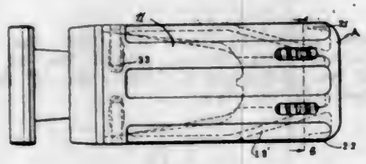


automatically engaged with each other in proper cyclic relation by operation of the driving mechanism when the magazine is replaced on the camera body.

1,619,109. THERMOMETER. WALTER H. FITTS, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed July 7, 1920. Serial No. 394,506. 9 Claims. (Cl. 73—118.)

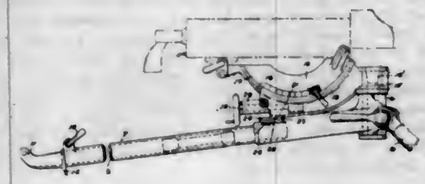
1. A thermometer operating by vapor tension comprising a pressure sensitive device, a remote liquid containing bulb and a connection therebetween including an expansion chamber of capacity to accommodate the increased volume of the liquid as such under changes of temperature to which the bulb is subject.

1,619,110. APPARATUS FOR CLEANING CANDLE RECEPTACLES. MARTIN A. FLANNERY, New York, N. Y., assignor to Will & Baumer Candle Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 13, 1922. Serial No. 552,201. 1 Claim. (Cl. 87—3.)



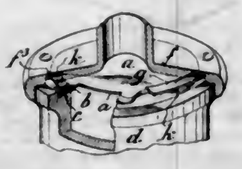
An apparatus for cleaning candle receptacles comprising an oven, means for heating the oven, a pan slidably positioned in said oven, and a wire screen member arranged in the pan and having its edges flanged downwardly and resting upon the pan bottom to space the body of the wire screen from the pan.

1,619,111. DEGUMMING PROCESS. LYLE N. GILLIS, Rosecrest, Va. Filed June 18, 1925. Serial No. 37,996. 12 Claims. (Cl. 92—15.)



1. That process of degumming flax straw and the like which includes subjecting straw to an alkaline degumming bath containing a hardening agent, washing the straw, and subjecting the straw to a neutralizing bath.

1,619,112. FRICTION DRAFT GEAR. ERNEST G. GOODWIN, Brooklyn, N. Y., assignor to Standard Coupler Co., New York, N. Y., a Corporation of New Jersey. Filed Jan. 5, 1922. Serial No. 527,066. 6 Claims. (Cl. 213—26.)



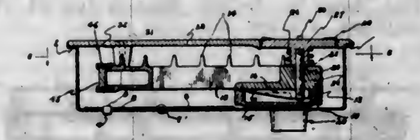
1. In a friction draft gear, in combination, a spring support, a friction box, and a key for securing said box to said support, said key terminating intermediate the walls of the support and being provided with an inner retaining bead.

1,619,113. MOUNT FOR MACHINE GUNS. WALTER T. GORTON, of the United States Army, Springfield, Mass. Filed Aug. 20, 1925. Serial No. 51,461. 14 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883; 22 Stat. L., 625.)

8. A combination machine gun mount embodying a tripod having a hollow head, a member mounted on said head for movement in azimuth and adapted to provide a low mounting for a gun and an adaptor vertically receivable in the hollow head and providing a high mounting for the gun.

1,619,114. TELEPHONIC RECEIVER. EDWARD ALFRED GRAHAM, Brockley, London, England; Maria Graham and Alfred Graham executors of said Edward Alfred Graham, deceased. Filed July 21, 1925. Serial No. 45,113, and in Great Britain Aug. 6, 1924. 6 Claims. (Cl. 179—115.)

1. A telephonic receiver comprising, in combination, a casing having at one end portion thereof an inner seat and an outer abutment, an electro-magnet diaphragm influencing system arranged within said casing, a diaphragm extending over said diaphragm influencing system and seat, soft sound damping material arranged between said seat and the peripheral portion of said diaphragm, and a bearing ring of undulating or wavy shape, formed of springy material arranged between said peripheral portion



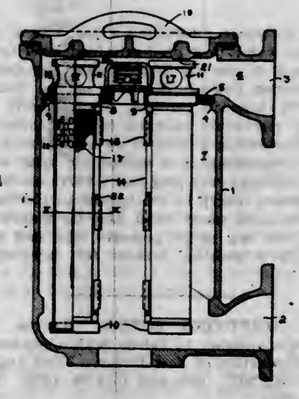
of said diaphragm and said outer abutment and adapted to hold the peripheral portion of said diaphragm against said damping material and seat.

1,619,115. MUFFLER. EMMET P. GRAY, Detroit, Mich. Filed Oct. 20, 1921. Serial No. 509,218. 3 Claims. (Cl. 137—160.)

1. In a muffler, the combination of a cylindrical shell having inlet and outlet openings in its ends for exhaust gases, a tube within the shell comprising a plurality of independent sections having closed ends, each section being formed with two groups of holes to permit the passage of exhaust gases, and shields mounted in the shell to prevent the passage of gases longitudinally of the shell, one shield being mounted between the two groups of holes of each tube section, the tube and shell being formed with radial flanges and the tube contacting with the shell at the flanges thereon and the flanges of the tube extending between the flanges of the shell.

1,619,116. AUTOMOBILE HEATER. EMMET P. GRAY, Detroit, Mich. Original application filed Feb. 17, 1923, Serial No. 619,745. Divided and this application filed Oct. 29, 1923. Serial No. 671,315. 3 Claims. (Cl. 257—136.)

1. A heater for utilizing the exhaust gases of an internal combustion engine, comprising a hollow casing, a floor plate secured to the top of the casing and having a multiplicity of apertures therethrough open to the casing, a hollow U-shaped conduit for exhaust gases having the legs thereof arranged in a horizontal plane, a partition in each leg forming longitudinal chambers in the interior, said conduit having an inlet port at the end of one of the legs, an exhaust port at the end of the other leg, the bottom of the casing being provided with a pair of apertures each substantially in registration with a port, a hollow member covering the inlet port and providing a chamber formed with a hollow extension for connection of a conduit, a valve mounted in the said chamber movable in a horizontal plane to cover or uncover the said inlet port, a valve operating plate rotatably mounted in an aperture therefor provided in the floor plate, and a vertical rod connecting the plate with the said valve.

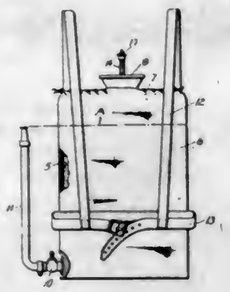


1,619,117. VALVE CONTROL. EMMET P. GRAY, Detroit, Mich. Filed Sept. 25, 1925. Serial No. 58,480. 4 Claims. (Cl. 74—39.)

1. A valve control comprising a member adapted to be secured in stationary position, a rod extending through the said member, a knob on the end of the said rod, a tubular member secured to the first named member, the said tubular member being provided with a longitudinal slot having notches opening therefrom, a control wire secured to the end of the rod opposite the knob and adapted to be attached to a valve, the said control wire being placed under a twisting strain when attached to

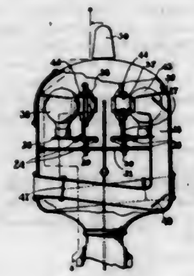
the valve, and a pin on the end of the said rod adapted to engage in the notches of the tubular member due to the twisting strain on the control wire.

1,619,118. FILTER. HENRY LEWIS GUY and THOMAS BLACKLOCK, Manchester, England, assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 10, 1920, Serial No. 372,922, and in Great Britain Apr. 15, 1919. 4 Claims. (Cl. 210—184.)



1. A filter comprising a filter chamber, a diaphragm removably supported within the chamber and dividing the chamber into inlet and outlet compartments, a filter element mounted in the diaphragm through which fluid normally passes from the inlet compartment to the outlet compartment, and a relief valve carried by the diaphragm and adapted to pass fluid therethrough in parallel with said filter element upon clogging of the latter.

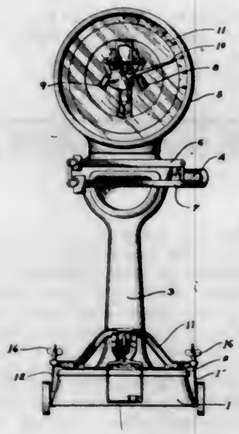
1,619,119. MANUFACTURE OF INNER TUBES. HORACE HILLYARD HASTINGS, Quebec, Quebec, Canada. Filed Jan. 24, 1925. Serial No. 4,460. 1 Claim. (Cl. 154—14.)



The herein described process in making inflatable tubes consisting in covering the overlapped transverse edges of the vulcanized inner joint with an annularly extending strip of rubber and cementing the latter to the tube, then introducing the tube into a circumscribed area and inflating and finally applying a hot metal surface enclosed within said area to the said strip throughout its complete length at one and the same time and thereby merging said strip with the wall of the tube at the joint portion.

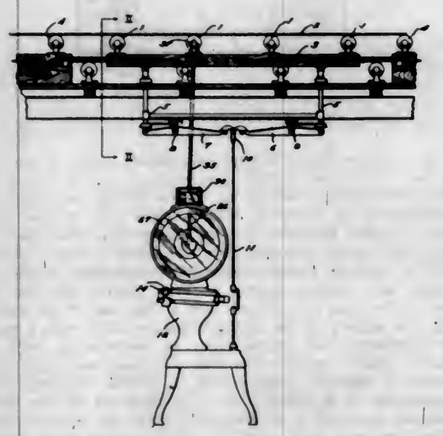
1,619,120. FIRE EXTINGUISHER. WILLIAM H. HEATON, Oakland, Calif. Filed Aug. 18, 1924. Serial No. 732,711. 1 Claim. (Cl. 299—95.)

A fire extinguisher comprising a bag, means for filling the bag with water to a predetermined level including a funnel secured to the top wall of said bag and opening into the interior thereof, the neck of the funnel being provided with interior threads, an externally threaded closure plug removably engaged in said threaded neck, means for introducing a head of air above the water level in said bag consisting of a valved air stem secured in and passing through said plug and a valve controlled hose of predetermined length in the bottom of the bag for determining the said water level and for discharging the water from the bag under pressure, the said bag being provided with a packing harness for carrying the extinguisher.



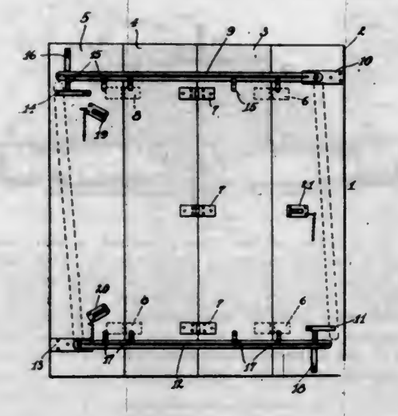
1,619,121. COMPUTING SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Aug. 9, 1920, Serial No. 402,303. Renewed July 26, 1926. 18 Claims. (Cl. 265—37.)

1. In a weighing scale, in combination, a chart having rows of graduations thereon, a projector adapted to project a real image of a portion of said chart, said chart and projector being relatively movable, manually operable means for moving one of said elements in one direction, and weighing mechanism connected to the other of said elements to move it in another direction.



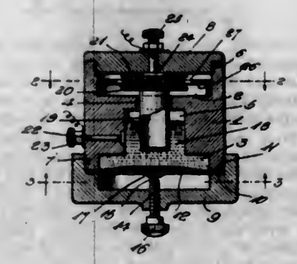
1,619,122. TESTING DEVICE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 11, 1922. Serial No. 587,268. 11 Claims. (Cl. 265—1.)

1. In a scale testing device, in combination, a beam lever, a supporting frame therefor adapted to rest upon the platform of the scale to be tested, a pan carried by said beam lever adapted to receive a plurality of test weights, means for anchoring the beam lever to the scale



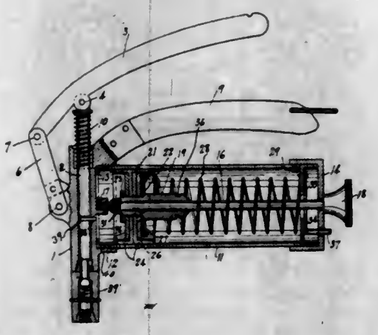
to be tested and means whereby said anchoring means may be adjusted to keep said beam lever horizontal as the platform moves under load.

1,619,123. INTEGRATING SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed May 31, 1924, Serial No. 716,988. Renewed July 26, 1926. 10 Claims. (Cl. 265—28.)



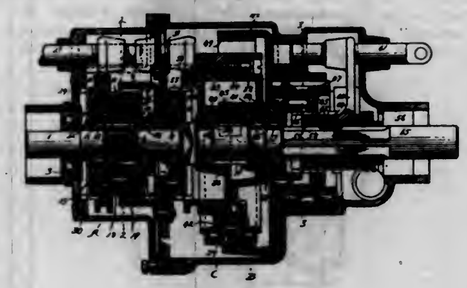
1. In a device of the class described, in combination, weighing mechanism, a commodity support operatively connected thereto, means for moving commodities over said commodity support, a disk, means for rotating said disk at a speed proportional to the speed of commodities over said support, a roller having a plane perpendicular to the face of said disk, means supporting said roller with its periphery in engagement with the face of said disk, the supporting means being arranged to permit lateral movement of said roller over the face of said disk, and means connected with said weighing mechanism for turning said roller about an axis perpendicular to the face of said disk.

1,619,124. FOLDING TABLE. JOHN HOSZOWSKI, Oakland, Calif. Filed Nov. 25, 1922. Serial No. 603,207. 1 Claim. (Cl. 45—116.)



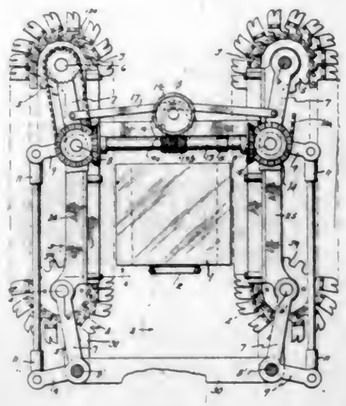
In combination a table plate comprising a plurality of leaves hinged alternately on opposite sides so as to be adapted for folding to the width of a single leaf, legs supporting the outer leaves and engaging the same at an angle so that the legs intersect substantially at the center of the table midway of the height thereof, means for tying the legs at the intersection and bars pivoted to the outer leaves at diametrically opposed corners, each being adapted to be swung outward from a parallel position and around the corner into a transverse position for supporting all the leaves, the leaves having alined clips adapted to receive the bars and springs being positioned in the path of the bars so as to be passed and depressed by the latter and to rebound after the bars have passed for locking the same in place.

1,619,125. PIEZO-ELECTRIC-CRYSTAL APPARATUS. CLINTON W. HOUGH, Boonville, N. Y., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 20, 1926. Serial No. 96,206. 8 Claims. (Cl. 171—327.)



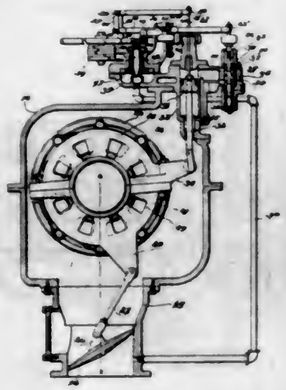
1. A piezo electric crystal holder comprising in combination a body structure, a piezo electric crystal element housed within said body structure, means for establishing contact with opposite faces of said piezo electric crystal element, and hydrostatic means for selectively varying the effective pressure between said piezo electric crystal element and said first mentioned means.

1,619,126. LUBRICATING DEVICE. WALTER F. HUNDEMER, Alameda, Calif., assignor to Gat Gun Lubricating Corporation, Oakland, Calif., a Corporation of California. Filed Feb. 8, 1926. Serial No. 86,792. 5 Claims. (Cl. 221—47.3.)



2. A cylindrical grease container closed at one end having means for withdrawing grease therefrom associated with the other end, an axial rod slidable in the container having a piston slidable relative thereto, spring means urging the piston forward, means associated with the piston and operable by the rod allowing the piston to be retracted to the rear end of the container and means for locking the said means in the retracted position allowing the rod to be plunged forward.

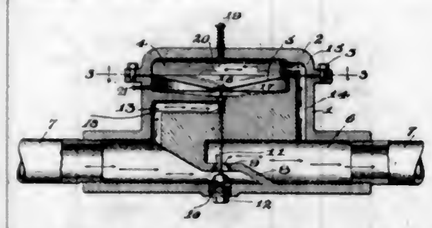
1,619,127. TRANSMISSION. SCHUYLER A. JEFFRIES, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a Corporation of Michigan. Filed Dec. 22, 1924. Serial No. 757,518. 9 Claims. (Cl. 74—34.)



1. In a transmission, the combination of a pair of concentric gears, a driving shaft for one of said gears, an eccentric, an eccentric gear journaled on said eccentric having internal gear teeth meshing with one of said concentric gears and having external gear teeth meshing with the other, a driven shaft, and means for fixing one of said concentric gears against rotation and connecting said eccentric to said driven shaft whereby the latter is driven reversely to the first-mentioned gear.

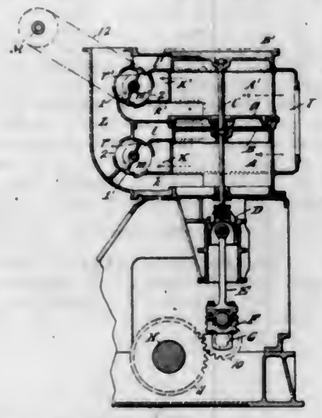
1,619,128. ICE-SCORING MACHINE. CONRAD JOBST, Toledo, Ohio, assignor, by mesne assignments, to The Uline Ice-Scoring Machine Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 17, 1923. Serial No. 681,259. 9 Claims. (Cl. 125—21.)

1. An ice scoring machine comprising endless scoring elements arranged to engage opposite sides of an ice block and means for simultaneously moving said scoring elements parallel with the sides of the block and means for feeding the scoring elements toward each other into the block.



1,619,129. BLEEDER TURBINE. JOSIAH F. JOHNSON, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 8, 1923. Serial No. 644,255. 29 Claims. (Cl. 60—67.)

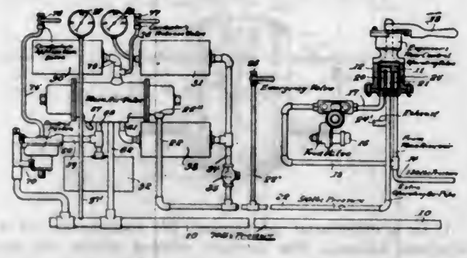
1. In a bleeder turbine, the combination of a bleeder line valve, a governor, and means operated by the governor for closing the bleeder line valve upon predetermined overspeeds and underspeeds of the turbine.



29. In a bleeder turbine, the combination of an interstage valve, a bleeder line, a bleeder line valve, means for controlling one of said valves, and variable motion means separate from said control means for connecting the valves so that the interstage valve is opened and closed while the bleeder line valve is substantially fully open.

1,619,130. SAFETY STOP VALVE. LESLIE W. JONES, Charleston, W. Va., assignor of one-third to A. Homer Young and one-third to C. Laco Bright, both of Charleston, W. Va. Filed Apr. 26, 1926. Serial No. 104,717. 2 Claims. (Cl. 67—115.)

1. In a device of the class described, a valve casing having a conduit therein, a diaphragm mounted therein, a valve positioned in said conduit, a spring pressed rod connecting said valve and diaphragm, said casing also provided with passages communicating with said conduit at opposite sides of said valve and extending to opposite sides of said diaphragm, and means exterior of said casing for moving said valve to open position.

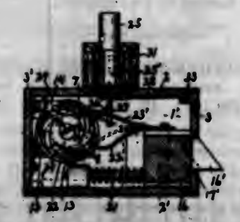


1,619,131. SCAVENGING AIR PUMP OR COMPRESSOR. OLAV ESKIL JORGENSEN, Forest Hills, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Dec. 3, 1924. Serial No. 753,592. 3 Claims. (Cl. 230—32.)

1. A double-acting air pump or compressor having a common discharge chamber at one side of the cylinder, combined inlet and discharge passages at each end of the cylinder adjacent the discharge chamber, a common suction chamber for both ends of the cylinder extending about the cylinder from the suction connection, a common valve chamber between the inlet chamber and discharge chamber and connecting directly with said chambers and with the inlet and discharge passages, and a rotary valve having segments that alternately connect the respective ends of the cylinder with the inlet and discharge chambers for inlet and discharge at the opposite ends of the cylinder.

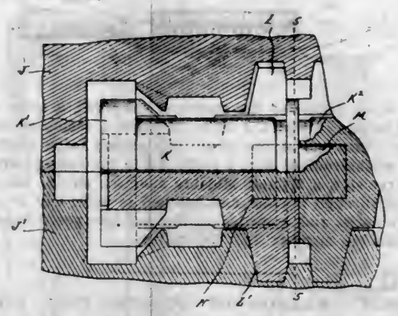
1,619,132. REAR AIR-BRAKE CONTROL. JOHN JULIANO, Niagara Falls, N. Y., assignor of one-fourth to Joseph F. Braden, Niagara Falls, N. Y. Filed May 8, 1926. Serial No. 107,750. 13 Claims. (Cl. 303—47.)

1. In air brake control mechanism, an engineer's operating valve, a brake pipe adapted to extend the length of a train, a control apparatus at the rear of the train and connected with the brake pipe, a pipe connected with the operating valve and with the control apparatus at the rear, permitting the engineer to reduce pressure in the rear control apparatus and brake pipe, initially at the



rear of the train, and thence forwardly toward the engine, and means permitting pressure reduction in the rear control apparatus and brake pipe independently of the engineer's operating valve.

1,619,133. BLADE FASTENING. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 7, 1922. Serial No. 527,674. 9 Claims. (Cl. 253—77.)

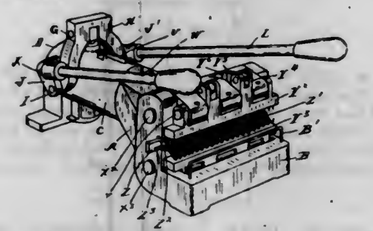


1. In a turbine, the combination of a rotor having dovetail slots, a plurality of blades having dovetail root portions fitting in the slots, and an expansible key arranged between the bottoms of the slots and the bottom portions of the blades for holding the latter tightly in the slots.

1,619,134. DOOR-CONTROLLED ELECTRIC-LIGHTING SWITCH. JOSEPH M. KERN, Oswego, N. Y. Filed Nov. 2, 1923. Serial No. 672,289. 2 Claims. (Cl. 200—54.)

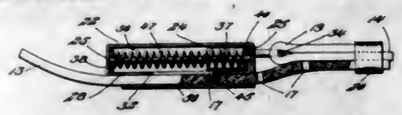
1. In a door-controlled electric lighting switch, a rotary conducting member having contact segments in uniformly spaced relation, a ratchet wheel having a number of teeth corresponding to the number of the segments and operatively connected to the conducting member to rotate therewith, a self-retracting plunger actuated in one direction by the closing of the door and in the opposite direction when the door is opened, pawls carried by the plunger for engaging the ratchet teeth and rotating the conducting member one-half tooth space at a time, each forward and return movement of the plunger and the contact brush for the segments, said brush and contact member being electrically connected in the lighting circuit, and additional means operable at will for rotating said contact member step by step independently of the movements of the plunger.

1,619,135. MOLD FOR CASTING PISTONS. CHARLES H. KIRBY, Detroit, Mich. Original application filed May 21, 1923, Serial No. 640,565. Divided and this application filed Jan. 18, 1926. Serial No. 82,144. 6 Claims. (Cl. 22—151.)



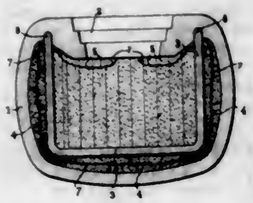
1. In a mold for casting a piston blank, the combination with an outer mold having a cavity therein corresponding to the outer contour of two oppositely disposed axially aligned pistons and a core supported in said outer mold at a point intermediate its ends, said core projecting from said support in opposite directions and having its surfaces corresponding to the inner contour of a reinforced hollow piston.

1,619,136. BOTTLE CLOSURE. WILLIAM H. KNOWLES, Port Chester, N. Y. Filed May 8, 1924. Serial No. 711,775. 13 Claims. (Cl. 215—95.)



1. A closure including in combination a body of flexible material, and means for securing said closure to a receptacle, said means having one end permanently attached to said body its opposite end being movable relatively thereto.

1,619,137. BELT-HOOK-CLOSING MACHINE. FRANK W. KNOTT, Detroit, Mich., assignor to Detroit Belt Lacer Co., Detroit, Mich., a Corporation of Michigan. Filed Nov. 6, 1924. Serial No. 748,218. 7 Claims. (Cl. 1—494.)

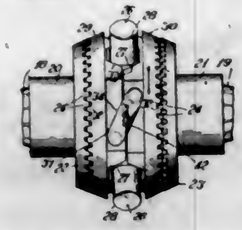


1. A closing tool comprising a frame, a cylinder at one end thereof, a bed of greater width at the opposite end, a holder for the work to be closed extending transversely over said bed, closing jaws oppositely movable on said frame and upon opposite sides of said holder, a piston in said cylinder, means intermediate said piston and said movable jaws for transmitting pressure to the latter, a plunger for pumping fluid into said cylinder, rock arms on opposite sides of said cylinder, a yoke connecting said rock arms to said plunger, and a pair of handles connected to said rock arms extending divergently therefrom on opposite sides of said bed.

1,619,138. STRAP FOR PERSONAL WEAR. GEORGE KOLLSTEDE, Providence, R. I. Filed May 22, 1926. Serial No. 110,950. 2 Claims. (Cl. 24—180.)

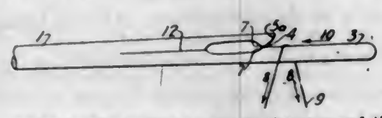
1. In an article of the character set forth, a strap provided at one end with a series of holes, a casing attached to the other end of the strap, said casing being provided with a longitudinal slot, a guide rod in the casing parallel with the slot, a member slidably mounted on the rod projecting through the slot and adapted to enter one or more of the holes, and a spring on the rod interposed between the slidable member and the casing.

1,619,139. METHOD OF CONSTRUCTING SAFES. SAMUEL FORRY LAUCKS and WILLIAM E. WILKINSON, York, Pa., assignors to said Laucks. Filed Aug. 8, 1922. Serial No. 580,404. 6 Claims. (Cl. 22—204.)



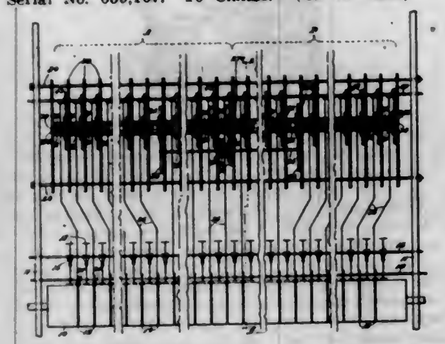
3. A method of forming a safe structure, which includes utilizing a receptacle body of tool-resistant metal having an opening and a recess in its inner face adjacent such opening, applying cores of heat-insulating, non-metallic material to the inner faces of said body, said cores being extended to a point adjacent said recess, heating the cores and body and thereupon casting a lining of heat-dissipating metal to the inner faces of said cores and causing the said lining to extend into said recess.

1,619,140. SAFETY POCKET. MILTON R. LAYMAN, Johnstown, Pa. Filed June 28, 1926. Serial No. 119,131. 3 Claims. (Cl. 2—261.)



1. A safety pocket comprising a plate, a clamping device hinged to the lower part of said plate, means to normally hold said clamping device against said plate, a pocket, means to attach one edge of said pocket to said plate, means to attach the other edge of said pocket to said clamping device, and means to securely hold said safety pocket within a wearing apparel pocket, said last named means being hingedly connected to the upper edge of said plate.

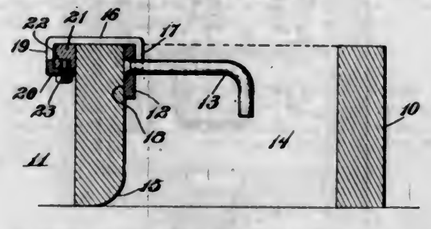
1,619,141. DIFFERENTIAL MECHANISM. FRANK M. LEWIS, Chicago, Ill. Filed May 11, 1925. Serial No. 29,275. 10 Claims. (Cl. 74—7.)



1. In a differential mechanism, the combination of a rotatable housing, axle sections entered within the opposite ends of said housing, driven clutch members fast on said axle sections, shiftable clutch members between said driven member, a driver connected to said housing and having portions thereof drivingly engaged with said shiftable members, means urging said shiftable members outwardly into clutch engagement with said driven members, angularly movable means connecting said shiftable members operating to effect disengagement of either of said shiftable members from its co-operating driven clutch member when one shiftable member overruns the other in one direction, and other angularly movable means connecting said shiftable members operating to effect disengagement of either of said shiftable members from its co-operating driven clutch member when one shiftable member overruns the other in the opposite direction.

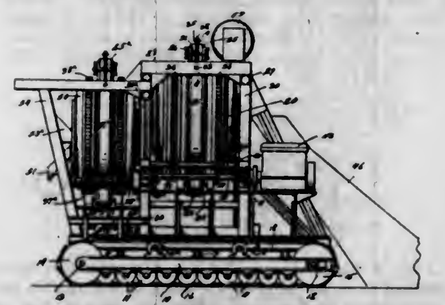
1,619,142. SEWING NEEDLE. HERMAN ISADORE LIPPARD, Darby, Pa. Filed Apr. 7, 1926. Serial No. 100,338. 3 Claims. (Cl. 223—37.)

3. A sewing needle having an eye at the rear end thereof, a slit at the rear end of said eye, a slit at the front end of said eye extending towards the point or front end of said needle, a beveled surface at the rear end of said eye, the said bevel sloping towards the slit at the rear end, and arms formed by the said slit.



1,619,143. LEATHER-MEASURING MACHINE. ROBERT J. MCFALL, Amherst, Mass. Filed Aug. 24, 1923. Serial No. 659,107. 10 Claims. (Cl. 33—124.)

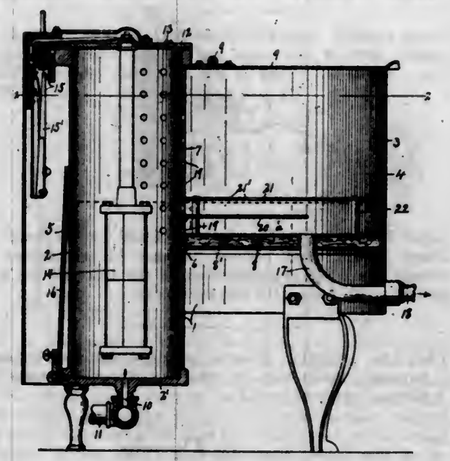
1. In a leather measuring machine, in combination, means for measuring strips of the material to be measured, means comprising a series of gears for directly



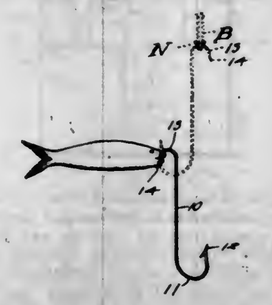
cumulating the lengths of said strips, means for actuating said cumulating means, and means mechanically connected with said measuring means and controlled thereby for connecting said cumulating means with said actuating means and disconnecting the same therefrom.

1,619,144. QUICK-ACTION CLAMP. EDWARD H. MCMILLAN, Oakland, Calif. Filed Dec. 31, 1925. Serial No. 78,637. 4 Claims. (Cl. 144—304.)

1. A clamp for the purpose described including a body having an inner, downwardly extending leg and an outer downwardly extending leg, a wedge disposed inward of the outer leg and having an outer inclined face, the outer leg being complementarily inclined to said face, the wedge having a longitudinally extending recess, and a pin carried by the clamp and extending into said recess, the recess being less in length than the wedge whereby to detachably hold the wedge against accidental displacement but permit of the longitudinal movement of the wedge.



1,619,145. COMBINATION TANDEM CONCRETE-MIXING MACHINE. EDWARD H. MCMILLAN, Oakland, Calif. Filed July 13, 1926. Serial No. 122,257. 6 Claims. (Cl. 83—73.)

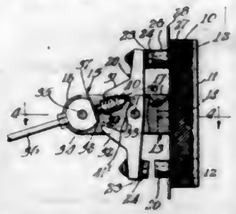


1. A separate and independent mixing machine comprising two mixing drums mounted in tandem and each having a centrally disposed receiving opening and a centrally disposed discharge opening in its opposite ends, a gate having the form of a chute pivotally supported in connection with the discharge opening of the first drum and adapted to be shifted into a downwardly inclined position to receive material from the first drum and discharge it into the second, and a gate pivotally mounted in connection with the discharge opening of the second drum and shiftable from an inoperative position to a downwardly and outwardly inclined position, each of said gates having portions extending into its corresponding drum, each drum having separate driving means.

1,619,146. COMBINED WATER HEATER AND STERILIZING APPARATUS. ALPHONSE MARTIN, Ogdensburg, N. Y., assignor of fifty-one one-hundredths to Max Katzman, Ogdensburg, N. Y. Filed Dec. 8, 1924. Serial No. 754,618. 3 Claims. (Cl. 167—3.)

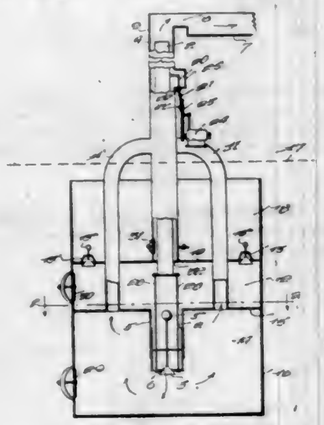
1. A combined water heater and sterilising apparatus comprising an upright cylindrical water heating chamber having a water inlet at its lower end and its upper end closed, a heater supported from the closed upper end of the heating chamber above the water inlet, and a sterilising chamber embracing a portion of one side of the heating chamber above the lower end of the heater, the portion of the heating chamber embraced by the sterilizing chamber being perforated to permit the passage of steam from the heating chamber to the sterilizing chamber.

1,619,147. FISHING HOOK. LOUIS C. MATHEY, Nashville, Tenn. Filed Nov. 2, 1926. Serial No. 145,821. 4 Claims. (Cl. 43—40.)



1. A live bait fishing hook the shank of which is provided at its line engaging end with a small open hook facing in the opposite direction from the fish hook and with which the line is adapted to be engaged, said small hook having the bill thereof sharp and free from barbs whereby the line may be slipped therefrom to release the hook.

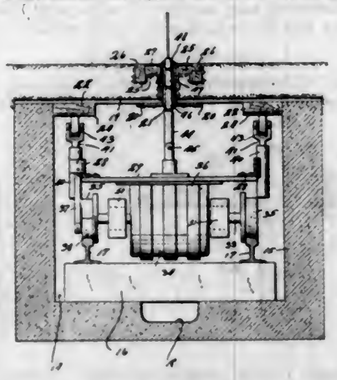
1,619,148. SWITCH. JOHN T. MILLER and MICHAEL HANLEY, Chicago, Ill. Filed Mar. 6, 1926. Serial No. 92,754. 2 Claims. (Cl. 200—68.)



1. In combination, in an electrical switch, a base, a support connected to the base, a switch blade pivoted intermediate its ends to the said support, contact mechanism carried by the base and cooperable with the ends of the switch blade, said blade at all times having one end in engaged position and its other end in a disengaged position with respect to the contact mechanism, a member pivotally connected to the said support, said blade being positioned intermediate the member and the base and having an apertured portion intermediate its ends, a

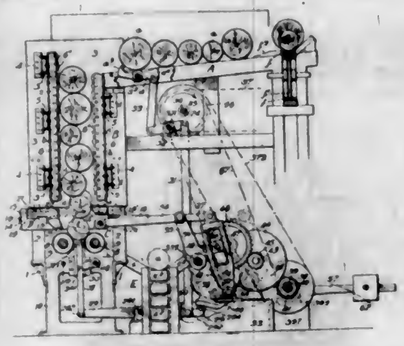
stud connected to the pivoted member, resilient means surrounding the said stud, and a plunger surrounding the said resilient means and extending into the said apertured portion of the blade, said plunger being at all times

urged into engagement with the blade by the said resilient means, said pivoted member being adapted to change the point of application of the force of the said plunger with respect to the said blade.



1,619,149. PUMP. JOSEPH MILLS, Coalhurst, Alberta, Canada. Filed Sept. 22, 1924. Serial No. 739,094. 3 Claims. (Cl. 103—178.)

1. A pump comprising in combination a main tank open at the top and adapted to be immersed, a partitioning wall in said tank spaced from the open top and provided with suction operable valves, controlled openings communicating with the open top, a second partitioning wall spaced from the first mentioned partitioning wall and forming a middle compartment and a lower compartment, a conduit protruding beyond the tank and extending into the tank to the first partitioning wall, branches for the conduit of lesser diameter and communicating with the lower compartment, a passageway between the middle compartment and the lower compartment, a piston in said passageway provided with a stem extending through said conduit, a valve in the piston head adapted to open and close the passageway.

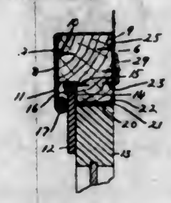


1,619,150. DOG RACE TRACK. SIDNEY W. MITCHELL, JACK NAUD, and CLARENCE F. GOLDMAN, St. Petersburg, Fla. Filed Mar. 16, 1926. Serial No. 95,064. 6 Claims. (Cl. 272—4.)

1. A race course having an underground channel and a surface slot communicating with the channel, the slot being defined by two longitudinally extending angle irons, flexible yielding strips disposed on each side of the slot at the surface of the track and normally closing said slot, and a carriage operating within the channel and having a lure support extending up through the slot, the support being mounted for lateral movement upon the carriage and having a plurality of anti-friction rollers disposed one above the other, the uppermost roller bearing against

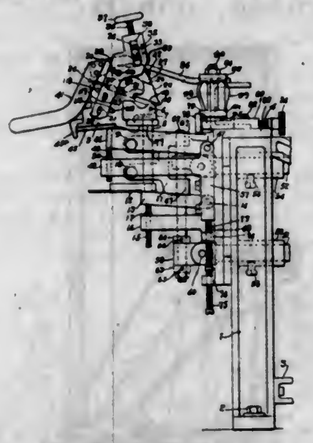
the rubber strips to open them as the carriage passes and the lower rollers bearing against the angle irons forming the side walls of the slot.

1,619,151. LOG-BARKING APPARATUS. JOHN MORAVEC, Vancouver, British Columbia, Canada. Filed Aug. 2, 1924. Serial No. 729,781. 39 Claims. (Cl. 144—208.)



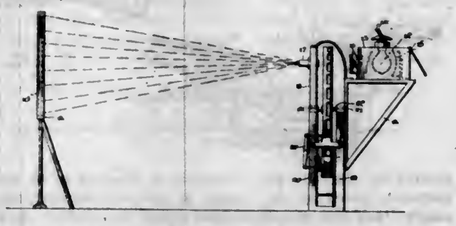
1. In a log-barking apparatus, a log-abrading device arranged to support and abrade a log, in combination with a log-ejecting device, and means for moving the log-ejecting device across the log-abrading device.

1,619,152. FISHPOLE HOLDER. EMIL V. NUNLIST, Indianapolis, Ind. Filed Mar. 6, 1922. Serial No. 541,420. 1 Claim. (Cl. 248—37.)



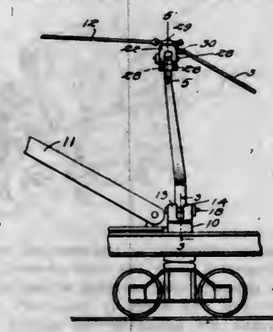
A fish pole holder comprising a stem having its lower extremity provided with an enlarged cylindrical socket adapted to fit over a support, said enlarged cylindrical socket having an enlargement at one side, a set screw threaded through said enlargement for clamping the socket on a support said stem having its upper end flattened and forming an enlarged head, said head being provided with serrations on each side, an arm having one end terminating in a fork, a second independent arm having one end terminating in a ring, said fork and ring being adapted to engage a fish pole, said arms being twisted and having flattened heads disposed in upright position at right angles to their opposite ends for engagement with the flattened head of the stem, a tooth on the inner side of the flattened heads for cooperation with serrations on the flattened head of the stem, a bolt extending through said flattened heads and having a wing nut for fastening the head and arms together in various positions of adjustment, substantially as set forth.

1,619,153. VEHICLE TOP CONSTRUCTION. MILTON M. PLUMB, Detroit, Mich., assignor to American Auto Trimming Company, Detroit, Mich., a Corporation of Michigan. Filed July 14, 1924. Serial No. 725,978. 5 Claims. (Cl. 296—102.)



1. In a vehicle top construction, the combination with a frame having a metal rail, of a tacking strip secured to said rail, a bead at the lower edge of the rail, and a yieldable abutment strip for a side curtain secured to said tacking strip and bearing against said bead.

1,619,154. MACHINE FOR FORMING HEELS FOR SHOES. CARL INGALLS POLLARD, Portsmouth, Ohio, assignor of one-half to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed July 10, 1923. Serial No. 650,623. 14 Claims. (Cl. 12—87.)

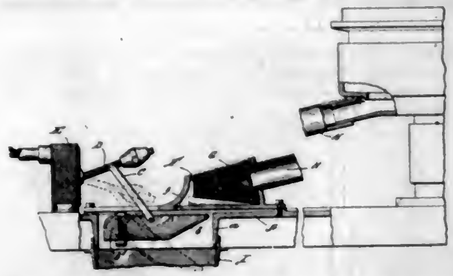


8. In a machine for manufacturing heels, a frame, a cutting means mounted thereon, a holding means to hold a blank, a link connected with said holding means and laterally adjustably pivoted on said frame for guiding said holding means and its blank adjacent the cutting means, a track for supporting said holding means as it is moved relatively to the frame on the link, means to pivot on a vertical axis the holding means on the outer end of the link, a second track for adjusting the elevation of said vertical pivoting means and the holding means, said tracks normally being disposed at a slight angle to the horizontal, means for adjusting the angularity of said tracks, means for bodily adjusting either of said tracks, and additional means permitting the adjustment of the vertical position of the vertically pivoting means connecting the link and the holding means to one another.

1,619,155. CHANGEABLE EXHIBITOR. GEORGE RICHARD PRICE, Monessen, Pa. Filed Aug. 9, 1921, Serial No. 490,908. Renewed Oct. 5, 1926. 3 Claims. (Cl. 88—27.)

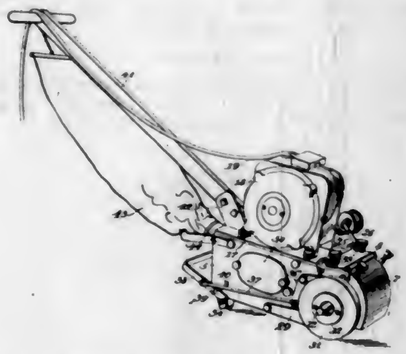
2. A changeable exhibitor including an intermittently movable wheel having a plurality of images, a constantly rotating disk adjacent to and opposite the peripheral face of the wheel, and a friction member carried by said disk and radially projecting and yieldable with respect thereto for engagement with the said peripheral face of the wheel whereby partial rotation of the image wheel will be induced during each rotation of the disk.

1,619,156. A FRAME FOR STEAM SHOVELS. ADDISON E. RUDY, Matewan, W. Va. Filed Mar. 8, 1926. Serial No. 93,190. 3 Claims. (Cl. 212—144.)



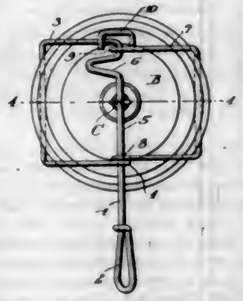
1. The combination with the sill of a digging machine having recesses in its ends, of an A-frame including legs having their lower ends seated in said recesses, and transverse wedge members disposed through the sill and operatively engaged with said leg ends whereto to hold said legs and to permit compensation for wear thereof.

1,619,157. LIQUID FUEL SAVING AND SAFETY DEVICE. JOHN SCHEMINGER, Jr., Providence, R. I., assignor to Aetna Automatic Oil Burner, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1923. Serial No. 658,147. 7 Claims. (Cl. 158—42.3.)



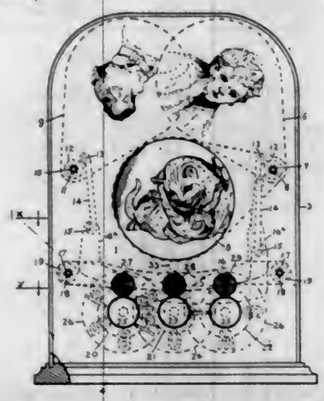
1. A fuel saving and safety device for electrically controlled liquid fuel burners, comprising an unbalanced liquid fuel receptacle pivotally supported near one end; said end being weighted and the receptacle having a free end portion of much greater length than said weighted end extending from its pivotal support and terminating in a rearwardly and upwardly inclined portion underlying a discharge port in a superposed fuel receiving chamber, an electric circuit including a switch or contact device and a switch-lever projecting therefrom toward said receptacle, a link pivoted at one end to said extended free end portion of said receptacle and having its other end

pivoted to said switch-lever; said link and switch-lever being adapted to support the extended end portion of the receptacle, and a counterbalance on the short end of said



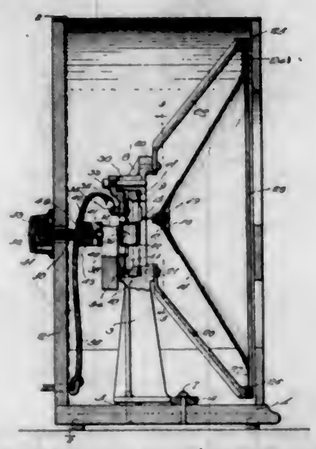
receptacle, whereby the receptacle is adapted to be automatically tilted by the weight of the fuel therein and to empty itself and simultaneously break the electric circuit.

1,619,158. COMBINATION WOODWORKING MACHINE. JOHN SCHIMMELPFENNIG, Cedar Rapids, Iowa. Filed Jan. 24, 1925. Serial No. 4,579. 10 Claims. (Cl. 51—176.)



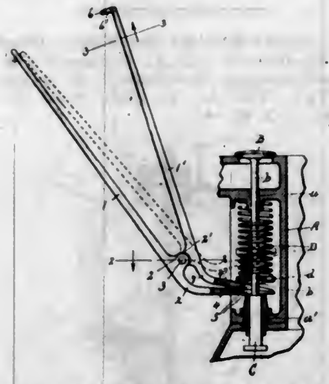
1. In a sanding machine, a roll-carrying housing, a sanding roll journaled near one end thereof, a wheel support for the opposite end, carrying wheels adjacent to the ends of the roll and normally concentric therewith axially, and means for adjusting the wheels vertically with respect to said roll.

1,619,159. COOKING UTENSIL. WILLIAM F. SCHOENWEITZ, Rochester, N. Y. Filed May 26, 1926. Serial No. 111,748. 3 Claims. (Cl. 294—2.)



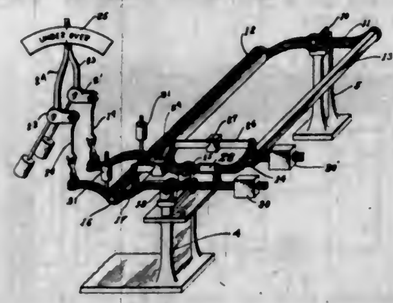
1. In an article of the character described, the combination with a fixed jaw having a handle portion thereon extended to form a central portion having an open loop adapted to engage beneath the knob of a covered vessel, of a swinging jaw pivoted to the central portion of the fixed jaw to straddle the loop and adapted to rest upon the fixed jaw and expose the loop for engagement.

1,619,160. EDUCATIONAL DEVICE FOR TEACHING SPELLING. HERBERT H. STEELE, Lynbrook, N. Y. Filed Jan. 21, 1924. Serial No. 687,638. 32 Claims. (Cl. 35—9.)



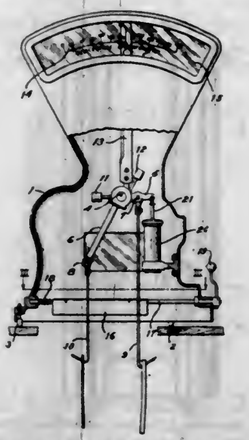
1. The combination with a casing having an opening, of a target normally hidden from view but arranged to move to the opening, and a series of rotatable selectively operable elements jointly controlling the presentation of the target to the opening.

1,619,161. ELECTROMAGNETIC SOUND REPRODUCER. HARRY STEVENSON, Kearny, N. J., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed July 16, 1926. Serial No. 122,853. 11 Claims. (Cl. 179—115.)



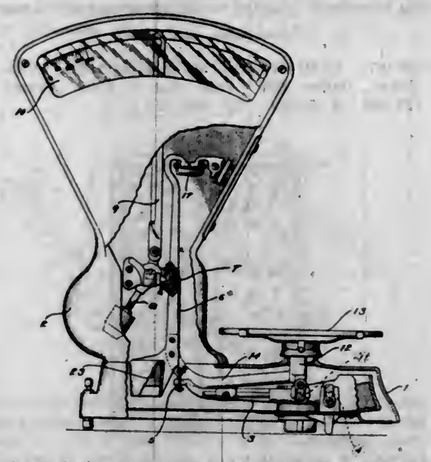
1. An electromagnetic sound reproducer comprising a vertically extending casting, an electromagnetic driving mechanism supported by said casting, a plurality of lug members integrally related to the exterior of said casting, an electromagnetic operating mechanism, a frame concentrically arranged within said casting for carrying said electromagnetic operating mechanism, and a plurality of pins extending between said frame and the lug members on said casting whereby said electromagnetic operating mechanism may be slidably adjusted within said casting, a driving armature actuated by said electromagnetic operating mechanism, and a cone shaped sound reproducing diaphragm having its apex connected with said armature whereby mechanical vibrations of said armature impart similar movement to said diaphragm.

1,619,162. VALVE LIFTER. NORBERT J. STRODEL, Syracuse, N. Y. Filed July 2, 1924. Serial No. 723,723. 1 Claim. (Cl. 29—86.3.)



A valve lifting device comprising similar inner and outer levers, each comprising a relatively long straight handle portion and a relatively short straight wedge-shaped jaw portion longitudinally bifurcated and extending at an obtuse angle to the handle portion, said handle portions having pivotally connected lateral ears thereon adjacent to but slightly spaced from the juncture of the handle and jaw portions, whereby the levers are pivotally connected in noncrossed relation so as to permit positioning of the jaws horizontally in substantially flatly contacting relation for being readily wedged between the lower abutment of a valve stem spring and an adjacent fixed part, with the handle portions positioned at a nearly vertical upward and outward inclination and in slight upwardly diverging relation, for being grasped to press the handle portion of the inner lever outwardly and downwardly toward the handle portion of the outer lever and to thereby raise the jaw portion of the inner lever away from the jaw portion of the outer lever and compress the valve stem spring.

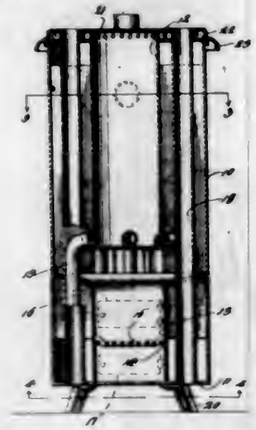
1,619,163. DEVICE FOR WEIGHING SHEET MATERIAL. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 11, 1922. Serial No. 587,275. 13 Claims. (Cl. 265—61.)



1. In a device of the class described, in combination, means for supporting a portion of a moving strip of material, and means connected to said supporting means for indicating the variations in weight per unit of length of said strip and for indicating variations in the weight from side to side of said strip, said means comprising a pair of movable indicators and a fixed chart, said indicators being adapted to indicate uniformity or non-uniformity in weight per unit of length of the strip by registration or non-registration with a predetermined mark on the fixed chart and uniformity or non-uniformity of weight from side to side of said strip by registration or non-registration with each other.

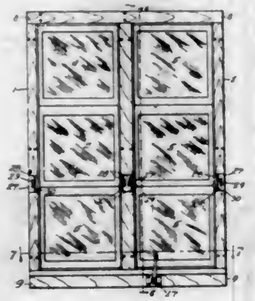
1,619,164. TESTING DEVICE. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 17, 1923. Serial No. 681,029. 7 Claims. (Cl. 265—36.)

1. In a device of the class described, in combination, a bent lever, a commodity-receiver supported by each arm of said bent lever, manually releasable means for normally preventing free swinging of said lever and the parts supported thereby, and an indicator connected to said lever for indicating the relation of the weights of commodities supported by the respective commodity-receivers.



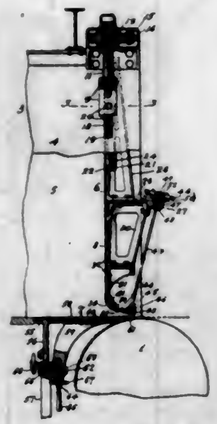
1,619,165. WEIGHING SCALE. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Feb. 2, 1924. Serial No. 690,114. 8 Claims. (Cl. 265—61.)

1. In a device of the class described, in combination, a frame, a lever connected thereto by means of a fulcrum pivot, said lever having a load pivot, a commodity-



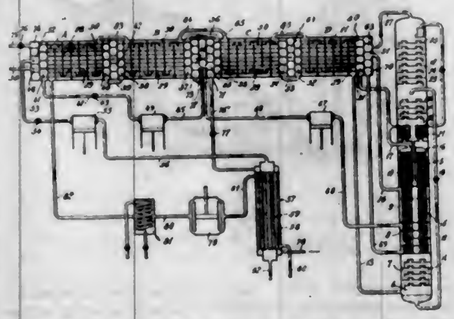
receiver located above said load pivot and positioned substantially symmetrically in respect thereto, an arm extending from said commodity-receiver, a link pivotally connecting said arm and said frame, the axes of the pivotal connections between said link, the arm and frame and the load and fulcrum pivots of said lever being in parallelogrammatic relation, and means for keeping said link in tension regardless of the position on the platform of a load within the capacity of the scale.

1,619,166. STOVE. WILLIAM E. TOLER, Pawnee, Okla. Filed Nov. 23, 1925. Serial No. 70,940. 3 Claims. (Cl. 126—70.)



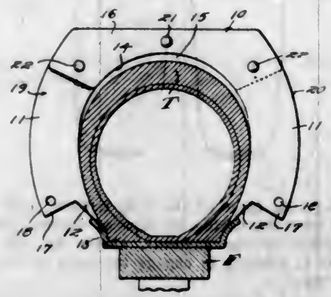
1. A stove comprising, in combination, an outer cylindrical casing, a bottom plate enclosing the lower end of the said casing, a fire box positioned in the central lower portion of the casing flaring outwardly at its upper extremity, an interior cylindrical casing mounted in the upper central portion, a plurality of air conducting pipes extending vertically through the chamber formed between the said inner and outer casings, a plurality of shorter conducting pipes extending from the bottom plate and communicating with the lower portion of the inner casing, means for supporting the structure, and a hollow cover embodying a pair of spaced plates connected by a perforated ring, the said hollow cover being detachably mounted on the upper end of the casings.

1,619,167. SASH-OPERATING MECHANISM. UUNO E. TUOMI, Dallas, Tex. Filed Aug. 7, 1926. Serial No. 127,865. 4 Claims. (Cl. 268—21.)



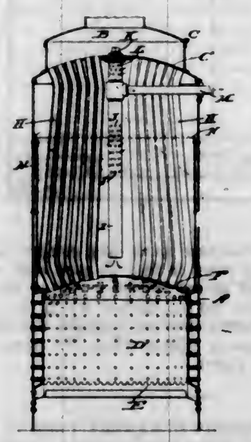
1. A window of the character described in which is provided a plurality of vertical screw threaded shafts adapted to be rotated by a common horizontal shaft, and a plurality of swingable sashes operated thereby, means to effect independent control of said sashes when the shafts are operated, said means comprising collars freely movable on said shafts to which the sashes are connected by arms, a latch having thereon a thread segment engageable with the threads of said vertical shafts pivoted to said collars and normally urged to such engagement, and means to release such engagements selectively from a common point on said window.

1,619,168. PAPER-MAKING MACHINE. CHARLES W. VALENTINE, Watertown, N. Y., assignor to The Bagley and Sewall Company, Watertown, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 82,899. 14 Claims. (Cl. 92—44.)



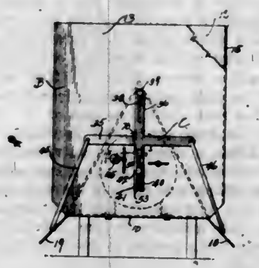
1. In a Fourdrinier paper making machine, the combination of the breast roll and the wire, of a slice adjustable to and from the wire, a controller bar carried by the lower end of the slice, said bar being of flexible metal and formed with weakened portions at a plurality of points so that it may be flexed with a light pressure both longitudinally and transversely of the wire, and means for flexing the bar.

1,619,169. APPARATUS FOR SEPARATING THE CONSTITUENTS OF GASEOUS MIXTURES. CLAUDE C. VAN NUYS, Cranford, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Sept. 9, 1920, Serial No. 409,096. Divided and this application filed Dec. 6, 1924. Serial No. 754,281. 4 Claims. (Cl. 62—123.)



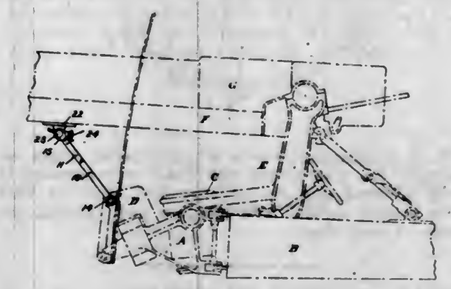
1. In an apparatus for separating the constituents of a gaseous mixture by liquefaction, the combination of a column having a plurality of tubes for the passage of the mixture, a chamber surrounding the tubes to receive liquid, a head in which the tubes terminate, means for withdrawing residual unliquefied gas from the head, means for non-selectively liquefying a regulated portion of the residual gas thus withdrawn, means for diverting the remainder of the residual gas from the liquefying means, a rectifying compartment and means for delivering liquid produced in the tubes and the liquefied residual gas to the rectifying compartment.

1,619,170. TRACTION DEVICE FOR VEHICLE TIRES. JOHN R. VOSBURGH, Johnstown, N. Y. Filed May 13, 1926. Serial No. 108,887. 1 Claim. (Cl. 152—14.)



A traction device for tired vehicle wheels comprising a U-shaped member adapted to straddle the tire and having the ends of its arms coverging to fit against the side walls of the tire adjacent the rim, the opening between the arms being elongated at the bight to provide a space between the tread of the tire and the confronting face of the bight portion when the device is disposed radially to the tire.

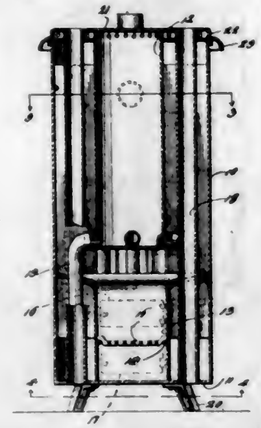
1,619,171. BOILER. HENRY E. WALLIS and CHARLES T. KINGSTON, Detroit, Mich. Filed Mar. 29, 1924. Serial No. 702,827. 1 Claim. (Cl. 122—118.)



In a vertical tube boiler, upper and lower tube sheets, a plurality of tubes connected to the tube sheets, a central pipe extending through the upper tube sheet and suspended therefrom and terminating immediately above the same, a plug to close the upper end of said central pipe and the latter extending downwardly from the upper tube sheet to a point adjacent the lower tube sheet and open at its lower end and having a plurality of apertures adjacent the water level, whereby the water in the boiler may circulate downwardly through said pipe and be discharged therefrom adjacent the lower tube sheet, a horizontally disposed pipe disposed below the upper tube sheet and connected with the said central pipe and extending through the shell of the boiler between the tubes for the passage of steam, said central pipe having a plurality of apertures above said horizontally disposed pipe below the upper tube sheet open to the steam space of the boiler, whereby steam may be admitted in the said central pipe for passage through said horizontal pipe.

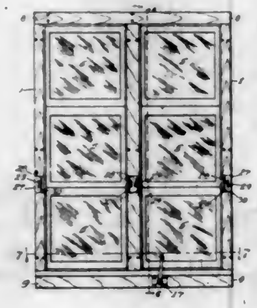
1,619,172. TIME FEEDER FOR DOMESTIC ANIMALS. WILLIAM F. WENT, Colorado Springs, Colo. Filed Aug. 1, 1924. Serial No. 729,563. 2 Claims. (Cl. 161—10.)

1. In a feeder of the class described a housing providing a storage compartment having openings at the lower opposite corners thereof, lids pivotally connected to said housing normally operated by their own weight to assume an open relation, a cross-shaped member carried by said housing for vertical movement and including oppositely disposed side arms, links connecting the opposite ends of said side arms with said lids so that the weight of said cross-shaped member will act upon said lids to hold them in an open relation with respect to the openings of said housing, and time controlling means for operating said cross-shaped member.



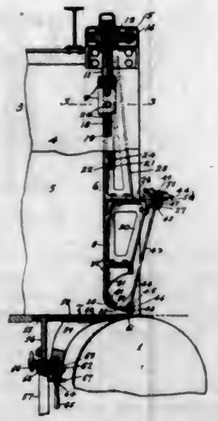
1,619,173. CRADLE LOCK FOR GUN CARRIAGES. HARRY C. ZIMMERMAN, Washington, D. C. Filed Aug. 25, 1924. Serial No. 734,060. 5 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)

5. A cradle lock for gun carriages including a tripodal swinging support, means for mounting said support to the carriage, a tripod head formed wtih upstanding apertured ears, an apertured lug on said cradle, a coupling bolt insertable through the ears and lug, and means mounted in the head and cooperating with the bolt for holding the bolt in either locked or unlocked position.



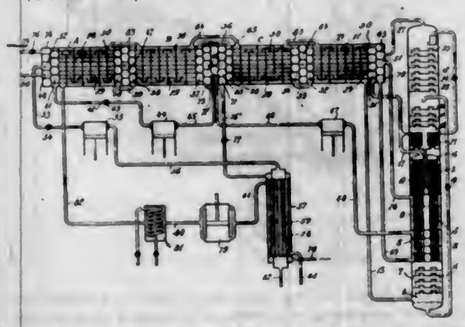
receiver located above said load pivot and positioned substantially symmetrically in respect thereto, an arm extending from said commodity-receiver, a link pivotally connecting said arm and said frame, the axes of the pivotal connections between said link, the arm and frame and the load and fulcrum pivots of said lever being in parallelogrammatic relation, and means for keeping said link in tension regardless of the position on the platform of a load within the capacity of the scale.

1,619,166. STOVE. WILLIAM E. TOLER, Pawnee, Okla. Filed Nov. 23, 1925. Serial No. 70,940. 3 Claims. (Cl. 126—70.)



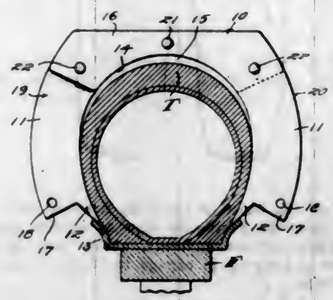
1. A stove comprising, in combination, an outer cylindrical casing, a bottom plate enclosing the lower end of the said casing, a fire box positioned in the central lower portion of the casing flaring outwardly at its upper extremity, an interior cylindrical casing mounted in the upper central portion, a plurality of air conducting pipes extending vertically through the chamber formed between the said inner and outer casings, a plurality of shorter conducting pipes extending from the bottom plate and communicating with the lower portion of the inner casing, means for supporting the structure, and a hollow cover embodying a pair of spaced plates connected by a perforated ring, the said hollow cover being detachably mounted on the upper end of the casings.

1,619,167. SASH-OPERATING MECHANISM. UUNO E. TUOMI, Dallas, Tex. Filed Aug. 7, 1926. Serial No. 127,865. 4 Claims. (Cl. 268—21.)



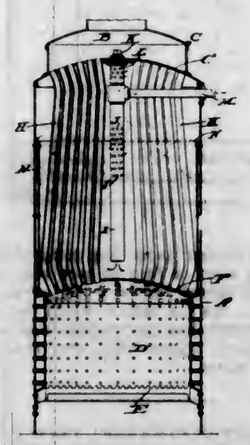
1. A window of the character described in which is provided a plurality of vertical screw threaded shafts adapted to be rotated by a common horizontal shaft, and a plurality of swingable sashes operated thereby, means to effect independent control of said sashes when the shafts are operated, said means comprising collars freely movable on said shafts to which the sashes are connected by arms, a latch having thereon a thread segment engageable with the threads of said vertical shafts pivoted to said collars and normally urged to such engagement, and means to release such engagements selectively from a common point on said window.

1,619,168. PAPER-MAKING MACHINE. CHARLES W. VALENTINE, Watertown, N. Y., assignor to The Bagley and Sewall Company, Watertown, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 82,899. 14 Claims. (Cl. 92—44.)



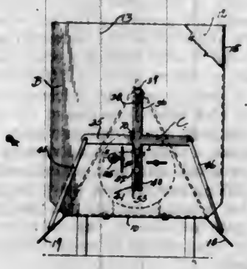
1. In a Fourdrinier paper making machine, the combination of the breast roll and the wire, of a slice adjustable to and from the wire, a controller bar carried by the lower end of the slice, said bar being of flexible metal and formed with weakened portions at a plurality of points so that it may be flexed with a light pressure both longitudinally and transversely of the wire, and means for flexing the bar.

1,619,169. APPARATUS FOR SEPARATING THE CONSTITUENTS OF GASEOUS MIXTURES. CLAUDE C. VAN NUYS, Cranford, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Sept. 9, 1920, Serial No. 409,006. Divided and this application filed Dec. 6, 1924. Serial No. 754,281. 4 Claims. (Cl. 62—123.)



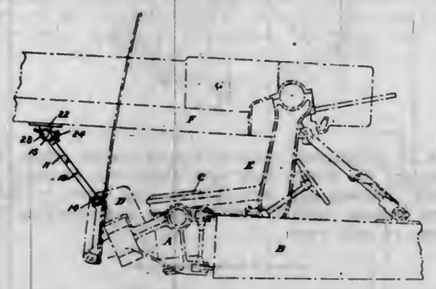
1. In an apparatus for separating the constituents of a gaseous mixture by liquefaction, the combination of a column having a plurality of tubes for the passage of the mixture, a chamber surrounding the tubes to receive liquid, a head in which the tubes terminate, means for withdrawing residual unliquefied gas from the head, means for non-selectively liquefying a regulated portion of the residual gas thus withdrawn, means for diverting the remainder of the residual gas from the liquefying means, a rectifying compartment and means for delivering liquid produced in the tubes and the liquefied residual gas to the rectifying compartment.

1,619,170. TRACTION DEVICE FOR VEHICLE TIRES. JOHN R. VOSBURGH, Johnstown, N. Y. Filed May 13, 1926. Serial No. 108,887. 1 Claim. (Cl. 152—14.)



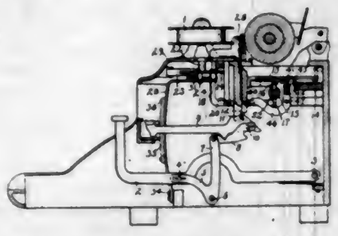
A traction device for tired vehicle wheels comprising a U-shaped member adapted to straddle the tire and having the ends of its arms coverging to fit against the side walls of the tire adjacent the rim, the opening between the arms being elongated at the bight to provide a space between the tread of the tire and the confronting face of the bight portion when the device is disposed radially to the tire.

1,619,171. BOILER. HENRY E. WALLIS and CHARLES T. KINGSTON, Detroit, Mich. Filed Mar. 29, 1924. Serial No. 702,827. 1 Claim. (Cl. 122—118.)



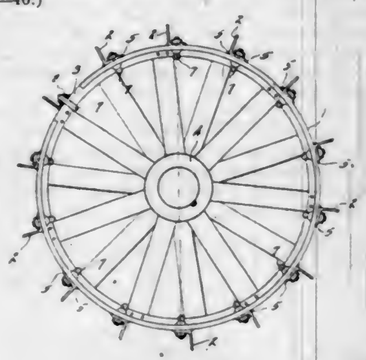
In a vertical tube boiler, upper and lower tube sheets, a plurality of tubes connected to the tube sheets, a central pipe extending through the upper tube sheet and suspended therefrom and terminating immediately above the same, a plug to close the upper end of said central pipe and the latter extending downwardly from the upper tube sheet to a point adjacent the lower tube sheet and open at its lower end and having a plurality of apertures adjacent the water level, whereby the water in the boiler may circulate downwardly through said pipe and be discharged therefrom adjacent the lower tube sheet, a horizontally disposed pipe disposed below the upper tube sheet and connected with the said central pipe and extending through the shell of the boiler between the tubes for the passage of steam, said central pipe having a plurality of apertures above said horizontally disposed pipe below the upper tube sheet open to the steam space of the boiler, whereby steam may be admitted in the said central pipe for passage through said horizontal pipe.

1,619,172. TIME FEEDER FOR DOMESTIC ANIMALS. WILLIAM F. WENT, Colorado Springs, Colo. Filed Aug. 1, 1924. Serial No. 729,563. 2 Claims. (Cl. 161—10.)



1. In a feeder of the class described a housing providing a storage compartment having openings at the lower opposite corners thereof, lids pivotally connected to said housing normally operated by their own weight to assume an open relation, a cross-shaped member carried by said housing for vertical movement and including oppositely disposed side arms, links connecting the opposite ends of said side arms with said lids so that the weight of said cross-shaped member will act upon said lids to hold them in an open relation with respect to the openings of said housing, and time controlling means for operating said cross-shaped member.

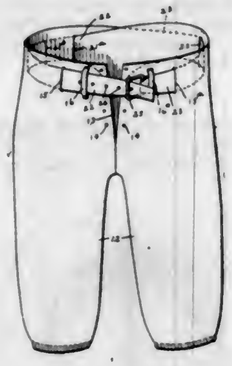
1,619,173. CRADLE LOCK FOR GUN CARRIAGES. HARRY C. ZIMMERMAN, Washington, D. C. Filed Aug. 25, 1924. Serial No. 734,060. 5 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883. 22 Stat. L. 625.)



5. A cradle lock for gun carriages including a tripodal swinging support, means for mounting said support to the carriage, a tripod head formed wtih upstanding apertured ears, an apertured lug on said cradle, a coupling bolt insertable through the ears and lug, and means mounted in the head and cooperating with the bolt for holding the bolt in either locked or unlocked position.

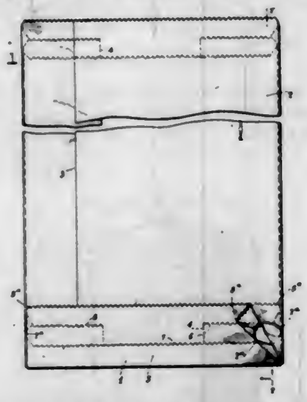
1,619,174. RIBBON-OPERATING MECHANISM FOR TYPEWRITING MACHINES. JESSE ALEXANDER, Los Angeles, Calif. Filed Nov. 5, 1923. Serial No. 672,822. 2 Claims. (Cl. 197—157.)

1. In a typewriter, a universal bar, a support for the universal bar, means for actuating the universal bar and its support, a rock shaft below the universal bar support and actuated thereby, ribbon feeding mechanism actuated by said rock shaft, a ribbon lifter, a lifting arm pivoted intermediate of its ends below the universal bar support and in rear of the rock shaft, one end of the lifting arm curving around the rock shaft and having a connection with the ribbon lifter, a slide on the universal bar support in rear of the rock shaft, and pins on said slide, the opposite end of the lifting arm curving upwardly and having a slot adapted for engagement by the respective pins by shifting the slide relative to the universal bar support, and said pins being spaced to exert different leverage on the lifting arm.



1,619,175. AUXILIARY RIM AND MEANS FOR ATTACHING SAME. ARTHUR P. ARMINGTON, Willoughby, Ohio, assignor to The Euclid Crane & Hoist Company, Euclid Village, Ohio, a Corporation of Ohio. Filed Mar. 24, 1926. Serial No. 97,014. 3 Claims. (Cl. 301—40.)

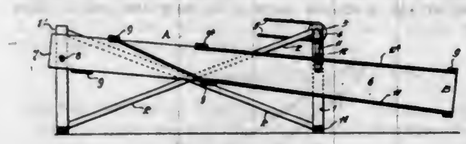
2. In combination with a flanged tractor wheel, an auxiliary rim spaced from said wheel by a plurality of tread members, and secured upon said wheel by hook bolts passing through said members and engaging the flange of said wheel.



1,619,176. TROUSERS FOR ATHLETES. HENRY K. ATWELL, Syracuse, N. Y. Filed Mar. 6, 1926. Serial No. 92,705. 2 Claims. (Cl. 2—237.)

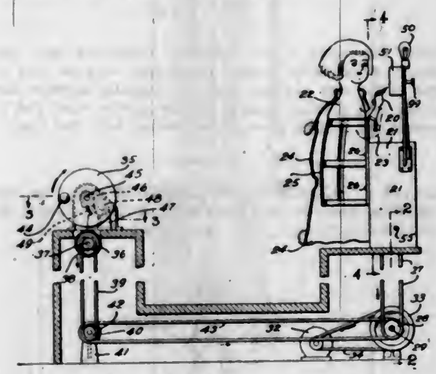
1. Trousers of the character described, including leg and body sections, the front of the body being separated into two members by a vertical opening extending through its upper edge and provided on opposite sides of said opening with slits closed at both ends, the back and sides of the body including a lower portion continuous throughout the width of the garment and an upper portion constituting the waist portion of the garment which is divided to provide two overlapping members that extend to the upper edge of the back and the free edges of which terminate in strap-like parts that extend through the afore-

said slits in the front of the body portion, each of said strap-like portions having an exposed section within the waist portion of the garment, above the hip portion whereby it is adapted to engage the body of the wearer over the hips.



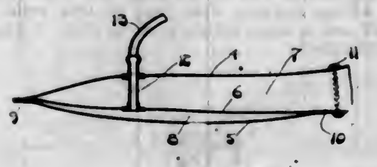
1,619,177. SIFT-PROOF BAG. TRUE M. AVERY, Hudson Falls, N. Y., assignor to Union Bag & Paper Corporation, Hudson Falls, N. Y., a Corporation of New Jersey. Filed June 26, 1925. Serial No. 39,824. 2 Claims. (Cl. 229—58.)

1. A square-bottom paper bag comprising a tube-like body having a pleat or tuck at each edge and a bottom flap folded and pasted against a side of the body of the bag, the side of the bag against which the bottom flap is pasted being wider than the opposite side of the bag and providing supports against which the corners of the bottom flap are pasted.



1,619,178. COTTON CLEANER. CLYDE J. BAKER, Wellington, Tex. Filed Mar. 29, 1926. Serial No. 98,238. 3 Claims. (Cl. 19—65.)

1. A cotton cleaner comprising a frame, supporting means therefor; an elongated screened box having one end loosely connected to a cross rod in the frame and having connection near its center to a crank shaft in the frame; a pulley secured to the crank shaft and means for driving the pulley; said box having both ends open and screens at the top and bottom, one end adapted to receive cotton from the upper side of the box and the other end adapted to deliver the cotton when cleaned; said crank shaft when rotated by the pulley so arranged

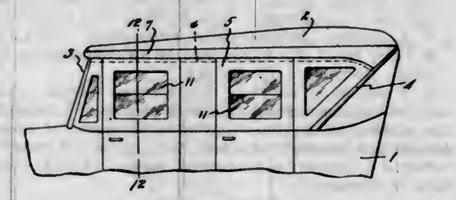


that the cotton will be given an agitating up and down movement between the screens of the box in removing the dirt therefrom.

1,619,179. MECHANICAL TOY. ADOLF BANGERTER, New Brighton, N. Y. Filed Jan. 5, 1924. Serial No. 684,664. 8 Claims. (Cl. 273—86.)

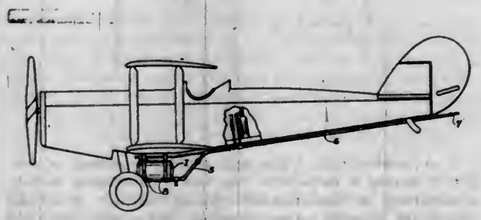
1. A toy as characterized comprising a movable marking member; a stationary chart magazine for disposing successive charts adjacent to said marking member; and power driven means for moving said marking member successively to place a marking point against the outermost chart and to simultaneously move said point under pressure over said chart, in a predetermined path, and then to move said marking member out of contact with said chart.

1,619,180. BATH MIT. ANDREW BENUSSI, Brooklyn, N. Y. Filed Feb. 20, 1926. Serial No. 89,807. 1 Claim. (Cl. 15—127.)



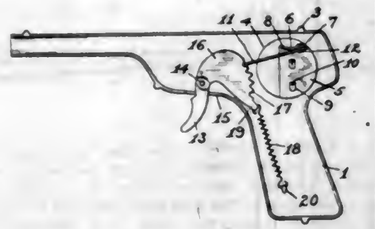
A bath mit having a hand compartment and a water compartment secured to the face of the hand compartment, said hand compartment being water proof and adapted to receive the wearer's hand, said water compartment being adapted to receive water and to have its discharge through the outer wall thereof onto the wearer's body while in use, and a hose connection extending from the water compartment through the hand compartment and accessible from the back of the mit for connection to a source of water supply.

1,619,181. COMBINATION TOOL. JOHN BERETZ, Blair, W. Va. Filed Apr. 22, 1926. Serial No. 103,684. 2 Claims. (Cl. 81—9.5.)



1. In a device of the class described the combination with a pair of pliers, of wire stripping elements comprising a lower gripping member located at a point intermediate to the sides of the said plier jaw, and an opposed gripping member having the form of a rotatable plate with a plurality of straight edges which are at varying distances from the pivot center of the said plate and each of which edges may be brought into registration with the said lower member, and means to lock the said plate in the desired position.

1,619,182. CONVERTIBLE VEHICLE BODY. FRANK A. BEST, Ford, Ontario, Canada, assignor to American Auto Trimming Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 25, 1924. Serial No. 734,076. 12 Claims. (Cl. 296—45.)

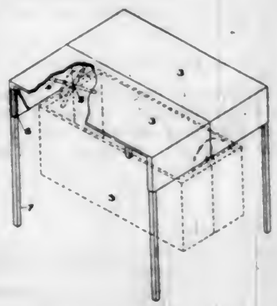


1. The combination with a vehicle body and a removable window section, of means for attaching said section to said body including a socket secured to the body, a plate rigidly secured to the section, a bar slidably engaging said socket, and an adjustable connection between the bar and plate capable of adjusting said window section relative to the vehicle body.

1,619,183. PROCESS OF PRODUCING SMOKE CLOUDS FROM MOVING AIRCRAFT. DONALD B. BRADNER and NICHOLAS E. OGLESBY, Edgewood, Md. Filed May 8, 1925. Serial No. 28,981. 8 Claims. (Cl. 244—1.)

1. In a process of producing a smoke screen, ejecting from a moving body a liquid which reacts with a constituent of the air to produce a smoke, said body moving at a velocity sufficient to produce a highly dispersive action upon a liquid falling therefrom and said smoke-producing liquid being ejected in a direction substantially opposite to that of the moving body and at a velocity to counteract said dispersive action.

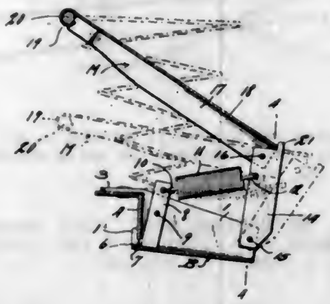
1,619,184. TOY PISTOL. HARRY BERGMAN, Lorain, Ohio, assignor to The Steel Stamping Company, a Corporation of Ohio. Filed June 30, 1923. Serial No. 648,778. 2 Claims. (Cl. 46—46.)



1. In a toy pistol, the combination of a body, a plate fixed to the body, the plate having a flange extending at a right angle thereto, the flange having one portion inclined downwardly and its other portion extending upwardly, a flat spring fixed to the downwardly inclined portion of the flange, a trigger pivotally supported by the body, and the trigger being provided with teeth for engaging the free end of said flat spring, substantially as described.

1,619,185. PROCESS FOR REMOVING THE DUST FROM CALCIUM CYANAMIDE AND DEODORIZING THE SAME. JOSEPH BRESLAUER, Geneva, Switzerland, assignor to Compagnie de L'Azote et des Fertilisants S. A., Geneva, Switzerland, a Swiss Firm. Filed Jan. 8, 1926, Serial No. 80,104, and in Switzerland Jan. 10, 1925. 6 Claims. (Cl. 71—9.)

1. A process for removing the dust from calcium cyanamide and of deodorizing the latter consisting in treating this cyanamide simultaneously with a current of carbon dioxide and superheated steam for a period of time insufficient to convert a substantial amount of said cyanamide to ammonia.

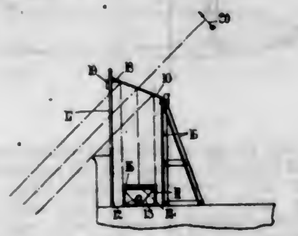


1,619,186. COMBINATION AUTOMOBILE TRUNK AND TABLE. TOBIAS J. BRICCA and JOSEPH C. FAVILLA, San Francisco, Calif. Filed July 27, 1926. Serial No. 125,277. 5 Claims. (Cl. 190—12.)

1. A combination trunk and table comprising, a container having a detachable top and a detachable bottom, a plurality of side members joined together by hinges which are adapted to be converted into a table top, and supports carried inside the container for supporting the top, bottom and the table top.

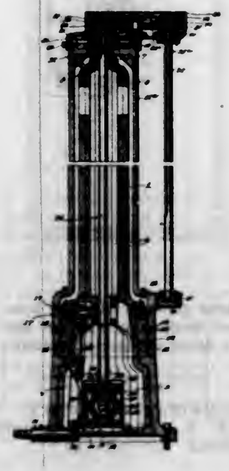
1,619,187. ATTACHMENT FOR BED SPRINGS. EDWARD L. BRONSTEIN, St. Paul, Minn. Filed Apr. 13, 1926. Serial No. 101,770. 1 Claim. (Cl. 5—262.)

In combination with a bed spring including a frame and a top border wire, a member secured to the frame and extending laterally therefrom, said member being in cross section substantially U-shaped, an arm fitting within said member and secured thereto, an end portion of the arm having direct abutting contact against the bottom of the U-shaped member to hold the arm against



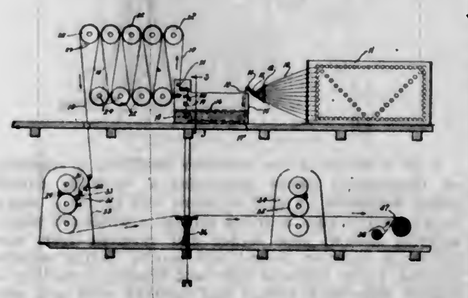
rocking movement, a link pivotally connected with said member, a retractile spring interposed between and secured to the arm and link, and an elongated member having one end portion secured to the border wire and its opposite end portion pivotally connected with the link.

1,619,188. NONSKID CROSS-CHAIN HOOK. LE ROY BROWNE, Troy, N. Y. Filed Sept. 6, 1923. Serial No. 661,292. 3 Claims. (Cl. 24—230.5.)



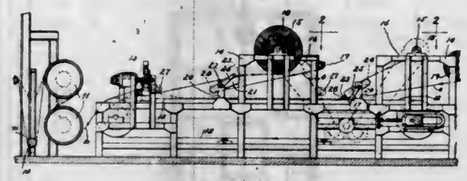
1. A cross chain hook formed from a single piece of resilient material bent to provide a loop at one end for receiving the cross chain, double hooks at the other end for engaging a link of the side chain, and a projection intermediate the ends normally closing the jaws of said hooks; said double hooks adapted to be sprung apart to allow a cross chain link to pass therebetween, and sprung away from said projection to permit a side chain link to enter the hook.

1,619,189. SIGN. WILLIAM ALBERT BURNS, London, England, assignor, by mesne assignments, to Charles Gold, Ravens, England. Filed Sept. 12, 1924, Serial No. 737,427, and in Great Britain Sept. 20, 1923. 7 Claims. (Cl. 40—130.)



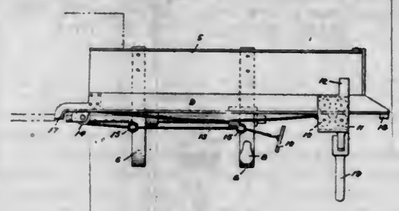
1. A means for displaying a sign to be visible as floating in the air against the sky as a background, comprising a display device mounted by an elevation materially above the eye of the observer and wholly concealed by such elevation from the eye of the observer, a translucent reflector arranged above the display device and between it and the background, and at an angle other than a right angle to the display device to cause the line of observation to be through the reflector to the background wholly beyond said elevation and said display device.

1,619,190. RADIAL DRILL. JACK C. CARLTON, Cincinnati, Ohio, assignor to The Carlton Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 18, 1922. Serial No. 582,751. 20 Claims. (Cl. 77—28.)



1. In a radial drill, a column, a sleeve concentrically and rotatively supported upon and surrounding said column, a cap for said sleeve housing transmission gearing, a second housing removably mounted within the base of said column and projecting beyond the side wall of the same, having transmission gearing therein, and a shaft extending longitudinally of said column having splined connection at each end with a gear of respective transmission gearings.

1,619,191. MANUFACTURE OF WEFTLESS CORD FABRIC. MARTIN CASTRICUM, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 16, 1923. Serial No. 657,791. 5 Claims. (Cl. 154—1.)

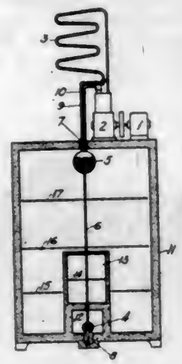


3. An apparatus for forming weftless cord fabric which comprises a cord supply, means to arrange the cords in separate spaced relation to form a sheet, devices for guiding the cords through a liquid bath while thus separated, means to crowd the cords together while still preserving the sheet form, devices acting while the cords are thus crowded to remove excess liquid from the cords, and devices for applying to the cords a uniting matrix of rubber.

1,619,192. DELIVERING MOVING WEBS. MARTIN CASTRICUM, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 6, 1926. Serial No. 92,904. 4 Claims. (Cl. 271—2.1.)

1. A method of picking up stock being delivered on a conveyor belt, which comprises causing a conveying web to pass through an abrupt turn in a direction of motion opposite to that of the belt, and substantially in contact with the belt ahead of the leading end of the stock, whereby the stock will be lifted from the belt and carried upon the web.

1,619,193. LOADER FOR GUNS. THOMAS A. CONLON, Silver Spring, Md. Filed Feb. 19, 1925. Serial No. 10,340. 1 Claim. (Cl. 89—47.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)



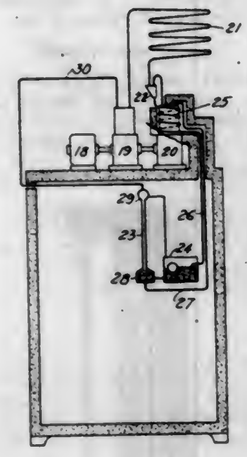
In combination with a gun, a loading tray mounted for oscillatory movement on the cradle thereof, a rail on the tray, a rammer movable on the rail and having a finger extending within the tray for engaging a projectile, means on the rail for limiting movement of the rammer, a cable attached to the rammer, pulleys over which the cable is trained, and a handle for moving the rammer.

1,619,194. WORKING SUBSTANCE FOR HEAT ENGINES. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 29, 1922, Serial No. 603,998. Renewed Apr. 19, 1926. 16 Claims. (Cl. 252—5.)

1. The use as a refrigerating fluid of carbon tetrachloride and a mixture of the vapor of the latter and of a gas substantially inert toward and insoluble in the liquid carbon tetrachloride at common atmospheric temperatures and pressures.

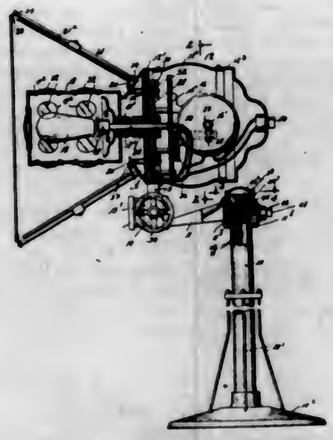
1,619,195. HEAT ENGINE. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Original application filed Nov. 29, 1922, Serial No. 603,998. Divided and this application filed Apr. 25, 1924. Serial No. 708,936. 19 Claims. (Cl. 62—116.)

1. Refrigerating apparatus utilizing as a refrigerant a physical mixture of a liquid and a gas inert to and insoluble in said liquid comprising a compressor, means to operate said compressor, a refrigerating element for containing the liquid refrigerant, a continuously open nozzle opening into said element, a condenser, ducts connecting said compressor to said element and to said condenser respectively, and a duct through which contiguous streams of liquid and gas pass from said condenser to said nozzle.



1,619,196. PROCESS OF TRANSFORMING HEAT. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 12, 1925. Serial No. 15,172. 21 Claims. (Cl. 62—170.)

1. The process of transforming heat, involving repeatedly conducting a suitable working substance having a gaseous incondensible component, through a closed thermodynamic cycle, which consists in successively compressing, condensing, expanding, and vaporizing the said working substance.

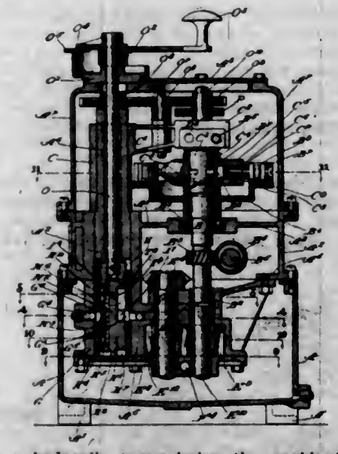


1,619,197. HEAT ENGINE. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Original application filed Apr. 25, 1924, Serial No. 708,936. Divided and this application filed July 24, 1925. Serial No. 45,905. 21 Claims. (Cl. 62—115.)

1. A heat engine adapted to the circulation of a working substance having liquid and gaseous components comprising a compressor, a condenser, an expansion device in dynamic relation with said compressor, a boiler for containing the liquid component of the refrigerant, and pipes interconnecting said elements arranged to conduct the

gaseous component of the refrigerant from said condenser to said expansion device and thence to said boiler beneath the level of the liquid refrigerant therein.

1,619,198. ILLUMINATING DEVICE. KARL EDISON, New York, N. Y. Filed Jan. 9, 1926. Serial No. 80,273. 2 Claims. (Cl. 240—49.)

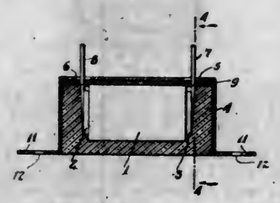


1. In a device of the character described, a standard, an illuminating device comprising a vertically tiltable casing supported on said standard and having a socket for an electric bulb, a driven spindle, a windowed mantle mounted around said socket and revolved from said spindle, a reflector around said mantle having movable sections, a gear operated from said spindle, a plurality of pinions distributed around and meshing with said gear and crank arms operated from said pinions and operatively connected to said movable section so as to rock the latter transversely of the reflector.

1,619,199. FULL-FASHIONED HOSIERY. HUMPHREY EVANS and HERBERT E. HEILBRONNER, Milwaukee, Wis., assignors to Holeproof Hosiery Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 12, 1924. Serial No. 712,593. 7 Claims. (Cl. 66—184.)

1. As a new article of manufacture, a hose having seamless toe and heel portions and consisting of a leg portion, an ankle portion, a toe portion, a sole portion and a heel portion formed from an integral piece of knitted material in which the sole portion is integral with the upper portion at the toe to form a seamless connection therebetween at the toe, a longitudinally extending seam joining the edges of the leg portion together from the ankle to the upper end of the hose, and diagonally extending branch seams extending on opposite sides of the hose from the lower end of the longitudinal seam and along the opposite sides of the foot to points spaced from the end of the toe to join the portions together and eliminate seams from the toe and heel portions proper and the bottom portions of the sole.

1,619,200. HYDRAULIC TRANSMISSION. WALTER FERRIS, Milwaukee, Wis. Filed Apr. 11, 1921. Serial No. 460,184. 41 Claims. (Cl. 60—52.)

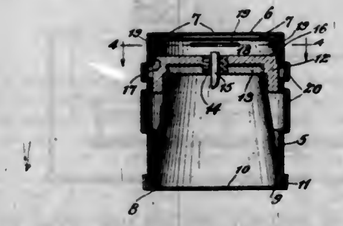


1. In a hydraulic transmission the combination of a hydraulic motor, a variable displacement pump for delivering a driving liquid thereto, means for regulating pump displacement to regulate the speed of said motor within a limited range, a second pump for driving said motor, valve mechanism for controlling the discharge from said second pump to increase the speed of said motor above said range, and a unitary means for controlling said displacement regulating means and said valve.

22. In a hydraulic transmission the combination of a hydraulic circuit, a motor in said circuit, a pump, valve mechanism adjustable to connect said pump with either side of said circuit to operate said motor in either direction, and a low pressure relief valve connected with the discharge side of said motor in all positions of said valve.

34. In a hydraulic transmission the combination of a hydraulic circuit, a variable displacement pump for feeding said circuit, means for regulating pump displacement, and valve mechanism associated with said regulating means for automatically effecting communication between the two sides of said circuit when pump displacement is zero.

1,619,201. CONDENSER. JOSEPH A. FRIED, Flushing, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 29, 1926. Serial No. 105,595. 4 Claims. (Cl. 175—41.5.)

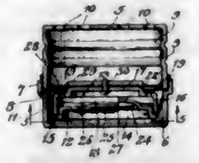


1. A condenser comprising a rolled body, a casing in which the body is disposed, the casing having openings adjacent opposite ends of the body, a terminal in the form of a flat relatively wide strip secured to each of the opposite ends of the body, the terminals projecting through said openings, an insulating embedment sealing the condenser in the casing, and perforated metallic lugs carried by the casing, and projecting one at each end thereof.

1,619,202. POWDERED SOLUBLE FRUIT, VEGETABLE, OTHER EDIBLE NATURAL OR MANUFACTURED SUBSTANCES AND PROCESS OF MAKING A POWDERED FRUIT, VEGETABLE, OR OTHER EDIBLE SUBSTANCE OR COMPOSITION. CHARLES J. GREENSTREET, Chicago, Ill. Filed Sept. 13, 1923. Serial No. 662,444. 11 Claims. (Cl. 99—5.)

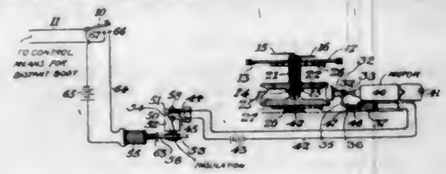
1. A composition of matter comprising substantially all the constituents of a natural fruit chemically unchanged and reduced to such a fine state of subdivision as to form a colloidal solution in the presence of water.

6. The process of making a powdered edible substance comprising the reduction of a natural edible substance including both juices and fibrous structure to the colloidal state in the presence of a liquid carrier, and evaporating to dryness the resultant colloidal solution.



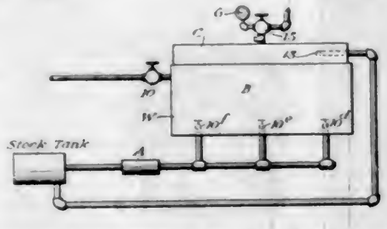
1,619,203. SOUND-PRODUCING DEVICE. ANTON L. GRUBMAN, Belle Harbor, N. Y., assignor to Voices Incorporated, Newark, N. J., a Corporation of Delaware. Filed Nov. 22, 1924. Serial No. 751,451. 7 Claims. (Cl. 46—46.)

1. In a sound producing device, a casing having sound-emission apertures in the wall thereof, a bellows arranged



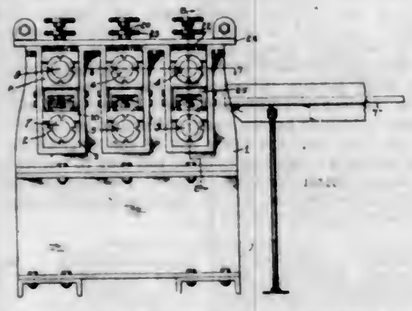
within said casing having a gravity movable head, a sound producing reed through which air is expelled from the bellows in the movement of said head in one direction, the wall of said casing being also provided with sound emission passages spaced apart longitudinally of the casing, and relatively fixed means on the bellows heads cooperating with said spaced passages in the air expelling movement of said head to effect an articulated emission of the sound.

1,619,204. SOUND-PRODUCING DEVICE. LEO J. GAUBMAN, New York, N. Y., assignor to Voices Incorporated, Newark N. J., a Corporation of Delaware. Filed Aug. 7, 1923. Serial No. 656,169. 12 Claims. (Cl. 46—46.)



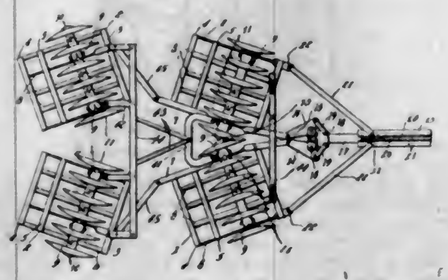
1. In a sound producing device, an air chamber and a movable head constituting one end of said chamber, a sound producing reed through which the air flows in the movement of said head in one direction, a wall surrounding said head, said head having means thereon cooperating with said wall to provide a sound emission passage between said means and the wall, and means affording communication between said reed and said passage.

1,619,205. ANGLE-INDICATING DEVICE FOR MOVING BODIES. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Sept. 25, 1918, Serial No. 255,681. Renewed Apr. 26, 1924. 4 Claims. (Cl. 177—311.)



1. An indicating system comprising an indicator having a pair of pointers, means for turning said pointers in opposite directions, means including a motor running at a constant speed for operating said pointer turning means at a rate corresponding to the angular velocity of a distant body, an electric circuit, and means operated by the closing of said circuit for actuating said operating means, whereby said indicator reproduces the angular turning movement of said distant body.

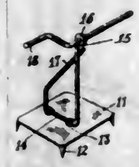
1,619,206. TREATMENT OF GASOLINE. MEADE W. HARRIGER and WILLIAM J. BAKER, Tylersburg, Pa. Filed Aug. 6, 1924. Serial No. 730,415. 1 Claim. (Cl. 196—11.)



Apparatus for extracting wild gas from casing head gasoline, comprising a plurality of parallel pipes located in vertically spaced relation to each other and each sloping downwardly from the horizontal at an angle such that the total drop from the intake end to the outlet end is substantially 5¾ inches in 107 inches, a plurality of vertical headers each having a considerably greater internal diameter than the sum of the internal diameters of said pipes, the first of said headers being connected with all of said pipes at one end and the last of said headers being connected with all of said pipes at the other end, while all of the pipes open into each intermediate header, a gasoline intake pipe opening into the first header, a vapor outlet at the top of each header for the release of wild gas, a gasoline outlet at the bottom of certain of said headers, means for heating said pipes and headers to such temperature as will vaporize the wild gas in the gasoline flowing therethrough, and a residue gas container located above said sloping pipes and said headers and receiving the vapor from the vapor outlets in said headers, said container having an opening at its bottom leading into the first of said headers to return to the sloping pipes any liquid gasoline which escapes with the wild gas.

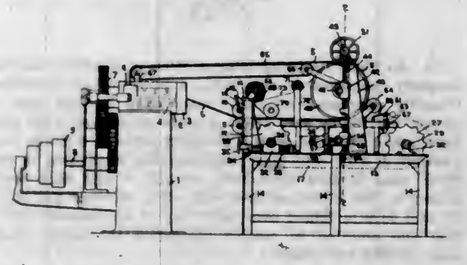
1,619,207. MACHINE FOR FORMING BLANKS FOR CORRUGATED-PAPER BOXES. JAMES F. JONES, Sewickley, Pa., assignor to The Consolidated Paper Company, Monroe, Mich., a Corporation of Michigan. Filed Jan. 24, 1925. Serial No. 4,367. 6 Claims. (Cl. 93—58.)

1. A machine for forming blanks for corrugated paper boxes, a plurality of pairs of shafts, scoring discs located on the shafts, the pairs of following scoring discs being located closer together than the leading discs, the shafts having a diameter substantially one half of that of the scoring discs, adjustable bearings for supporting the shafts, oiling rings for lubricating the shafts.



1,619,208. DISK CULTIVATOR. ROBERT KILLEFER, Los Angeles, Calif., assignor to The Killefer Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed May 12, 1924. Serial No. 712,639. 4 Claims. (Cl. 55—83.)

1. A cultivator comprising a front pair of frames, a draft bar, a member slidably mounted on the draft bar, a pair of bell crank levers, each being pivoted at the center

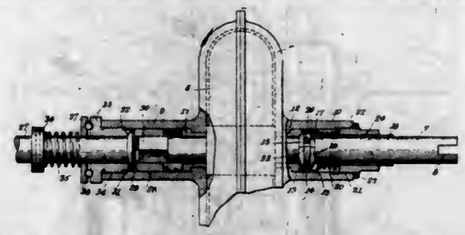


to the draft bar, and connected at their forward ends to the slidable member, and pivoted at their other ends to rods secured to the front frames, a slide frame, means for engaging the slide frame with the draft bar, and means adjustably secured to the slide frame for limiting the sliding extension of the draft bar within the slide frame.

1,619,209. DRILL. OSWALD LUSCHNIG, Nokomis, Ill. Filed Oct. 1, 1924. Serial No. 740,900. 2 Claims. (Cl. 255—46.)

1. A coal mining device comprising a base plate having hinged thereto a U-shaped member, one of the legs of this member being formed with an eye through which is passed the shank of a rotary drilling member, said shank having a collar fixed thereon against which the eye is adapted to bear, and also provided with a crank handle on its rear end, and the other leg of the U-shape member being extended in the form of a foot lever.

1,619,210. APPARATUS FOR FORMING ARTICLES FROM SHEETS OF MATERIAL. ALFRED A. MACLAREN, Boston, Mass. Filed Apr. 29, 1922. Serial No. 557,283. 17 Claims. (Cl. 18—4.)

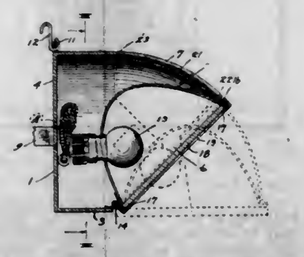


1. A machine for producing articles from rubber material which comprises means for working a heated mass of said rubber material and extruding therefrom a continuously moving sheet of said material, continuously moving means including skeleton cutting dies to receive said sheet as it is extruded, means for pressing said sheet against said dies having a surface moving with said sheet at substantially the same rate of speed and acting to force the material upon said cutting dies and sever the articles therefrom, means automatically operable to discharge the cut out articles downwardly through the dies and means for progressively returning the remainder of the sheet to the mass while in a heated condition to the means for working and extruding the material.

1,619,211. PUMP PACKING. JAMES D. MAXWELL, Brooklyn, N. Y. Filed May 13, 1925. Serial No. 29,967. 9 Claims. (Cl. 103—111.)

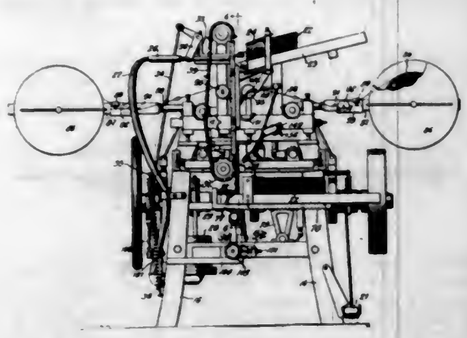
1. The combination with a rotary pump or the like, including a casing having a bearing and a shaft rotating therewith protruding therefrom, of a packing for said shaft comprising a conical shoulder on the shaft, and a conical seat for said shoulder at the end of said bearing forming with the shoulder, a valve, and a spring pressed sleeve surrounding the shaft and exerting pressure to hold said valving parts rotatably engaged, said sleeve having a conical end face and a corresponding conical shoulder on the shaft engaged thereby.

9. A packing for rotary pumps and the like comprising in combination with the rotary pump shaft and a hub provided with a bearing therefor, said bearing having a conical valve face at the outer end of the same, a non-rotating bushing surrounding said shaft, a nut surrounding said shaft bushing and supported by the hub, said bushing having a conical inner end, oppositely facing conical shoulders on the shaft and rotating therewith, one of said shoulders being engaged by the conical inner end of the bushing, the other of said conical shoulders



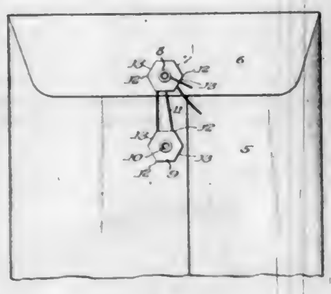
being in rotary valving engagement with the conical valve face in the outer end of the bearing and a spring surrounding the shaft bushing, said spring being acted on by the nut to adjustably hold the bushing yieldingly engaged with the outer shoulder on the shaft and the shaft thereby thrust over with the inner shoulder on the same in free sliding valving engagement with the conical valve face in the outer end of the bearing.

1,619,212. NOVELTY TOOTHBRUSH. STEPHEN A. NEEDERMAN, Dallas, Tex., assignor of forty per cent to Harry M. Smith, Dallas, Tex. Filed Aug. 28, 1925. Serial No. 53,017. 1 Claim. (Cl. 132—84.)



A tooth brush having an elongated handle with a recess therein of substantially the same configuration as the handle, a mirror formed in the handle below the recess and extending from one end of said recess to the medial portion thereof, and a protective covering for said mirror slidably arranged in said recess and of substantially half the length thereof, whereby said cover may be caused to expose said mirror.

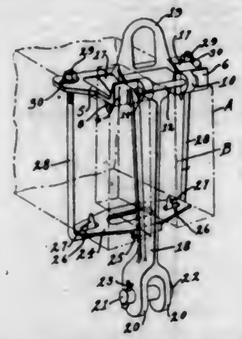
1,619,213. LAMP. JOSEPH F. NENZEL, Reno, Nev. Filed Mar. 11, 1925. Serial No. 14,777. 1 Claim. (Cl. 240—41.)



A miner's lamp comprising a housing having an opening in the front thereof, the upper forward part of said housing curving downwardly as it extends forwardly, said upper part extending forwardly of the base of the housing, a reflector set in said housing, said reflector being hinged at its lower forward edge to the lower forward edge of the base of the housing and closing the opening in said housing, and a hood secured to the top of the reflector, said hood pressing resiliently against the casing whereby it will maintain the reflector in a desired position relative to the casing.

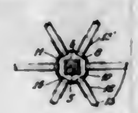
1,619,214. MACHINE FOR PUNCHING AND REENFORCING BLANKS. ALBERT OLGAY, Glen Ellyn, Ill., assignor to Gaw O'Hara Envelope Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1923. Serial No. 617,181. 18 Claims. (Cl. 218—15.)

1. In a machine of the character described, the combination of means for feeding a succession of separate and unconnected blanks, means for supplying reenforcing disks for the blanks, means for automatically applying said reenforcing disks to opposite faces of each of said blanks, means for punching an opening through said disks and blanks, and means for automatically applying a metal eyelet to each of said openings.



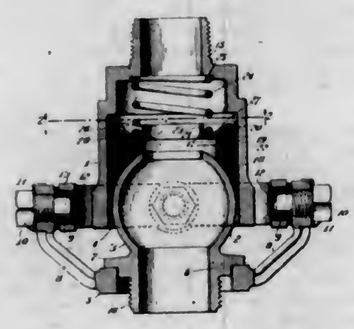
1,619,215. ENVELOPE-FASTENING DEVICE. ALBERT OLGAY, Glen Ellyn, Ill., assignor to Gaw O'Hara Envelope Company, Chicago, Ill., a Corporation of Illinois. Filed June 27, 1925. Serial No. 39,906. 3 Claims. (Cl. 229—77.)

2. An envelope and the like fastener comprising a button attached to one of two relatively separable parts of an envelope adapted to be joined by a cord, and a cord for connection to the other of said separable parts, said button having sides intersecting to form sharp corners for facilitating the entrance of a fastening cord therebeneath.



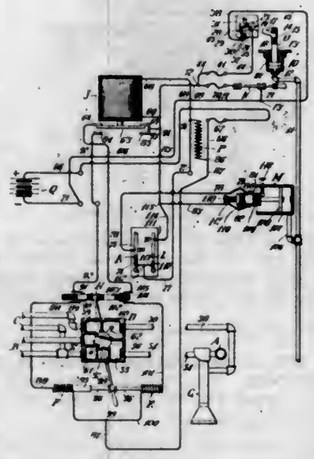
1,619,216. BEAM ADJUSTER. JAMES P. RATIGAN, Walnut Park, Calif. Filed Dec. 13, 1926. Serial No. 154,470. 9 Claims. (Cl. 74—5.)

1. A beam adjuster comprising a saddle provided with an opening therein extending to one edge of the saddle, means to secure the saddle to an operating member, a stem extending through the opening and provided with flanges



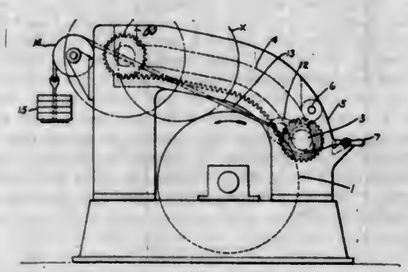
loosely seated on the saddle, and a pin movably mounted on the saddle and extending across the opening to prevent the stem escaping from the opening.

1,619,217. UMBRELLA. JAMES REID, New York, N. Y. Filed Aug. 24, 1922. Serial No. 583,964. 18 Claims. (Cl. 135—28.)



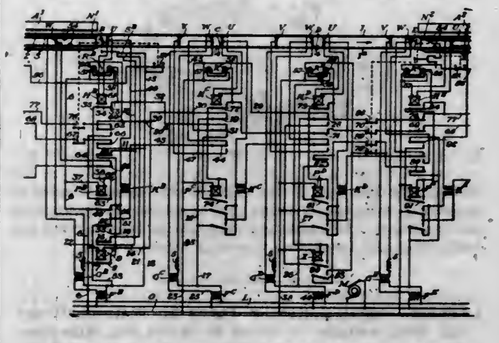
18. An umbrella comprising a stick, a plurality of ribs hingedly connected to said stick, a plurality of stretchers hingedly connected at their outer ends to said ribs, a runner carried by said stick, a plate associated with said runner and provided with a plurality of ears, a hinge ring associated with said plate and hingedly connected to the inner ends of said stretchers, certain of said ears being folded in one direction over said ring whereas the other of said ears is folded over said ring in an opposite direction and adapted to receive thereupon the latter hinge ends of said stretchers.

1,619,218. FLEXIBLE PIPE JOINT. EDWARD A. RUSSELL, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed Jan. 9, 1925. Serial No. 1,407. Renewed Jan. 25, 1926. 12 Claims. (Cl. 285—93.)



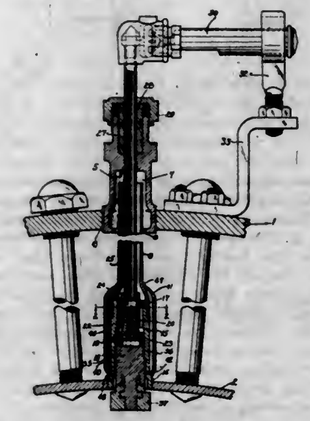
10. In combination with a flexible pipe connection of the ball and socket type in which a gasket bearing against the ball member is longitudinally movable within the socket member, a flexible wiper interposed between the gasket and the wall of the socket member to provide a seal between these members.

1,619,219. AUTOMATIC REGULATING APPARATUS FOR CAR-HEATING SYSTEMS. EDWARD A. RUSSELL, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed July 6, 1925, Serial No. 41,779. Renewed July 17, 1926. 25 Claims. (Cl. 236—36.)



1. In combination with electrically operated mechanism for automatically maintaining the car at a lower temperature when out of service than when in service, a circuit breaker whereby said controlling mechanism may be rendered operative or inoperative at will while the car is in service without affecting the automatic operation of said mechanism when the car is put out of service.

1,619,220. WINDING MEANS. WILLIAM M. STOCKER, Woodhaven, N. Y., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed July 6, 1925. Serial No. 41,537. 10 Claims. (Cl. 242—65.)

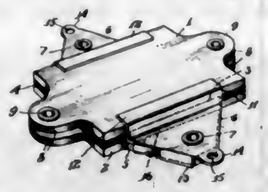


1. A winding machine including a surface winding means, a winding shaft to be placed in winding relation therewith, and guiding means for the shaft whereby the accumulation of material on the shaft causes it to progress over the surface of the winding means.

1,619,221. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 2, 1924. Serial No. 735,236. 16 Claims. (Cl. 246—37.)

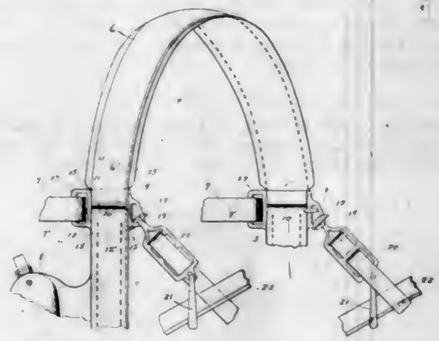
1. Railway traffic controlling apparatus comprising a stretch of track used by trains of two classes having different maximum braking distances, and means operating under unsafe traffic conditions to give a restrictive indication on an approaching train at one point or at another point in said stretch according as the train is of one class or the other.

1,619,222. LOW-WATER ALARM. HERMAN B. THURSTON, Cleveland Heights, Ohio. Filed Mar. 19, 1925. Serial No. 16,627. 14 Claims. (Cl. 122—504.1.)



1. In a low water alarm, a member having a passage adapted to communicate with the steam space at one end and with an alarm device at the other, plug carrying means within the boiler and located adjacent the crown sheet, and a fusible plug carried by said means and normally interrupting said passage, means whereby heat is conducted from the fire space to said plug and an insulating means surrounding a portion of the plug carrying means and arranged to prevent water contact with said plug carrying means.

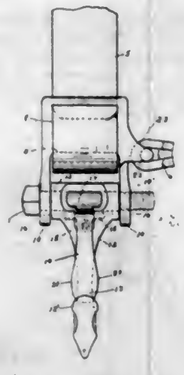
1,619,223. CONDENSER. HARRY R. VAN DEVENTER, New York, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed May 17, 1924. Serial No. 714,140. 11 Claims. (Cl. 175—415.)



1. A condenser comprising a pair of face plates, insulating and conductive material disposed between said face

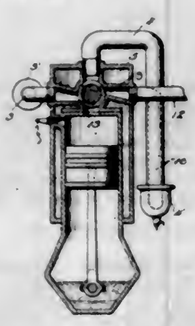
plates, means adjacent the opposite ends of the condenser and extending along the edges thereat for securing the plates together, and additional securing means passing

through the two face plates adjacent the opposite sides to co-operate with the securing means adjacent the ends of the condenser and cause the face plates to compress the conductive and insulating material between them.



1,619,224. CROWN RING. JAMES M. WALSH, Milwaukee, Wis., assignor to James M. Walsh Co., Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 7, 1925. Serial No. 7,589. 6 Claims. (Cl. 54—6.)

6. A crown ring consisting of a member provided with an elongated medial opening having its longest length extending horizontally for upward connection with a head strap and downward connection with a cheek strap, said member also having upper and lower edge extensions and medial tongues for supporting edge and medial portions of the straps while being sewed to the member, the forward and rearward edge portions of the member having eyes, the forward eye being of elongated form with the greatest length extending vertically for connection with a brow strap, and the rearward eye being approximately of egg shape with the larger diameter below for removably receiving a throat strap connector.

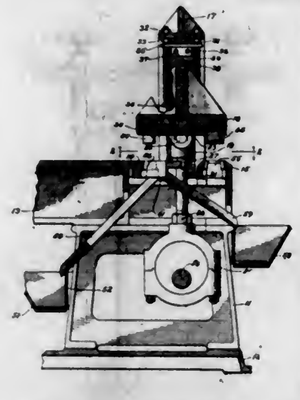


1,619,225. BREAST-STRAP SLIDE. JAMES M. WALSH, Milwaukee, Wis., assignor to James M. Walsh Co., Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 7, 1925. Serial No. 7,592. 6 Claims. (Cl. 54—59.)

6. A breast strap slide, comprising a member having a U-shape slide portion and opposite side slotted portions above the plane of the U-shaped part to receive a breast strap, one edge portion of the member medially of its height having a transversely extending loop for receiving a martingale strap, lower parts of the slide portion having downwardly projecting eyed extensions, a bolt extending through one eyed extension and having a threaded engagement with the other eyed extension, a hook member pivotally mounted on the bolt between the eyed extensions and provided with a side opening in communication with the bore through which the bolt extends, said hook member also having recessed portions opening into the bore, a locking dog having trunnions which enter the recesses through the side opening to pivotally connect the dog to the hook member, said dog also having an inwardly extending projection and the hook member having a spring recess, and a coiled spring surrounding the projection

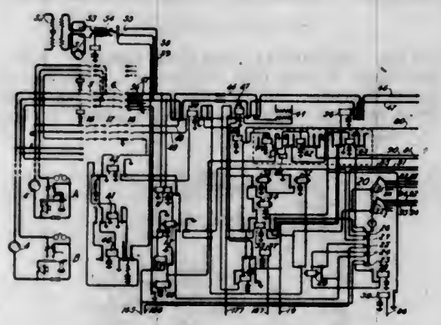
and extending into the last mentioned recess of the hook to yieldingly hold the dog in locking position, said dog and spring being detachable from the hook member when the bolt is partly withdrawn from the hook member.

1,619,226. ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES. THEOPHILUS D. WERBITZKY, Cleveland, Ohio. Filed Feb. 9, 1925. Serial No. 7,966. 1 Claim. (Cl. 123—80.)



In combination with a cylinder of an internal combustion engine, a rotary valve casing adjacent and communicating with said cylinder, an air inlet leading into the casing, an exhaust port leading from the casing, a mixture inlet leading into the casing from the carbureter, and an air outlet leading from the casing to the carbureter, a rotary valve mounted in the casing, and ports in the valve so positioned that, under the rotation of the valve during the operation of the engine, an air current may pass into the air inlet through the valve and through the air outlet to the carbureter, whereby to cool and scavenge the valve.

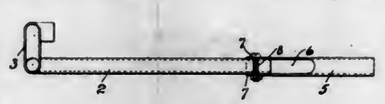
1,619,227. BLANK-SHEARING APPARATUS. MAGNUS E. WIDELL, Cincinnati, Ohio, and FRANK RUDOLPHI, Montclair, N. J., assignors to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 21, 1922. Serial No. 530,776. 12 Claims. (Cl. 164—18.)



1. In an apparatus for cutting metal sheets to form blanks from which can ends and the like may be formed,

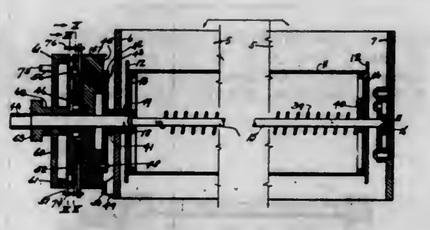
the combination of cutting dies elongated transversely to the direction of the feed of the sheets and having alternating wide and narrow portions for cutting the blanks into transverse strips, the latter containing waste portions, and dies arranged in line with the end portions of

the blank-cutting dies and operating in advance thereof at the sides of the sheets for cutting supplemental blanks from said waste portions of said sheets, said advance dies being arranged to be in line with said waste portions only at the moment of cutting.



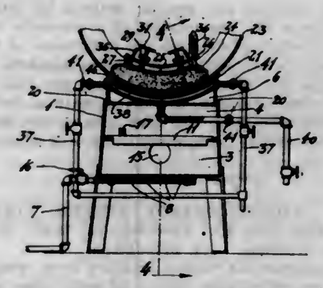
1,619,228. AUTOMATIC TELEPHONE HIGH-FREQUENCY TRUNK. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., and LEWIS M. CLEMENT, Mountain Lakes, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 1, 1920, Serial No. 370,476. Renewed Dec. 18, 1925. 168 Claims. (Cl. 179—2.)

1. The combination with two automatic telephone systems comprising telephone stations and automatic switches for interconnecting the same, of high frequency carrier telephone transmitting and receiving apparatus associated with each system, and means controlled by any station of one system for causing the operation of said high frequency apparatus to establish connection with any station of the other system.



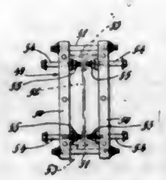
1,619,229. OIL-FEED CONSTRUCTION. FLOYD R. WOOD, Grand Rapids, Mich. Filed Jan. 4, 1923. Serial No. 610,626. 1 Claim. (Cl. 137—70.)

In combination with an engine, an oil tube having its rear end turned upwardly and adapted to receive oil, said tube extending downwardly and forwardly toward the front of the engine and terminating a distance short of the front of said engine, a member having an open upper side into which the front end of the tube passes



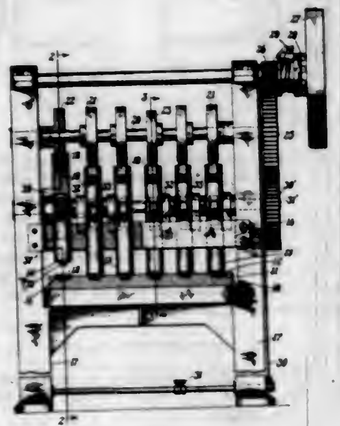
and adapted to carry oil from the tube to the front of the engine, said opening permitting application of an air hose to the front end of the tube on removal of the bottom plate of the engine whereby obstructions to oil flow in said tube may be forced therefrom.

1,619,230. CALCULATOR. JOHN E. WRIGHT, Mayfield, Ky. Filed Oct. 31, 1925. Serial No. 66,021. 6 Claims. (Cl. 235—86.)



1. In a calculator, having a rotatable cylinder, a roller, a flexible web between said cylinder and said roller, said web bearing integrations, and means for rotating said roller and said cylinder, the combination of a disc rotatable by rotation of said cylinder and movable out of engagement therewith, said disc also bearing integrations, and means for returning said cylinder to initial position after advance rotation thereof and of said disc, while said disc remains in its advanced position.

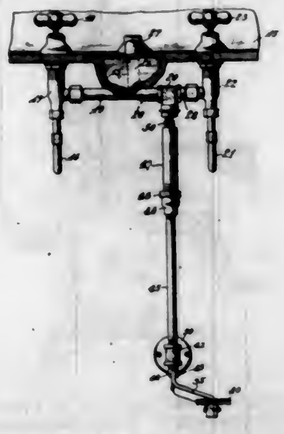
1,619,231. VULCANIZER. ACHILLE A. RAFFETTI, Chicago, Ill. Filed Sept. 12, 1923. Serial No. 662,255. 13 Claims. (Cl. 18—18.)



1. In a vulcanizer, the combination of a mould, a hot-air chamber for heating the mould, and means for cooling the same, said last-named means comprising a fluid-circulating conduit interposed between the hot-air chamber and the mould.

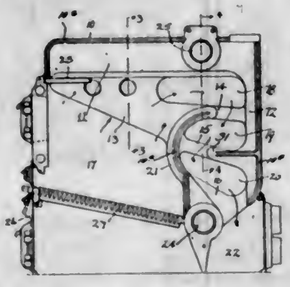
1,619,232. METHOD OF FABRICATING STRUCTURAL MEMBERS. MILO A. BAKER, Los Angeles, Calif. Filed Oct. 8, 1925. Serial No. 61,204. 11 Claims. (Cl. 29—155.)

1. The method of fabricating heavy columns, girders and other structural steel members having center web plates and angle iron flanges, consisting of placing said angle iron flanges against the center web plate of the column or girder, clamping said angle irons to said column or girder web plate in finished position, drilling holes collectively through and through said members while so held, driving rivets through said holes, and removing said clamps.



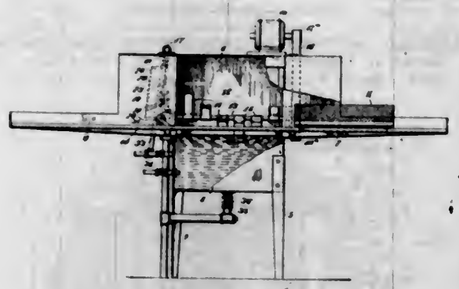
1,619,233. MACHINE FOR MAKING BUTTONS. LEON H. BEAN, New York, N. Y., assignor to Hollander-Langee, Inc., a Corporation of New York. Filed Aug. 3, 1922. Serial No. 579,317. 11 Claims. (Cl. 18—16.)

1. In a machine for shaping articles in which each article requires the consumption of a relatively long predetermined period of time for the completion of its shaping, a plurality of forming or shaping members, one for each article, and means for operating the same successively in timed relation without a waiting interval of time therebetween, and with each member stationary and active on the article for said relatively long predetermined period.



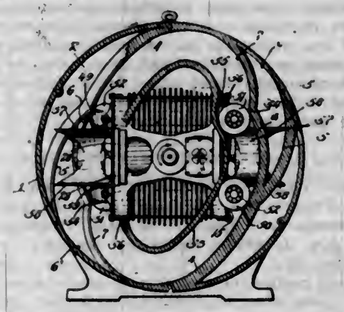
1,619,234. LIQUID-CONTROL SYSTEM. LESLIE W. BEEBE, Oak Park, Ill. Filed Oct. 15, 1925. Serial No. 62,535. 9 Claims. (Cl. 277—50.)

5. The combination with a lavatory bowl, sink, or the like, of a hot water pipe and a cold water pipe each having a hand valve therein operable from a place adjacent to the bowl, sink or the like, a hollow valve body to which said hot and cold water pipes are connected so as to discharge thereinto, the body having intake ports where said pipes respectively discharge thereinto, said valve body having a discharge opening and discharge pipe means leading therefrom to discharge into said bowl, sink or the like, valve means in said body for substantially simultaneously opening and substantially simultaneously closing said intake ports, means including a pedal adjacent to the floor for operating the valve means in said body to open said intake ports, and spring means for operating said last mentioned valve means to close said intake ports.



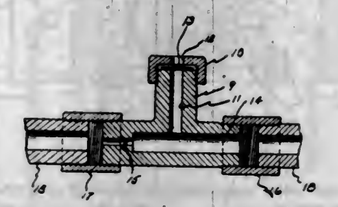
8. A device for controlling the mixing and discharge of liquids of different properties and which may be under different pressures, comprising in combination a pair of supply-controlling valves each adapted to be connected to a different source of liquid supply, a hollow discharge valve body, means forming an independent passageway from each of said valves to and into said discharge valve body, the discharge valve body having a discharge port for the mixed liquids and having an intake port associated with each of said passageway-forming means, said valve body having valve means operable from outside the body for substantially simultaneously opening and substantially simultaneously closing said intake ports.

1,619,235. SECTIONAL HEATING BOILER. JOHN B. BERNHARD, Warren, Ohio, assignor to Ironton Bernhard Boiler Company, Ironton, Ohio, a Corporation of Ohio. Filed Mar. 13, 1922. Serial No. 543,235. 3 Claims. (Cl. 122—223.)



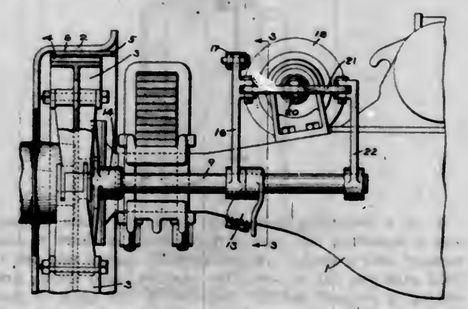
1. In a boiler of the type described, the combination with suitable side sections, of intermediate sections adapted to be clamped therebetween, each such intermediate section being provided with lateral ports for the free passage of water and steam and being formed with a vertical pedestal constituting a portion of the rear wall of the boiler, a member projecting forwardly from the upper end of said pedestal and constituting a portion of the top wall or crown-sheet of the boiler, an angularly related member of less transverse dimension than said top member and pedestal extending downwardly and rearwardly from the former to the latter, the rear portion of said angularly related member being branched where it joins said pedestal and having lateral extensions at the front of such branches to form a rearwardly curving back wall for the combustion chamber, a transverse closure including a hollow water-carrying chamber communicating with adjacent chambers, extending forwardly from the pedestal toward the concave side of such back-wall so as to form a circuitous passage through which the gases from such combustion chamber after rising to the top of the boiler are caused to pass downwardly and the openings between said branches and their adjacent chambers forming a series of connected combustion and heat absorption passage ways, of alternately enlarged and restricted size, and a flue-chamber located below the lowermost of such branches.

1,619,236. DISHWASHING MACHINE. GEORGE S. BLAKESLEE, Oak Park, Ill.; George R. Blakeslee executor of said George S. Blakeslee, deceased. Filed Aug. 16, 1920. Serial No. 403,760. 5 Claims. (Cl. 141—9.)



1. A dish washing machine comprising a tank, means for conducting the articles to be washed over said tank, means for throwing water from said tank upon such articles, an apron at the outlet end of the tank under the path of the articles, spraying means adjacent to the outlet end of said tank adapted to throw water laterally over said apron upon such articles and means located at the outlet end of the tank and actuated by the articles moving out from over the tank for operating said spraying means.

1,619,237. INTERNAL-COMBUSTION ROTARY MOTOR. GEORGE EDGAR BRAGG, Cincinnati, Ohio. Filed July 25, 1919. Serial No. 313,353. Renewed Nov. 29, 1924. 36 Claims. (Cl. 123—43.)

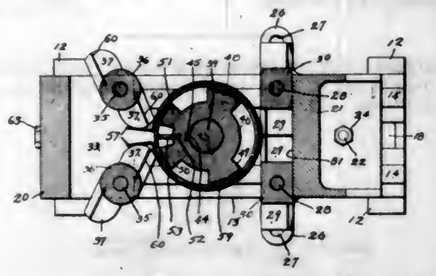


21. A rotary cylinder engine comprising a stator having a double cam track, one track comprising opposed portions which project substantially beyond the adjacent portion of the other track, a rotor comprising offset cylinders having opposing pistons, and rollers on said pistons, the adjacent rollers being disposed to follow different tracks throughout the rotation of the rotor, substantially as described.

1,619,238. CIRCULATING DRIP VENT. AUGUST BUSS, Detroit, Mich. Filed Apr. 13, 1925. Serial No. 22,769. 5 Claims. (Cl. 137—122.)

1. A circulating drip vent of the class described, comprising a T-shaped member having a bore formed in the arm thereof, said bore being reduced, adjacent the outer end of one of said arms, the stem of said T having a bore formed therein; a cap mounted on said stem and having an opening formed centrally thereof in registration with the bore in said stem, the base of said cap being normally spaced from the end of said stem; and a closure loosely positioned on the end of said stem, intermediate said cap and said stem, said closure being normally of larger diameter than the bore in said stem.

1,619,239. AUTOMOTIVE BRAKE DEVICE. CHRISTOPHER P. CASS, Berkeley, Calif., and JOHN F. CRAIG, Edgewood, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 25, 1923. Serial No. 641,403. 1 Claim. (Cl. 188—152.)



In a vehicle brake, the combination with a brake drum, brake heads mounted in said drum and having opposite pairs of adjacent free ends, and a cam for spreading each pair of free ends, of a shaft for operating each cam, an operating arm secured to each shaft, a link connected to one arm, an equalizing bar connected to the other arm, a third arm connected to said link and to said equalizing bar, and a fluid pressure operated member connected to said equalizing bar at a point intermediate the ends of the bar.

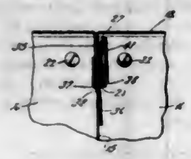
1,619,240. METHOD OF ASSEMBLING PISTON RINGS FOR FINISHING. MANUEL F. CORNEGO, St. Louis, Mo. Filed May 26, 1924. Serial No. 715,874. 2 Claims. (Cl. 29—89.)

1. The method of assembling split piston rings for finishing which consists in superimposing a plurality of split rings, applying an inwardly directed pressure adjacent the gap and at a point diametrically opposite the

same, applying inwardly directed pressure to the outer circumference of said rings, supporting the inward circumference of said rings at predetermined points against

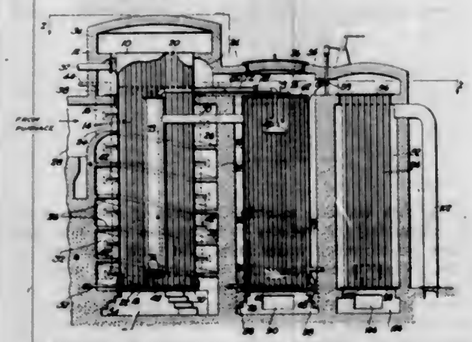
collapse, and lastly subjecting the edges of said rings to a continuous pressure sufficient to hold the same in collapsed position during the finishing operation.

1,619,241. PEN LIFTER FOR RECORDING INSTRUMENTS. ARTHUR B. CUNNINGHAM, Chicago, Ill., assignor to Republic Flow Meters Co., Chicago, Ill., a Corporation of Illinois. Filed June 21, 1926. Serial No. 117,292. 10 Claims. (Cl. 234—1.)



5. In a recording instrument having a chart support and a recording pen, means for securing a chart to said support, and a spring arm arranged to engage said pen to hold said pen out of operative position, said spring arm having a contact portion disposed in the path of said chart securing means to be operated thereby for releasing said pen when said chart securing means is moved to operative position.

1,619,242. LINGERIE CLASP. RENE E. DENMAN, Kansas City, Mo. Filed Oct. 21, 1926. Serial No. 143,283. 2 Claims. (Cl. 24—85.)

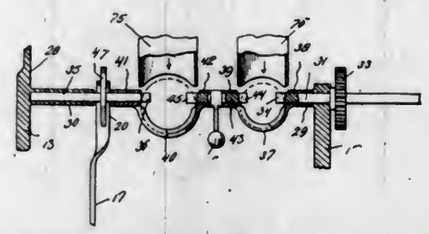


1. A lingerie clasp, comprising a composite pin and clasp arrangement formed integrally of a single continuous wire, one end of the wire forming the point of the pin and the opposite end forming a holding loop encircling the backs of the pin and clasp to hold the pin and clasp portions in position.

1,619,243. STOVE CONSTRUCTION. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Aug. 7, 1926. Serial No. 127,793. 14 Claims. (Cl. 126—39.)

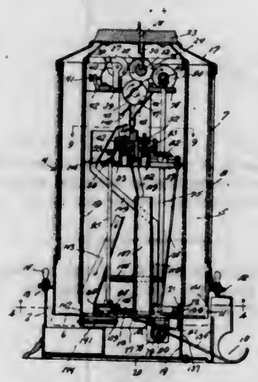
1. In a stove structure, the combination of a door frame, a wall plate arranged to underlie a portion of said frame, and means on the frame for forcing said wall portion into a holding contact with the overlying part of said frame.

1,619,244. APPARATUS FOR GENERATING STEAM. HENRY L. DOHERTY, New York, N. Y. Filed Mar. 30, 1921. Serial No. 457,159. 8 Claims. (Cl. 122—7.)



1. In an apparatus of the class described, an upright fire tube boiler and a furnace therefor, a feed water preheater, an inverted U-shaped conduit having one leg in the preheater and the other leg in the boiler, the last-named leg having its lower end turned upwardly, said end being located near the bottom of the boiler and substantially in the axis thereof, an open-ended tube extending upwardly from said upturned end and in vertical alignment therewith the top of the tube terminating short of the water line in the boiler, said boiler and furnace being so constructed and arranged as to produce a downward circulation of water within said open-ended tube, and a feed water pipe connecting the preheater with the upper portion of said tube.

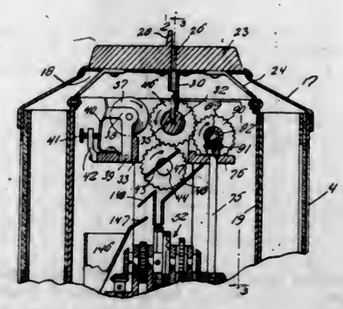
1,619,245. VENDING MACHINE. WILLIAM F. DONATHAN, Poteau, Okla., assignor, by direct and mesne assignments, to Stephen J. Graham, Tuckerman, Ark. Filed Apr. 1, 1925. Serial No. 19,876. 9 Claims. (Cl. 194—85.)



1. A coin control for actuating an ejector of a vending machine comprising in combination, a pair of spaced shafts, the inner opposed ends of said shafts being notched, a substantially semi-circular coin receiving member freely rotatable at its respective ends on said shafts, a coin chute having its discharge end disposed above the notched inner ends of the shaft, said shafts being

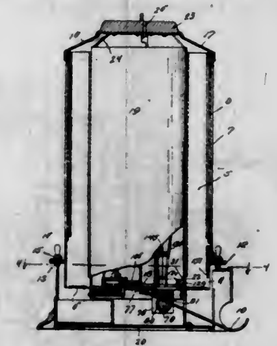
interlocked when a coin enters the notched inner ends of the shafts and is disposed in said coin receiving member, means operable by said shafts when the same

are interlocked for actuating said ejector, means for actuating the interlocked shafts, and means for returning the coin receiving member to its normal position.



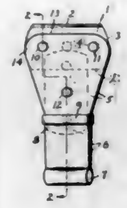
1,619,246. COIN-CONTROLLED VENDING MACHINE. WILLIAM F. DONATHAN, Memphis, Tenn., assignor to Stephen J. Graham, Tuckerman, Ark. Filed Nov. 30, 1925. Serial No. 72,375. 13 Claims. (Cl. 194—85.)

1. A coin control for an ejector actuating mechanism of a vending machine comprising in combination, a plurality of pairs of spaced aligned shafts, the inner opposed ends of each pair having complementary discs carried thereby, means arranged on the inner opposed faces of each pair of discs for spacing the same from each other, said means further providing a coin receiving pocket, a coin chute associated with each pair of shafts and having its discharge end disposed above the pair of discs for cooperation with said pocket, each pair of spaced aligned shafts being adapted to be interlocked independently by the insertion of a coin in the chute, said chute causing the coin to be disposed in said pocket, means for operatively connecting one shaft of each pair of shafts together, means for manually rotating the shafts when the same are interlocked, and additional means operatively connecting the shafts with the ejector actuating mechanism.



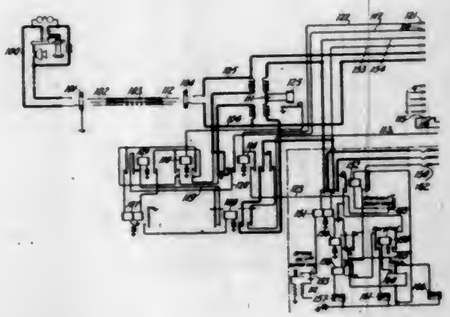
1,619,247. FRAUD PREVENTER FOR COIN-CONTROLLED DEVICES. WILLIAM F. DONATHAN, Winchester, Tenn., assignor to Stephen J. Graham, Tuckerman, Ark. Original application filed Nov. 30, 1925, Serial No. 72,375. Divided and this application filed Mar. 15, 1926. Serial No. 94,820. 11 Claims. (Cl. 194—100.)

1. A fraud preventing device comprising a rotatable shaft provided with a coin receiving pocket, a spring pressed roller supported adjacent the shaft and cooperating with the shaft to bend a slug placed in said



pocket when the shaft is rotated, and a deflector operatively associated with said shaft and disposed below the shaft and said roller.

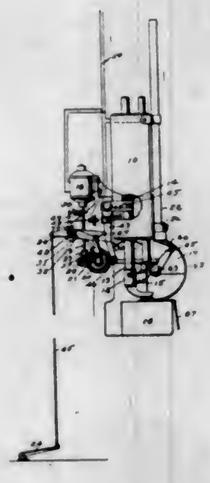
1,619,248. VENDING MACHINE. WILLIAM F. DONATHAN, Winchester, Tenn., assignor to Stephen J. Graham, Tuckerman, Ark. Original application filed Nov. 30, 1925, Serial No. 72,375. Divided and this application filed Mar. 15, 1926. Serial No. 94,821. 2 Claims. (Cl. 211—8.)



1. A vending machine comprising in combination, a base, a circular track extending upwardly therefrom, the upper edge of said track having notches formed therein at spaced intervals, a casing, a laterally extending flange formed on the lower end of said casing, said flange being disposed directly over the upper edge of the circular track and being provided at predetermined spaced intervals with openings, a grooved roller journaled in each of said openings and adapted to travel on the upper edge of the track to facilitate the rotation of the casing, said rollers and said notches cooperating to hold the casing in predetermined positions, a plurality of article holding magazines arranged on the inner wall of the casing, and a delivery chute at the side of the base, each magazine having a discharge opening therein, adapted to communicate with said delivery chute when positioned thereover.

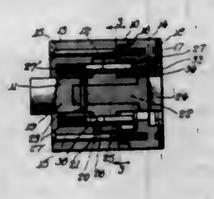
1,619,249. BLADE HOLDER. LEE F. DUFF, Los Angeles, Calif. Filed Aug. 5, 1926. Serial No. 127,243. 2 Claims. (Cl. 30—25.)

1. A holder for a cutting blade which has opposite cutting edges and a pair of openings spaced lengthwise of the cutting edges, said blade holder having a pair of engaging means spaced transversely of the holder adjacent its outer end and adapted to engage the blade openings for positioning the blade with one of its cutting edges parallel to and projecting beyond the outer end of the holder, the holder also having a single engaging means medially of its width, adjacent its inner end and adapted to engage one of the blade openings with the other blade opening engaged by either of said pair of engaging means to position the blade with its opposite cutting edges projecting angularly beyond a side and the outer end of the holder respectively.



1,619,250. TELEPHONE-EXCHANGE SYSTEM. BERT G. DUNHAM, Hawthorne, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1925. Serial No. 62,725. 14 Claims. (Cl. 179—27.)

1. In a telephone system a selective switch, a switch controlling circuit, means for transmitting impulses over said circuit to control said switch, and means for counting the impulses transmitted comprising a set of counting relays including optional pairs of relays for a particular impulse or series of impulses the choice being dependent upon the number of impulses in a series.

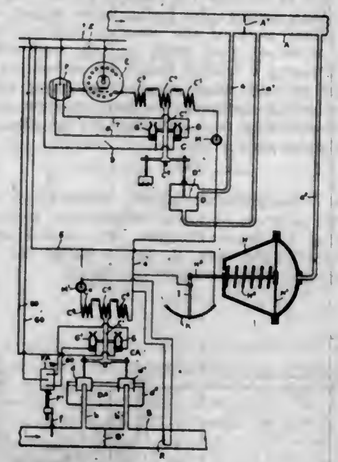


1,619,251. LAUNDRY MARKING-TAG-ATTACHING MACHINE. ALEXANDER L. FAUST, Cincinnati, Ohio, assignor to National Marking Machine Company, Cincinnati, Ohio, a Corporation. Filed Aug. 23, 1921. Serial No. 494,682. 10 Claims. (Cl. 112—104.)

1. In a device of the class described, the combination of a container designed to hold a series of disconnected independent tags arranged one above the other, a device for withdrawing the tags one at a time from the container and for moving them to position resting upon a garment to be marked, said device including a pointed

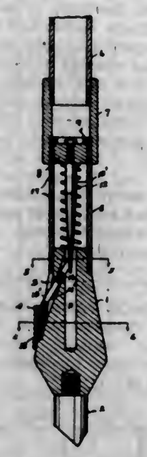
finger to engage and penetrate the under surface of the tag, and means automatically actuated upon a movement of said tag withdrawing device for securing the tag to a garment.

1,619,252. TUMBLER LOCK. HARRY F. GEORGE, Chicago, Ill. Filed Dec. 12, 1921. Serial No. 521,607. 18 Claims. (Cl. 70—47.)



1. A tumbler lock having a plurality of tumblers arranged parallel with one another, a barrel including an annular member of hardened steel, a rotatable plug including a protecting member of hardened steel, said barrel and said plug providing between them an annular space communicating with said tumblers, said barrel having a portion including a non-corrosive member for overlying and forming an abutment for a portion of the end of each of said tumblers.

1,619,253. FLOW-CONTROLLING APPARATUS. GEORGE H. GIBSON, Montclair, N. J. Original application filed June 3, 1920, Serial No. 389,303. Divided and this application filed Aug. 10, 1923. Serial No. 656,765. 7 Claims. (Cl. 236—24.5.)

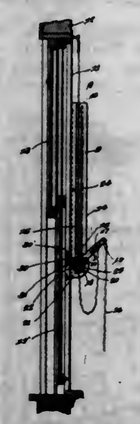


1. In apparatus for maintaining a definite ratio between the strength of an electric current and a fluid rate of

flow, the combination with a differential pressure motor actuated by the flowing fluid, of an electro-dynamic motor

actuated by said current and opposing the action of the first mentioned motor, and means responsive to a physical condition of the fluid flowing for modifying the said ratio.

1,619,254. SPEAR. CLYDE HART, Humble, Tex., assignor of one-half to John G. Carr, Harris County, Tex. Filed Apr. 1, 1926. Serial No. 99,122. 4 Claims. (Cl. 294—86.)

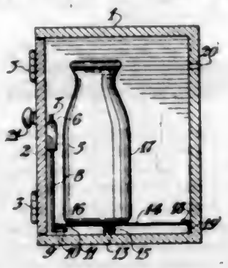


1. A spear including a mandrel having a downwardly flared portion provided with tracks, pipe engaging jaws mounted to slide on said tracks and whose outer sides are formed with teeth, said mandrel having a deep socket therein forming a bearing, a cylinder associated with the mandrel, a plunger in the cylinder, a stop carried by the cylinder adapted to limit the upward movement of said plunger, an actuating rod carried by the plunger and working in said socket, a coil spring surrounding said rod and interposed between the upper end of the mandrel and the plunger, said mandrel having downwardly diverging slots leading from said socket through said mandrel, links working through said slots and pivoted at their lower ends to the corresponding jaws and whose upper ends are in operative connection with said rod, each link having a lengthwise slot therethrough forming a bearing and a pintle point fixed to said mandrel and working through said bearing.

1,619,255. SOCKET WRENCH. HOBART F. HAYNES, Syracuse, N. Y. Filed Nov. 5, 1925. Serial No. 67,073. 3 Claims. (Cl. 81—185.)

1. A socket wrench comprising a tubular body having the forward end portion of its bore constituting a nut-receiving socket, a sleeve slidable longitudinally upon said body and having the forward end portion of its bore constituting a socket to receive a nut when the sleeve is projected from the body, the rear end portion of said sleeve being formed with a longitudinally extending slot and said body having an opening registering with the slot, a handle having a shank fitted into the rear end portion of said body, a fastener carried by said shank and extending through the opening and slot to hold the handle in place and limit sliding of the sleeve, a socket member slidable longitudinally in the forward end portion of said body and formed with a longitudinally extending groove closed at its ends, a tongue struck from said body and bent inwardly into said groove to limit sliding of the socket member, and a spring in said body confined between th socket member and forward end of said shank and serving to yieldably resist inward movement of the socket member.

1,619,256. WINDOW ATTACHMENT. CHARLES M. HEUBLEIN, Chicago, Ill. Filed Feb. 2, 1926, Serial No. 85,585. Renewed Nov. 26, 1926. 16 Claims. (Cl. 156—33.)

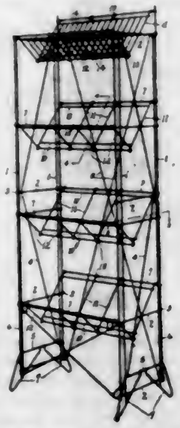


2. The combination with a movable window sash of a window construction and a curtain for the window construction, of a supporting member movable through an arc of a circle in engagement with a portion of the window curtain for raising the window curtain upon movement of the movable sash, operating means movable with the sash, and a connection between the operating means and the supporting member.

1,619,257. SAFETY DELIVERY RECEPTACLE. CHARLES E. HOFFMAN, Richland, Wash. Filed June 12, 1926. Serial No. 115,477. 1 Claim. (Cl. 232—41.)

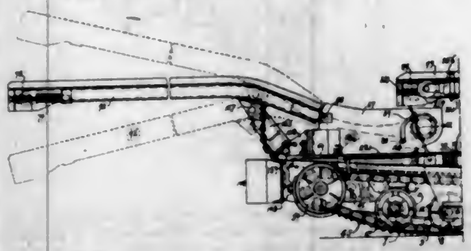
In a device of the kind described, the combination with a cabinet, a door hingedly mounted on the said cabinet, and false bottom pivoted in the said cabinet, of a locking

means comprising a lock; a lock bolt provided in the said lock and adapted to advance upwardly from the said lock; a bell crank pivoted on the said door; a right angularly projecting finger provided on the upper arm of the said bell crank; the said projecting finger being adapted to engage the said lock bolt when the said lock bolt is advanced upwardly from the said lock; a right angularly



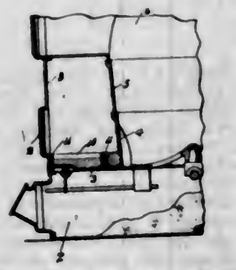
projecting finger provided on the lower arm of the said bell crank; an inclined or cam shaped face provided on the second mentioned projecting finger so as to form a hook; a downwardly projecting lip positioned on the forward edge of the said false bottom; the said lip being adapted to engage the said hook whereby the said door may be latched to the said false bottom.

1,619,258. INSECTIFUGE. SIDNEY L. HOOVER, St. Louis, Mo., assignor of one-half to H. Fancourt Miller, St. Louis, Mo. Filed Mar. 12, 1926. Serial No. 94,321. 3 Claims. (Cl. 99—1.)



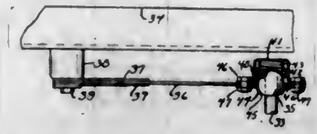
1. The method of protecting dried food-stuffs against becoming infested with vermin, consisting in treating them with an insectifuge made of berries of the Sapindus marginatus tree.

1,619,259. RACK. CHARLES H. JARVIS, Battle Creek, Mich., assignor to United Steel and Wire Company, Battle Creek, Mich. Filed Mar. 5, 1926. Serial No. 92,444. 8 Claims. (Cl. 211—14.)



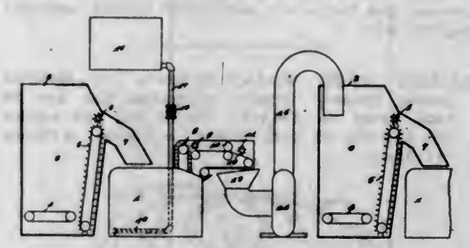
1. In a collapsible rack, the combination of end members comprising uprights and cross pieces secured to said uprights with their ends projecting beyond the same and provided with horizontally disposed eyes and diagonally disposed crossed braces secured to said cross pieces, side members comprising end uprights pivotally engaged in said eyes and longitudinal pieces connecting said uprights, and diagonally disposed crossed braces connecting said side member uprights and secured to said longitudinal pieces at the crossing points thereof, and shelf members arranged in coacting pairs, said shelf members comprising longitudinal pieces and cross pieces, the cross pieces having eyes at the outer ends thereof pivotally engaging the longitudinal pieces of the side members, the cross pieces of one of the coacting pairs of shelf members being provided with downwardly facing hooks engageable with a longitudinal piece of the coacting shelf member providing a V-shaped shelf when erected, said shelf members constituting a bracing means for preventing the collapsing of the rack when engaged and being adapted to swing to an approximately vertical position when disengaged permitting the collapsing of the side and end members upon each other.

1,619,260. LOADING MACHINE. JOSEPH F. JOY, Franklin, Pa., assignor, by mesne assignments, to Joy Manufacturing Company, Franklin, Pa., a Corporation of Delaware. Filed Aug. 2, 1924. Serial No. 729,833. 10 Claims. (Cl. 198—11.)



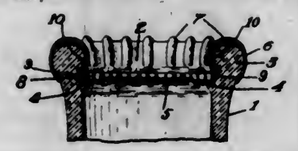
1. In a coal loading machine, in combination, an automotive organization comprising among its elements a carrying and mounting structure consisting of a single, rigid frame, suitable propelling mobility means for said organization upon which said frame is rigidly mounted, a single power unit carried by said frame adapted to supply power for the operation of said automotive organization and the various operating elements of said machine, a delivery conveyor carried upon and wholly supported by said frame adapted and operable by power derived from said power unit to deliver coal to a car, a gathering and elevating conveyor carried upon and wholly supported by said frame adapted and operable by power derived from said power unit to gather coal from the floor of a mine and to transfer same to and upon said delivery conveyor, and directing and adjusting means, operable by power derived from said power unit adapted to advance, direct and adjust said gathering and elevating conveyor into gathering relation to the coal to be gathered and elevated thereby.

1,619,261. FURNACE-WATER-PAN CONSTRUCTION. JOHN P. KOLLA, Holland, Mich., assignor to Holland Furnace Company, Holland, Mich., a Corporation of Michigan. Filed Apr. 13, 1925. Serial No. 22,514. 3 Claims. (Cl. 126—113.)



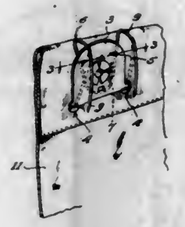
1. In combination with a furnace having an ash pit shell including a forward extension thereto having substantially vertical sides and a top between the upper edges of said sides, of a water pan disposed above said forward extension and wherein the top of said extension constitutes the bottom of the said water pan, integral spaced apart sides and integral spaced apart front and rear ribs being cast with said top of said forward extension to complete the pan, substantially as described.

1,619,262. BRAKE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed July 2, 1926. Serial No. 120,126. 9 Claims. (Cl. 188—194.)



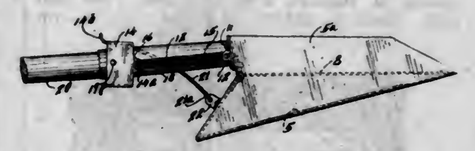
4. In a motor vehicle, braking means for a wheel thereof, a brake-operating shaft extending inwardly therefrom and terminating in a ball end, and means for supporting the inner end of said shaft from the frame of said vehicle comprising a leaf spring rigidly secured to said frame at one end and provided with a socket for receiving said ball end of said shaft at its other end.

1,619,263. DYEING AND OXIDIZING MACHINE. JONES C. MCFALLS, Romona Mills, N. C. Filed Aug. 4, 1924. Serial No. 730,010. 2 Claims. (Cl. 8—19.)



1. In a cotton oxidizing and dyeing apparatus the combination of dye vats, a feed hopper for each of said vats having upright and horizontally disposed aprons for conveying cotton through the hopper, a spout discharging from said hopper into one of said vats and into which the cotton is delivered by said apron, a fan located between the vats and equipped with a hopper to receive cotton from one vat, and a discharge spout to deliver it to the next hopper.

1,619,264. CLOSURE FOR CONTAINERS. CLAUDE IVES MCLAINE, Boston, Mass., assignor to Seal-Kap Company, Natick, Mass., a Corporation of Massachusetts. Filed Jan. 22, 1923. Serial No. 614,158. 2 Claims. (Cl. 215—38.)



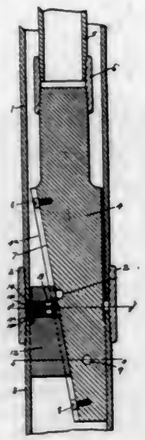
1. In combination with a container having an internal annular recess about its mouth, of a conformable closure engageable therewith, and a corrugated locking member disposed against said closure adjacent said recess.

1,619,265. SLIP-COVER FASTENER. GEORGE ROLAND MIDDLETON, Tampa, Fla. Filed Oct. 18, 1926. Serial No. 142,378. 3 Claims. (Cl. 24—150.)

1. A slip cover fastener comprising a head, a plate secured to the head, said plate having tongues carried thereby, a fastening member including a loop and pins, the loop being secured to the plate by the tongues to hold the pins in overlaying relation with respect to the plate.

1,619,266. ASH-SIFTING SHOVEL. ADOLPH H. MILLER, Minneapolis, Minn. Filed June 9, 1926. Serial No. 114,646. 7 Claims. (Cl. 209—419.)

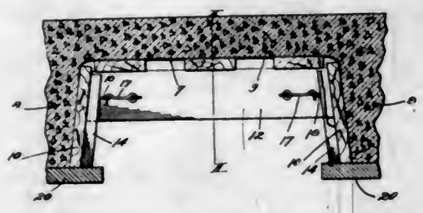
1. An ash sifting shovel having the top compartment with a perforated bottom and open at its top and front end, a lower compartment with a fixed imperforate bottom, a handle extending from the rear of said shovel above said lower compartment, a rearwardly swinging door at the rear end of said lower compartment and means for opening and closing said door.



1,619,267. METHOD OF PRODUCING CALCIUM ARSENATE. HUGH K. MOORE, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Feb. 14, 1925. Serial No. 9,352. 6 Claims. (Cl. 23—53.)

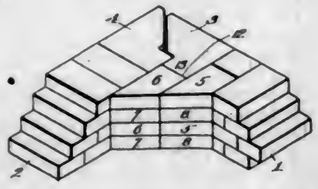
5. A process of forming calcium arsenate, which comprises adding arsenious acid in finely divided form to the constantly changing surface of a rapidly agitated liquor containing calcium hydroxide and an agent capable of furnishing nascent oxygen to react with the arsenious acid and calcium hydroxide to produce calcium arsenate.

1,619,268. CASING WEDGE. CHESTER A. RASMUSSEN, Long Beach, Calif., assignor of one-half to Charles R. Butler, Long Beach, Calif. Filed Feb. 12, 1925. Serial No. 8,638. 5 Claims. (Cl. 255—35.)



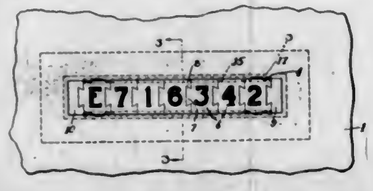
4. In a device of the character referred to, in combination, a body having a tapering portion, a wedge element moving thereon and connected therewith, a body extension member detachably connected with said body to

adapt it to larger casing, means carried by said wedge element, and adapted to interlock with said well casing



whereby said wedge element is stopped and said body moves relative thereto and forces said wedge element into biting engagement with said casing.

1,619,269. SEMIMETALLIC FLEXIBLE FORM FOR FLOOR DOMES. HENRY READ, Kansas City, and SAMUEL M. HIGGINS, Webb City, Mo. Filed Sept. 7, 1926. Serial No. 133,771. 5 Claims. (Cl. 25—131.5.)

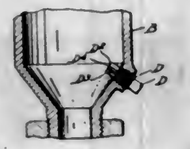


1. A form structure for concrete floor work, comprising a flexible crown sheet, spaced longitudinal reinforcing members secured to one face of said sheet, rigid side supporting members attached to the side margins of said sheet and in spaced relation to said reinforcing members, and rigid brace members carried by said supporting members in supporting engagement with said reinforcing members.

1,619,270. CORNER-FILL FURNACE-WALL CONSTRUCTION. GEORGE P. REINTJES, Kansas City, Mo. Filed Oct. 18, 1926. Serial No. 142,358. 5 Claims. (Cl. 72—39.)

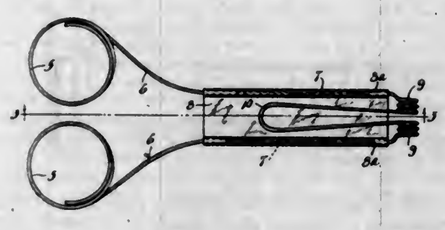
1. The combination with intersecting walls composed of conventional brickwork courses, of two sets of corner filling tiles, one set bonding with each wall and projecting inwardly thereof, the tiles of the filling courses corresponding in thickness to the elements of the brickwork courses; each filling tile set bearing an overlapping relation where inward of the respective wall, with the corresponding portion of the filling tiles of the next lower course of the other wall.

1,619,271. IDENTIFICATION DEVICE FOR VEHICLES. HUGH C. ROSS, Toledo, and HARRY W. FALCONER, near Perrysburg, Ohio; said Ross assignor to said Falconer. Filed Apr. 8, 1926. Serial No. 100,492. 1 Claim. (Cl. 40—2.2.)



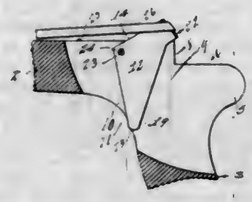
An identification device for vehicles comprising in combination with a vehicle part, a casing fixed to said part and having an opening, a plurality of identification blocks in said casing visible through said opening, said casing having opposed recesses and said blocks having opposed grooves registering with said recesses, leaf springs loosely disposed in said registering grooves and recesses for preventing removal of said blocks from the casing, and means for securing said blocks in assembled relation, said means comprising a twisted wire extending through said blocks and cementitious material surrounding said wire.

1,619,272. TREE. WILLIAM ORMISTON ROY, Montreal, Quebec, Canada. Original application filed Apr. 26, 1920, Serial No. 376,444. Divided and this application filed Feb. 16, 1922. Serial No. 536,856. 4 Claims. (Cl. 47—1.)



2. A self supporting tree trunk, the fibers of the main crown-crotch of which, due to artificial training, are normally compressed and drawn together.

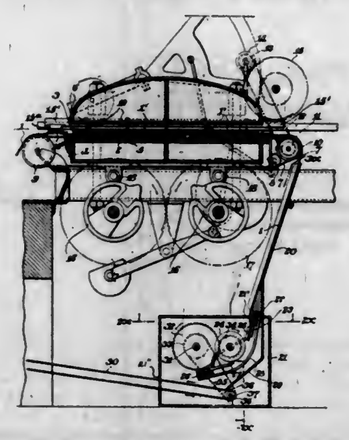
1,619,273. INSPECTION PLUG. GEORGE H. SARGENT, Chicago, Ill. Filed Oct. 19, 1925. Serial No. 63,487. 14 Claims. (Cl. 137—111.)



2. In combination with a liquid container through which liquid passes, an inspection hole and a plug located therein, said plug provided on its inner end with a portion having a receiving depression within it.

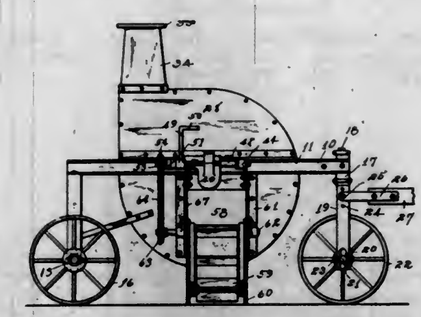
1,619,274. COW-TAIL TIE. GURNEY L. SHORT, Angus, Minn. Filed June 9, 1926. Serial No. 114,871. 4 Claims. (Cl. 119—105.)

1. A cow tail tie comprising a single resilient wire or rod having its ends formed into loops respectively opposed at their sides and adapted to embrace a cow's leg between said sides, said wire having substantially parallel portions extending at one side of said loops, means rigidly secured to and spacing said portions, said wire beyond said portions being bent to form springs and having a loop portion extending from said spring and cooperating with said means to form a hook for clasping the tail of the cow.



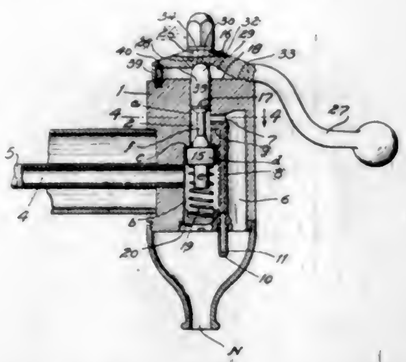
1,619,275. TOY GUN. DOUGLASS M. SMITH, Walla Walla, Wash. Filed Dec. 12, 1925. Serial No. 74,976. 2 Claims. (Cl. 124—14.)

1. In a toy gun, a barrel portion and a grip, united to form a stock, a breech formed on said barrel portion, said barrel portion and grip being arranged to form an angle at their juncture, to provide for forming an action slot and a trigger aperture in said stock with a single cut of a saw and a single piece action mounted in said slot and comprising a plate having wings, and foldable on its central axis to provide a smooth trigger face, and a reinforced hammer, said wings being foldable in opposed directions to provide a hammer head, said hammer head being arranged to normally rest adjacent to said breech.



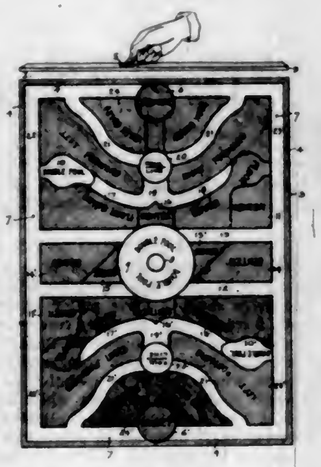
1,619,276. SHEET-LINOLEUM DISINTEGRATOR. JOHN TAMBERLIN, Philadelphia, Pa., assignor to The George W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 2, 1920. Serial No. 421,278. 2 Claims. (Cl. 83—6.)

1. In a machine of the character described, the combination of a sheet conveyor, a slotted member to which a sheet is delivered by said conveyor, and a disintegrator comprising a revoluble member having fingers movable through the slots in said slotted member, said fingers being so shaped as to engage a sheet on the slotted member substantially at right angles to the surface thereof,



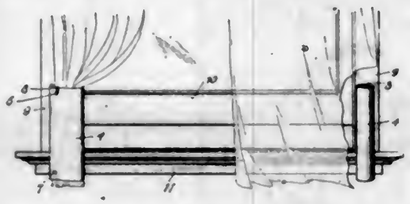
said slotted member and revoluble member cooperating to shear the sheet without substantial pull thereon longitudinally.

1,619,277. PORTABLE PNEUMATIC ELEVATING DEVICE. WILLIAM B. THIEMANN, Albert City, Iowa. Filed Oct. 17, 1922. Serial No. 595,104. 4 Claims. (Cl. 302—37.)



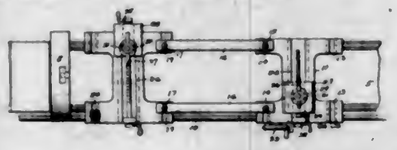
1. In a device of the class described, a cylindrical blower casing, a drive shaft passing through said casing, a fan on said drive shaft, a drive pulley on one end of said drive shaft, a second shaft arranged transversely to the other end of said drive shaft, means for imparting movement from said drive shaft to said transversely arranged shaft, a sprocket wheel rotatively mounted on one end of said transverse shaft, said sprocket wheel including a clutch member, a second clutch member slidably mounted on said transverse shaft designed to coact with the first said clutch member, means for yieldingly holding said clutch members normally in contact, a rotatable member mounted on said transverse shaft for moving said second clutch member out of engagement with said first clutch member, an arm mounted on said rotatable member, a second transverse shaft parallel with said transverse shaft, a conveyor pivotally mounted on said second shaft and capable of movement from a horizontal to a vertical position, a sprocket wheel mounted on one end of said second transverse shaft, a chain for said sprocket wheels, and said members being so arranged that when the conveyor is moved from a horizontal to a vertical position the operation of the said conveyor is stopped.

1,619,278. BEVERAGE-DISPENSING APPARATUS. JOHN M. TRAVIS, St. Louis, Mo. Filed Aug. 6, 1926. Serial No. 127,619. 7 Claims. (Cl. 225—26.)



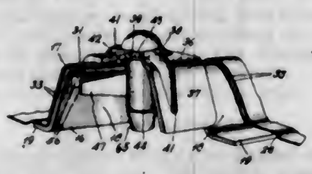
1. A faucet comprising a casing, said casing having a syrup port and a water port, a source of syrup supply and a source of water supply, a valve chamber disposed between the syrup supply and port and a valve chamber between the water supply and port, valves in said chambers for controlling the fluid flow to said ports, an auxiliary water port, and means for acuating said valves to simultaneously open communication between the fluid sources and ports or between syrup source and port, and water source and auxiliary water port.

1,619,279. BASKET-BALL GAME. ERVIN C. WAGNER, Indianapolis, Ind. Filed Sept. 17, 1926. Serial No. 136,142. 8 Claims. (Cl. 273—85.)



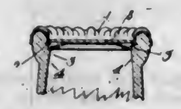
1. The combination, with a manually controlled projectile, of a board having one or more goal spaces toward and into which the projectile is shot, a plurality of other defined spaces from which the projectile may be progressively projected toward the goal, and other defined spaces separating those of the first from each other and wherein the stopping of the projectile forfeits the right to shoot next to the opponent of the player who shot last and foul spaces partly bordering the other two.

1,619,280. WINDOW-CURTAIN PROTECTOR. MARY EDITH WHEELER, Evanston, Ill. Filed Jan. 23, 1924. Serial No. 687,911. 4 Claims. (Cl. 156—83.)



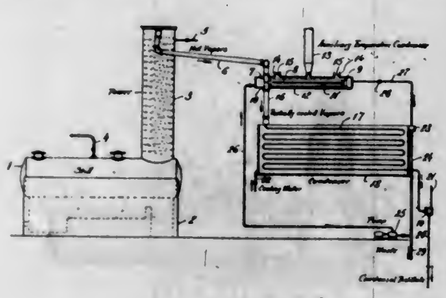
1. As a new article of manufacture, a curtain protector comprising a rectangular sheet adapted to be folded about a hanging curtain into an elongated tubular casing open at both ends, fastening means for retaining the sheet in said form, and means for suspending the casing thus formed in a substantially vertical position.

1,619,281. MULTIPLE CARRIAGE LATHE. JAY C. WHITE, New Castle, Pa. Filed Mar. 1, 1926. Serial No. 91,397. 4 Claims. (Cl. 82—2.)



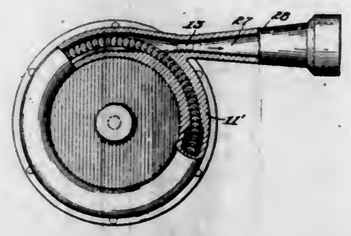
1. In a lathe, an elongated bed, a tail stock and rotative chuck mounted at spaced points upon said bed, a main carriage mounted to travel longitudinally of the bed between the chuck and tail stock, power means constituting a part of the lathe mechanism for causing the main carriage to reciprocate longitudinally upon the bed, a cutting tool upon the main carriage, an auxiliary carriage mounted to travel upon the bed, detachable connecting means extending between the two carriages whereby movement of the main carriage is transmitted to the auxiliary carriage and a cutting tool upon the auxiliary carriage both of said cutting tools being adapted to act simultaneously upon the same piece of work extending between the chuck and tail center, said auxiliary carriage being actuated wholly by and in unison with the main carriage through said connecting means.

1,619,282. CAR-ROOF CLAMP. THERON H. WILLIAMS and WILLIAM WRIGHT, Chicago, Ill., assignors, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 6, 1925. Serial No. 886. 13 Claims. (Cl. 105—5.4.)



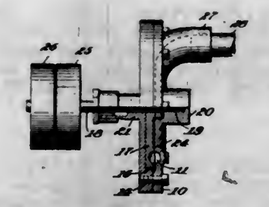
1. A car roof construction involving side plates, carlines extending across the car from side plate to side plate and secured thereto, said carlines having a substantially flat top web and depending outwardly flaring sides, roof sheets extending across the car from side plate to side plate, the sides of the roof sheets terminating in upwardly directed inverted channel portions, said portions consisting of a top web and depending outwardly flaring sides arranged in lapped formation over the top web and depending sides of the carline, and clamps positioned over said upwardly projecting portion of said carlines and the upwardly directed portions of the sides of said roof sheets, said clamps having a top web and depending outwardly flaring sides, the sides of said clamps pressing the sides of said upwardly projecting portion of said roof sheets immovably down on the side of the carlines, the web of said clamps having an aperture therein, a bolt having a portion of reduced diameter, said reduced portion fitting in the aperture in the web of said clamp and the upper end of said reduced portion being riveted down on top of said web, said bolt having a slot therein, and a wedge positioned in said slot, the top edge of said wedge engaging the web of said carline and the bottom edge of said wedge engaging the bottom of said slot.

1,619,283. BOTTLE CAP. EWALD G. BAUM, Natick, Mass., assignor to Seal-Kap Company, Natick, Mass., a Corporation of Massachusetts. Filed Mar. 21, 1924. Serial No. 700,836. 5 Claims. (Cl. 215—38.)



1. A bottle cap having a bore covering portion terminating in an upwardly inclined, annular portion to engage and be closely conformed to the usual internal annular ledge adjacent to the mouth of a milk bottle and extended downwardly beyond the face of the ledge to form a sealing contact beneath it and serve as a sealing gasket therefor.

1,619,284. EVAPORATIVE CONDENSER. JOHN E. BELL, Brooklyn, N. Y., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 29, 1924. Serial No. 746,471. 16 Claims. (Cl. 257—24.)

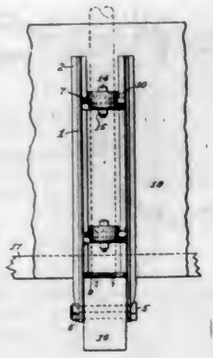


1. An improved method of cooling and condensing distillate vapors from oil stills, which comprises bringing the hot vapors escaping from the still into indirect heat exchanging relation with a relatively small volume of water maintained at its boiling point and vaporizing the water, passing a current of air in contact with said water to aid vaporization, and further cooling and condensing the distillate vapors by heat exchange with a relatively large volume of cooling water without substantial vaporization thereof.

1,619,285. PUMP. ARTHUR W. BURKS, Decatur, Ill. Filed Feb. 14, 1921, Serial No. 444,830. Renewed Jan. 15, 1927. 20 Claims. (Cl. 103—96.)

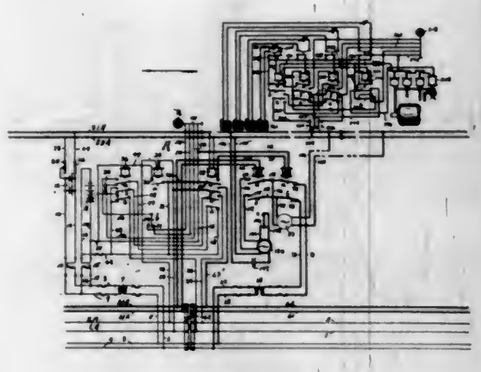
1. A pump comprising a rotor having an annular marginal series of blades positioned on a lateral face thereof, said blades having unshrouded ends whereby the spaces between the blades are open at the ends of the blades, and a casing having a fluid raceway enclosing said series of blades, there being a space within the raceway between the ends of the blades and the wall of the raceway.

1,619,286. PUMP. ARTHUR W. BURKS, Decatur, Ill. Filed June 1, 1921. Serial No. 474,120. 44 Claims. (Cl. 103—96.)



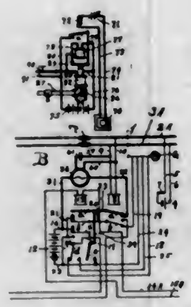
1. A pump comprising a rotor having an annular marginal groove, a plurality of blades in said groove, the walls of the groove closing the spaces between said blades at the sides of the blades, and a plurality of sealing ribs adjacent the groove adapted to co-operate with complemental ribs on a rotor casing.

1,619,287. HOSE-REPAIR CLAMP. THOMAS E. CHARTER, Cedar Rapids, Iowa. Filed Aug. 10, 1923. Serial No. 656,705. 4 Claims. (Cl. 137—99.)



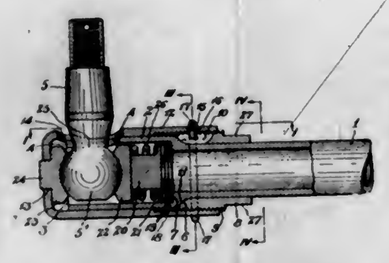
1. A hose repair clamp, comprising a pair of semi-cylindrical plates, one of them inwardly flanged to retain a gasket, a single-piece gasket fitting half of the clamp, and formed with ribs adapted to surround the break in the hose, and means adapted to hold the clamp-plates securely on the hose.

1,619,288. ADJUSTABLE BOLSTER STANDARD FOR WAGONS. JOHN V. CIZEK, Clutier, Iowa. Filed Mar. 29, 1926. Serial No. 98,228. 4 Claims. (Cl. 280—144.)



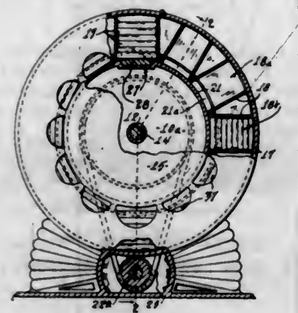
1. In combination, a wagon bolster, a pair of spaced standards having overlapping lugs adjustably fastened together to vary their spacings, and means for fastening said standards upon the bolster when so relatively adjusted apart.

1,619,289. TRAIN-CONTROL SYSTEM. THOMAS E. CLARK and JAMES E. CLARK, Detroit, Mich., assignors to Continuous Train Control Corporation, Detroit, Mich., a Corporation of Michigan. Filed Apr. 6, 1925. Serial No. 21,171. 12 Claims. (Cl. 246—63.)



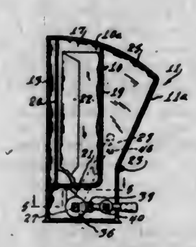
1. In an automatic train control system, a series of collector coils mounted on a vehicle adjacent the track to take up high-frequency currents of different wave lengths, tuning condensers and high-frequency relays connected to said coils to differentiate the wave lengths and respond thereto, a normally energized brake control device and circuits thereto, and electro-responsive means controlled by said high-frequency relays, one of said loops and the condenser and high-frequency relay connected thereto and the electro-responsive means controlled thereby serving to break the circuits to the other electro-responsive means.

1,619,290. TRAIN-CONTROL APPARATUS. THOMAS E. CLARK, Detroit, Mich., assignor to Continuous Train Control Corporation, Detroit, Mich., a Corporation of Michigan. Filed Apr. 16, 1925. Serial No. 23,514. 5 Claims. (Cl. 246—63.)



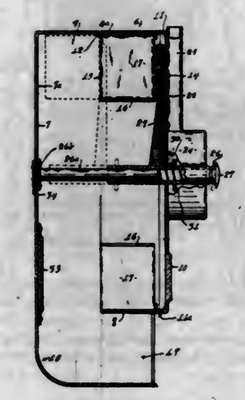
1. In a train signal and control system adapted for use in connection with a track divided into blocks, the combination of a source of direct current for each block, a signal installation embodying three lamps at the exit end of each block, means controlled by the presence of a vehicle in any block to cause current to pass from the current source to one of said lamps according as the first or second block in advance is occupied or both are unoccupied, means at each block to transform said direct current into high-frequency current and to propagate such high-frequency current in the rails of said block, and means controlled by the adjacent signal installation to determine the operation of the transformer.

1,619,291. TIE ROD OR THE LIKE. FREDERICK C. CRAWFORD and MATTHEW P. GRAHAM, Detroit, Mich., assignors to The Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 5, 1924. Serial No. 736,070. 2 Claims. (Cl. 287—90.)



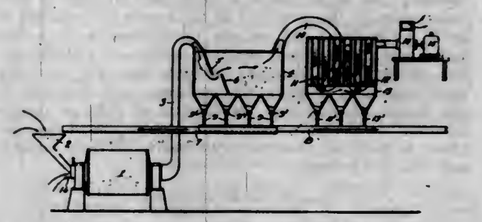
1. In a tie-rod or the like, the combination of a main member provided with open-ended socket portion having a ball-slot intersecting its open end; a cap fitting over said socket and provided with a ball opening; a member mounted upon said main member and adjustably connected with said cap; and means for holding said adjustably connected member against movement outwardly along said main member.

1,619,292. SELECTIVE VENDING MACHINE FOR STACKED ARTICLES. WILLIAM C. CUTLER, Glendale, Calif., assignor to Isabella M. Cutler, Glendale, Calif. Filed Sept. 16, 1925. Serial No. 56,709. 4 Claims. (Cl. 211—8.)



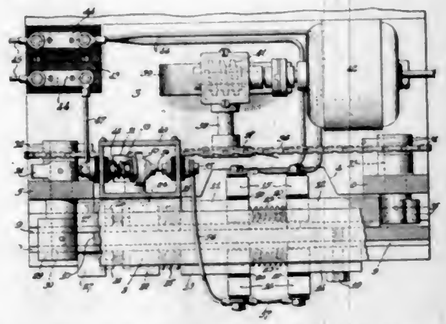
3. In a selective vending machine, a revoluble magazine, a plurality of inwardly opening radially arranged article holders, a fixed annular wall immediately concentric of the inner open ends of said holders, and a pull-out portion to said wall.

1,619,293. SELECTIVE DISPENSING MACHINE. WILLIAM C. CUTLER, Glendale, Calif., assignor to Isabella M. Cutler, Glendale, Calif. Filed Sept. 16, 1925. Serial No. 56,710. 5 Claims. (Cl. 211—8.)



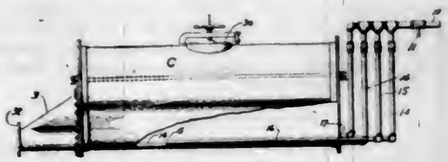
1. In a selective vending machine, a plurality of article holders arranged in close juxtaposition in a lineal series, hinges, one for each holder hinging same in said casing so that they are independently oscillatable upon their reapective hinges, each holder having its outer end open, a curved wall to said casing adapted to close the open ends of all holders; said wall conforming to an arc described about the center of the hinges and closely spaced from the open ends of the holders, said casing having an open portion with which the open end of any holder will register when that holder is properly moved on its hinge.

1,619,294. ROTARY SELECTING MECHANISM FOR VENDING MACHINES. WILLIAM C. CUTLER, Glendale, Calif., assignor to Isabella M. Cutler, Glendale, Calif. Filed Oct. 13, 1925. Serial No. 62,253. 8 Claims. (Cl. 211—8.)



3. In a selective vending machine a plurality of radially arranged article holders open-front and rear, a revoluble push rod co-axial of said article holders, and a finger projecting from said rod movable thru any article holder with which it is registered.

1,619,295. APPARATUS FOR AND PROCESS OF REDUCTION OF FINELY-DIVIDED MATERIAL. WILLIAM GARDNER, Cleveland, Ohio. Filed Apr. 14, 1926. Serial No. 101,871. 9 Claims. (Cl. 83—9.)

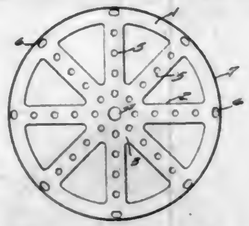


1. The process of reduction of finely divided material which consists in grinding material in a grinding unit, removing the fines from the grinding unit by means of a current of fresh air of low velocity and large volume before all the material has been ground to its finest condition therein, passing the fines through a settling chamber and returning to the grinding unit the oversized particles and passing the sized particles through an air filter without the return of the air used as the conveying medium to the grinding unit.

1,619,296. APPARATUS FOR ELECTRICALLY FORMING SPIRAL PISTON RINGS. HARRY S. GRAVES, Detroit, Mich., assignor to Spiral Piston Ring Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 15, 1925. Serial No. 50,532. 8 Claims. (Cl. 219—3.)

1. A machine of the type described, comprising clamping means for the ends of the split ring, means for electrically heating said ring by the application of current to said clamping means, and means adapted for shifting a portion of said clamping means to impart a spiral formation to said ring.

1,619,297. CONCRETE GUN. ROY C. HACKLEY, San Francisco, Calif. Filed Mar. 26, 1924. Serial No. 702,056. 2 Claims. (Cl. 302—53.)

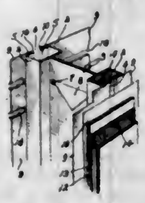


1. A device of the character described, comprising an elongated, horizontally disposed enclosed container for the reception of concrete, a discharge nozzle adjacent the bottom and at one end thereof, said nozzle being substantially cone shaped, a discharge conduit leading from the small end of the nozzle, a compressed air delivery pipe terminating in the large end of the nozzle and adapted to apply air pressure and velocity to concrete in the nozzle and to eject the concrete from the nozzle into and through the conduit, and a plurality of compressed air delivering pipes extending through the container and disposed in the bottom thereof and terminating at different points intermediate the nozzle and the discharge end of the container to move the concrete in successive portions towards and into the nozzle.

1,619,298. CIRCULAR GIRDER. FRANK HORNBY, Liverpool, England, assignor to Meccano Company, Inc., Elizabeth, N. J., a Corporation of New York. Filed July 10, 1924, Serial No. 725,103, and in Great Britain July 25, 1923. 9 Claims. (Cl. 46—35.)

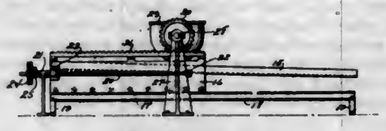
2. A circular element comprising a disc having a central perforation, concentric circles of perforations radially spaced according to a predetermined standard, and a peripheral flange at an angle to the plane of the disc having perforations not so spaced but adapted to register with standard perforations in other elements of a toy construction outfit.

9. A circular girder element comprising a rim having therein perforations equally spaced from center to center, said perforations being so formed that any two either adjacent or diametrically opposite will present openings to register with standard perforations in other elements of a toy construction outfit, and a peripheral flange at



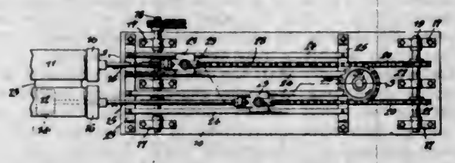
an angle to the plane of said rim having perforations therein of a different spacing but also adapted to register with standard perforations in said other elements.

1,619,299. ANIMAL FORCEPS. WALTER HYLARIDES, Granville, Iowa. Filed June 14, 1926. Serial No. 115,888. 4 Claims. (Cl. 128—324.)



1. An animal forceps of the class described comprising a tubular casing, fingers mounted on one end thereof, having spring means for normally constraining said fingers toward open position, and means mounted on the other end thereof for selectively closing said fingers.

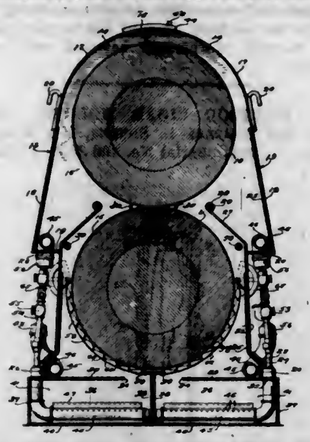
1,619,300. WALL CONSTRUCTION. BENJAMIN J. KLAASEN, Detroit, Mich. Filed Apr. 12, 1924. Serial No. 706,001. 5 Claims. (Cl. 72—115.)



1. A wall member comprising two parts each formed of sheet metal with a groove along each longitudinal edge portion of said parts, and means for securing the parts together with a space between the inturned edge portions of the metal forming the grooves to hold a wood filler strip in the channels formed by the confronting grooves of the opposed parts and with a portion of the wood exposed through said space.

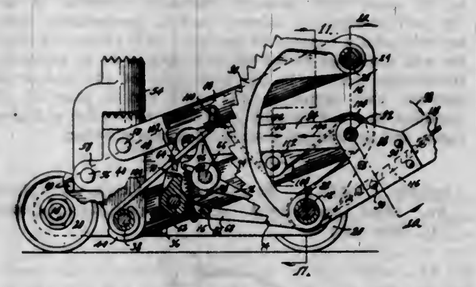
1,619,301. CHARGING APPARATUS FOR MOLDING MACHINES. RICHARD J. LEARY, Burlington, N. J. Filed June 12, 1925. Serial No. 36,603. 5 Claims. (Cl. 22—65.)

1. In a mold charging apparatus, a carriage adapted to be located adjacent a mold, a trough open at its outer end and included in the carriage, means whereby the carriage may be operated to project one end of the trough within the mold and means controlled by the movement of the carriage for delivering molten metal to the trough during the outward movement of the latter, whereby the metal will be distributed throughout the mold during such movement.



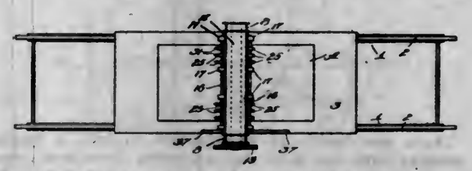
1,619,302. PUMPING APPARATUS. ANGUS R. LE GRUE, Buffalo, N. Y. Filed Nov. 9, 1925. Serial No. 67,733. 1 Claim. (Cl. 74—14.)

In an apparatus of the character described, the combination with a pair of cylinders and pistons including connecting rods operable therein, of a supporting base, front and rear shafts journaled on said base and each having a pair of sprocket wheels thereon, means for driving one of said shafts, sprocket chains passing around said wheels and provided at intervals with coupling pins, guide rails arranged parallel with said chains and disposed above the upper operative stretches thereof, crossheads applied to the piston-rods and guided on said rails, tappets depending from the cross-heads and disposed in the path of movement of said coupling pins to be alternately engaged with and disengaged from the tappets at predetermined points in the travel of said chains whereby the pistons are advanced in their cylinders, a sprocket wheel located above and between the operative stretches of the driving chains, and a chain fastened at its ends to said cross-heads and passing intermediate its ends around said last-named sprocket-wheel, whereby the return of one piston is effected simultaneously with the advance of the companion piston.



1,619,303. ROLL HEATER. HAROLD E. MCCREERY, ALBERT E. JESSEN, and ALONZO B. MONTGOMERY, Apollo, Pa., assignors to Apollo Holding Corporation, Apollo, Pa., a Corporation of Delaware. Filed Nov. 17, 1925. Serial No. 69,717. 17 Claims. (Cl. 80—41.)

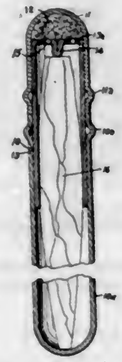
16. A roll heater comprising a casing adapted to surround a pair of adjacent upper and lower rolls, said casing including substantially closed side walls, and end walls shaped to fit the sides of said rolls, said casing being provided adjacent its upper end with a flue, burners arranged in the lower portion of said casing, a series of horizontally arranged plates surrounding the lower portion of said lower roll, each of said plates being pivotally connected at one horizontal edge to said casing, the opposite edge of each plate being free and arranged slightly outwardly of the pivoted edge of the next adjacent plate, a pair of flexible members each having one end fixed outwardly of said plates beneath the center of said lower roll, said flexible members contacting with the free edges of said plates, the upper ends of said series of plates being spaced from the side walls of said casing, a shaft arranged adjacent each upper end of said series of



plates, the opposite ends of said flexible members being secured to said shaft to be wound thereon, and dampers secured to said shafts.

1,619,304. LIFTING JACK. LEONARD D. NILSON, Wayzata, Minn., assignor to Marquette Manufacturing Company, St. Paul, Minn. Filed July 26, 1926. Serial No. 125,011. 28 Claims. (Cl. 254—2.)

1. A lifting jack comprising a supporting frame, a notched sector fixed relative to said frame, a pivoted load lifting arm, a pawl carrying frame pivoted to said arm and carried therewith, a lifting pawl pivoted to said carrying frame at a point spaced from the pivot point of said carrying frame and engageable with said sector and means connected to said carrying frame for imparting movement to said lifting arm.

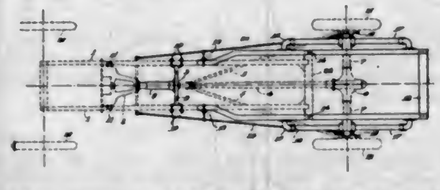


1,619,305. MACHINE FOR CUTTING METAL-SHEATHED SHEETS. CHARLES B. NORRIS, Grand Rapids, Mich., assignor to Haskelite Manufacturing Corporation, a Corporation of New York. Filed Mar. 12, 1924. Serial No. 698,640. 11 Claims. (Cl. 164—38.)

1. In a machine of the character described, a table, a member extending across the table at some distance above the same, rock shafts on opposite sides of said

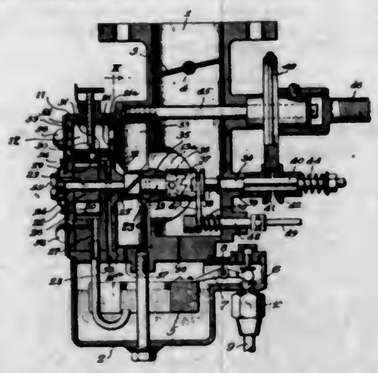
member extending across said table and parallel therewith, the rock shafts being arranged to rock independently of each other, cutting elements on said shafts constructed and arranged to be movable between working and idle positions by the rocking of said shafts, and means for producing relative movements between said table and said member.

1,619,306. HUMIDOR CIGAR HOLDER. HARRY R. NORTHUP and CHARLES L. SNYDER, Des Moines, Iowa. Filed Apr. 7, 1926. Serial No. 100,359. 1 Claim. (Cl. 131—30.)



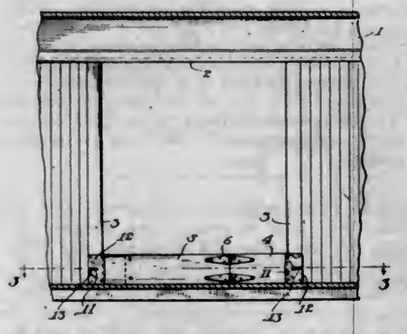
In a device of the class described, a lower casing member open at its upper end, a top casing member open at its lower end, moisture absorbent material at the top part of said top member, and an intermediate member frictionally received in the lower part of the top member and projected therefrom and adapted to be partially, frictionally received in the upper part of the said lower member, and having in its upper end a plurality of openings, and downwardly projecting means for engaging cigars and holding them away from said openings.

1,619,307. SHELF. SOLOMON OFFENBACH, Bradford, Pa. Filed Aug. 2, 1923. Serial No. 655,314. 1 Claim. (Cl. 248—18.)



As a new article of manufacture, a shelf, a tongue integral with the shelf and depending therefrom intermediate the length of its rear edge and adapted to fit into an eye projecting from a front face of a support, arms formed integral with said shelf and depending from the front of the shelf adjacent its ends, said arms converging downwardly and rearwardly and having their lower end portions bent to extend in parallel spaced relation to each other and substantially parallel to the plane of said tongue, and a spring clamp having a bridge portion secured against the inner faces of the parallel lower end portions of said arms and having arms extending rearwardly from its bridge portion to firmly grip the support from opposed side faces thereof with the said bridge portion engaging the front face of the support.

1,619,308. MOTOR-TRUCK CHASSIS. NELS L. OLSON, Detroit, Mich. Filed Feb. 9, 1922. Serial No. 535,171. 1 Claim. (Cl. 180—16.)



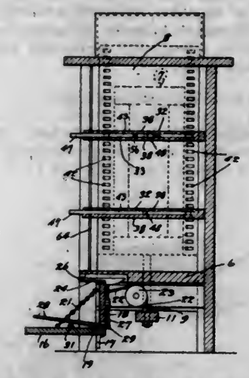
Means adapted for changing the wheel base or carrying capacity of a truck of a known wheel base and carrying capacity into a truck for other optional wheel bases and capacities, wherein the truck includes chassis frames, a rear transverse member, a rear axle assembly having a brake mechanism, a drive shaft housing and a transmission, said means comprising extension chassis frames having the extreme rear ends thereof connected and otherwise devoid of transverse connections to the forward ends of said extension chassis frames, clips connecting the forward ends of said extension chassis frames to the truck chassis frames, brake rods supported by said clips and diverging rearwardly outside of the extension chassis frame to the brake mechanism of the rear axle assembly, said extension chassis frames being connected to the rear transverse member of the truck chassis, at a point in advance of the rear axle assembly, side springs supporting said extension chassis frames from said rear axle assembly with said side springs having points of attachment in advance of the transverse member of said truck chassis and in proximity to the rear connected ends of said extension chassis frames, and a drive shaft extension mounted in the truck chassis and connecting the truck transmission and drive shaft housing.

1,619,309. CARBURETOR. EARL W. PAGETT, Detroit, Mich. Filed June 23, 1922. Serial No. 570,448. 1 Claim. (Cl. 261—28.)

In a carburetor having a float chamber and a manifold connection above the float chamber and to one side thereof, a cylindrical casing on the float chamber of said carburetor and at one side of the manifold connection, said cylindrical casing having a wall formed in part by the manifold connection and an end wall and intermediate transverse partition, said partition dividing said cylindrical casing into a conditioning chamber adapted to receive air and adapted to receive fuel from said float chamber, and a spray chamber adapted to receive fuel from said conditioning chamber and discharge it into said manifold connection, a rotary fluid pump adapted to supply fuel to said conditioning chamber from said float chamber, a rotary paddle in said spray chamber adapted to force fuel into said manifold connection, and means axially of said rotary pump and said paddle and extending through said manifold connection and operatable at the side of said manifold connection opposite said cylindrical casing for driving said pump and paddle.

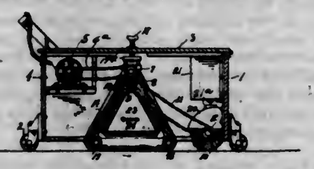
1,619,310. GRAIN-CAR DOOR. IRA D. PARKER, Minneapolis, Minn. Filed Aug. 19, 1926. Serial No. 130,286. 3 Claims. (Cl. 20—30.)

1. A grain car door comprising two overlapping door sections hinged together, the free end of each door section being provided with a longitudinal slot extending therethrough, whereby the door may be secured to the door posts by driving nails through said slots.



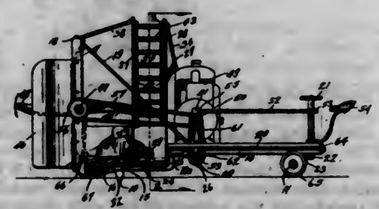
1,619,311. VEHICLE SIGNAL. ARVID D. PERTTU, Ridgefield, Wash. Filed June 1, 1925. Serial No. 34,213. 2 Claims. (Cl. 116—47.)

1. A vehicle signal comprising, in combination, a casing including a pair of spaced plates, a stationary shaft mounted transversely through the plates, an auxiliary shaft mounted adjacent the forward portion of the plates, a signal arm pivotally mounted on the auxiliary shaft, a pinion gear secured to the signal arm and rotatable on the auxiliary shaft, arm actuating means including a lever fulcrumed in the casing, a segment gear formed on the forward portion of the actuating lever adapted to mesh with the pinion for operation of the signal arm, a clamp bracket secured to the casing plates for mounting the signal upon a vehicle frame, means formed on the brackets for retaining the actuating lever in various adjusted positions, means for counter-balancing the weight of the signal arm, and cover plates mounted adjacent the casing plates.



1,619,312. CABINET. ZIEGMUND PETERS PIETRZYCKI, Klamath Falls, Oreg. Filed Apr. 16, 1925. Serial No. 23,600. 1 Claim. (Cl. 211—7.)

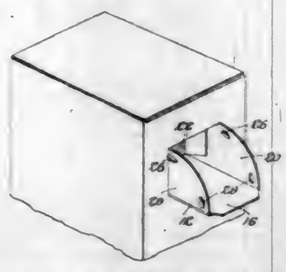
In a cabinet of the character described, a compartment having shelves therein adapted to be irregularly interposed between successive stacks of articles, slidably mounted vertical panels disposed on opposite sides of the compartment, means associated with each shelf allowing the same to be secured to the sliding panel, means for simultaneously raising the panels whereby the shelf secured



thereto is also raised, the cabinet having caps mounted on top thereof in spaced relation adapted to allow the top ends of the panels to slide thereinto when the latter are raised and serving as lateral supports for hooks placed on top of the cabinet.

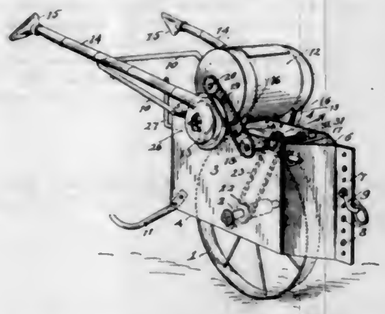
1,619,313. MOPPING AND SCRUBBING MACHINE. ALVA L. PRINCE, Dallas, Tex. Filed May 25, 1925. Serial No. 32,663. 1 Claim. (Cl. 15—51.)

In a mopping and scrubbing machine having a wheeled housing; a mopping element therefor comprising a rack, screws extending through the top of said housing and supporting said rack, a triangular frame carried by said rack, rollers mounted in the top of said frame and idle rollers mounted at the bottom thereof; the lower of said upper rollers arranged to protrude through the walls of said housing; an endless mopping belt trained about said idle rollers and arranged to pass between said upper rollers, and handle means for rotating the screws on the top of said housing to cause upward movement of said triangular frame.



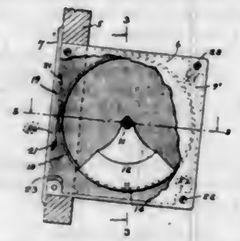
1,619,314. SNOWPLOW. IRVEN RECKARD, Duncombe, Iowa. Filed Sept. 14, 1925. Serial No. 56,136. 1 Claim. (Cl. 37—45.)

A snow plow comprising a V shaped frame, supporting wheels mounted on the front diverging portion thereof and steerable supporting wheels mounted on the rear con-



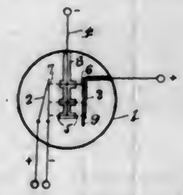
verging portion thereof, a platform and a lateral conveyor mounted on said frame having an upwardly extending portion projecting beyond one of the sides of the frame, an inclined scoop for conveying snow from the ground to the lateral conveyor, a rotating beater comprising blades adapted to engage the snow and slide it up the inclined scoop and onto the conveyor, side wings for deflecting the snow toward said scoop, a motor mounted on said platform and means for operatively connecting said conveyor and beater to said motor.

1,619,315. DISPENSING RECEPTACLE. RICHARD R. RICKETTS, Springfield, Mo. Filed Oct. 29, 1926. Serial No. 144,987. 9 Claims. (Cl. 221—11.)



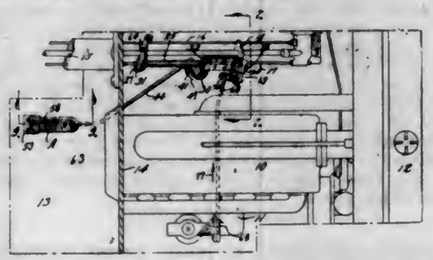
1. In a device of the character described, a receptacle having an opening in a wall thereof, a measuring cup pivoted to the receptacle for swinging movement through said opening to either of two positions, in one of which it may receive material contained in the receptacle and in the other of which it may deliver material contained therein to the exterior of the receptacle, and cooperative means associated with said cup and receptacle wall, in addition to the normal frictional engagement between the walls of said cup and said receptacle wall, serving to hold said cup against accidental swinging movement from either of its aforesaid two positions towards the other position thereof.

1,619,316. AGRICULTURAL POWDER-DISTRIBUTING DEVICE. RALPH R. ROOT, Lakewood, Ohio, assignor to The Root Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1923. Serial No. 679,597. 8 Claims. (Cl. 43—148.)



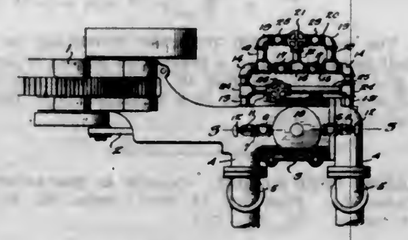
1. A powder duster comprising a supporting wheel having an axle, a casing enclosing the upper portion of the wheel, said casing having side walls to which opposite ends of the axle are secured and which extend above the top of the wheel, a powder distributor comprising a drum extending across the top of the casing and detachably secured thereto and fan casings at the ends of the drum having rearwardly extending spouts, a handle secured to the rear end of the casing, and means for driving the distributor from the wheel.

1,619,317. PENDULUM INCLINATION INDICATOR. HARVEY J. SMITH, Baypoint, Calif. Filed Nov. 14, 1925. Serial No. 69,174. 1 Claim. (Cl. 33—215.)



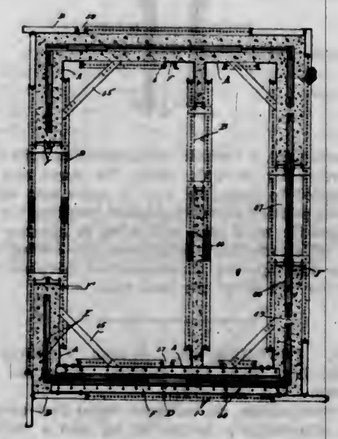
A pendulum inclination indicator comprising a casing having oppositely arranged plates provided with centrally disposed bearings, and having side portion connecting said plates and provided with an opening, a sector shaped pendulum, a spindle extending transversely through the vertex portion thereof and journaled in the said bearings, said pendulum being peripherally provided with a groove, and a circular strip surrounding the pendulum and having a portion thereof provided with a slot and seated within the groove and flush with the periphery of the pendulum and a screw extending through the slot and screwed into the pendulum for adjustably connecting the pendulum to the strip.

1,619,318. ELECTROSTATIC DETECTOR AND AMPLIFIER. FRANK E. SUMMERS, near Memphis, Mo., assignor to The Magnavox Company, San Francisco, Calif., a Corporation of Arizona. Filed Jan. 19, 1920. Serial No. 352,595. 14 Claims. (Cl. 250—27.)



1. An electric device comprising an envelope, a plurality of relatively spaced electrodes enclosed therein and a plurality of conducting members mounted in the electrodes transversely thereof, the members on the adjacent electrodes being disposed in the same plane and extending toward each other and terminating in points in close proximity to each other.

1,619,319. FOOT-THROTTLE CONTROL. WALTER H. THOMAS, Spencer, Iowa. Filed Mar. 31, 1926. Serial No. 98,880. 7 Claims. (Cl. 74—39.)



1. In combination with a motor vehicle having a carburetor thereon and a hand operable throttle control rod, an arm on the hand throttle control rod and a rod connection between the arm and the carburetor, of a foot operable throttle control including a fitting mounted on the hand throttle control rod adjacent the arm thereon, a part on said fitting adapted to receive one end of the rod connection normally extending between the arm and the carburetor, a projecting lug on said fitting adapted to coact with the arm on the hand throttle control rod, a spring connected to the arm on the hand throttle control rod and to said fitting for holding said projecting lug and arm normally in engagement with each other, whereby operation of the hand throttle control rod will impart operation to said fitting, and means for operating said fitting independently of the hand throttle control rod.

1,619,320. PUMP. HARRY S. TOOKER, Joplin, Mo., assignor to William D. James, Kansas City, Mo. Filed Dec. 6, 1924. Serial No. 754,417. 4 Claims. (Cl. 103—45.)

1. In a device of the character described, a cylinder, fluid pressure conveyors connected to the opposite ends of said cylinder, a reservoir connected to the opposite ends of said cylinder, a regulator connected to the opposite ends of said cylinder, said regulator comprising conduits connected to the ends of the cylinder, a transverse conduit connected thereto, an equalizing valve arranged in said transverse conduit, and check valves arranged in said transverse conduit on each side of said equalizing valve.

1,619,321. SYSTEM OF CONCRETE CONSTRUCTION. ARTHUR E. TROIEL, Oakland, Calif. Filed Dec. 9, 1920, Serial No. 429,346. Renewed Aug. 16, 1926. 18 Claims. (Cl. 25—131.)

1. A system of forms for plastic wall construction consisting of two relatively spaced vertically extending pairs of corner forming sections, each pair comprising a self-sustaining rigid and unitary inner angular metal plate member and a complementary outer angular member spaced therefrom, inner and outer wall sections between and supported for vertical adjustment on the inner and outer corner sections respectively, and means for holding the inner and outer wall sections together to move simultaneously while in spaced relation to each other and without movement of the corner sections.

1,619,322. COMBINED TONGUE AND SHOE-LACE FASTENER. ADELBERT D. WINN, Toronto, Ontario, Canada. Filed June 18, 1926. Serial No. 116,920. 1 Claim. (Cl. 24—117.)

In a shoe, the combination of a tongue having a plurality of openings therein defining a square and having a central opening within the square so defined and equidistant from each of said openings, laces for binding the shoe upon the foot, said laces being insertible through different combinations or sets of said tongue openings whereby to hold the said laces in crossed relation and against slipping should the shoe laces become untied, the laces binding in said openings and between the tongue and the foot of the wearer to be thereby held in place.

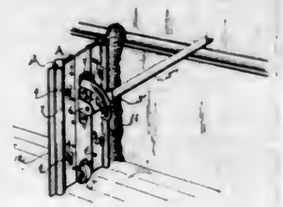
1,619,323. FOUNTAIN PEN. MAURICE ALLAND, Atlantic City, N. J. Original application filed June 10, 1925, Serial No. 36,104. Divided and this application filed Oct. 8, 1925. Serial No. 60,221. 7 Claims. (Cl. 120—42.)

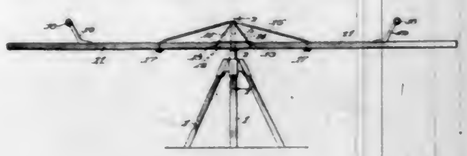
1. In a fountain-pen, the combination of a barrel having a throat, a feed-bar removably supported by said barrel in said throat and provided with a recess, and a removable holder normally positioned in said recess and adapted to contain a soluble ink-pellet.

1,619,324. MOP FOR BASEBOARDS. DUDWARD M. ALLEN, Binghamton, N. Y., assignor of one-half to Frank N. Gilbert, Binghamton, N. Y. Filed July 14, 1924. Serial No. 725,920. 2 Claims. (Cl. 15—115.)

1. In a mop for base boards, a substantially vertical plate forming a mop head, a stationary jaw arranged at

one of the side edges of said plate, a movable jaw cooperating with the stationary jaw for holding mop material, rotary supporting means on the lower end of the





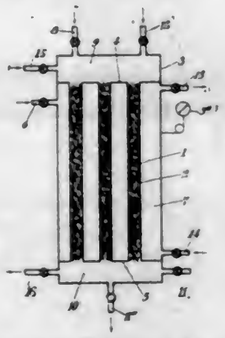


plate to permit the latter to be readily moved along the floor while held in the substantially vertical position, and a handle connected to said plate.

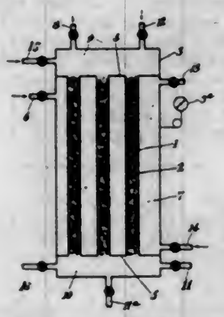
1,619,325. AMUSEMENT DEVICE. JOHN R. ANDERSON, Moline, Ill. Filed Oct. 1, 1925. Serial No. 59,757. 2 Claims. (Cl. 272—30.)



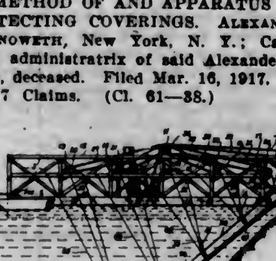
1. An amusement device comprising a stand, a post on the same rounded at its upper end to provide a bearing, a board having a longitudinally disposed slot therein to receive the post which projects above the board, and a yoke upon the upper face of the said board, said yoke being U-shaped in cross section in one plane and triangular in cross section in a plane at right angles to the said first-named plane and in the direction of the length of the board.

1,619,326. PROCESS OF REVIVIFYING CARBON USED IN PURIFYING ETHYLENE. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Sept. 27, 1924. Serial No. 740,398. 5 Claims. (Cl. 252—3.)

1. The process which comprises revivifying an activated carbon used in purifying ethylene by applying live steam accompanied by indirect heat and then a hot dry gas thereto, in such a manner as to remove impurities therefrom.

1,619,327. PROCESS OF REVIVIFYING CARBON. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Sept. 27, 1924. Serial No. 740,399. 8 Claims. (Cl. 252—3.)

1. The process which comprises revivifying an absorbent material used in a purification process by applying live steam accompanied by indirect heat and then a hot dry gas thereto, in such a manner as to remove impurities therefrom.

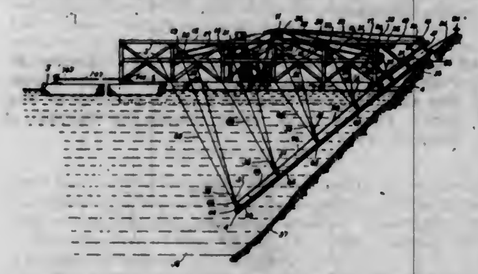


1,619,328. CORE BARREL. CHARLES H. BENCKENSTEIN, Vinton, La. Filed Oct. 12, 1925. Serial No. 62,100. 13 Claims. (Cl. 255—72.)

1. A sand trap, a conduit communicating with the sand trap, a vertically movable valve, the lower end of said valve adapted to cooperate with a valve seat said valve when in one position permitting communication between the conduit and the sand trap, and when in another position shutting off communication between the conduit and the sand trap and opening communication between the conduit and the well above the sand trap.

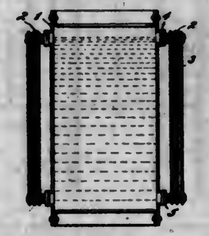
1,619,329. CARBURETOR. ALFRED V. CHAPIN, San Antonio, Tex. Filed Oct. 4, 1924. Serial No. 741,669. 2 Claims. (Cl. 261—121.)

1. In combination, an enclosed liquid fuel tank, a hot air pipe comprising a horizontal leg and a vertical leg, the vertical leg leading vertically through the top of the liquid fuel tank and having an open lower end which terminates adjacent the bottom of said tank, said hot air pipe having a dilution port for the entry of atmospheric air located in alignment with the vertical leg of the hot air pipe, a valve for controlling said dilution port located at the juncture of the vertical and horizontal legs and



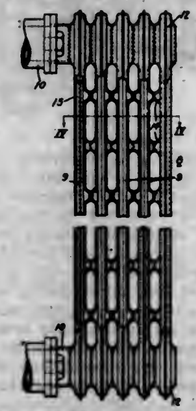
a main controlling valve located in the vertical leg of the hot air pipe outside the liquid fuel tank and inwardly of said dilution port.

1,619,330. AUXILIARY AIR AND FUME SUPPLY FOR EXPLOSIVE ENGINES. ALFRED V. CHAPIN, San Antonio, Tex. Original application filed Oct. 4, 1924, Serial No. 741,669. Divided and this application filed June 15, 1925. Serial No. 37,235. 1 Claim. (Cl. 123—127.)



The combination with the intake manifold of an internal combustion engine, of a carbureter connection leading thereto, a throttle valve in said connection, an auxiliary pipe leading from a side of said manifold in advance of the throttle valve, which pipe serves to conduct a fluid other than atmospheric air to the manifold, an auxiliary air inlet port in said pipe for the admission of atmospheric air of dilution thereto, a manually operable controlling valve for said port and a main valve in the auxiliary pipe, between the auxiliary air inlet valve and the manifold, controllable with the throttle valve.

1,619,331. METHOD OF AND APPARATUS FOR LAYING PROTECTING COVERINGS. ALEXANDER CRAWFORD CHENOWETH, New York, N. Y.; Catherine R. Chenoweth administratrix of said Alexander Crawford Chenoweth, deceased. Filed Mar. 16, 1917. Serial No. 155,197. 7 Claims. (Cl. 61—38.)

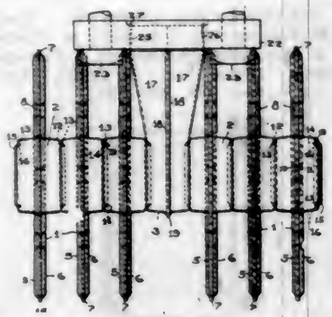


4. In apparatus for laying slabs on the surface to be protected, a pair of permanently spaced apart floats and a superstructure between the same, hoisting tackle mounted on said superstructure above said space, a horizontally movable slab support which can be moved into and out of the space between said floats to permit vertical lowering of a slab by said hoisting tackle.

1,619,332. TRANSFORMER RADIATOR. WALTER M. DANN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 29, 1920. Serial No. 427,189. 3 Claims. (Cl. 257—191.)

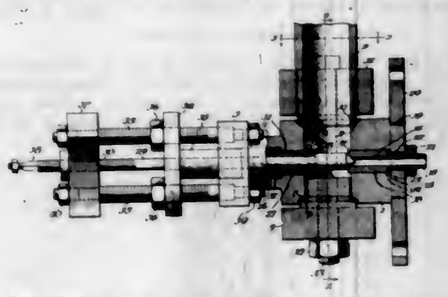
3. A radiator comprising a plurality of units of sheet metal, each of said units comprising complementary members of such form as to constitute a substantially rectangular envelope having longitudinal welds along the adjacent edges of said members whereby said units are integral, and each of said units having projecting portions with transverse openings therein surrounded by annular flanges that are welded to adjacent flanges to constitute an integral structure wherein the units are operatively connected for circulating a cooling medium.

1,619,333. RADIATOR. WALTER M. DANN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 30, 1920, Serial No. 427,300. Renewed Aug. 5, 1926. 4 Claims. (Cl. 257—191.)



1. A radiator comprising a plurality of pressed metal envelopes disposed in side-by-side relation, the walls of the intermediately disposed envelopes being provided with integral extruded portions engaging similar portions on the adjacent units, the end units being provided with integral indented portions in the walls thereof, the indented portions of the opposite walls being welded together.

1,619,334. TRANSFORMER RADIATOR. WALTER M. DANN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 29, 1922, Serial No. 557,325. Renewed Jan. 24, 1927. 9 Claims. (Cl. 251—191.)

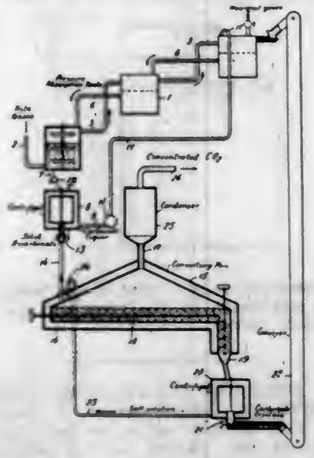


8. A radiator comprising a plurality of groups of communicating radiating elements and a member disposed be-

tween said groups for securing the same to a tank structure, said member comprising a plurality of complementary portions of similar shape, each of said portions having a relatively flat portion provided with an opening said flat portion gradually merging into a substantially

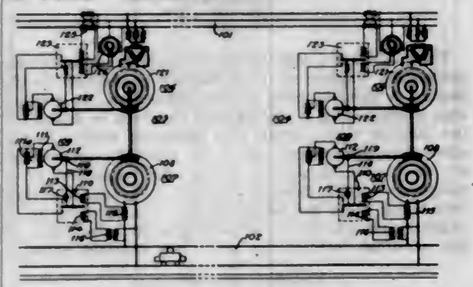
semi-cylindrical portion said members adapted to be secured together with said openings in axial alignment for communication with said elements and with said semi-cylindrical portions cooperating to form a tubular portion adapted to be secured to the tank.

1,619,335. APPARATUS FOR CONTROLLING FLUIDS. JOSEPH FRANCIS DONNELLY, Lemont, Ill. Filed Jan. 25, 1926. Serial No. 83,545. 13 Claims. (Cl. 251—50.)



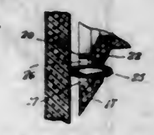
7. A fluid-controlling device comprising a body having a chamber therein provided with inlet and outlet passages and an integral extension thereon having a passage therethrough, a valve for controlling said outlet passage adapted to be inserted through said passage in said extension and having a stem extending outwardly to a point remote from said body, and means located at the outer end of said stem for operating said valve, supporting means for said stem removably mounted on said extension, a packing surrounding said stem in said passage in said extension, compression means for said packing mounted on said supporting means, and means on said supporting means adapted to operate said compression means.

1,619,336. PROCESS AND APPARATUS FOR MAKING CONCENTRATED CARBON DIOXIDE. VIGGO DREWSEN, Brooklyn, N. Y., assignor to West Virginia Pulp and Paper Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 12, 1921. Serial No. 507,375. 12 Claims. (Cl. 23—150.)



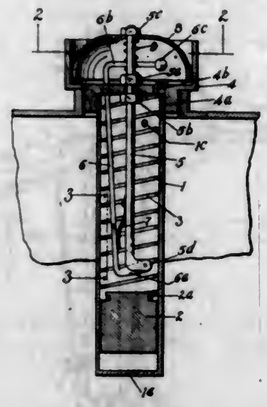
9. The process of making concentrated carbon dioxide from gases containing carbon dioxide which comprises absorbing the said gases in sodium carbonate liquor to effect its corresponding conversion into bicarbonate, centrifugally separating said sodium bicarbonate from said liquor and driving off and recovering substantially concentrated carbon dioxide from said bicarbonate.

12. The apparatus for producing concentrated carbon dioxide from gases containing carbon dioxide which comprises a connected series of absorption tanks having agitating means, a centrifugal separator connected to said absorption tanks and cooperating means to return the



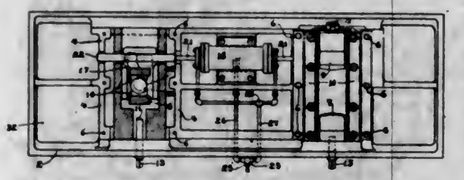
remaining liquor to said tanks, and a heated evaporating pan provided with a reflux condenser having a gas outlet.

1,619,337. DISTRIBUTION SYSTEM. ROBERT D. EVANS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 20, 1924. Serial No. 733,035. 40 Claims. (Cl. 172—237.)



1. The combination with a high-voltage transmission line, a low-voltage distribution line, and means for interconnecting said lines at a plurality of spaced points for the interchange of power, of means responsive to the power transmitted by one of said interconnections for substantially offsetting the phase distortion in said interconnecting means.

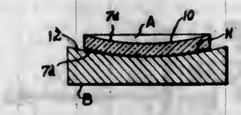
1,619,338. VERNIER TUNING DIAL. ALBERT W. FRANKLIN, New York, N. Y., assignor to Chas. Freshman Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 19, 1924. Serial No. 693,803. 2 Claims. (Cl. 74—7.)



1. A dial having a depression or pocket in its rear face adapted to receive the trunnions of a roller and having an elongated slot through which said roller may operate.

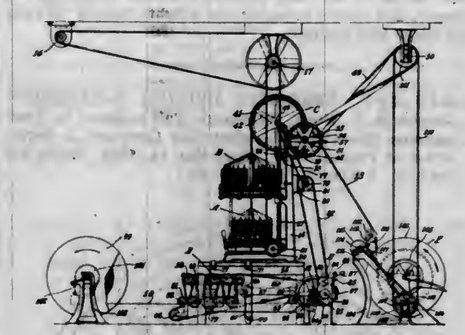
1,619,339. LOW-LEVEL ALARM FOR GASOLINE TANKS. ADOLF FREDERICKS, Monterey Park, Calif. Filed July 8, 1925. Serial No. 42,205. 6 Claims. (Cl. 116—110.)

4. In a device of the class described, a perpendicular cylinder member provided with a small orifice in its lower end communicating with the gasoline in the tank, a plunger reciprocally mounted in said cylinder and suspended on a spring, a bell member, and means for ringing said bell member, said means including a support, a lever pivotally mounted on said support, and adapted to be engaged by said plunger and a spring tending to separate said lever from said support.



1,619,340. WORK HOLDER. HERBERT S. FULLERTON, Philadelphia, Pa., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 1, 1924. Serial No. 696,378. 6 Claims. (Cl. 90—59.)

1. A work holder comprising the combination of a support, a work engaging jaw thereon, a slide on the support movable toward and from the jaw, a second jaw, means connecting the second jaw and slide for relative adjustment toward and from the first jaw, a member rotatably mounted in the support and having an eccentric portion engaging the slide, an outwardly extending arm on the member, and power operated means connected to the arm and adapted to rotate the member and slide to grip a work piece between the jaws.



1,619,341. OPHTHALMIC LENS. LOUIS L. GAGNON, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 10, 1925. Serial No. 49,285. 3 Claims. (Cl. 49—84.)

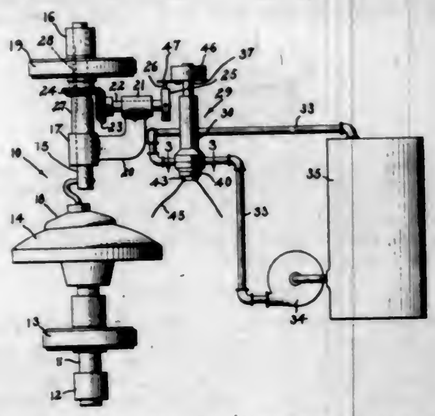
1. The process of making an ophthalmic lens having a toric surface on one side thereof comprising making a glass blank with a spherical surface on each side thereof, the curvature of the spherical surface being the same as the curvature of one meridian of the desired toric surface, placing the shaped blank on a block having the desired toric surface, heating the blank on the block until the blank drops down to the shape of the block forming a surface on both sides of the blank of the same

curvature as the block, the distortion in the glass blank due to the shaping having been reduced to a minimum as there has been no displacement in one meridian and a minimum displacement in the other meridian due to shaping both sides of the blank before heating to one meridian of the desired toric surface.

1,619,342. METHOD AND APPARATUS FOR PRODUCING ELASTIC STRIP MATERIAL. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1924. Serial No. 699,231. 9 Claims. (Cl. 96—3.)

1. Apparatus of the character described comprising means for progressively fabricating a flexible, extensible fibrous structure in association with strip rubber, means for supporting a supply of the strip rubber, means for pulling the product continuously from the fabricating means, hold-back means other than the supply-supporting means for retarding the movement of the rubber to the fabricating means, and means for compelling the withdrawing means and the hold-back means to function with a constant, determinate ratio of feeding speed.

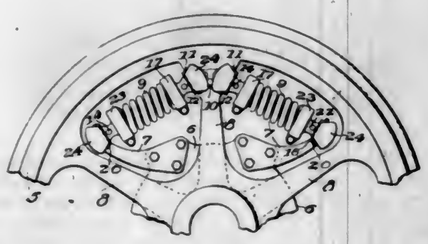
1,619,343. METHOD OF COATING MATERIALS. EARL J. HAVERSTICK, Oakmont, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 14, 1923. Serial No. 651,630. 4 Claims. (Cl. 91—70.)



1. A method of coating materials which comprises applying a film of a graphite suspension in water on said material and then baking the same at a temperature over 100° C.

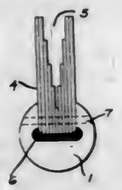
4. A coated article comprising a base and a baked coating of a graphite suspension thereon.

1,619,344. ABRASIVE-SUPPLYING MEANS. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 16, 1925. Serial No. 30,837. 6 Claims. (Cl. 51—263.)



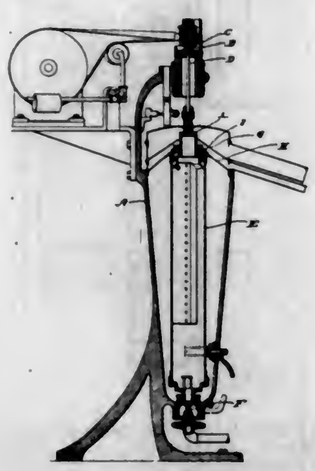
1. A device for supplying an abrasive to a lens surfacing machine, including a body portion having a vertical

bore and a transverse bore intersecting the first named bore, a plunger mounted within the vertical bore and extending into the transverse bore, an abrasive conducting



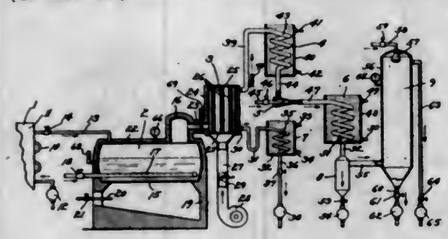
wire carried by the body portion, a weight carried by the plunger, and means engaging the weight whereby to raise and lower said plunger.

1,619,345. RESILIENT DRIVING CONNECTION. GEORGE H. F. HOLT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1921. Serial No. 468,572. 7 Claims. (Cl. 74—29.)



1. A resilient driving connection comprising a coil-spring member having one end provided with a seat that is pivotally supported for universal movement, the spring being rigidly secured in operative position.

1,619,346. WELDED SPRING STRUCTURE. HAROLD A. HOUSTON, Wilkinsburg, and VICTOR J. SHEPARD, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 1, 1922. Serial No. 540,367. 14 Claims. (Cl. 267—47.)

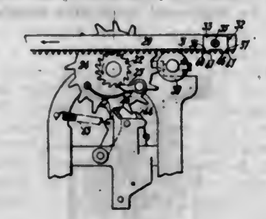


1. A spring-nest comprising a cylindrical base member and a plurality of spring leaves united therewith by anchor rods.

1,619,347. CENTRIFUGAL BOWL. LEO D. JONES and ARTHUR U. AYRES, Philadelphia, Pa., assignors to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 4, 1925. Serial No. 54,477. 8 Claims. (Cl. 233—21.)

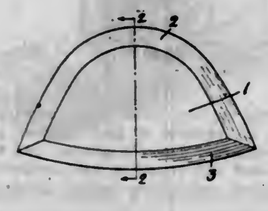
1. A centrifugal bowl comprising a shell and a head having complementary screw threads and a gasket sealing the external terminus of the interstice between said shell and head.

1,619,348. PROCESS OF PRODUCING LUBRICATING OILS. GUSTAV A. KRAMER, Concord, Calif., assignor, by mesne assignments, to Simplex Refining Company, San Francisco, Calif., a Corporation of California. Filed May 9, 1925. Serial No. 29,047. 21 Claims. (Cl. 196—77.)



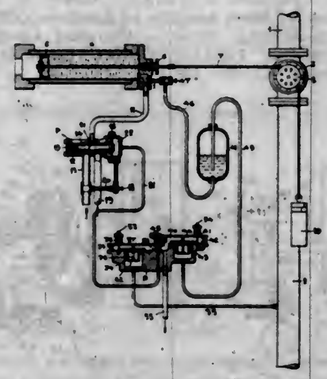
17. A process of treating mineral oils, which comprises: producing a mixture of vapors from a suitable charging stock under a low absolute pressure; cooling said mixture of vapors to a sufficient degree to condense therefrom a certain portion thereof; increasing the absolute pressure on the remaining vapors to a value which is still considerably less than atmospheric pressure; and subjecting said remaining vapors to a further condensation.

1,619,349. TYPEWRITING MACHINE. ADOLPH G. KUPETZ, New Rochelle, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 16, 1924. Serial No. 686,475. 7 Claims. (Cl. 197—176.)



7. In a typewriting machine, the combination of a power-driven carriage, escapement mechanism including a step-by-step escapement-wheel and a pinion, a feed-rack pivoted to the carriage and spring-pressed into operative engagement with the pinion, carriage-releasing mechanism

including a roller arranged to raise the rack out of engagement with the pinion to release the carriage, and a cam-element secured to the rack and arranged to ride



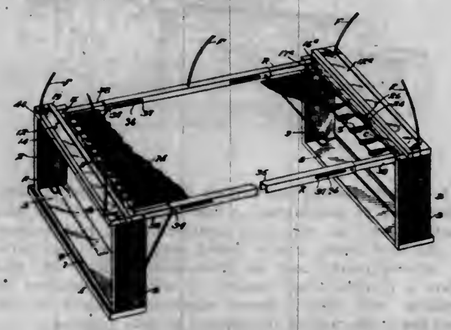
over the roller to automatically release and then arrest the carriage for a skipping movement during the normal operation of typing.

1,619,350. METHOD OF MAKING BOX TOES. EUCLID I. LA CHAPELLE, Brockton, Mass. Filed Feb. 10, 1925. Serial No. 8,150. 8 Claims. (Cl. 12—146.)

1. That improvement in the art of making box-toes which consists in reducing the front and back edges of a box-toe blank to a feather edge and treating the front edge of the blank to render it more rigid than the rest of the blank.

1,619,351. FLUID-PRESSURE-OPERATED REGULATOR. THOMAS LINDSAY, London, England, assignor to Arca Regulators, Inc., New York, N. Y., a Corporation of Virginia. Filed Feb. 12, 1925, Serial No. 8,741, and in Great Britain Feb. 28, 1924. 21 Claims. (Cl. 137—78.)

1. Apparatus for automatic control comprising a main control member, a liquid presure operated servomotor to control said main control member, a relay to control said servomotor, said relay comprising a movable baffling member, means to discharge a stream of liquid against said baffling member, and means to move said baffling member in response to changes in that which is to be controlled and in response to changes of liquid pressure in said servomotor.



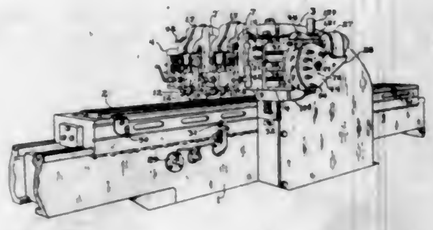
16. Method of automatic control which comprises controlling the pressure of a first stream of liquid in response to changes in that which is to be controlled, controlling the flow of a second stream of liquid by changes of presure in the first stream, regulating that which is be controlled by changes of pressure in said second stream of liquid and causing the second stream of liquid to produce a compensating effect on the first stream of liquid.

21. In a relay for fluid pressure operated regulators of the type wherein a continuously flowing stream of fluid is checked by a lever, the combination with said lever, of a second lever movable in response to changes in a compensating force adapted to be affected by movement of the first mentioned lever and a resilient interconnection between said levers.

1,619,352. PROCESS OF MAKING GREASE. JAMES MCKEE, Chester, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Feb. 27, 1925. Serial No. 11,993. 10 Claims. (Cl. 87—9.)

3. The process of making grease which contains a predominating proportion of mineral oil together with a lime-saponified fatty acid, which comprises forming a mixture of calcium hydrate with a minor proportion of the mineral oil, heating the mixture to expel moisture, cooling, and adding a fatty acid, a small percentage of water and the remainder of the mineral oil and heating to about 200° to 240° F.

1,619,353. CONVERTIBLE BED AND TRUNK. CHARLES D. MCDONALD, Fullerton, Calif. Filed Sept. 16, 1925. Serial No. 56,643. 3 Claims. (Cl. 190—2.)



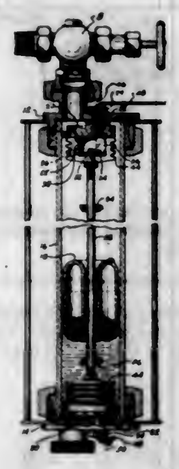
1. A convertible trunk and bed structure including a trunk comprising longitudinally separable, independent sections each having a top strip and below it a fixed cross piece and a meeting, inner filler member, and means extending from end to end of each cross piece and beneath the filler members for attachment of a mattress support.

1,619,354. METHOD OF AND APPARATUS FOR MAKING AND APPLYING MARKERS FOR RUBBER ARTICLES. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 6, 1924. Serial No. 691,066. 10 Claims. (Cl. 41—1.)

1. The method of forming marker assemblies which comprises superposing plies of vulcanizable material of

different characteristics and different widths to form a laminated structure striated upon its display face, superposing thereon a piece of deformable sheet material to form a composite sheet, and punching a blank from said composite sheet.

1,619,355. FROG AND SWITCH PLANER. NICHOLAS MARCALUS, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed June 20, 1924. Serial No. 721,229. 30 Claims. (Cl. 90—40.)

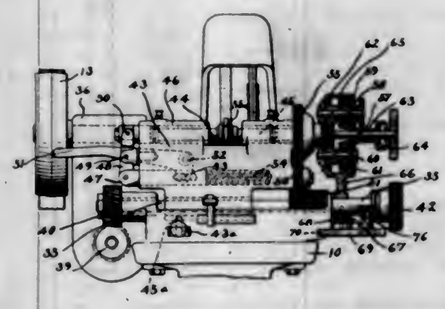


1. A tool feeding mechanism for planers or the like comprising in combination, a tool support, a pair of feed gears, means for optionally connecting the tool support to the feed gears, power means automatically operative to intermittently and simultaneously rotate the feed gears a predetermined amount in relatively opposite directions, and rotary means mounted coaxially of the feed gears for varying the amount of gear rotation.

7. In a machine tool, the combination of a support, a tool carrying member thereon, means including a power operated worm engaging a worm gear for intermittently feeding the member, clamping means for the member, and means engaging the worm and operatively connected to the clamping means for clamping the member to the support, rotation of the worm in one direction being adapted to release the member and thereafter feed the same and rotation of the worm in the opposite direction being adapted to clamp the member.

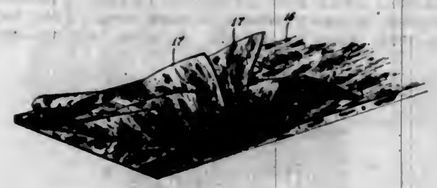
1,619,356. WATER-LEVEL-CONTROLLING MEANS. EARL L. MARTIN, New York, N. Y. Filed June 26, 1926. Serial No. 118,780. 6 Claims. (Cl. 137—101.)

1. In an apparatus for controlling the level of water within a steam boiler, the combination of a chamber connected to the boiler having at the top and bottom portions thereof, respectively, yielding wall portions, a vertical member connecting said yielding wall portions so that the boiler pressure thereon is balanced, a float adapted to move said connecting member upwardly



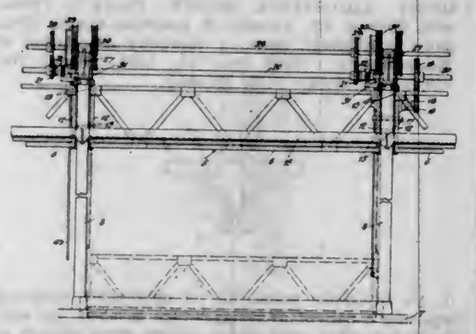
and downwardly as the water rises and falls, switch mechanism on the exterior of said chamber actuated by said float through said movable member, and two circuits alternately opened and closed by said switch mechanism and water supply controlling means actuated by said circuits.

1,619,357. SULPHUR COMPOSITION OF DIMINISHED INFLAMMABILITY AND PROCESS FOR PRODUCING SAME. CARL MARX, Wyoming, Milburn Township, Essex County, N. J., assignor to Union Sulphur Company, a Corporation of New Jersey. Filed Apr. 20, 1922. Serial No. 555,708. 7 Claims. (Cl. 106—12.)



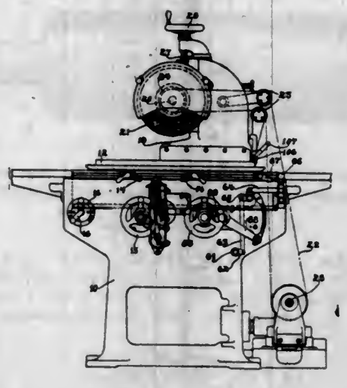
2. A non-inflammable composition comprising sulphur as a principal ingredient, the sulphur being homogeneously mixed with at least 10 percent of its weight of a non-inflammable haloid substituted hydrocarbon.

1,619,358. EDGING MACHINE. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 26, 1924. Serial No. 758,120. 5 Claims. (Cl. 51—101.)



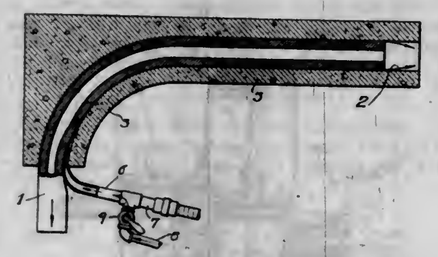
1. An edging machine, comprising a frame, a pair of guiding shoes carried by the frame, a grindstone shaft journaled in said frame, a pair of grindstones mounted on said shaft, one of said grindstones being provided with a V-shaped grinding edge, the other grindstone being provided with a straight grinding edge, means for axially reciprocating said last mentioned grindstone during rotation with respect to the shaft on which it is mounted, a second shaft parallel to the grindstone shaft and driven thereby, a lens carriage pivotally mounted on the second shaft, means for shifting the lens carriage out of the grinding range of one grindstone into grinding range of the other grindstone axially of the second shaft, a third shaft parallel to the second shaft and carried by said lens carriage and driven by said second shaft, a former slidably mounted on said third shaft, and means for sliding said former on the third shaft to align it with either of the said guide shoes.

1,619,359. VARIEGATED ARTICLES OF RUBBER OR THE LIKE AND METHOD OF MAKING THE SAME. TOD J. MELL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 9, 1925. Serial No. 42,451. 7 Claims. (Cl. 18—61.)



1. The method of making a variegated rubber article which comprises so mixing together a plurality of masses of rubber of different colors, at least one of the same being plastic, as to produce a mass of chance design in details of color arrangement, and vulcanizing the mass, and thereafter removing material from the surface of the mass so produced to expose the internal structure thereof as a surface of the article.

1,619,360. VEHICLE PARKING SYSTEM. MAX MILLER, New York, N. Y. Filed Mar. 21, 1925. Serial No. 17,453. 10 Claims. (Cl. 214—16.1.)



1. In a vehicle parking system, the combination with a roadway, of a movable platform adapted to receive a vehicle from the roadway, means located wholly at one side of the roadway for supporting said platform, means movably connecting said platform to said supporting means, and means for elevating said platform with the vehicle thereon to parking position over the roadway.

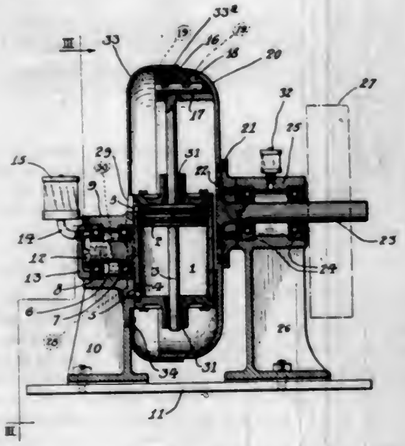
1,619,361. THREAD-CHASER-GRINDING MACHINE. EDWARD A. MOYER, West Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 2, 1925. Serial No. 6,305. 11 Claims. (Cl. 51—91.)

1. A grinding machine comprising in combination, a base, a table slidably mounted thereon, a wheel support having a cutting wheel rotatably mounted therein, said wheel support being movable toward and from the table, automatic means to move the support predetermined distances to index the wheel relative to the table and means to feed said wheel in a direction normal to its indexing movement.

1,619,362. WITHDRAWING CORES FROM MOLDED CONDUITS. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Sept. 17, 1924. Serial No. 738,151. 3 Claims. (Cl. 25—155.)

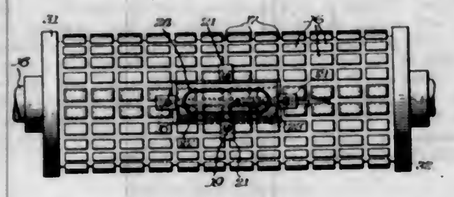
1. In the molding of conduits in plastic material by means of a flexible core, the method of withdrawal which consists in forcing a lubricating fluid into the space between the core and the surrounding wall so as to flex the core to break the adhesion while pulling the core longitudinally to withdraw it from the conduit.

1,619,363. CALIBRATING DEVICE FOR GAUGE STICKS. WILLIAM C. MURTAUGH, Chicago, Ill. Filed Jan. 30, 1926. Serial No. 84,822. 3 Claims. (Cl. 73—120.)



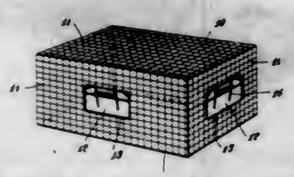
1. A calibrating device for gauge sticks comprising a casing formed with two passageways extending therethrough and through one of which a gauge stick may extend, means adapted to engage the gauge stick to secure it in a desired position, a slidable member extending through the second of said passageways, resilient means

on the inner wall on the second passageway adapted to engage the slidable member to prevent undesired movement thereof, and means on the lower end of said slidable



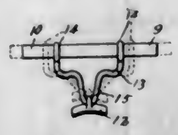
member for indicating the liquid level in a tank or container and serving as guides for a tool for marking the corresponding level on the gauge stick.

1,619,364. VACUUM PUMP. ERNEST C. OAKES, Bloomfield, N. J., assignor, by mesne assignments, to Empire Milking Machine Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Jan. 4, 1924. Serial No. 684,276. 13 Claims. (Cl. 230—31.)



1. A vacuum pump comprising a power shaft, a cylinder with its axis at right angles to the power shaft, a shaft supporting the cylinder projecting at right angles thereto and parallel with and offset from the power shaft, a fixed support for said cylinder shaft having suction port and a discharge port, and a port disc associated therewith integral with the cylinder side and mounted to rotate in pressed contact with the support disc under the influence of the pump suction.

1,619,365. ENVELOPE-WINDOW-CUTTING DEVICE. ALBERT OLGAY, Glen Ellyn, Ill., assignor to Gaw-O'Hara Envelope Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 28, 1925. Serial No. 58,967. 5 Claims. (Cl. 93—61.)



1. The combination with a printing press adapted to print on envelope blanks, of means relatively adjustable with respect to the print type for cutting a window in each envelope.

1,619,366. TRAP FOR CATCHING CRABS. CHRISTEN HANSEN ALFRED PETERSEN, Glenada, Oreg. Filed May 19, 1926. Serial No. 110,059. 2 Claims. (Cl. 43—66.)

1. A wire box of rectangular shape, with several rectagular inlets provided with trap doors, each of which comprises a rectangular door-frame, having a cross-bar, and a door composed of two pieces of wire, one of which forms a cross-bar on the other, the latter being bent upon itself to form hinges engaging the aforementioned rectangular frame at its top, stop-shoulders on said frame, and a regulation bar attached to said frame at its top to regulate the movement of the trap-door.

1,619,367. ADJUSTABLE BRIDGE. FRANK E. PETERSON, Chicago, Ill., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed June 11, 1924. Serial No. 719,307. 2 Claims. (Cl. 88—43.)

1. An adjustable bridge for an ophthalmic mounting comprising a pair of overlying bridge members one slidable on the other, each bridge member being secured at one end to a lens rim member, and a bendable member having openings adjacent each end, a bridge member being secured in each opening leaving sufficient space for the other bridge member to slide freely in the opening whereby the bridge members may be slid one on the other by opening out or closing the bendable member and whereby the portion of the bendable member around the opening not secured to a bridge member acts as a guide to retain the bridge members in their related positions.

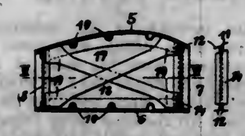
1,619,368. PROCESS OF MAKING ALKYL-NITROARYL ETHERS. LYDE STUART PRATT and EARL H. WELTE, Penns Grove, N. J., and WILLIAM LESTER MILLS, Chester, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 18, 1920, Serial No. 417,838. Renewed July 24, 1926. 11 Claims. (Cl. 260—143.)

1. A process of making alkyloxyl derivatives of nitro aromatic compounds which comprises heating a mixture containing an alcohol, a caustic alkali, and a nitroaryl halid in the presence of an oxidizing agent capable of hindering the reduction of the nitro group.

1,619,369. PASSENGER-CAR-WASTE-TRANSFER APPARATUS. SAMUEL S. RIEGEL, Scranton, Pa., assignor, by mesne assignments, of one-half to John H. Allen, Jersey City, N. J. Filed Apr. 28, 1925. Serial No. 26,441. 12 Claims. (Cl. 4—8.)

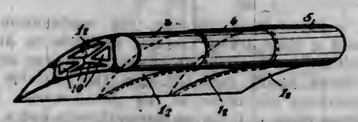
1. The combination in a man carrying vehicle of a toilet apparatus including a waste receptacle; a temporary waste container; said receptacle and container being in communication one with another; apparatus for automatic transfer of waste from the receptacle into said container; said apparatus comprising a source of compressed air for effecting such transfer; and filtering and noise reducing apparatus operatively connected with the waste storage container.

1,619,370. CYLINDER GAUGE. CHESTER C. ROBBINS, Waltham, Mass., assignor to B. C. Ames Co., Waltham, Mass., a Corporation of Massachusetts. Filed Dec. 19, 1922. Serial No. 607,895. 6 Claims. (Cl. 33—147.)



4. A gauge having in combination, indicating means, movable work engaging means, mechanism actuated by said work engaging means for operating said indicating means, said mechanism comprising a meshing gear and pinion, said gear having a hub, a second gear mounted on said hub concentrically with and being rotatable relatively to said first named gear, said second gear also meshing with said pinion, and a torsion spring concentric with said gears and connecting said second gear to a fixed part of said gauge.

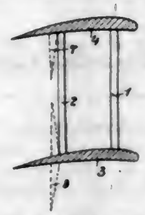
1,619,371. RUBBER-COVERED ROLL. BRUCE W. ROGERS and WALTER L. GLASS, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 26, 1926. Serial No. 90,840. 4 Claims. (Cl. 92—49.)



1. A roll comprising a tapered roll body, and an inextensible, annular cover member wedged thereon.

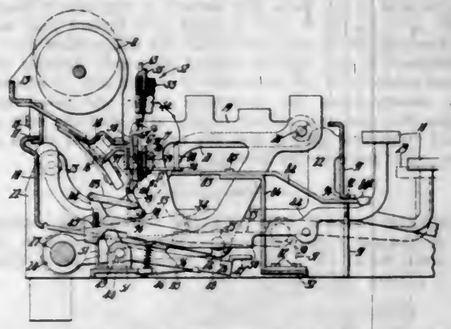
1,619,372. WING CONSTRUCTION FOR METAL AIRPLANES. ADOLF ROHRBACH, Charlottenburg, Germany. Filed Mar. 24, 1924, Serial No. 701,498, and in Germany Nov. 3, 1922. 34 Claims. (Cl. 244—12.)

1. In a metal wing structure for airplanes an intermediate section forming the backbone of the wing and including a pair of spaced and laterally braced longitudinal spars which form the front and rear boundary edges thereof, a pair of upper and lower imperforate stressed skin cover plate units firmly secured to and bridging said spars, and one of said cover plate units including a plurality of transverse former and girder members firmly secured to the inner side thereof at intervals throughout their length to form a rigid part thereof and said transverse girder members having end connections for attachment to the laterally braced spar unit whereby the final assembly of the intermediate section may be effected by superimposing the transverse girder and cover unit upon the spar unit and by merely attaching the ends of said transverse girders and the front and rear edges of the cover plate to the laterally braced spars.



1,619,373. WING FOR FLYING MACHINES. ADOLF ROHRBACH, Charlottenburg, Germany. Filed Mar. 20, 1924, Serial No. 700,620, and in Germany Apr. 9, 1923. 9 Claims. (Cl. 244—12.)

1. A metal wing for flying machines consisting of an internal skeleton frame structure formed of interconnected transverse frame members and continuous uninterrupted longitudinal girders, said longitudinal girders and transverse members having co-planar bearing and supporting surfaces and a flat outer metallic skin lying flat against said girders and transverse frame members, said outer skin being divided longitudinally of the wing into sections which are flat throughout their entire areas which are rigidly and directly secured to both the girders and the transverse frame members with each pair of adjacent sections overlapping each other along a transverse frame member in the plane of the outer skin and firmly secured to each other and to the transverse mem-

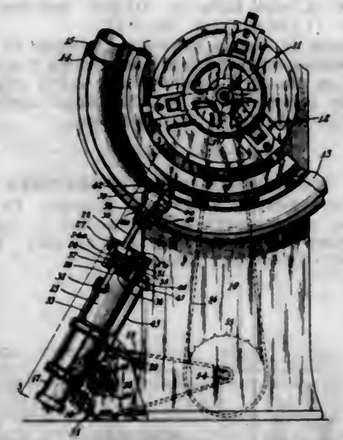


ber along the coplanar overlapping part whereby the flat outer skin forms a reinforcing and strengthening supplemental frame for transmitting all the loads and the stresses and the transverse double layers of metal along said transverse members form reinforcing means for the transverse members.

1,619,374. METHOD AND DEVICE FOR THE INCREASE OF FLOATING STABILITY OF AIRPLANES. ADOLF ROHRBACH, Berlin-Wilmersdorf, Germany. Filed July 14, 1924, Serial No. 725,833, and in Germany July 25, 1923. 9 Claims. (Cl. 244—29.)

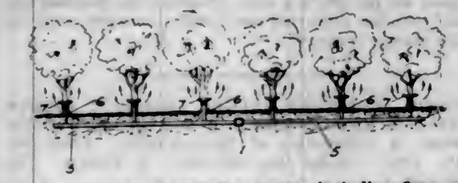
1. An airplane including a lift reducing device associated with the main lifting wing area thereof and sufficiently co-extensive with the span of the craft to neutralize or reduce the lifting force of wind gusts thereon to a harmless degree while the craft is standing in exposed places, said lift reducing device being independent of and separate from but readily attachable to the craft while standing.

1,619,375. TYPEWRITING MACHINE. EDWARD G. ROWLEY, Belleville, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 19, 1923. Serial No. 669,447. 24 Claims. (Cl. 197—155.)



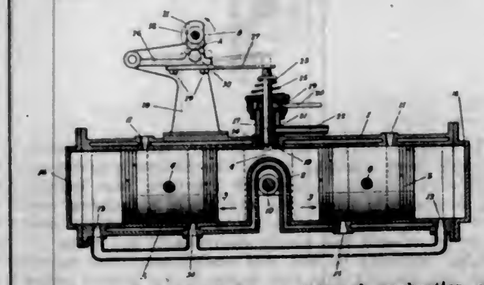
1. In a typewriting machine, the combination of a platen and a shift frame therefor shiftable to different case-positions, a vibratory ribbon-carrier on the shiftable frame, means wholly mounted upon the shiftable frame to predetermine the throw of the ribbon-carrier, including a ribbon-vibrator lever connected thereto and a rocker having spaced-off pivot-pins operable to engage with the vibrator-lever at different positions of its length, and key-actuated means to vibrate the lever.

1,619,376. LITHOPONE AND PROCESS OF INCREASING THE RESISTANCE THEREOF TO SUNLIGHT. HERMAN G. SCHANCHE, Philadelphia, Pa., assignor to E. I. Du Pont De Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 5, 1923. Serial No. 661,098. 18 Claims. (Cl. 134—78.)



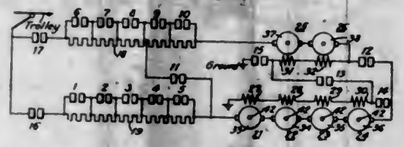
1. In the process of making lithopone the steps which comprise calcining and quenching the crude lithopone, wet-grinding the quenched product, and subjecting the ground lithopone to the action of an acid solution.

1,618,377. TIRE-BUILDING APPARATUS. MERLE C. SCROTE, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1924. Serial No. 709,795. 10 Claims. (Cl. 154—10.)



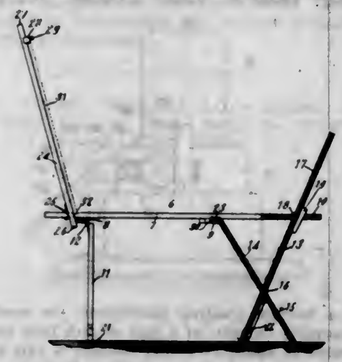
1. Tire-building apparatus including means for supporting and driving the work, a stitcher roller, means for quickly advancing the same approximately into engagement with the work, and means for thereafter advancing said roller radially of the work toward the latter's axis of rotation in determinate relation to the speed of the work.

1,619,378. SYSTEM OF FROST PREVENTION FOR ORCHARDS. JAMES SHAW, San Francisco, Calif. Filed Feb. 21, 1925. Serial No. 10,786. 3 Claims. (Cl. 126—59.5.)



1. In an orchard warming system including flues projecting upwardly from the ground, means for supplying heated gases to the flues at the lower ends thereof, and enlarged hoods surmounting the flues a certain distance above the same.

1,619,379. FUEL-FEED DEVICE FOR INTERNAL-COMBUSTION ENGINES. JAMES SHAW, San Francisco, Calif. Filed Oct. 8, 1925. Serial No. 61,293. 3 Claims. (Cl. 123—32.)

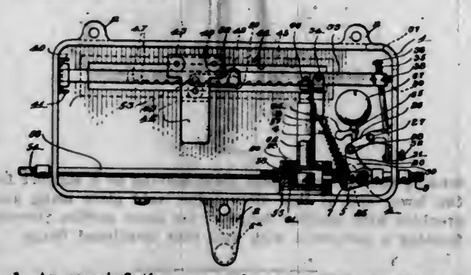


1. A fuel feed device for an internal combustion engine comprising a barrel communicating with the compression chamber of the engine, a plunger reciprocable in the barrel, means for feeding fuel into the barrel into the path of movement of the plunger, spring means tending to retract the plunger in the barrel, and yieldable means for advancing the plunger toward the inner end of the barrel.

1,619,380. MOTOR-CONTROL SYSTEM. ELDEN I. STAPLES, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 8, 1924. Serial No. 748,560. 10 Claims. (Cl. 105—29.)

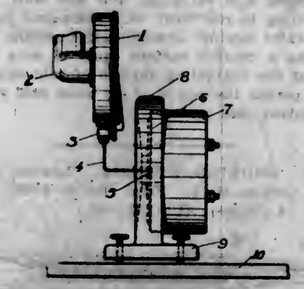
3. In a motor vehicle, the combination with a vehicle having a plurality of wheels, of a motor for driving said wheels, means for mechanically connecting said motor to said wheels, a gear wheel mounted upon said vehicle for actuating said vehicle on heavy grades, a second motor for driving said gear wheel during abnormal operations, means for mechanically connecting said second motor to said gear wheel and means for energizing said motors to maintain the peripheral speed of said wheels and said gear wheel equal until said gear wheel actuates said vehicle.

1,619,381. COLLAPSIBLE CHAIR AND EASEL. WILLIAM J. STEWARD, Boston, Mass. Filed Apr. 12, 1924. Serial No. 706,052. 6 Claims. (Cl. 45—129.)



1. A collapsible chair and easel having, in combination, a seat comprising a single rigid member slotted longitudinally thereof, an arm projecting upwardly from the front end thereof and constituting a support for a drawing or the like, said arm being foldable into said slot, a leg attached to the front end of said seat and a pair of intersecting legs at the opposite end thereof.

1,619,382. FASTENER FOR ENVELOPES AND THE LIKE. JAY G. SWAN, Baldwin, N. Y., assignor to Tension Envelope Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 10, 1925. Serial No. 49,493. 1 Claim. (Cl. 229—78.)

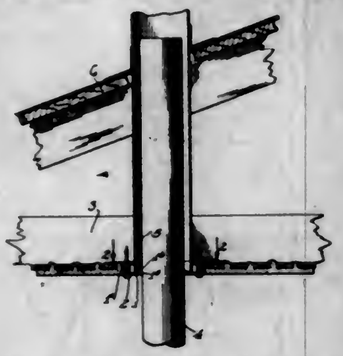


A fastener of the class described comprising a plate having a central portion and fingers projecting therefrom for the purpose set forth, said central portion being cut and formed to provide a plurality of pointed prongs disposed around a central aperture, said central portion of the fastener having raised ribs formed therein at opposite sides of and in concentric relation with said prongs, said ribs terminating at such points as to leave the said plate flat from the said central opening outwardly along said fingers.

1,619,383. OVERINFLATION-PREVENTING APPARATUS. CHARLES G. TIBBEL, Rochester, N. Y. Continuation of application Serial No. 719,454, filed June 11, 1924. This application filed June 16, 1925. Serial No. 37,585. 10 Claims. (Cl. 50—5.)

1. An over-inflation preventing apparatus comprising a valve controlling the supply of air to the device to be inflated, means for holding the valve normally closed, a detent for holding the valve open, means for opening the valve independently of said detent, mechanism responsive to the air pressure in the device being inflated, and a connection between said mechanism and the detent normally lying out of engagement with the latter and shifted into said engagement by said pressure responsive mechanism when the latter is operated by pressure in the device being inflated.

1,619,384. TELEPHONE ATTACHMENT FOR PHONOGRAPHS AND THE LIKE. HARRY R. VAN DEVENTER, New York, N. Y., assignor to Radio Patents Corporation, New York, N. Y., a Corporation of New York. Filed June 18, 1923. Serial No. 646,058. 2 Claims. (Cl. 179—100.1.)

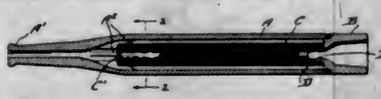


1. In a sound producing device, the combination with a phonograph reproducer embodying a needle holder, a telephone receiver embodying a vibratory member and an actuating coil mounted in operating proximity thereto, means for transmitting vibrations from said vibratory member to said needle holder, and a cap for said receiver adapted to hold said vibratory member in operative position and also serving as a support for the entire receiver.

1,619,385. WATER-HEATER-VENT-PIPE CEILING DEVICE. GEORGE L. WALLACE, San Diego, Calif. Filed Oct. 17, 1923. Serial No. 669,191. 1 Claim. (Cl. 126—317.)

In a device of the class described, the combination with a vent pipe and a sleeve pipe therefor, of a plate provided

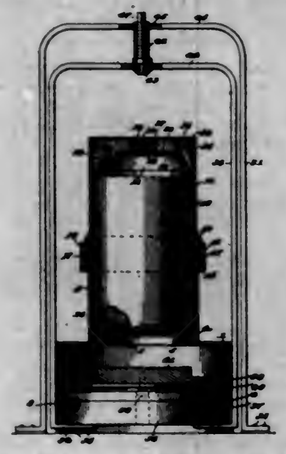
with an opening in the middle portion thereof and an upwardly extending flange secured to said plate and surrounding said opening and spaced from the vent pipe ex-



tending therethrough, said plate serving as a support for the lower end of said sleeve pipe, said plate being also provided with another flange at the outer portion thereof, forming a receptacle with said first mentioned flange.

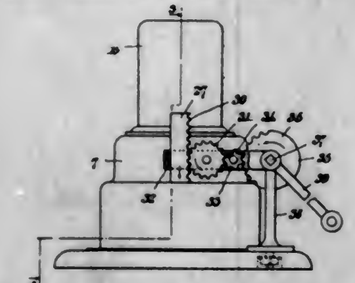
1,619,386. RADIATOR AIR VALVE. ROBERT T. WARING and GEORGE W. STULTZ, Brooklyn, N. Y. Filed Feb. 19, 1926. Serial No. 89,283. 4 Claims. (Cl. 137—122.)

1. A device of the class described, comprising a tubular casing adapted for attachment to a radiator valve, said casing having an interiorly threaded portion adjacent one end thereof, the opposite end of said casing having a wall with a constricted opening therein, a removable valve-seat within said casing, a valve-disk loosely disposed between said valve-seat and said wall, said valve-disk operating to rest upon said valve-seat to close said radiator valve against atmospheric pressure, said valve seat having a contact surface equal in area to at least one-half of the contacting surface of said valve-disk and means to permit the escape of air when said valve-disk is moved against said wall.



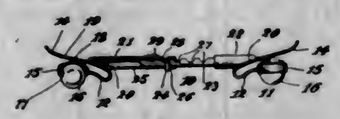
1,619,387. SMOKING UTENSIL. LESTER R. WAUGH, Mount Vernon, N. Y. Filed Oct. 5, 1925. Serial No. 60,477. 4 Claims. (Cl. 131—10.)

4. In a smoking utensil comprising a tubular barrel, the improvement which consists in a tubular filter axially disposed in the bore of said barrel and dividing the latter into a smoke inlet compartment within, and a smoke outlet compartment surrounding said filter, said filter incorporating a material having acid properties adapted to neutralize deleterious basic constituents of the smoke.



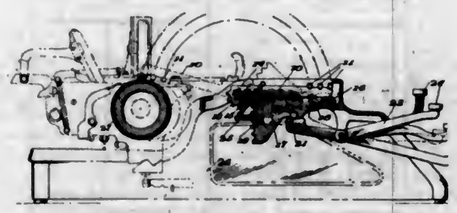
1,619,388. VACUUM-CREATING INSTRUMENT. FREDERICK V. WINTERS, New York, N. Y. Filed Feb. 19, 1924. Serial No. 693,847. 7 Claims. (Cl. 226—82.)

1. A vacuum creating instrument comprising a receptacle for enclosing a preserving jar, a cylinder communicating with said receptacle and having slots in its walls, a piston in said cylinder, and means for moving said piston extending through said slots, for withdrawing air from the jar and receptacle and absorbing it in said



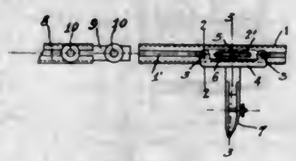
cylinder, said slots in said cylinder being positioned to be uncovered by the piston at the proper point in its movement for admitting atmospheric air to hermetically seal the jar.

1,619,389. VACUUM-CREATING INSTRUMENT. FREDERICK V. WINTERS, New York, N. Y. Filed Feb. 14, 1925. Serial No. 9,279. 2 Claims. (Cl. 74—14.)



1. In a vacuum creating instrument, the combination with a movable member, of a pair of rack bars carried by said member at diametric points thereon, a pair of standards, gear frames comprising parallelly disposed side bars, substantially U-shaped and inclosing said rack bars at their bight portions the inner ends of said side bars having bearings, gears mounted between said side bars and operatively connected to said rack bars, and means carried by said standards and associated with the bearings of said frames for driving said gears simultaneously.

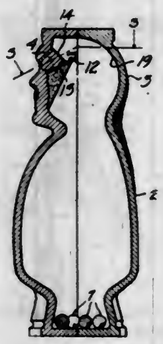
1,619,390. COLLAR FASTENER. FRANK WOLF, New York, N. Y. Filed Mar. 18, 1925. Serial No. 16,270. 9 Claims. (Cl. 24—81.)



1. A fastener comprising an adjustable extensible longitudinal bar, clamping surfaces carried by each end of the bar and arranged at an angle thereto and clasps cooperating with said angular clamping surfaces.

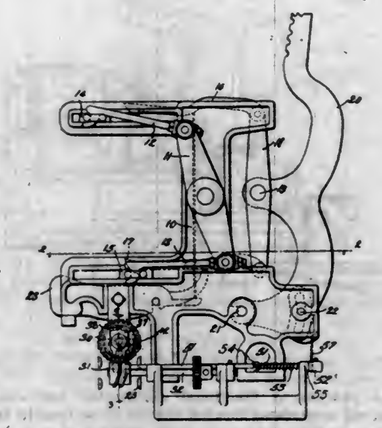
1,619,391. TYPE-BAR MECHANISM. ALBERT N. WOODRUFF, Washington, D. C. Filed May 11, 1926. Serial No. 108,308. 4 Claims. (Cl. 197—28.)

1. In a typewriter, a type bar pivotally supported adjacent to one end and to normally extend forwardly in a substantially horizontal position and having at its rear pivoted end a lateral enlargement provided with lower teeth forming a curved gear surface along a line eccentric with respect to its pivot, a sub-lever pivotally mounted at its forward end and normally extending in a substantially horizontal position beneath the type bar with the upper portion of its rear end engaging the type bar adjacent to the pivoted end of the latter, said rear end of the sub-lever having a curved gear surface cooperating with the gear surface of the type bar, and said sub-lever having a lower rounded projection intermediate its ends and a key lever fulcrumed intermediate its ends and having its inner end provided with an upwardly facing engaging surface in contact with the rounded projection of the sub-lever, as described.



1,619,392. BEAM COMPASS. KAZUE AKASHI, Tokyo, Japan. Filed July 16, 1923. Serial No. 651,982. 1 Claim. (Cl. 33—158.)

In a compass of the character described, a hollow metallic beam provided with a longitudinal slot along one side face, a sliding piece adjustable within the beam and provided with a slot aligning with the slot in the beam, a support outside the beam, means whereby the support is fixed to the sliding piece, a shaft mounted in the support, an adjusting roller mounted on the shaft and arranged through the slots and in intimate contact with the inner surface of the beam opposite the slot so that upon rotation of the roller the sliding piece will be adjusted and a marking element connected with the sliding piece.

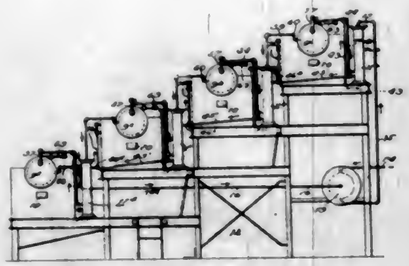


1,619,393. NOVELTY DOLL. GILBERT E. AUSTIN, Atascadero, Calif. Filed June 1, 1925. Serial No. 33,907. 8 Claims. (Cl. 46—40.)

7. A novelty doll comprising a hollow body member provided with one or more openings communicating with the interior of said member, and a plurality of sets of balls of different external characteristics and of greater size than said openings freely movable in said member

and arranged to engage in said openings one at a time, there being at least as many balls in each of said sets as there are openings.

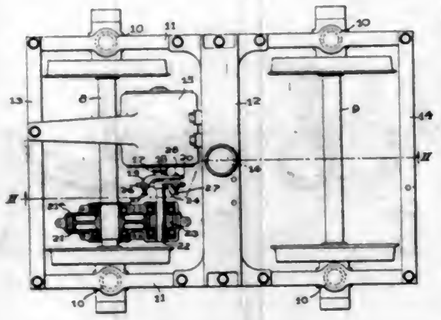
1,619,394. LOOM DOBBY. HENRY BARDSLEY, Providence, R. I., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 22, 1923. Serial No. 626,841. 3 Claims. (Cl. 139—323.)



1. In a dobby, a main pattern cylinder adapted to control the weave of a portion of the width of a fabric and an auxiliary pattern cylinder rotatable about the same axis and adapted to control the weave of the remaining portion of the fabric, means to regularly advance the main cylinder, additional driving mechanism for periodically advancing the auxiliary cylinder, and means jointly controlled by said two pattern cylinders for maintaining said additional driving mechanism operative for a determined period.

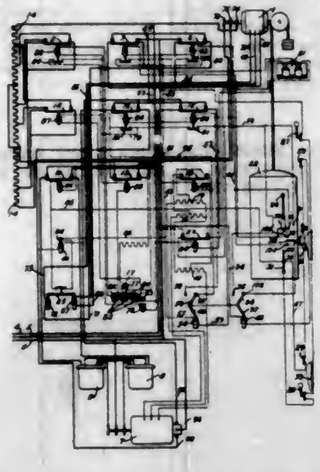
1,619,395. TOOL. WILLIAM BARTELS, New York, N. Y. Filed Oct. 16, 1925. Serial No. 62,904. 8 Claims. (Cl. 77—76.)

1. In a tool, the combination with the tool shaft, of a tool-head comprising separate parts fitted to each other and adapted to operatively engage the work, a means yieldingly resiliently connecting said parts, and a means for separating said parts throughout their lengths so as to expand the tool-head.



1,619,396. APPARATUS AND PROCESS FOR FRACTIONAL DISTILLATION AND CONDENSATION. JOHN S. BELL, Brooklyn, N. Y., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 14, 1921. Serial No. 507,629. 15 Claims. (Cl. 196—73.)

1. A process of fractional distillation and condensation of oil comprising flowing the oil to be treated through a series of stills heated to successively higher vaporizing temperatures, heating the feed oil to each still by vapors from the same still, withdrawing the resulting condensate and heating each still by the remaining uncondensed vapors from the still at next higher temperature.

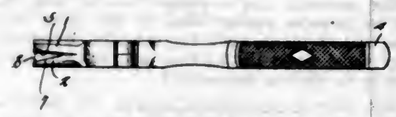


1,619,397. RAILWAY-MOTOR MOUNTING. CLAUDE BETHEL, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 7, 1922. Serial No. 550,259. 7 Claims. (Cl. 105—109.)

1. In a railway vehicle, the combination with an axle and a frame yieldingly supported thereby, of a driving motor carried by the frame, a pinion shaft, a gear wheel secured to the axle, and a resilient connection between the

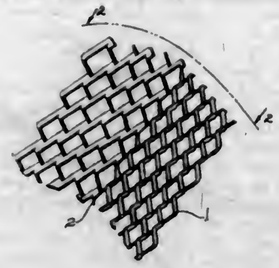
said pinion shaft and the driving motor, said resilient connection comprising a segment spring secured at its respective ends.

1,619,398. SYSTEM OF CONTROL. EDGAR M. BOUTON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 7, 1921. Serial No. 505,982. 11 Claims. (Cl. 172—152.)



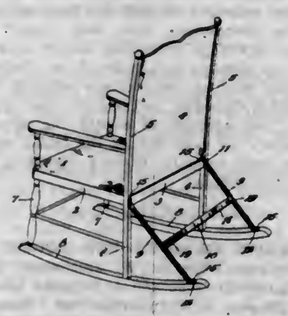
1. The combination with an elevator car and an alternating-current hoisting motor therefor, of means for supplying energy at different frequencies, means for selectively varying the frequency applied to said motor, and electroresponsive means for insuring gradual change in the value of frequency to insure an accurate and smooth stop of the elevator car.

1,619,399. PRODUCTION OF THIN STEEL. PORTER H. BRACE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1921. Serial No. 444,989. 10 Claims. (Cl. 148—12.)



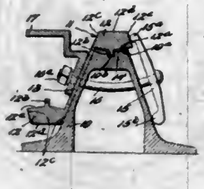
2. A method of producing thin steel sheets which comprises rolling the steel, annealing the same to reduce the grain size and then cold rolling and repeating the process.

1,619,400. PLIERS. GEORGE W. BRIGGS, Nanuet, N. Y. Filed Aug. 28, 1926. Serial No. 132,151. 1 Claim. (Cl. 294—43.)



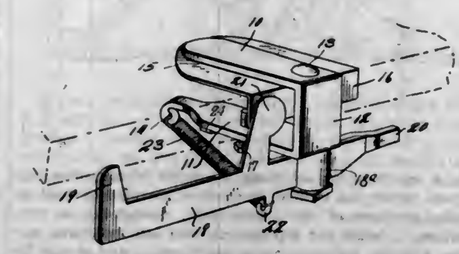
A pair of pliers comprising pivotally connected handles each provided with a first jaw and with a second jaw, located side by side, the first jaws being of polygonal cross section and being disposed opposite to each other, the second jaws being of approximately circular cross section to provide curved surfaces thereon, the second jaws being disposed opposite to each other, the first jaws having pronounced inner longitudinal edges which cooperate with the curved surfaces of the second jaws to hold an object, the said cylindrical surfaces serving to engage an object without marring it, the second jaws each being in the form of a cone, and one element of each cone forming an acute angle with respect to one of said inner longitudinal edges of the first jaws, thereby to enable the holding of objects of different diameters without changing the distance between the handles.

1,619,401. METAL-LATH CORNER STRIP. WILLIAM E. CAMPBELL, San Diego, Calif., assignor of one-third to Amy Hicks, San Diego, Calif. Filed Jan. 29, 1926. Serial No. 84,545. 3 Claims. (Cl. 72—121.)



2. A metal lath corner strip for right angle corners of a room, said strip being made of perforated metal and formed as a long angular strip, the angle between the sides thereof being obtuse.

1,619,402. CHAIR BRACE. GEORGE W. CARTER, Canonsburg, Pa. Filed Apr. 26, 1926. Serial No. 104,749. 2 Claims. (Cl. 155—197.)

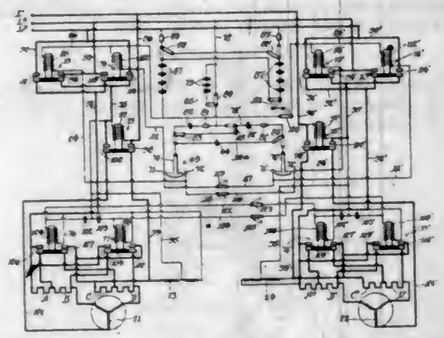


1. A chair brace comprising struts having their end portions provided with feet adapted to be secured to rockers and the rear legs of a chair, ears extending from the inner sides of said struts intermediate their ends, and a cross bar formed of companion strips secured at their outer ends to said ears, said strips being overlapped and adjustably secured together to retain the struts in predetermined spaced relation to each other.

1,619,403. RAIL. WILLIAM G. COUGHLIN, Philadelphia, Pa. Filed Nov. 2, 1926. Serial No. 145,883. 10 Claims. (Cl. 238—132.)

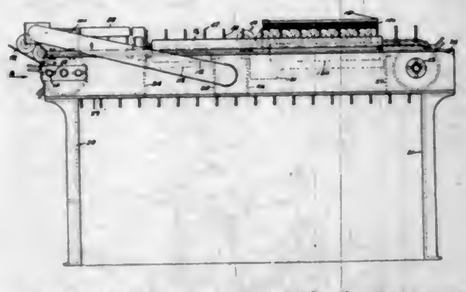
1. In a compound rail, in combination, an inverted U-shaped base having a top surface comprising two inclined faces sloping toward the center and a rectangular groove along the center, a detachable head section having a support surface comprising two inclined faces sloping toward the center and a rectangular rib along the center, said support surface of the head section being adapted to be seated on the top surface of the base, bolts extending through the legs of said base, and means engaged by said bolts for detachably securing said head section to said base.

1,619,404. FOOT SCRAPER FOR AUTOMOBILES. LEROY J. CROWE, Monument, Kans. Filed Mar. 6, 1926. Serial No. 92,874. 5 Claims. (Cl. 15—237.)



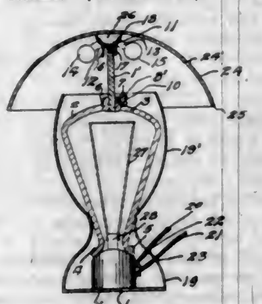
1. A foot scraper for automobiles including a clamp adapted to embrace the running board of an automobile and be engaged therewith, a scraper pivotally mounted upon the clamp for movement into a projected position, a spring urging the scraper into a position at right angles to the clamp and parallel to the running board, a stop limiting the movement of the scraper in this direction, means for latching the scraper in a projected position.

1,619,405. ELEVATOR. JAMES DUNLOP, Chicago, Ill., assignor to Kaestner & Hecht Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 12, 1925. Serial No. 14,857. 33 Claims. (Cl. 187—29.)



15. An elevator having, in combination, two elevator units each of which comprises a cage, a counterweight, and means for driving said cage, and a set of control circuits for said driving means, a hatchway in which said cages are mounted for movement side by side, gates in the adjacent sides of said cages, switches controlled by said gates and forming part of each set of control circuits, said switches acting to prevent independent operation of said units when said gates are open, means for connecting said counterweights, and interlocking

switches controlled by said connecting means and forming part of said sets of control circuits, said interlocking switches serving to prevent independent operation of said

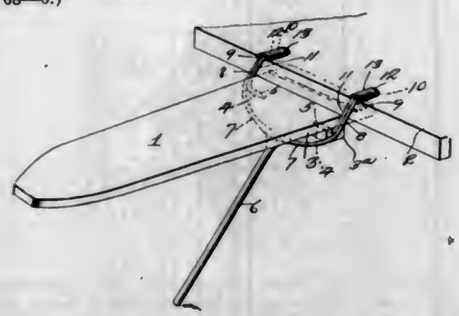


units when said counterweights are connected and serving to prevent joint operation of said units when said counterweights are disconnected.

1,619,406. ARMATURE-COMMUTATOR-LEAD-SOLDERING MACHINE. RODGER J. EMMERT, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 28, 1925. Serial No. 26,420. 9 Claims. (Cl. 113—59.)

1. A machine for soldering the leads of armature conductors which are located in notches provided by lead receiving portions of the commutator, comprising in combination, a device for fluxing only the lead receiving portions, a device for applying solder thereto, and means for conveying the armature successively to said devices.

1,619,407. RADIO APPARATUS. EDWARD H. EVERS, Cincinnati, Ohio. Filed Apr. 18, 1925. Serial No. 24,249. 5 Claims. (Cl. 181—27.)

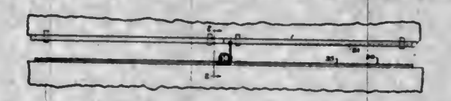


1. In a device of the class described, a sound wave reproducing unit having a sound wave exit, a pair of spaced apart supports fixed to said unit, a vertical rod detachably secured to the upper ends of said supports, a casing concealing said unit and said supports, an outwardly tapered tube secured to said unit adjacent said exit and extending upwardly, and a concavo-convexo lamp shade having its concave surface fixed to the upper end of said rod and having its outer rim extending downwardly, whereby sound waves issuing from said tapered tube are adapted to be directed downwardly.

1,619,408. SAFETY CIGARETTE HOLDER. CLARENCE E. FERGUSON, Portland, Oreg. Filed Aug. 27, 1925. Serial No. 52,791. 2 Claims. (Cl. 131—10.)

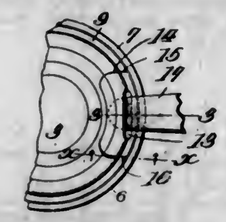
2. A safety cigarette holder, consisting in a mouth-piece having a cylindrical hub at one end, a tubular barrel adapted to be secured at one end upon said hub to receive a cigarette in axial alignment therein that is secured in said mouth-piece, said barrel having a longitudinally disposed groove upon one side to receive ashes from a burning cigarette, a closure-cap hingedly connected to the end of the barrel provided with a plurality of ventilating apertures, and a shutter on said cap arranged to close said apertures.

1,619,409. IRONING BOARD. DAVID WILLIAM FERGUSON, Harrold, S. Dak. Filed Apr. 24, 1924. Serial No. 708,716. Renewed July 20, 1926. 1 Claim. (Cl. 68—6.)



The combination with an ironing board adapted to be clamped on the edge of a horizontally disposed support, of a supporting leg and clamp, said supporting leg comprising a floor engaging member, the upper end of said floor engaging member terminating in a U-shaped portion having arms extending upwardly above the ironing board and rearwardly horizontally, the ends of said arms terminating in members formed by bending said arms backwardly on themselves, said last named members terminating in inwardly extending axially aligned arms intermediate the ends of the arms of the U-shaped portion and having bearings on opposite sides of the board, said horizontally disposed portions of said arms forming clamping jaws adapted to engage the upper side of the support when the rear end of the board engages the under side of said support, thereby clamping the ironing board on the support.

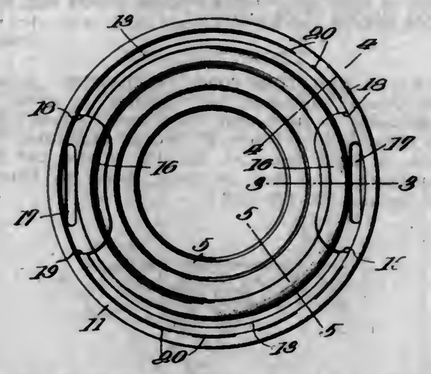
1,619,410. KNIFE GRINDER FOR LOOMS. GEORGE P. FINDLAY and WILLIAM W. JOHNSTON, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1923. Serial No. 675,467. 8 Claims. (Cl. 51—249.)



1. A mechanism for grinding the knives of a carpet loom comprising a pair of guide bars, means to secure

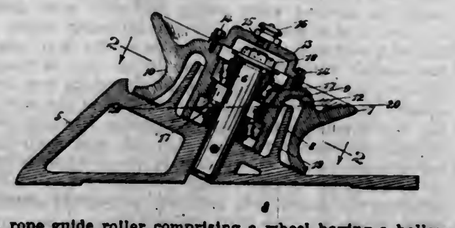
said bars in position on said knives when said knives are in spaced relation, and a sliding frame supporting a grind-

ing wheel and driving mechanism therefor, said frame being movable on and guided by said bars to present said wheel in predetermined relation to a knife edge.



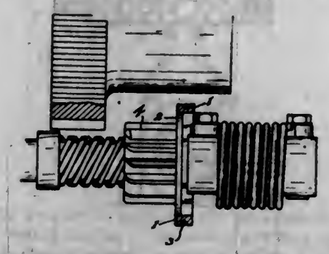
1,619,411. SEALED METAL CONTAINER. HENRY A. FINK, Syracuse, N. Y., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,725. 1 Claim. (Cl. 220—61.)

A sealed metal container comprising a body portion having an outwardly extending flange, an end having a centrally disposed portion adapted to extend into and frictionally engage the inner surface of the wall of the container body, a flange overlying the flange on the body portion, an endless sealing ring having an imperforate portion overlying the end flange, said sealing ring having a vertical wall at its inner edge extending into the central depression in the end, a substantially horizontal inwardly projecting portion at the lower end of said vertical wall, an integral breaking member extending inwardly from said horizontal portion at the lower edge of the vertical wall, said horizontal portion of the sealing ring at the lower edge of the vertical wall being formed with slits in line with the side edges of the breaking member, said breaking member having means whereby the same may be raised and pried upon for breaking the sealing ring, said sealing ring having an imperforate portion extending down over the edges of the two flanges and underneath the flange on the body portion of the container, said portion of the sealing ring beneath the body flange being shaped vertically and horizontally to conform to the under surface of said flange whereby said sealing ring may be applied to the container and bumped into close contact with the flanges thereof, so that said container may be tightly sealed, said flanges having a sealing material placed therebetween prior to the applying of the sealing ring to the container.



1,619,412. SEALED METAL CONTAINER. HENRY A. FINK, Syracuse, N. Y., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,726. 2 Claims. (Cl. 220—61.).

1. A sealed metal container comprising a cylindrical body portion having an outwardly extending flange, an end having a central depression adapted to frictionally engage the inner surface of the wall of the body portion of the mouth thereof, said end having an outwardly extending flange adapted to overlie the flange on the body portion, an integral sealing ring overlying the flange on the end and extending down into said depression in the end, said sealing ring at the outer edge thereof extending downwardly across the flanges and adapted to be turned underneath the flange on the body portion for holding said flanges in tight engagement and sealing the container, a sealing means between the flanges, said sealing ring having an inwardly projecting breaking member at the inner lower edge of the ring, the vertical



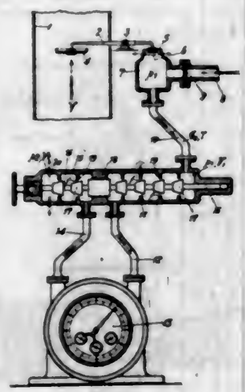
wall of the sealing ring being provided with cut-away portions to aid in releasing the ring after it is torn across through the aid of the breaking member.

1,619,413. ROPE-GUIDE ROLLER. RUDOLPH H. FOX, Denver, Colo. Filed May 12, 1924. Serial No. 712,686. 1 Claim. (Cl. 254—190.)

A rope guide roller comprising a wheel having a hollow hub and an annular recess exteriorly thereof, a support having a circular wall extending in the recess in spaced relation to the hub to provide an outer oil compartment, a slanting shaft on the support coaxial with the hub and in spaced relation to the wall thereof to provide an inner oil compartment, upper and lower bearings supporting the wheel on the shaft within the hub, the compartments being in communication to conjointly provide an oil reservoir the outer wall of which terminates in a plane above the lower bearing.

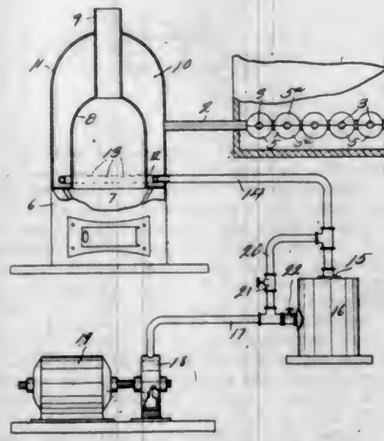
1,619,414. STARTER FOR GAS ENGINES. HARRY WILLIAM GAULD, Brandon, Manitoba, Canada. Filed Oct 13, 1921, Serial No. 507,522. Renewed Oct. 22, 1926. 1 Claim. (Cl. 74—7.)

The combination with a conventional engine starter of the type including a driving gear, a driven screw threaded shaft and a pinion having threaded engagement with the



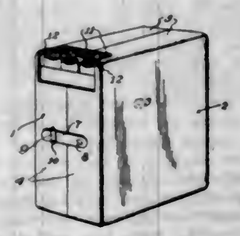
shaft to advance toward the driving gear during rotation of the shaft, of a driving member attached to the said pinion and means for driving said member to cause the pinion to rotate and to mesh with the driving gear prior to the starting of the starter.

1,619,415. ARMATURE-CORE INSULATION. ALBERT B. GOMORY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Original application filed Feb. 3, 1923, Serial No. 616,842. Divided and this application filed Sept. 26, 1924. Serial No. 740,057. 3 Claims. (Cl. 171—206.)



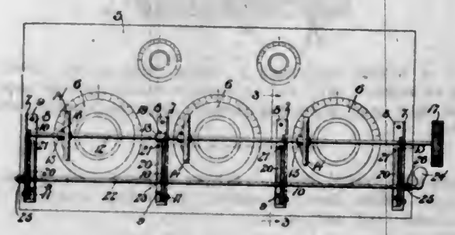
1. The process of making an armature, having a core provided with open slots which are defined by spaced core teeth having stem portions which are narrower than the portions of the teeth adjacent their outer peripheries, which includes placing within each slot an insulating member which lines the bottom of the slot and portions only of the sides of the slot, placing over each tooth an insulating member which covers the tooth outer periphery and is provided with portions extending within the slot and overlapping those portions of the first insulating member which line the sides of the slot, in winding wire into each slot to cause the bottom of the first lining member to be drawn against the bottom of the slot and the overlapping portions of both lining members to be pressed against the sides of the slot, said overlapping portions sliding the one relative to the other in order to conform to the core teeth sides, and then removing those portions of the second mentioned insulating members which cover the teeth outer peripheries.

1,619,416. FLUID-FLOW METER. BENJAMIN GRABMIGER, Zurich, Switzerland. Filed May 8, 1925, Serial No. 28,908, and in Switzerland May 16, 1924. 4 Claims. (Cl. 73—167.)



1. An apparatus for the automatic integration of quantities of fluid flowing through a conduit during periods of any desired length, comprising in combination; a pressure chamber provided with an outlet opening, means to supply a fluid under pressure to said chamber, a valve device to control the outlet opening of said chamber, a movable resistance body to be placed within said conduit and spaced from the walls of the conduit to permit passage of the fluid past said member under all conditions of operation, means connecting said movable resistance member to the valve-device for moving the latter upon a movement of the resistance member to change the specific pressure in said chamber, a meter for measuring the volumes of fluid and provided with an inlet and outlet, means for connecting the interior of said pressure chamber to the inlet of said meter to measure the unvented fluid passing from said chamber into the meter, and a throttling device interposed between said chamber and said meter.

1,619,417. GRAIN CONDITIONER. JOSEPH L. GUINAN, Omaha, Nebr. Filed Apr. 10, 1926. Serial No. 101,151. 1 Claim. (Cl. 98—55.)

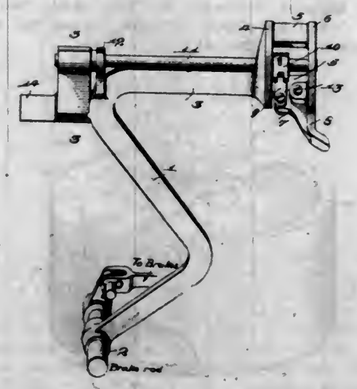


The combination with a grain bin, an air supply pipe extending into said bin adjacent its lower end, a plurality of horizontally disposed pipes carried by the air supply pipe and having perforations in their upper sides and a plurality of discs vertically disposed and surrounding the branch pipes between the perforations thereof.

1,619,418. CIGARETTE CASE. WILLIAM D. HEAP, Two Rivers, Wis. Filed Aug. 11, 1926. Serial No. 128,602. 1 Claim. (Cl. 206—41.)

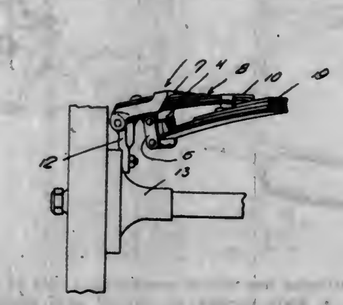
A receptacle for a package of cigarettes, said receptacle comprising companion sections, each having a main wall and side and end walls projecting therefrom and having edge to edge contact with correspondings walls of the other section, a hinge having pivotally connected leaves secured against certain of the contacting side walls of said sections and hingedly connecting the sections for swinging movement into and out of a closed position, corresponding corner portions of said sections having their meeting side and end walls formed with recesses registering to provide an opening of less depth than the receptacle and through which cigarettes placed in the receptacle may be extracted, and means to releasably hold said receptacle forming sections closed.

1,619,419. FRICTIONAL-UNIT CONTROL FOR MULTIDIAL RADIO SETS. WILLIAM T. HERRICK, Tulsa, Okla. Filed July 9, 1926. Serial No. 121,388. 6 Claims. (Cl. 74—7.)



2. The combination with a plorality of rotatable dials arranged side by side, of a unit control device therefor, comprising a shaft disposed transversely in front of the dials, friction wheels secured on the shaft, parallel arms in which the shaft is journaled, spring means acting on said arms to cause said friction wheels normally to bear against the respective dials, a second shaft mounted for rocking movement and having cam slots adjacent the rear edges of said arms, and means for rocking said second shaft to cause the edges of said slots to engage the arms and move the latter forwardly in opposition to said spring means, thereby disengaging the friction wheels from the dials.

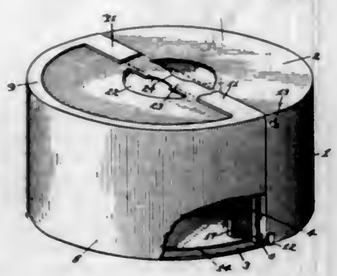
1,619,420. DISPLAY RACK. CHARLES H. HOTH, Postville, Iowa. Filed Aug. 20, 1925. Serial No. 51,426. 1 Claim. (Cl. 211—15.)



A display rack including a base plate, a plurality of transverse partitions rigidly mounted upon the base plate in spaced relation, and vertical strips rigid with the rear edges of the partitions and projecting laterally beyond opposite sides of the latter, said partitions having laterally directed ears upon the forward lower portions thereof, the lower ends of said strips and said ears respectively engaging the rear and front edges of the base plate and secured to the latter, said base plate having a plurality of transverse grooves in which the lower edge portions of the partitions are seated, and said base plate further having recesses in its edges in which the lower ends of the strips and the ears are respectively seated.

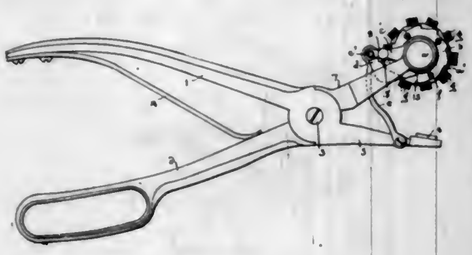
1,619,421. MOTOR-VEHICLE CONTROL PEDAL. HARRY E. HULL, Washington, D. C. Filed July 2, 1926. Serial No. 120,166. 8 Claims. (Cl. 74—81.)

1. In a motor vehicle having an engine with a fuel supply control, road wheels with brake mechanism therefor driven by the engine, an operating lever for said brake mechanism, said lever including a stem; a revoluble element extending along the stem, a plate carried at one end of said element, a pedal member mounted to be rocked in the general direction of movement of the brake lever, said rocking movement being independent of the braking movement of the lever, and means for translating the rocking movement of said pedal member into turning movement of said element and plate to actuate the fuel supply control.



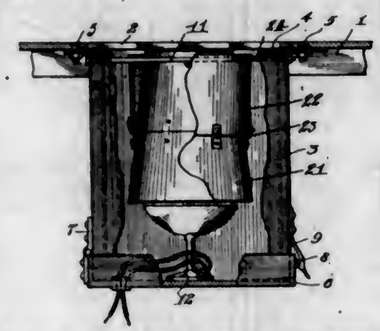
1,619,422. AUTOMOBILE SHOCK ABSORBER. ADOLPH JENSCHKE, Fredericksburg, Tex. Filed Sept. 14, 1925. Serial No. 56,314. 1 Claim. (Cl. 267—19.)

As a new product of manufacture, an automobile shock absorber comprising, in combination, a spring chair embodying a channel-shaped member having a diagonally disposed U-shaped part at one end forming a spring bridge, having depending apertured ears at its opposite end and on its bottom and an intermediate hanger



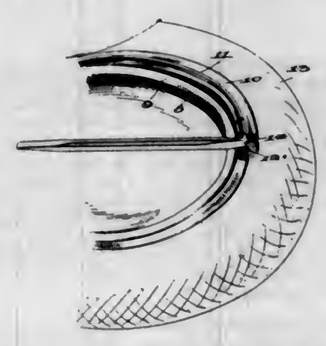
loop on the center of its bottom, a mounting perch comprising a single casting having its opposite ends offset in lateral directions and formed with openings, one of said ends being pivotally confined between said ears, an auxiliary leaf spring having one end fitted into said chair between the side portions of the channel, said bridge extending transversely across the top leaf of the spring, a yoke connected to one of the leaves of said spring, and an anti-friction roller slidably and rotatably mounted on the free end portions of the arms of said yoke.

1,619,423. CAKE BOX. FRANCESCA KORN, San Francisco, Calif., assignor of one-half to Carrie Seiler, San Francisco, Calif. Filed Feb. 11, 1926. Serial No. 87,603. 10 Claims. (Cl. 220—41.)



1. A cake box comprising a cylindrical container closed at top and bottom and having a semi-circular opening in one side thereof to admit a cake; and a semi-circular cover slidably connected to the container and arranged to be moved upwardly relative to the container to open and close the opening.

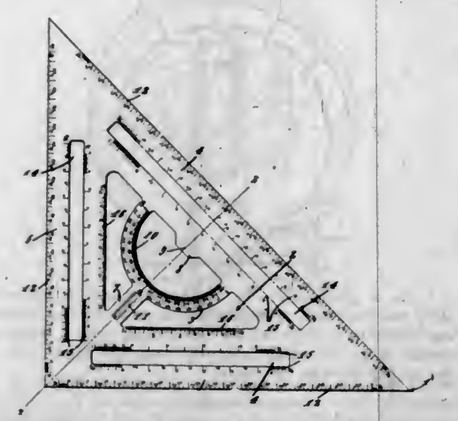
1,619,424. ANIMAL MARKER. FORTUNATO LATAGLIATA, Buenos Aires, Argentina. Filed Mar. 24, 1922, Serial No. 546,427, and in Argentina Oct. 15, 1919. 3 Claims. (Cl. 128—333.)



1. A tattooing instrument comprising a pair of pivoted members, a plate carried by one of said members, a shaft journaled in the other member, a plurality of type elements journaled on said shaft, ratchet teeth carried by the type elements, a frame pivoted on said shaft laterally of said type elements, pawls carried by said frame adapted to cooperate with said ratchet teeth, and a link connection between the first mentioned pivoted member and said frame to oscillate the latter incident to relative movement of the pivoted members.

1,619,425. HEATER. LOUIS JOSEPH LÉVESQUE and JOSEPH LEBARD, Bagotville, Quebec, Canada, assignors to Le Chauffage Electrique Ideal Limitee, Bagotville, Quebec, Canada. Filed May 6, 1926. Serial No. 107,206. 2 Claims. (Cl. 219—34.)

1. A heater comprising a casing, said casing including an asbestos skirt and an annular trough mounted over said skirt, and a heating element disposed beneath said skirt.



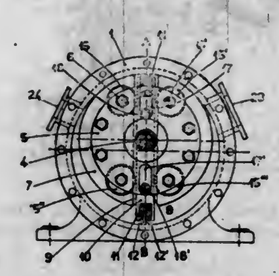
1,619,426. TIRE TOOL. ALBERT FREDRIC LEW, Baker, Oreg. Filed Dec. 10, 1924. Serial No. 755,010. 1 Claim. (Cl. 157—6.)

A tire tool for removing locking rings from rims comprising a bar reduced adjacent one end and provided at said end with an enlarged foot consisting of a toe portion projecting in one direction and having a rounded terminal, and a heel portion projecting in the opposite direction and having a relatively sharp terminal, the end surface of said enlarged foot being rounded along an arc extending continuously and uniformly between the terminals of the toe and heel portions, said toe and heel portions projecting beyond the corresponding adjacent surfaces of the bar and merging into the said surfaces of the bar along regular concave lines adapting the reduced portion of the bar adjacent to the said head to conform to the curvature of a rim and its locking ring when the said bar is extended at its reduced portion therebetween.

1,619,427. DRAWING INSTRUMENT. THOMAS F. MCCAFFERY, Jr., Colorado Springs, Colo. Filed Oct. 7, 1924. Serial No. 742,202. 1 Claim. (Cl. 33—104.)

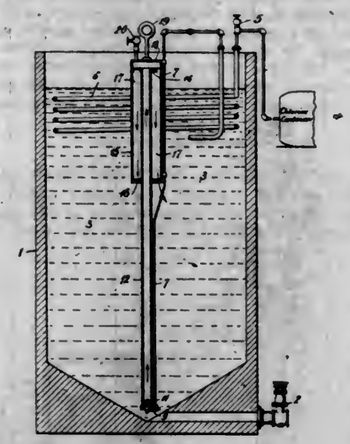
In a device of the class described, a frame of triangular outline, and having an opening the edges of which, throughout a major portion of their length, are parallel to the outer edges of the frame, a semi-circular protractor in the opening and joined at its ends to one side member of the frame whereby said side member will form a base for the protractor, the other side members of the frame constituting guards for the protractor, and an arm extended from the intermediate portion of the protractor to the place of juncture between said other side members of the frame and serving to hold the protractor and the

frame against bending out of a common plane, the arm having an elongated opening the prolonged axis of which passes through the external angle defined by the outer edges of said other side members, and through the 90° mark of the protractor.



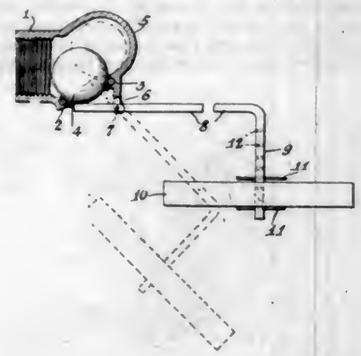
1,619,428. METHOD OF MANUFACTURING BRUSHES. HUGH P. MCMILLAN, Baltimore, Md., assignor to Samuel M. Dell & Co., Inc., Baltimore, Md., a Corporation of Maryland. Filed Apr. 23, 1926. Serial No. 104,154. 3 Claims. (Cl. 300—21.)

1. The method of manufacturing brushes which comprises forming stock into a bunch and treating it with rubber solution to form a knot, inserting a plug in the knot, vulcanizing the rubber, forming a handle attaching means in the plug while in the knot, and attaching a handle to the handle attaching means.



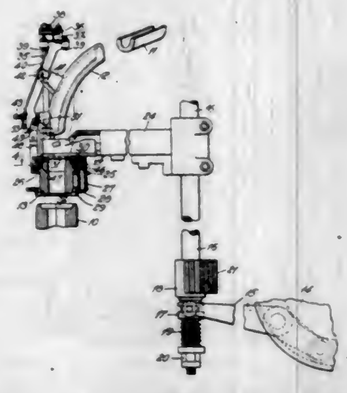
1,619,429. BLADE PUMP. ARTHUR MAILLEFER, Lausanne, Switzerland. Filed Nov. 12, 1926, Serial No. 148,027, and in Switzerland Aug. 29, 1925. 3 Claims. (Cl. 103—137.)

1. A blade pump, characterised by the feature that it comprises a fixed cylinder provided with suction and delivery orifices in the interior of which moves a rotatable cylinder, the shaft of which is placed eccentrically in such a way that the periphery of the rotatable cylinder penetrates slightly into the fixed cylinder with which it thus presents a large contact zone a suction and delivery space, the rotatable cylinder comprising a central transverse slot, in which moves transversely a blade, the ends of which are provided with packing plates which come into contact with the inner walls of the fixed cylinder, the blade being given rectilinear to-and-fro movement relatively to the rotatable cylinder by means of a ball bearing eccentric relatively to the shaft of the rotatable cylinder in the lateral wall of the fixed cylinder, the inner



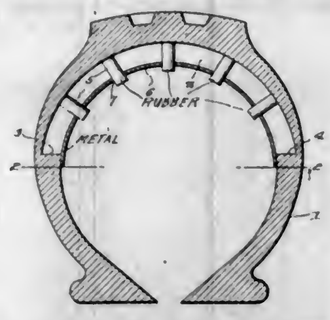
bearing ring of which ball bearing also comprises a circular cavity placed eccentrically relatively to the first ball bearing, in the interior of which cavity is located a second ball bearing the inner bearing ring of which is connected to the blade by pins, the whole arrangement being so constructed that when the rotatable cylinder makes one turn the blade is driven alternately in one direction and the other in such a way that its issuing end is constantly in contact with the inner wall of the fixed cylinder.

1,619,430. GAS-ABSORPTION APPARATUS. MAX MAURAN, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed Sept. 18, 1923. Serial No. 663,574. 4 Claims. (Cl. 261—77.)



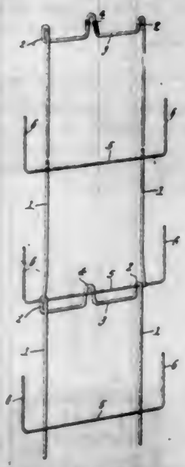
1. Gas absorption apparatus comprising a tank adapted to contain liquid, a vertically arranged tubular passage in said tank, the lower end of said passage being in open communication with said tank, a casing covering the upper end of said passage, said casing opening downwardly below the normal liquid level in the tank, and means to introduce gas into the lower portion of said passage below the point at which said casing opens into said tank.

1,619,431. AUTOMATIC VALVE AND FLOAT FOR DRINKING TROUGHS AND THE LIKE. ALBERTO MENDIZÁBAL, Buenos Aires, Argentina. Filed May 12, 1926. Serial No. 108,598. 3 Claims. (Cl. 137—104.)



1. A valve and float for drinking troughs consisting of a valve chamber of cast iron having an inlet opening and an outlet opening, the latter provided with a recess in its wall, a rubber ring in said recess forming a seat, a heavy ball valve within said chamber normally resting upon said seat to close said outlet, the chamber having an extension out of line with the line of flow of the liquid, a lever pivoted to the said chamber and having one of its arms bent so as to extend downwardly, and a wooden float adjustable on said arm and adapted to be fixed thereto at a suitable height, said valve adapted to be moved by the other arm of the lever into said extension of the valve chamber when the downwardly bent arm of the lever is lowered in the trough.

1,619,432. GUIDING DEVICE FOR MOLTEN GLASS. VERGIL MULHOLLAND, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Jan. 6, 1922. Serial No. 527,300. 18 Claims. (Cl. 49—14.)

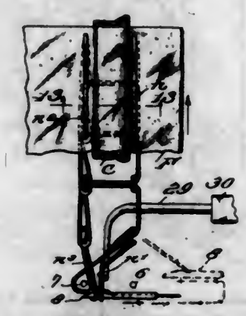


1. Apparatus for controlling the delivery of mold charges to a mold, comprising a plurality of relatively movable guiding members for the charges, one of said members being arranged to be moved by the mold and to thereby actuate another of the guiding members, to maintain them in proper alignment with each other.

1,619,433. PUNCTUREPROOF PNEUMATIC TIRE. MARTIN L. PAULSON, Fort Snelling, Minn. Filed May 5, 1926. Serial No. 106,898. 3 Claims. (Cl. 152—18.)

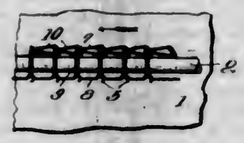
1. In a pneumatic tire casing, a metallic protector plate substantially semi-circular in cross section extending circumferentially within the casing, and a series of rubber plugs extending inwardly from the inner wall of the casing through the plate.

1,619,434. DEVICE FOR DISPLAYING CARDS, ETC. ANDREW REESE, Massillon, Ohio. Filed Apr. 26, 1926. Serial No. 104,810. 1 Claim. (Cl. 40—124.)



An article of the class described, comprising side pieces and cross arms joining the side pieces, the cross arms having angularly disposed fingers located about parallel with the side pieces but spaced therefrom, the fingers and the side pieces cooperating to hold an article.

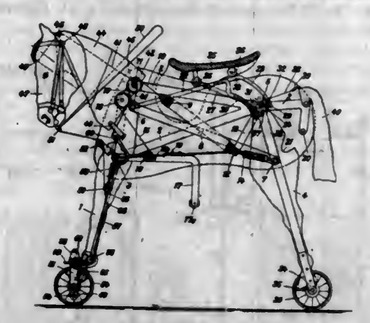
1,619,435. METHOD OF PRODUCING MODELS OF BUILDINGS AND THE LIKE. MAX RICHARD RETTIG, Koenigsberg, Germany, assignor to Festbaukasten Gesellschaft mit beschrankter Haftung, Berlin, Germany. Filed Jan. 21, 1926, Serial No. 82,744, and in Germany Jan. 25, 1924. 3 Claims. (Cl. 35—12.)



1. Building models composed of building blocks and a binding and plastering medium adapted to set quickly and hard, and to be readily dissolved in water after the hardening.

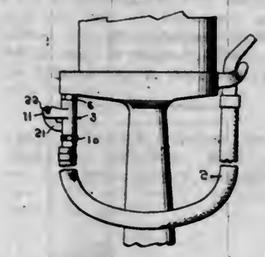
1,619,436. SEWING MACHINE FOR CORDING. CHARLES F. RUBEL and FRANK KUCERA, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1926. Serial No. 121,918. 8 Claims. (Cl. 112—2.)

2. A sewing machine including in combination a cloth plate, a rib on said cloth plate, a presser foot cooperating with said rib for forming a ridge in the material being stitched, a pair of needles located one on each side of said rib, a thread-carrying looper cooperating with said needles, a thread positioning finger and means for operating said finger, whereby said finger is moved across the looper and then forward against the needle thread loop thereon adjacent the heel of the looper for moving said loop forward on the looper so that the looper thread loop is entered only by the needle adjacent the point of the looper.



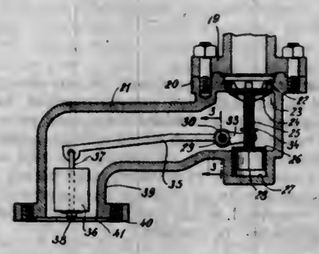
1,619,437. SEAM FOR SEWED ARTICLES. CHARLES F. RUBEL and FRANK KUCERA, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1926. Serial No. 121,919. 1 Claim. (Cl. 112—262.)

A seam for sewed articles comprising a body fabric, having a ridge therein, a cord located in the recess on the under face of the fabric formed by said ridge, stitching threads disposed along the right side of the fabric and formed into directly opposed thread loops extending through the fabric at opposite sides of said ridge and cord, a thread on the under face of the fabric parallel with the cord and extending along one of the rows of thread loops, said thread being formed into loops passing through the directly opposed loops and crossing the cord substantially at right angles, said under thread loops being secured by the thread loops on the opposite side of the cord from that where the thread is laid.



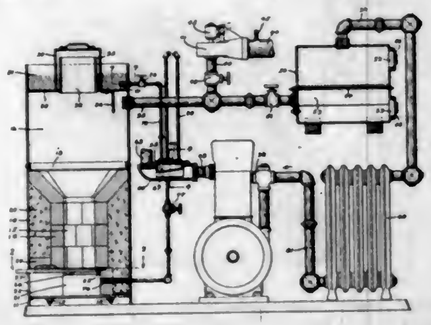
1,619,438. APPLIANCE FOR PRACTICING RIDING SPORT. WALTER SCHOENKE, Lichterfelde, near Berlin, Germany. Filed Oct. 8, 1925, Serial No. 61,272, and in Germany Apr. 1, 1924. 39 Claims. (Cl. 208—42.)

1. In an appliance for practicing riding sport, the combination of two legs adapted to be alternately spread apart and contracted, one of said legs being mounted as a double lever, a spring for contracting said legs, said spring being associated with means for imparting a preliminary tension thereto, when in position of rest, a flexible connection between one end of said spring and the upper end of the one of said legs, and a guiding means



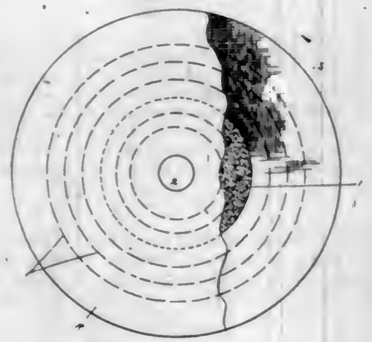
around which said connection is carried, said guiding means being adapted to change the direction of said connection.

1,619,439. HOSE CONNECTION. WILLIAM T. SKILLERN, Boise, Idaho. Filed Feb. 10, 1925. Serial No. 8,146. 6 Claims. (Cl. 285—110.)



1. A hose connection for pumps or the like, including two tubular parts, one provided with a channel-shaped recess extending lengthwise of the same, and having its bottom surface substantially parallel to the axis of said parts, the other tubular part having a tubular extension occupying said recess, interlocked arms connecting said parts, and means for locking the tubular extension in said recess.

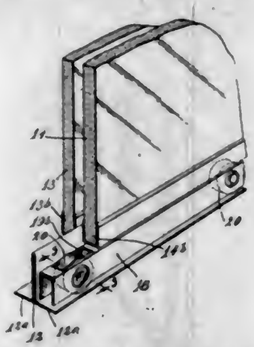
1,619,440. PRESSURE STILL. ALFRED J. SLOAN, Kansas City, Kans., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 15, 1923. Serial No. 662,797. 11 Claims. (Cl. 196—137.)



3. A pressure still for cracking hydrocarbons, having a condenser maintained at a lower pressure than the pressure in the still, a vapor line leading from the still to the condenser, a pressure reducing valve in the vapor line, and a by-pass around this valve which includes an automatic self-contained relief valve.

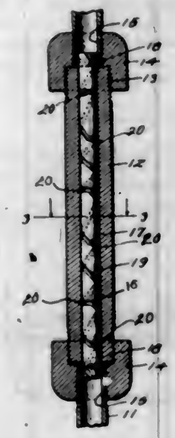
1,619,441. GAS-GENERATING APPARATUS. HARRY F. SMITH, Dayton, Ohio, assignor to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed May 16, 1921. Serial No. 469,977. 11 Claims. (Cl. 123—3.)

1. A gas generating system comprising in combination, a producer; a gas engine connected thereto and adapted during operation to furnish the suction for causing operation of the producer; and a flash boiler vaporizer associated with the exhaust of the engine, said vaporizer being connected to the air supply of the producer to supply moisture thereto during operation and means for feeding water to said boiler at a rate proportionate to the rate of gas generation.



1,619,442. POLISHING WHEEL. JOHN STEINER, Poughkeepsie, N. Y. Filed Dec. 16, 1924. Serial No. 756,201. 3 Claims. (Cl. 51—193.)

1. A polishing wheel composed of an inner porous portion and an outer portion secured together, said inner portion being comprised of felted fibers, said outer portion including a structure through which abrasive particles may pass comparatively readily, but adapted to hold and move them over a surface to be abraded, said porous portions being impregnated with an abrasive compound and adapted to feed the compound to the outer portions by centrifugal action as said wheel is revolved.

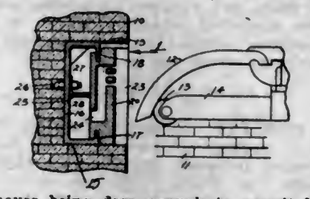


1,619,443. ROLLER BEARING FOR SLIDING DOORS. LOUIS SUTKER, Brooklyn, N. Y. Filed Dec. 16, 1925. Serial No. 75,690. 2 Claims. (Cl. 16—100.)

1. In a sliding door construction of the character described, a roller bearing comprising an elongated channel-cage formed of sheet metal, and cylindrical rollers having recessed portions on the plane faces thereof revolubly

retained between the side walls of said cage, said walls being indented to extend sufficiently into said recesses for loosely retaining the rollers in the cage.

1,619,444. ANTICHATTERING DEVICE. DOC GILFORD TAYLOR, Baytown, Tex. Filed July 8, 1926. Serial No. 121,247. 1 Claim. (Cl. 73—31.)

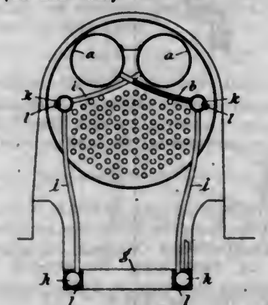


In an anti-chattering device and in combination with a pressure responsive element, a line leading from a source of pressure thereto, a member adapted for insertion in said line increasing the effective length of the line a distance greater than its own length and reducing the bore of the line comprising a tubular body adapted at its ends for connection with the pressure line and a rod fitting the body and having a spiral groove in the periphery thereof, said rod being of greater length than the tubular body and having means coacting with the tubular body whereby it is held with its ends extended beyond opposite ends of the tubular body, said groove being extended to such ends.

1,619,445. FURNACE-WALL AIR PLATE. IRVING A. TAYLOR, Worcester, Mass., assignor to S. Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 6, 1923. Serial No. 673,162. 7 Claims. (Cl. 110—75.)

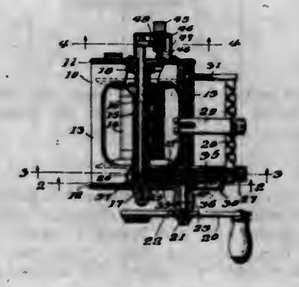
1. In a furnace, in combination, a furnace wall having a recess, an ash support adjacent thereto, members forming upper and lower ribs in said recess, and a plurality

of air-admitting plates mounted at the front of said recess and having end grooves to receive said ribs, the



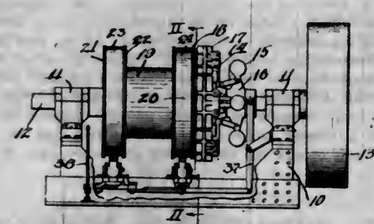
upper grooves being deep enough to permit lifting said plates to clear the lower ribs for removal from said furnace.

1,619,446. DANCING TOY. LAURA K. H. THOMSEN, San Francisco, Calif. Filed Apr. 19, 1926. Serial No. 102,853. 8 Claims. (Cl. 46—40.)



1. A dancing toy comprising a soft stuffed animal body, soft stuffed limbs sewed thereto in a manner forming pivotal connections permitting lateral swinging movement of the limbs, weights attached to the extremities of certain of the limbs, and an inelastic cord attached to the body in a position to support the body and limbs in the natural position which they normally occupy, quick jerking movement of the cord when supporting the body being adapted to cause the limbs to flop laterally about their pivots to simulate a grotesque dance.

1,619,447. STEAM BOILER. PETER THOMSEN, Cassel-Wilhelmshohe, Germany, assignor to Schmidt'sche Heissdampf-Gesellschaft m. b. H., Cassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed June 15, 1923, Serial No. 645,531, and in Germany June 28, 1922. 3 Claims. (Cl. 122—94.)

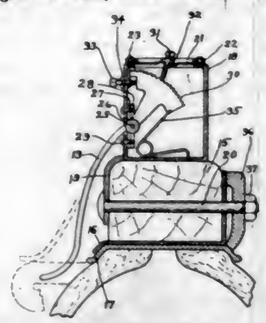


1. In a steam boiler, a furnace, water tubes located at opposite sides of said furnace and extending upwardly therefrom, steam and water containing means connected with the upper ends of said tubes, the upper portions of the tubes on each side being bent towards the other side, and each tube crossing each adjacent tube, and a barrier filling the spaces between said upper tube portions and forming in conjunction with said tube portions, an imperforate wall to protect said steam and water containing means against injurious heating by the furnace gases.

1,619,448. FISHING REEL. ARTHUR C. VANCE, Brooklyn, N. Y. Filed Mar. 20, 1926. Serial No. 96,239. 8 Claims. (Cl. 242—84.1.)

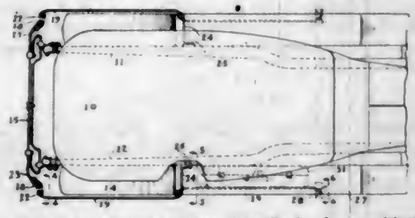
1. In a fishing reel, the combination of a spool on which the line is to be wound; a winding handle; and means intermittently rotating said spool by continuous rotation of said handle.

1,619,449. NEUTRAL BRAKE. HARRY H. WATERS, Clinton, Iowa, assignor to Climax Engineering Company, Clinton, Iowa, a Corporation of Delaware. Filed Oct. 5, 1925. Serial No. 60,367. 7 Claims. (Cl. 192—4.)



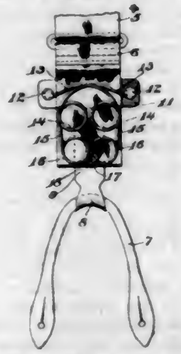
1. In a device of the class described including a driving means and a final driven means, a direct drive and a reversing drive therebetween, a neutral brake adapted to stop the driven means when shifting from one drive to the other and a single operating mechanism interconnecting the direct and reverse driving mechanisms and neutral brake whereby the application of the neutral brake is automatically performed by a shift from one driving means to the other.

1,619,450. DEFLATION ALARM FOR PNEUMATIC TIRES. BURLING D. WELLS, Danbury, Conn., assignor to Robert S. Blair, Stamford, Conn. Filed Feb. 18, 1921. Serial No. 446,161. 9 Claims. (Cl. 116—34.)



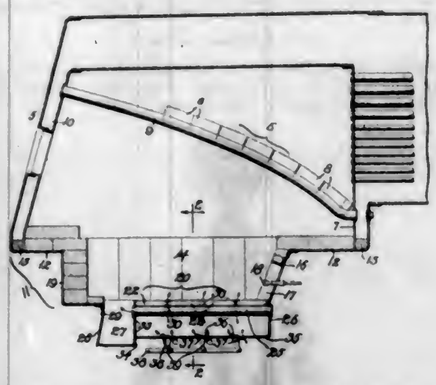
9. In a pneumatic tire deflation signalling device, in combination, a wheel comprising a pneumatic tire, an audible signal mounted thereon, a member connected with said signal to actuate the same and extending adjacent to said tire, a spring urging said member toward said tire, a means limiting the movement of said member

toward said tire to a position in which it is spaced therefrom beyond the path of deformation thereof with the tire running in ordinary condition and in position to be



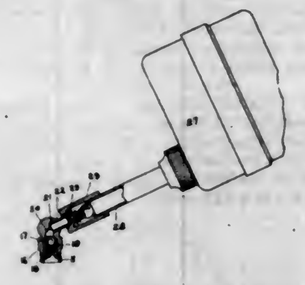
engaged and moved by the tire upon the tire becoming soft, and means adapted to adjust the normal position of said member with respect to the tire.

1,619,451. COMBINED FENDER AND LUGGAGE CARRIER. HARRY G. WEYMOUTH, Cleveland, Ohio, assignor to The Eaton Axle and Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 29, 1925. Serial No. 33,660. 6 Claims. (Cl. 293—55.)



6. In a device of the class described, the combination with the wheel fender of an automobile, of a bumper extending transversely of the automobile at one end thereof and comprising a plurality of vertically spaced bars, a bolt connecting the ends of said bars, a member pivoted to said bolt and having projections to engage with said bars to limit turning movement of the member in one direction a fender guard supported at one end on said member, and means for supporting the other end of said guard.

1,619,452. SPRING-SUSPENSION DEVICE. DAVID BROWN WHITEHILL, Clarendon, Pa. Filed July 9, 1925. Serial No. 42,547. 5 Claims. (Cl. 267—69.)

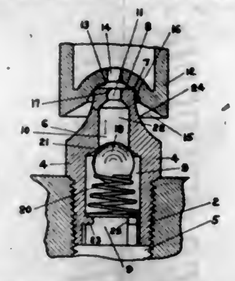


1. A spring suspension device comprising a resilient wire formed with two opposed symmetrical portions which are united by a connecting portion and which extend rearwardly and cross each other, terminating in end portions which approach the line of the connecting portion at an acute angle, and a supporting member constituting a lost-motion connection between the ends of the wire and the connecting portion thereof to positively limit the yielding movement of the wire.

1,619,453. FIRE PAN. ALFRED H. WILLETT, West New York, N. J., assignor to American Arch Company, a Corporation of Delaware. Filed Aug. 6, 1921. Serial No. 490,195. 10 Claims. (Cl. 158—3.)

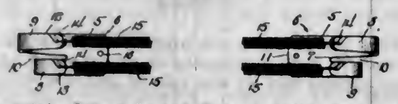
1. The combination of a fire pan with fore and aft air supply tubes extending out through one end thereof discharging into the pan at their other ends, and refractory flooring supported by said tubes, and means for admitting an additional supply of air to said pan through said refractory flooring.

1,619,454. LUBRICANT-RECEIVING NIPPLE. OSCAR ZERK, now by judicial change of name Oscar Ulysses Zerk, Cleveland, Ohio, assignor, by mesne assignments, to The Bassick Manufacturing Company. Filed July 5, 1923. Serial No. 649,701. 15 Claims. (Cl. 184—89.)



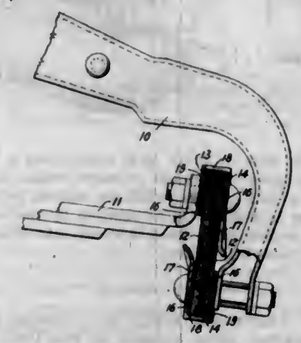
1. A lubricant nipple comprising an axially bored body, an open lateral projection on said body continuing said bore, and a check valve in the axial portion of said bore.

1,619,455. LUBRICATING NIPPLE. OSCAR U. ZERK, Detroit, Mich., assignor, by mesne assignments, to The Bassick Manufacturing Company. Original application filed Nov. 21, 1922, Serial No. 602,465. Divided and this application filed July 30, 1924. Serial No. 729,038. 15 Claims. (Cl. 184—105.)



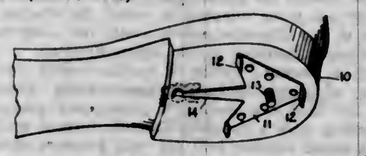
1. As an article of manufacture, a fitting forming part of a contact pressure-lubricating system; said fitting

comprising a body-member terminating at one end in a truncated conical portion having a flat end surface bound-



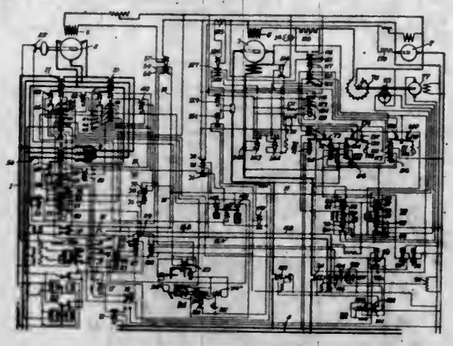
ed by a circular dirt cutting edge, said body-member having a cylindrical bore extending therethrough, said bore increasing in diameter in successive stages.

1,619,456. CURTAIN FIXTURE. WILLIAM C. BARRETT, Chicago, Ill. Filed Apr. 30, 1923. Serial No. 635,507. 1 Claim. (Cl. 156—19.)



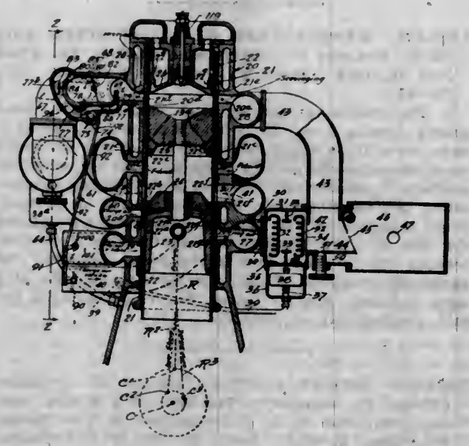
A curtain fixture formed from a single piece of sheet metal, comprising a body portion and two arms curved on different radii and lying in spaced horizontal planes.

1,619,457. FLEXIBLE COUPLING. HARVEY W. BELL, Ardsley-on-Hudson, N. Y., assignor to The Beloyt Corporation, Dover, Del., a Corporation of Delaware. Filed July 14, 1923. Serial No. 651,598. 9 Claims. (Cl. 267—54.)



1. A link unit for flexible couplings comprising a pair of links of flexible material disposed in juxtaposed relation and sheaths of non-metallic material surrounding the end portions of said links.

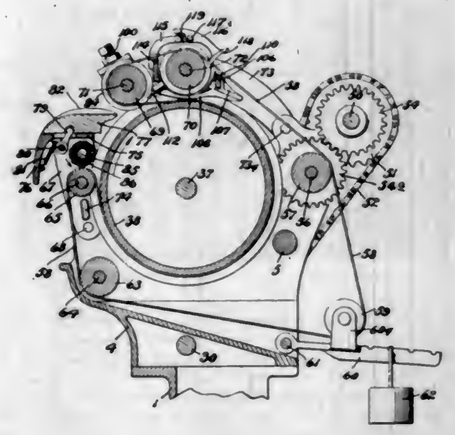
1,619,458. SHOE HEEL. ANDREW BONO, Brooklyn, N. Y. Filed Aug. 12, 1926. Serial No. 128,766. 1 Claim. (Cl. 36—35.)



In combination with a shoe-heel an exchangeable tread member provided with a recess which opens into its breast edge for receiving a key, a metal binding plate embedded in the tread member which carries a spring clip extending into the recess and constructed to hold the key, and means operable by the key for binding the tread member to the shoe-heel.

1,619,459. AUTOMATIC STATION. CHARLES A. BUTCHER, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 28, 1923. Serial No. 641,868. 39 Claims. (Cl. 171—312.)

1. In a power distributing system, the combination with a synchronous motor, a direct-current generator to be driven thereby and an exciter generator provided with a shunt field winding for energizing the field magnet windings of both the motor and the generator, of a resistor in the circuit of the field winding of the exciter and means dependent upon a condition of the motor and the generator for controlling the effectiveness of the resistor.



1,619,460. INTERNAL-COMBUSTION ENGINE AND MEANS FOR SUPPLYING CHARGE THERETO. JOHN M. CAGE, Ford City, Ontario, Canada, assignor to Cage Engine Syndicate, Inc., New York, N. Y., a Corporation of Delaware. Filed July 23, 1920. Serial No. 398,329. 25 Claims. (Cl. 123—69.)

1. In combination with an internal combustion engine having an intake, means to feed charge to the intake at a pressure varying substantially in accordance with

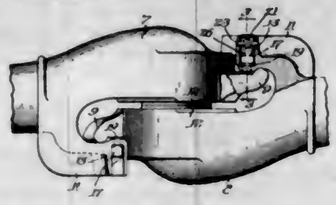
the varying resistance to flow of the charge at varying operating speeds; said means embodying an intake passage leading to the intake, a compressor adapted to compress charge into the passage at a pressure sufficient to flow the charge through the intake at the highest speed of engine operation, an auxiliary reservoir and communication means between the passage and the reservoir automatically throwing the reservoir out of action at high speed operation.

1,619,461. TOBACCO STEMMING AND BOOKING MACHINE. JOHN H. DEAN, Grand Rapids, Mich. Filed Mar. 23, 1925. Serial No. 17,537. 20 Claims. (Cl. 131—56.)

2. A machine of the character described, comprising a rotatably mounted drum, means for driving the same, an annular rib projecting from the drum, a roller mounted over the drum and having a grooved portion lying directly over the rib, belts passing around the roller and partly around the drum, and means for feeding leaves of tobacco into the machine under said roller and belts and over the drum and rib thereon.

1,619,462. MANUFACTURE OF ALLOY STEEL AND IRON. BYRAMJI D. SAKLATWALLA, Crafton, Pa. Filed July 16, 1924. Serial No. 726,335. 8 Claims. (Cl. 75—45.)

1. The process of making alloy steel or iron, comprising forming a molten bath of steel or iron having a metal layer and a slag layer, incorporating into the metal layer successive charges of a reducing agent the oxidation products of which render the slag more fluid and incorporating into the slag layer successive charges of an unreduced compound of the alloying metal, and maintaining the bath at a temperature sufficient to cause a reaction between the reducing agent in the metal layer and the unreduced compound of the alloying metal in the slag layer to thereby directly reduce the alloying metal in the bath, substantially as described.

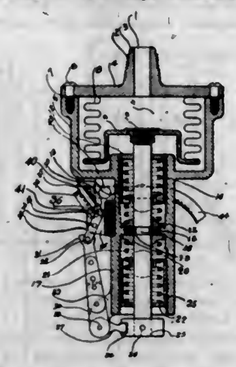


1,619,463. BOILER BAFFLE. GEORGE H. DICKSON, Chicago, Ill., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed June 4, 1918. Serial No. 238,097. 5 Claims. (Cl. 110—98.)

1. A baffle for water tube boilers consisting of two separated walls extending across and surrounding the tubes, each of said walls comprising a plurality of tiles at least partly in contact with and resting on the water tubes to form a substantially closed side of a mold, each

tile being less in width and height than the width and height of the baffle and a layer of poured and hardened plastic material between and held by said side walls.

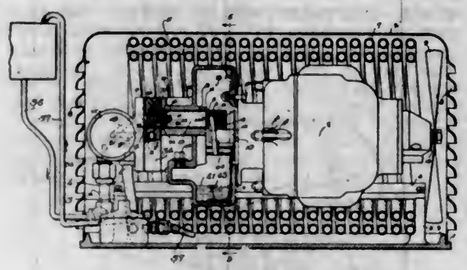
1,619,464. TRAIN-PIPE COUPLING. CHARLES EICHHOAN, Chicago, Ill., assignor to Victor Tobolla, Chicago, Ill. Filed Oct. 27, 1922. Serial No. 597,249. 8 Claims. (Cl. 285—62.)



1. A train pipe coupling head comprising a body provided with inner and outer coupling lugs, and means comprising a pair of lugs yieldingly carried by said outer coupling lug in position to be engaged by the inner coupling lug of a companion head whereby said heads may be locked and pressed together.

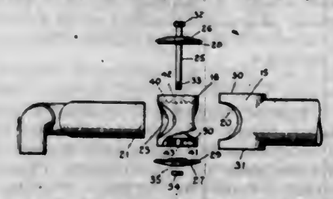
1,619,465. PRESSURE SWITCH. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 5, 1925. Serial No. 73,355. 7 Claims. (Cl. 200—81.)

1. In a pressure switch, a pressure chamber, a plunger moved thereby, and a switch adapted to control means for regulating the pressure in the pressure chamber operated by said plunger, yielding means on either side of a shoulder on said plunger, a shoulder on said plunger, said yielding means being adapted to be actuated when the shoulder passes the neutral point of rest of said plunger, said springs being adapted to resist the closing of the switch in one direction and to resist the compression of the pressure chamber in the other direction.



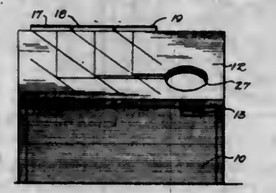
6. In a pressure switch, a casing formed like a cup having, a tubular member communicating therewith, a cover for said cup having a passageway therein communicating with a pressure chamber formed within said cup, a metal bellows wall for said pressure chamber, a head carried on said wall for moving therewith, a plunger connected to said head, caps threaded in either end of said tubular member adapted to support said plunger, a

fixed ring carried on said plunger, loose rings carried on said plunger on either side of the fixed ring, helical springs adapted to be engaged by said loose rings, their free ends resting in said cups threaded in the tubular



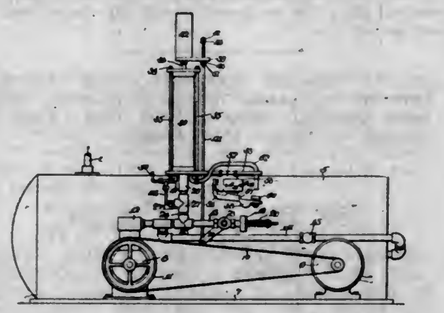
member, a bell crank having one arm connected to said plunger, and the other end to a switch, a switch, and yielding means adapted to snap said switch into and out of operative position.

1,619,466. COMPRESSOR. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 22, 1926. Serial No. 83,005. 10 Claims. (Cl. 230—27.)



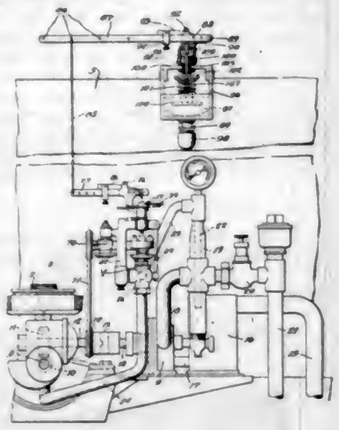
1. In combination, a cylinder, a piston and a rotary driving means for the piston engaging therewith to reciprocate it, said rotary means consisting of a worm, the thread of which passes through said piston transversely thereon causing the piston to reciprocate as the thread advances and retreats due to the rotation thereof, and means carried by said piston for yieldingly engaging said worm to maintain the engagement of the worm and piston in predetermined relationship.

1,619,467. TONE ARM FOR PHONOGRAPHS. MORRIS M. GRUBER, East Orange, N. J., assignor, by mesne assignments, to Sonora Phonograph Company, Inc., New York, N. Y., a Corporation of New York. Filed July 12, 1923. Serial No. 650,992. 2 Claims. (Cl. 274—23.)



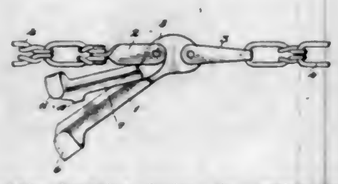
1. A device of the character described comprising a tone arm having a reproducing section and an amplifying section, a joint connecting said sections comprising a hollow cylinder carried by one of said sections and a second hollow cylinder carried by the other of said sections and adapted to fit concentrically within said first cylinder, said second cylinder having inset heads each provided with a central hub, end plates for said first cylinder each provided with a central perforation and a shaft adapted to pass through said hubs and said perforations and to form an axle to rotatably support the second cylinder in spaced relation to said first cylinder and a leaf spring positioned upon the inner wall of said second cylinder against one of said heads, said spring having a detent projecting through the wall of said cylinder and adapted to engage grooves in the wall of said first cylinder, whereby said reproducer portion of said tone arm may be locked in raised or lowered position.

1,619,468. COLOR MIXER. HUBERT GRUENDER, St. Louis, Mo., assignor to George Fabyan, Geneva, Ill. Filed Apr. 28, 1924. Serial No. 709,388. 1 Claim. (Cl. 88—14.)



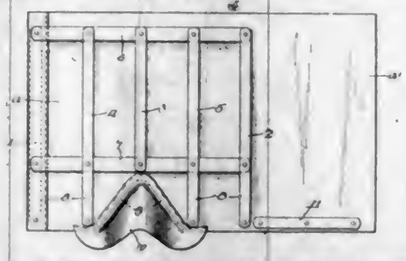
A device of the kind described comprising a plurality of color screens, a plurality of reflectors of plain unsilvered glass adapted to form a single beam of light of a single color composed of the light reflected by each of said reflectors and means for interrupting the light incident upon one of the color screens over a portion of its area in order to produce an image consisting in part of a color combination without the latter color and in part of a color combination with such color.

1,619,469. AUTOMATIC RELIEF VALVE. AUGUST F. HABENICHT, Tinley Park, Ill. Filed May 3, 1926. Serial No. 106,239. 6 Claims. (Cl. 230—24.)



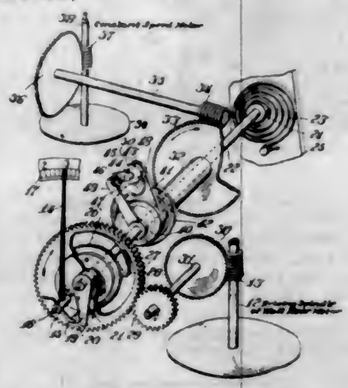
1. A device of the class described, in combination, a supply pipe line of a pressure system provided with a check valve therein, a compressor communicating with said pipe line, a cylinder mounted vertically above said pipe line, a restricted passage connection uniting the said pipe line and the lower portion of said cylinder whereby the back pressure from the check valve will enter the cylinder, a reciprocating piston and its rod in said cylinder and having a weight and arm on the upper portion of said rod, a connection uniting the arm and a movable part, an exhaust pipe leading from the lower part of the cylinder and means to close said exhaust pipe when the compressor is in operation.

1,619,470. OIL-BURNING MECHANISM. FRANKLIN HARDINGE, Chicago, Ill., assignor to Hardinge Brothers, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1923. Serial No. 681,461. 3 Claims. (Cl. 158—45.5.)



1. The combination with a movable control element comprising a reciprocable rod, a pivoted lever resting upon the outer end of said rod, a stationary stop and an adjustable stop mounted upon said lever for engaging said stationary stop to limit the movement of said lever, of an oil burner and means for controlling the supply of oil to said burner comprising a valve seat, a rotary valve co-acting with said seat, said valve having a valve stem, a spring biasing said valve toward its open position, a sleeve adjacent the outer end of said valve stem, a hollow spindle threaded into said sleeve, means whereby said spindle can be manually adjusted, a rod slidably mounted in said spindle, the inner end of said rod having a shoulder engageable by said spindle and also having engagement with the upper end of said valve stem, a second lever pivotally mounted adjacent the outer end of said rod and resting upon said rod, adjustable means for limiting the movement of said second lever, and means for communicating the movement of said first-named lever to said second lever.

1,619,471. TENSION FASTENING FOR ANTISLIP CHAINS. ADALBERTO GUALTERIO HARTUNG, Buenos Aires, Argentina. Filed Sept. 30, 1926. Serial No. 138,609. 1 Claim. (Cl. 24—68.)

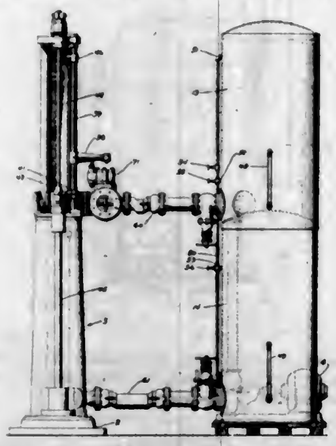


In a chain fastening device, the combination of a lever having spaced pivotal connections at one end with opposite ends of a chain and a hook at the other end adapted to engage over the chain when the pivotal connections have been reversed by operation of the lever to tighten the chain, a second lever pivoted at one end to one of the pivotal connections of the chain and first lever and having its free end provided with oppositely projecting hooks, one thereof being adapted to engage over the first lever adjacent its hook when the second lever is closed and the other hook of the second lever being engaged under the chain at a point inside the engaged hook of the first lever and chain.

1,619,472. LEGGING. CHARLES R. HOLCOMB, Chicago, Ill., assignor to Holcomb Safety Garment Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 19, 1925. Serial No. 63,338. 4 Claims. (Cl. 36—2.)

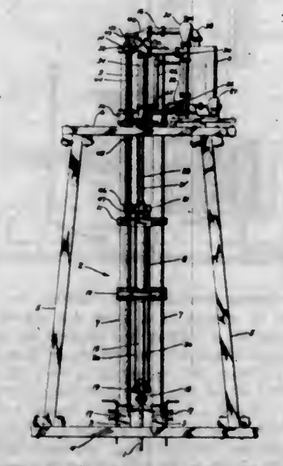
4. A legging comprising a leg covering portion of flexible protective material provided with a cut out at the lower edge of its front portion adapted to fit over the instep of the user and so proportioned that when the legging is adjusted for use the rear portion of its lower edge will overlap the counter of a shoe worn by the user, stays secured to the leg covering portion of the legging, comprising spaced transverse stays made of resilient material and shaped to encircle the leg of the user, the bottom one of which is positioned closely adjacent to the top of said cut out, and longitudinal stays comprising a front stay which terminates at the lower transverse stay, and side and back stays which extend substantially to the lower edge of the legging.

1,619,473. MAXIMUM DEMAND METER. FREDERICK C. HOLTZ, Springfield, Ill., assignor to Sangamo Electric Company, Springfield, Ill., a Corporation of Illinois. Filed May 23, 1921. Serial No. 471,924. 26 Claims. (Cl. 171—34.)



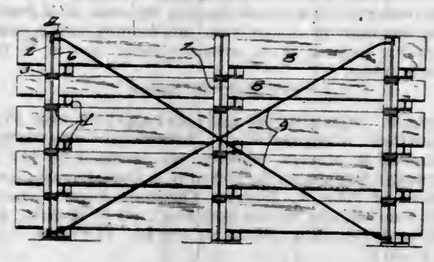
1. In a maximum demand meter of the type having an indicator, and actuating mechanism therefor correlated with the meter and adapted to be reset independently thereof, a resetting device comprising an approximately constant speed motor, a resetting member, means for actuating said member, a fixed stop adapted to be engaged by said member, and means actuated by said motor and operating to move said member to release it from said stop at regular intervals.

1,619,474. PUMPING SYSTEM. WILLIAM E. HUBBARD, San Francisco, Calif., assignor to Hubbard Machine Company, a Copartnership consisting of William E. Hubbard and Leon Sloss, jr., San Francisco, Calif. Filed May 4, 1925. Serial No. 27,728. 1 Claim. (Cl. 103—45.)



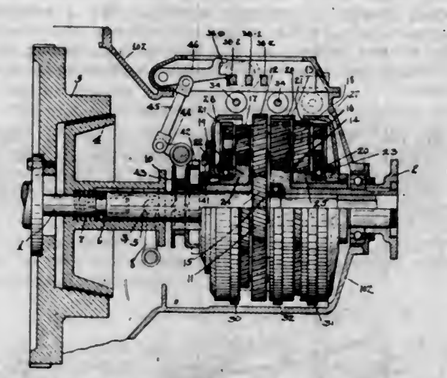
A pumping system comprising the combination of a cylinder, a piston operating therein, a relatively large

tank in communication with the cylinder, means providing fluid to the tank under pressure, a valve between the tank and cylinder for controlling the flow of fluid to the cylinder, means automatically operating the valve in timed relation with the piston movements, a second



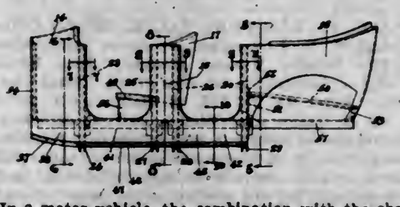
cylinder and a piston therein operatably connected to the first piston, and a chamber in communication with the second cylinder whereby a fluid medium is confined for compression by movement of the pistons in one direction to store up power for impelling the pistons in the opposite direction when the latter are free to so move.

1,619,475. PUMPING SYSTEM. WILLIAM E. HUBBARD, San Francisco, Calif., assignor to Hubbard Machine Company, a Copartnership consisting of William E. Hubbard and Leon Sloss, jr., both of San Francisco, Calif. Filed July 23, 1925. Serial No. 45,454. 4 Claims. (Cl. 103—46.)



1. A pumping mechanism comprising the combination of a cylinder, a piston operating therein, a long pump rod connected to the piston, means co-operating with the piston and pump rod to overcounterbalance and normally move the same upwardly with considerable surplus lifting force, a continuously operating pump, pipes connecting the pump with the cylinder at opposite sides of the piston, a valve, and means automatically operating the valve in timed relation to the piston movement to alternately place the pump in communication with the cylinder at the opposite sides of the piston through the said pipes.

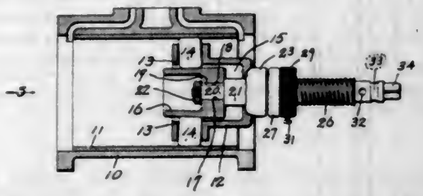
1,619,476. STEEL-STOCK RACK. HARRY S. JONES, Chicago, Ill. Filed June 22, 1923. Serial No. 647,095. 1 Claim. (Cl. 211—14.)



A stock rack comprising a plurality of superimposed detachably connected self-supporting sections, each section embracing a plurality of one-piece H-frame units having side channel members, said units being disposed in a plurality of aligned series with their channel members overlapping, and stock troughs removably seated in said aligned units for receiving stock steel.

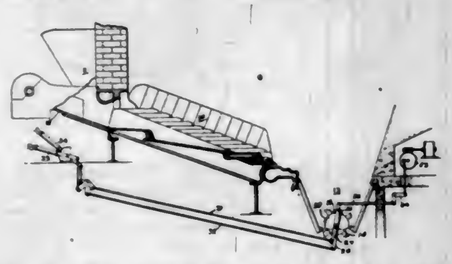
1,619,477. TRANSMISSION MECHANISM. CYRUS B. KURTZ, Lakewood, Ohio. Filed Aug. 23, 1918. Serial No. 251,044. 12 Claims. (Cl. 74—34.)

1. In transmission mechanism, the combination of two shafts, variable speed epicyclic gear means connected to one shaft, a clutch adapted to connect said gear means to the other shaft, gripping means adapted to lock one of said gear means to render the same operative on the engagement of said clutch a single lever adapted to selectively actuate said gripping means.



1,619,478. MOTOR VEHICLE. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 18, 1922. Serial No. 588,807. 12 Claims. (Cl. 296—28.)

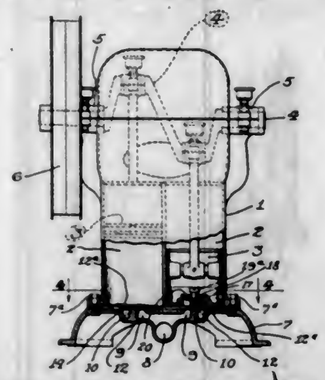
1. In a motor vehicle, the combination with the chassis frame and running boards at the sides of the motor vehicle, of a body mounted on said chassis frame and in-



cluding a frame work having longitudinally and vertically disposed frame members, a body shell made up of a plurality of sheet metal body panels secured to said framework, certain of the panels forming the sides of the body being extended downwardly to the running boards, said vertically disposed frame members being secured to the chassis frame.

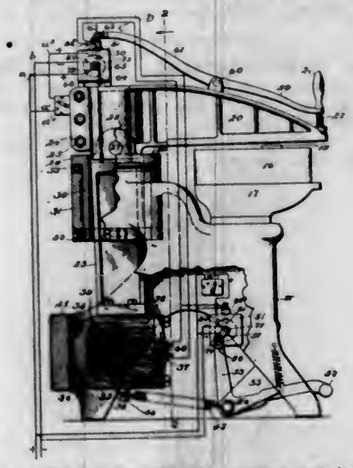
1,619,479. METHOD OF AND APPARATUS FOR FINISHING CYLINDRICAL BEARING SURFACES. GRAVES R. MAUPIN, Moberly, Mo., assignor to The J. Faessler Manufacturing Company, a Copartnership composed of John W. Faessler, Christinia Faessler, Louis E. Faessler, and Graves R. Maupin, all of Moberly, Mo. Filed Feb. 1, 1926. Serial No. 85,149. 18 Claims. (Cl. 29—90.)

1. The method of finishing a cylindrical bearing surface which consists in applying to said surface a sufficient pressure by a rolling contact to compress and smooth the wearing surface of said bearing, and causing said rolling contact to move said pressure longitudinally of the surface.



1,619,480. STOKER. DONALD J. MOSSHART, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 22, 1925. Serial No. 32,102. 8 Claims. (Cl. 110—32.)

4. The combination with a stoker provided with a refuse receptacle at the rear thereof, of crushing discharge mechanism at the bottom of said receptacle embodying a pair of aligned crushing rolls, and means for operating said rolls at differing angular velocities, whereby refuse may be discharged from one portion of said receptacle at a different rate than from another portion thereof.

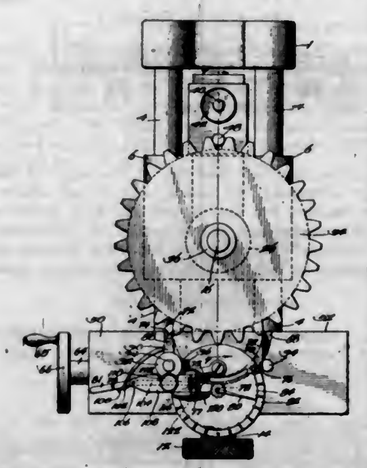


1,619,481. VACUUM PUMP VALVE. ERNEST C. OAKES, Bloomfield, N. J., assignor, by mesne assignments, to Empire Milking Machine Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 28, 1922. Serial No. 597,471. 2 Claims. (Cl. 230—34.)

1. An air pump comprising a pair of cylinders, oppositely disposed pistons in said cylinders, a common base for said cylinders and a common gasket for both cylinders, an air inlet port centrally in each cylinder in the base, and a partially severed portion of the gasket above each inlet port adapted to provide an inlet valve flush with the entire surface of the cylinder head and on the approach of the piston to seat upon the base and close the inlet ports and form a spacer coincident with the cylinder-head clearance upon the piston reaching the outer end of its stroke, whereby said valve and gasket jointly form in

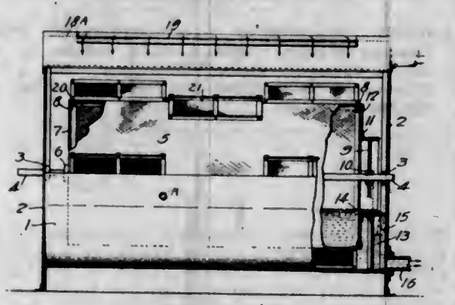
closed position a cushioning engagement flush with the end and with minimum clearance from the piston when in extreme position.

1,619,482. PRESS FOR CUTTING OR PUNCHING SHEET MATERIAL. JOHN ROGER OLIVER, Medfield, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed June 2, 1925. Serial No. 34,420. 21 Claims. (Cl. 164—23.)



1. In a clicking machine for cutting out leather or like material by means of a loose die placed selectively upon the material, a cutting bed supporting the material, a presser member adapted to overhang substantially all portions of the bed, and mounted to rock about a transverse axis toward the bed, and electromagnetic means for rocking the presser member with a quick cutting stroke toward the bed whereby to drive the die through the material; the presser member being normally held retracted from the bed at a slight angle to the bed, but arranged to rock toward the bed with its under surface in parallelism with the bed at the end of its operative movement.

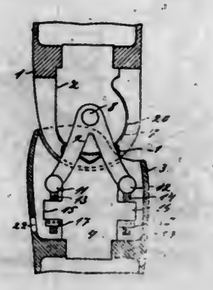
1,619,483. GEAR-TESTING MACHINE. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Mar. 30, 1922. Serial No. 547,955. 17 Claims. (Cl. 73—51.)



1. A gear testing machine having a base cylinder having a diameter equal to the diameter of the base circle of

the gear to be tested, a table having a straight working edge, means for causing relative movement between the base cylinder and the table whereby there is a rolling action between them, means for holding the gear to be

tested concentric with and fast to the base cylinder, a contactor adapted to engage a tooth of the gear to be tested, a contour indicator actuated by said contactor, and means for indicating the position along the tooth curve where said contactor engages the tooth.

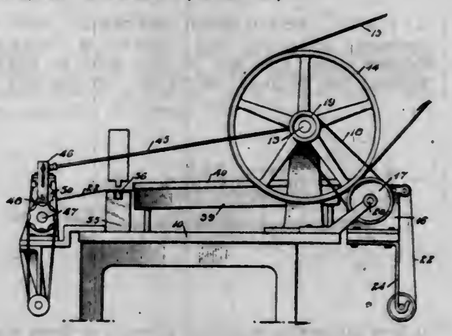


1,619,484. STRAINER FOR SUGAR JUICES AND THE LIKE. SAMUEL S. PECK, Honolulu, Territory of Hawaii. Filed Aug. 27, 1923, Serial No. 659,684, and in Great Britain, Jan. 13, 1923. 5 Claims. (Cl. 210—201.)

2. Apparatus for straining sugar juices and the like comprising a tank, a wall extending from the bottom of the tank upwardly to form a dam, and a foraminous drum mounted to revolve in the tank and having one open end, a hub member comprising a central portion and a spaced circular flange mounted coaxially with said drum, the face of said circular flange revolving in contact with said dam to form a seal therewith, such seal being effective irrespective of longitudinal movement of said drum within said tank.

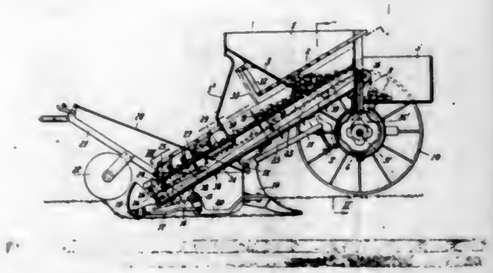
1,619,485. ARTIFICIAL KNEE JOINT. HEINRICH REHM, Nuremberg, Germany. Filed Sept. 29, 1924, Serial No. 740,648, and in Germany Feb. 16, 1924. 1 Claim. (Cl. 3—2.)

An artificial knee joint comprising in combination an upper element having a curved lower surface, a joint bolt traversing this lower end of said upper element, a lower element having in its upper end a cavity in which said curved lower end of said upper element bears at a front and rear edge, two rigid forks having outwardly inclined arms mounted one on each end of said joint bolt, cross bolts connecting the ends of the arms of each fork,



two projections one on the front and one on the rear surface of said lower element each projection having a vertical bore, screw bolts on said cross bolts and traversing the vertical bores of said projections, and nuts screwed on the lower ends of said screw bolts.

1,619,486. PROCESS OF REFINING OILS. FRANCIS JAVIER RESINES, Philadelphia, Pa., assignor to By-Products Recovery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 28, 1923. Serial No. 665,467. 1 Claim. (Cl. 87—12.)



The process of refining and decolorizing vegetable oils which comprises quickly admixing with agitation such an oil with the amount of caustic alkali solution required for neutralization, separating the neutral oil from the other matters present by centrifugal action immediately upon completion of incorporation of the alkali solution, once more quickly admixing with agitation the oil with a further quantity of alkali solution sufficient to decolorize the oil and once more separating by centrifugal action immediately thereafter.

1,619,487. PROCESS AND APPARATUS FOR MARKING ARTICLES. JOHN ROCHE, Hoboken, N. J., assignor to American Lead Pencil Company, a Corporation of New York. Filed Mar. 10, 1924. Serial No. 698,192. 4 Claims. (Cl. 41—7.)

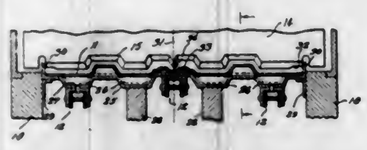
1. The process of marking an article which consists in applying a suitable marking powder loosely to one side of a bare flexible strip, interposing said strip between the article and a marking die with its powder side next to said article while the powder is still adhering to said strip, and pressing the strip against said article by means of the die.

1,619,488. POTATO-LAYING MACHINE. CARL RUETZ, Zurich, Switzerland. Filed Dec. 15, 1924, Serial No. 756,147, and in Switzerland Dec. 22, 1923. 10 Claims. (Cl. 221—118.)

5. In a potato planting machine, a hopper, a trackway, a reciprocating feeder forming a portion of said trackway, a stirrer in the hopper, means for leveling off the potatoes passing along the trackway, a stop bar at the discharge end of the trackway movable into and out of the path of the potatoes, a striker for engaging and discharging the potatoes, and means for periodically operating the feed device, stirrer, stop bar and striker.

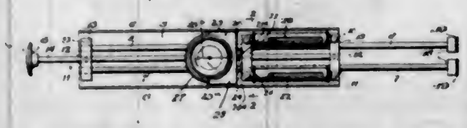
6. In a potato planter, a traveling vehicle having a hopper, an inclined chute for discharging potatoes from the hopper, feeding means for feeding the potatoes along the chute, means for leveling off the potatoes in the chute and discharging surplus potatoes laterally from the chute, a receptacle, and a conveyor at the side of the chute for receiving the surplus potatoes and conveying the same to said receptacle.

9. In a potato laying machine according to claim 1 and having a feed receptacle, the provision in the rear part of the said receptacle of a fork, adapted to be projected into the track of the potatoes by means of a hand-operable lever and thereby stop the further passage of potatoes down the forward part of the track.



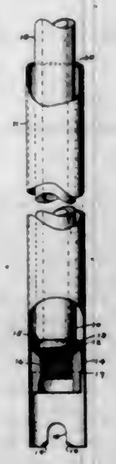
10. A potato planting machine according to claim 1, wherein a bar is fixed above the rear part of the track and has depending arms oscillatably mounted on it, the said arms each carrying a striking roller situated vertically above the track and adapted to act on the potatoes to assist in controlling the movement of the potatoes along the track and their discharge from the track.

1,619,489. TILE-MAKING MACHINE. JOHN N. SCHWARZ, Bridgeport, and VINCENT W. SCHWARZ, Fairfield, Conn. Filed Nov. 29, 1922, Serial No. 603,991. Renewed Dec. 16, 1926. 26 Claims. (Cl. 25—43.)



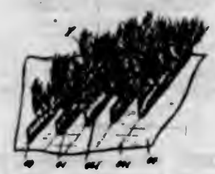
1. In a tile making machine a plurality of molds placed end to end, means for advancing the molds, a hopper open at its lower end to discharge concrete onto the molds and provided with a movable gate at its rear end over the molds, means for imparting up and down and longitudinal movement to said gate to regulate the amount of concrete carried forwardly by the molds, and means rearwardly of the gate for shaping the upper surface of the concrete in the molds.

1,619,490. MOLD PLATE FOR ROOFING-TILE MACHINES. VINCENT W. SCHWARZ, North Bergen, N. J. Filed Jan. 12, 1925, Serial No. 1,776. Renewed Jan. 22, 1927. 4 Claims. (Cl. 25—43.)



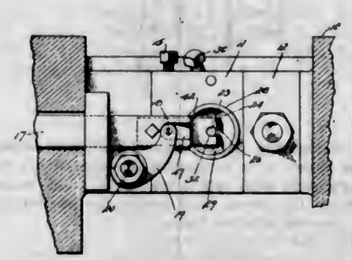
1. In a tile forming machine, a plurality of molds, means for advancing the molds, and means above the molds for shaping the top of the tile, said molds being of a width transverse the direction of movement to form two integral tiles, and said mold and forming means being arranged to form the two tiles in reverse relation.

1,619,491. MEASURE OF TENSION DIFFERENTIAL. OAKLEY SMITH, Chicago, Ill. Filed July 1, 1925. Serial No. 40,776. 5 Claims. (Cl. 265—19.)



1. An instrument for measuring differential of resistance to applied pressure, comprising a frame to which force is applied, a plurality of independently movable plungers carried by said frame, separate means extending between the frame and the respective plungers for indicating the pressure applied to the subject matter under test through the several plungers, and independent means for showing the differential between the action of the several plungers.

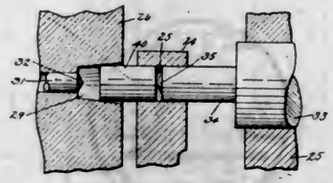
1,619,492. MEASURING AND DISPENSING PUMP. CHARLES SPAETH, Cleveland, Ohio, assignor to The Marvel Equipment Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 6, 1924. Serial No. 730,340. 5 Claims. (Cl. 285—162.)



1. A telescopic intake device for a measuring and dispensing pump, comprising a pair of telescopic tubes, the inner tube having a removable and adjustable gland member and packing affixed to its lower end and movable in its entirety through the outer tube, and the outer tube being open at its bottom and slidably sleeved over said inner tube and having a limiting stop adapted to permit said gland to project partly through said open bottom.

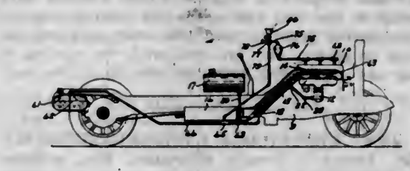
1,619,493. FEATHER-LINED MATERIAL AND PROCESS OF MAKING THE SAME. FRITZ WEVER, Stuttgart, Germany; Henri Marmignat administrator of said Wever, deceased. Original application filed May 15, 1922, Serial No. 561,216, and in Germany Dec. 14, 1920. Divided and this application filed June 24, 1924. Serial No. 722,186. 4 Claims. (Cl. 2—278.)

1. In the art of forming feather lined material, the process which consists in securing a feather lined band or strip to an endless sheet of supporting material along a substantially helical line.



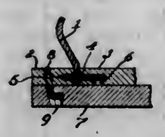
1,619,494. UPSETTING MECHANISM. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 6, 1922. Serial No. 534,538. 10 Claims. (Cl. 78—17.)

2. In mechanism of the character described; a cut off knife having an opening therein adjacent to one end, of substantially the same diameter as the wire from which the blank is cut, and a slot, of less width than said opening, connecting the same with said end, the walls of said opening and slot being rigid and unyielding and maintaining their shape during the separation of the blank from the knife.



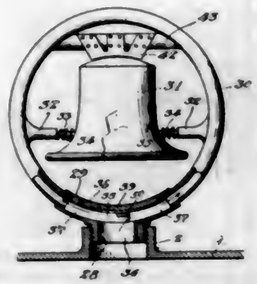
1,619,495. UPSETTING MECHANISM. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 6, 1922. Serial No. 534,539. 5 Claims. (Cl. 78—17.)

1. In a machine for cold shaping blanks into substantially frusto-conical form, a die having a conical blank receiving opening therein, a punch, holding means interposed between the die and punch and having an opening of a diameter substantially equalling that of the blank to receive the blank and the punch therein, and means to operate the punch so as to initially cause the blank to enter the die opening while supported by the holding means so that the latter prevents enlargement of that part of the blank held therewithin during partial shaping of the blank in the die, thereby to prevent the formation



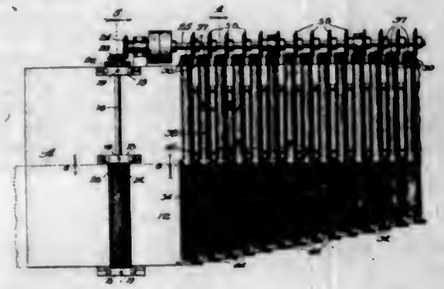
of an air pocket between the die and blank, and to finally move the blank out of the holding means and substantially completely into the die opening.

1,619,496. VAPORIZER AND PREHEATER FOR INTERNAL-COMBUSTION ENGINES. MICHAEL BECK, Minneapolis, Minn. Filed Nov. 28, 1921. Serial No. 518,183. 6 Claims. (Cl. 123—122.)



1. The combination with an internal combustion engine, of a casing arranged to be heated by the exhaust from the engine, oil, air and mixing chambers in the casing, said oil and air chambers having communication with the mixing chamber, said mixing chamber having communication with the intake of the engine, an intake valve normally closing the mixing chamber to said intake and arranged to be opened under the suction stroke of the engine, a valve actuated by the intake valve for controlling the oil supply from its chamber to the mixing chamber, and a heating element immersed in the oil in the oil chamber.

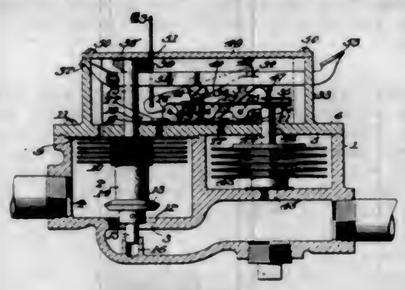
1,610,497. SEAM. CHARLES C. BLAKE, Brookline, Mass., assignor to C. C. Blake, Incorporated, Boston, Mass., a Corporation of New York. Filed Nov. 6, 1920. Serial No. 422,278. 18 Claims. (Cl. 112—262.)



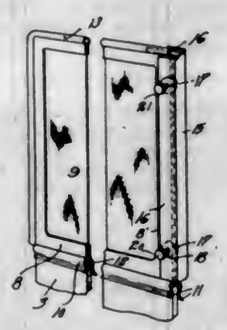
2. In combination, two members one of which is provided with stitch anchoring posts connected at their bases only within the body portion of the member at a substantial distance from the surface thereof, and both of which are provided with a thread secured to one of the members and looped about the posts on the other member.

1,619,498. RADIATOR FILLER. WILLIAM FLOYD COMBS and JOSEPH MAHONAY BECK, Eureka, Utah. Filed Dec. 30, 1924. Serial No. 758,902. 9 Claims. (Cl. 220—86.)

1. The combination of a radiator cap and a filling bell for the radiator of an automobile, said cap having an opening, a slide for closing said opening, a bracket, means for pivotally mounting the bell on the bracket so that the greater portion of the bell will be located above the pivotal point of said bell, said bell having an opening at its upper end adapted to register when inverted with the opening in the cap, and means for locking the bell in an inoperative position, said bell when released being rocked by gravity and inverted, with the opening in the upper end registering with the opening in the cap.



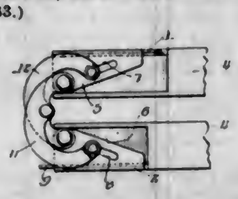
1,619,499. CONTINUOUS LATH-EXPANDING MACHINE. LEWIS E. CURTIS, Milwaukee, Wis., assignor to The Youngstown Pressed Steel Company, a Corporation of Ohio. Filed May 22, 1924. Serial No. 715,137. 6 Claims. (Cl. 164—6.6.)



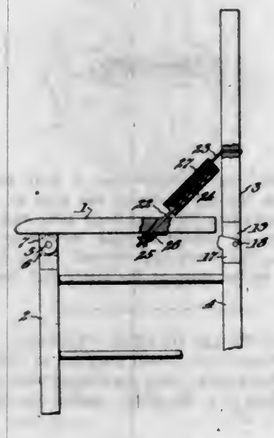
1. In a machine for expanding slitted sheet metal having a deformed edge, a bed for supporting the slitted blank, a series of stepped ledges arranged diagonally of the bed, means lying in the path of said blank to deflect it over the stepped ledges, said means acting as a guide for the deformed edge of the sheet, and rolls for moving said blank along the bed.

1,619,500. AUTOMATIC CUT-OFF FOR PRESSURE-FLUID-SUPPLY LINES. PETER D. ECONOPOULY, Port Jefferson, N. Y. Filed Oct. 11, 1923. Serial No. 668,942. 9 Claims. (Cl. 67—115.)

1. An automatic cut-off for pressure fluid supply lines comprising, a casing, a cut-off valve therein having a stem arranged to extend through said casing, reciprocating mechanism located on the exterior of said casing and arranged to engage the extended portion of said stem for holding the valve open, vertically movable means in the casing controlled by the pressure fluid for actuating said reciprocating mechanism, spring means for closing the valve when the presure falls to a predetermined point, and manually operated means for opening the valve.

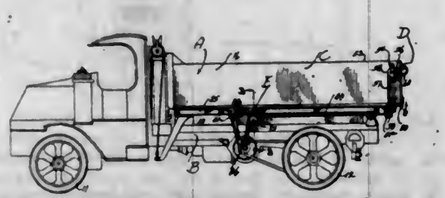


1,619,501. SCREEN FOR AUTOMOBILES. RICHARD WALTER EVANS, Spokane, Wash. Filed Oct. 10, 1925. Serial No. 61,720. 4 Claims. (Cl. 296—45.)



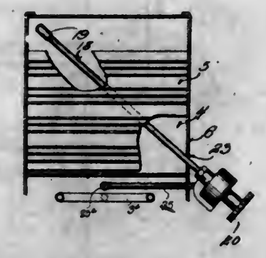
1. The combination with a grooved window frame and lower glass panel, of a screen having a resilient bottom bar for engagment with said glass panel, a side extension rail carried by the screen, and means for projecting said rail in the grooved window frame.

1,619,502. CONCEALED HINGE. MARTIN FOX, Chicago, Ill. Filed June 15, 1925. Serial No. 37,010. 3 Claims. (Cl. 16—163.)



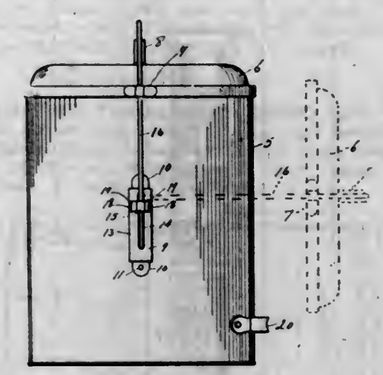
1. The combination with a pair of sectionally angular hinge members adapted for attachment to the adjacent corners of a pair of members to be connected, the corresponding angular parts being formed with inclined slots, and a pair of pivotally connected links each of which is pivoted to one of the angular parts in line with the slot thereof and has a pivoted sliding connection with the slot of the other member, the links extending below the confines of the members when they are in aligning position.

1,619,503. CHAIR. GEORGE D. FURLONG, New Orleans, La. Filed Oct. 28, 1924. Serial No. 746,373. 6 Claims. (Cl. 155—55.)



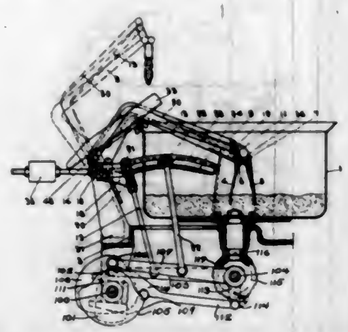
1. A seat and back structure of the type in which a seat and a back are individually pivoted to a support for rocking movement with respect to each other and to said support, characterized by a spring connection between the seat and back.

1,619,504. AUTOMATICALLY-OPERATED END GATE FOR DUMP VEHICLES. HERBERT D. GABRIEL, New York, N. Y. Filed Aug. 25, 1926. Serial No. 131,496. 10 Claims. (Cl. 298—23.)



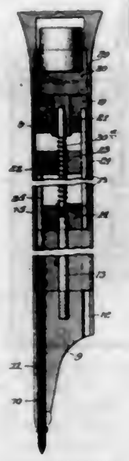
9. In an automatically operated end gate construction for vehicles the combination of a chassis frame, a dump body movably mounted on the chassis frame, an end gate movably connected to the dump body so as to swing open upon elevation of the dump body, a cable, means connecting the cable to the end gate, means connecting the cable to the chassis frame in cooperation with the last mentioned means so that when the dump body is elevated on the chassis frame the cable will have sufficient slack in it to enable the gate to open, and a thrust arm carried by the dump body to engage the cable when the dump body is lowered to render the cable taut and shorten the effective length thereof between the above first and second mentioned means to cause the gate to move to a closed position.

1,619,505. THERMOSTATIC CONTROL FOR OVENS. FRANK A. GAUGER, Milwaukee, Wis., assignor to Time-O-Stat Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 22, 1924. Serial No. 757,445. 16 Claims. (Cl. 126—39.)



1. In a gas range, the combination of a burner supply header, an oven located adjacent said header, a burner for said oven, and a thermostatic control unit for the oven burner, said unit being directly attached to said header and extending diagonally into said oven and positioned closely adjacent a vertical wall thereof.

1,619,506. LOCK-UP COVER FOR RECEPTACLES. EMIL GEMEINDER, Philadelphia, Pa. Filed Nov. 7, 1925. Serial No. 67,487. 3 Claims. (Cl. 220—58.)

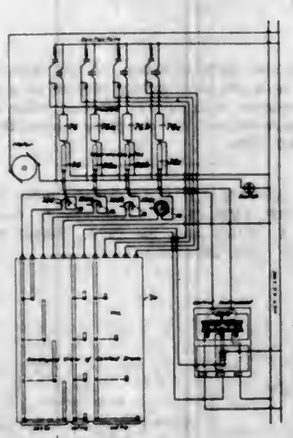


1. In a device of the character stated, a receptacle, vertically, longitudinally slotted guide members on the outside of the receptacle at diametrically opposite points, keepers carried by the guide members and disposed across the slots below the upper ends of the latter, a bail having trunnions at the lower ends of its limbs projecting into the slots of the guide members, the limbs of said bail coacting with the keepers when the bail trunnions are below the upper edges of the keepers to prevent swinging movement of said bail, such swinging movement being permitted when the trunnions are above the upper edges of the keepers, and a cover slidably connected with the bail limbs.

1,619,507. MACHINE FOR HANDLING TOBACCO. ERIK GRANSTEDT, Stockholm, Sweden, assignor to Aktiebolaget Formator, Stockholm, Sweden, a Corporation. Filed Oct. 8, 1924, Serial No. 742,454, and in Sweden Mar. 12, 1924. 11 Claims. (Cl. 214—147).

1. A tobacco machine including a store reservoir, a driven member, a pincher, and means for causing said pincher to grasp a portion of the tobacco mass in the store reservoir and to deliver it from the reservoir upon the operation of said driven member.

1,619,508. LEAD PENCIL. CLARENCE O. GRONBERG, Elgin, Ill., assignor of one-third to Albert M. Price, Elgin, Ill. Filed Mar. 13, 1922. Serial No. 543,381. 23 Claims. (Cl. 120—18.)

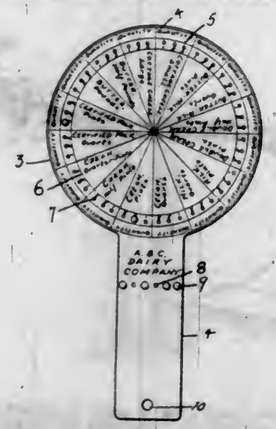


2. A lead pencil comprising a lead-magazine and lead-forcing means for successively engaging the leads in the magazine and feeding them therethrough into position for use comprising a lead-engaging element and rotary means for actuating said element operating, when rotated in one direction, to actuate said element to feed a lead and when reversely rotated to retract said element from the magazine and operating, when rotation thereof is continued after moving said element to retracted position, to effect relative bodily rotation of said lead-forcing means and said magazine.

1,619,509. BOTTLE CAP. LUCIAN S. GROVES, Boston, Mass., assignor, by mesne assignments, to Stewart Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1926. Serial No. 81,717. 1 Claim. (Cl. 215—38.)

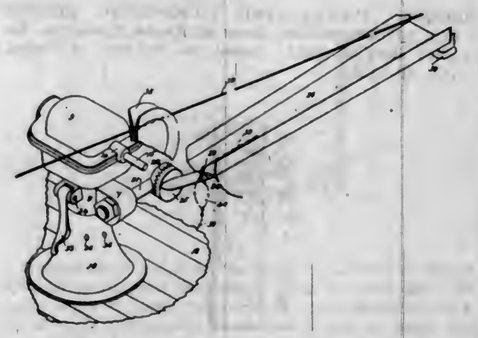
A milk bottle closure comprising a body plug and a skirt formed on the periphery of the plug at the upper edge thereof depending from the body plug and in spaced relation thereto, an expansion ring carried by the body plug adjacent to the lower edge thereof, and a contraction ring embedded in the skirt at the lower end thereof.

1,619,510. MULTIPLE HEATER CONTROL. HOWARD A. HANDS, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Dec. 30, 1926. Serial No. 158,004. 2 Claims. (Cl. 236—1.)



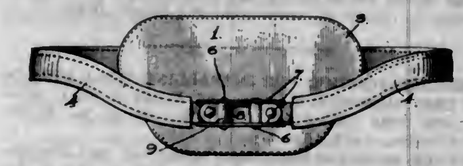
1. In an automatic temperature regulator for a plurality of electric heaters, a plurality of thermo-electric elements, associated with said heaters, a plurality of circuit controllers for regulating the current supplied to said heaters, a single control instrument adapted to be influenced by one or another of said thermo-electric elements, a common distributor with switches and connections whereby the single control instrument is placed in operative relation with one or another of said thermo-electric elements and with the corresponding circuit controllers, and manually controllable means for independently varying the electrical action of each thermo-electric element.

1,619,511. ORDER CARD. OSCAR GEORGE HAUSNER, Webster Groves, Mo. Filed June 7, 1926. Serial No. 114,152. 1 Claim. (Cl. 40—4.)



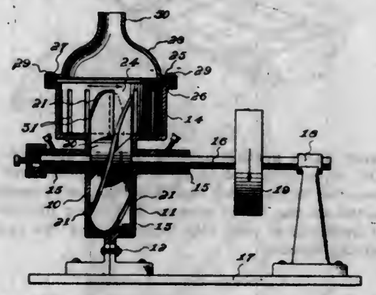
An order card comprising a circular body portion and a projection so proportioned as to permit its insertion into a bottle, the projection secured to the body portion, the face of the body portion being radially divided into

sections, each section having a merchandise indication and a quantity indication and a row of perforations bearing numerical indications, pins of such size as to permit their



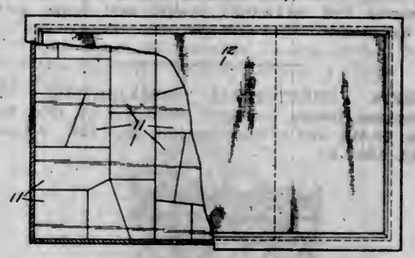
insertion in the perforations of the row in each segment, said projection having perforations therein for the reception of said pins.

1,619,512. FISHING APPARATUS. BRUCE C. HECKMAN, Eureka, Calif. Filed July 15, 1926. Serial No. 122,622. 16 Claims. (Cl. 43—4.)



1. In a fishing apparatus, a supporting frame, a fishing arm connected with the frame at one end and having a receiving trough for the line, said trough being open at each end to permit the fish-line to be stretched through it under tension, a guide sheave for the fish-line at the other end of the fishing arm, and a winding device for the fish-line supported by the said frame and arranged in line with the said trough and guide sheave.

1,619,513. ABDOMINAL SUPPORT. CARL H. HITTENBERGER, San Francisco, Calif. Filed Jan. 16, 1926. Serial No. 81,698. 5 Claims. (Cl. 128—99.)

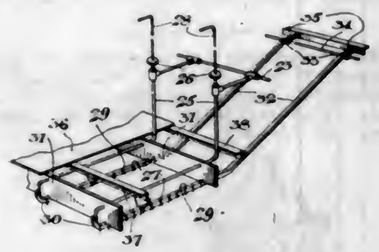


1. An abdominal support comprising a pad; a pair of springs pivotally mounted upon axis parallel to the front of the pad and adapted to extend around the hips of a wearer to hold the pad in supporting relation to the abdomen, said springs being arranged to be swung outwardly from the front of the pad whereby the support may be applied or removed without distorting the springs or pad; and means for preventing vertical strain upon the pivot mountings of the springs and to hold the ends of the spring in rigid engagement with the pad.

1,619,514. PROPELLER PUMP. STEPHEN W. HOLMAN, Marmarth, N. Dak., assignor to The Holman Pump Manufacturing Company, a Corporation of South Dakota. Filed June 9, 1925. Serial No. 35,939. 3 Claims. (Cl. 103—125.)

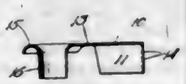
1. A propeller pump comprising a housing embodying a cylindrical propeller chamber closed at both ends, a cylindrical gate chamber closed at the bottom, the axes of which chamber are respectively horizontal and vertical, a propeller rotating within the propeller chamber and provided with a plurality of spiral fins making substantial contact with all walls of the chamber, and a gate fitting within the gate chamber constructed substantially as a cylinder having its cylindrical walls provided with spaced slots, properly positioned and proportioned to embrace and permit the passage of and make continuous contact with the vanes and to serve in conjunction with the vanes as a worm to continuously rotate said cylindrical gate.

1,619,515. BED FOR BILLIARD TABLES AND THE LIKE. EDMUND F. HOSKIN, Chicago, Ill., assignor to William A. Spinks & Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 2, 1926. Serial No. 133,194. 7 Claims. (Cl. 273—6.)



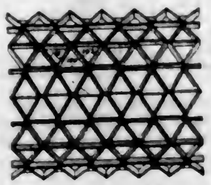
4. In a bed for a table of the character described, the combination of a rigid flat supporting member having a veneer of relatively smaller irregularly shaped slate pieces on the upper surface thereof.

1,619,516. STUBBLE BURNER. CHARLES CLARENCE HOWELL, Kisbey, Saskatchewan, Canada. Filed Feb. 16, 1924. Serial No. 693,303. 3 Claims. (Cl. 126—271.2.)



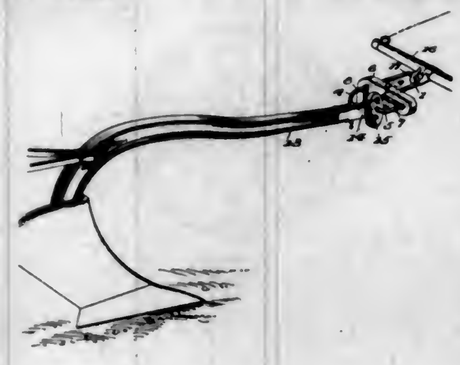
1. A device of the character described comprising a frame, a plurality of spaced parallel runners provided at the forward ends with upwardly extending portions hinged to said frame to provide for vertical displacement

of the runners, spaced transversely extending cross bars supported on said runners and a plurality of liquid fuel pipes supported by said runners and cross bars, each pipe being bent into U-form and arranged to provide a lower burner portion lying on one of said runners and



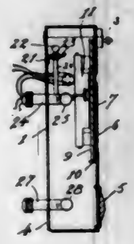
an upper retort portion passing through openings formed in said cross bars and lying directly above said burner portion, the latter being sealed at the end opposite that connected to the retort portion and being provided with outlet openings at each side located above the underlying supporting runner.

1,619,517. CONNECTER FOR ELECTRIC WIRES. WILLIAM HUGHES, Taunton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 5, 1920. Serial No. 363,520. 2 Claims. (Cl. 173—269.)



2. The combination with an electric wire having a terminal bend forming an eye, of a terminal connecter consisting of a single piece of sheet metal having a portion substantially surrounding the wire near said eye, an annular flange portion in concentric relation to and engaging said eye, and a barrel portion projecting from said flange portion and through said eye, said barrel portion being divided into a plurality of prongs which curl outwardly and backwardly toward said flange portion and are clenched upon said eye.

1,619,518. SHEET-METAL TRELLISWORK. HUGO JUNKERS, Dessau, Germany. Filed Nov. 21, 1925, Serial No. 70,618, and in Germany Nov. 24, 1924. 9 Claims. (Cl. 108—1.)

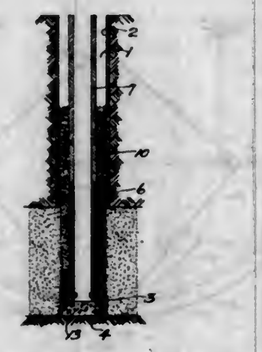


5. Trellis work comprising a plurality of panel rods assembled to form the sides of polygons, part of said panel rods having the form of sheet metal strips, the flat ends of said strips being bent at an angle and the parts adjoining a longitudinal edge being rolled in channel-like fashion, the ends of adjoining rods being superposed in the points of junction, and means for pressing said ends together.

1,619,519. LAP LINK. ELBERT KELLY, Anniston, Ala. Filed Sept. 30, 1925. Serial No. 59,586. 2 Claims. (Cl. 278—96.)

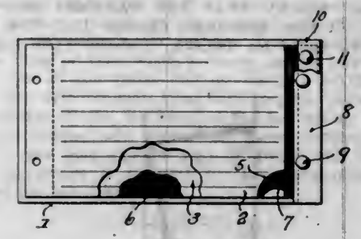
1. A lap link comprising a pair of substantially U-shaped hooks constituting attaching portions, one arm of each of said hooks being longer than the other arm thereof, a half loop having arms into which the longer arms of said hooks are merged, the free ends of the hooks terminating substantially flush with each other, and a latching member for closing said half loop and said hooks, said loop and said hooks extending in opposite directions.

1,619,520. ILLUMINATED LICENSE-TAG HOLDER FOR AUTOMOBILES. JOHN H. KERNS, Covington, Ky. Filed June 30, 1924. Serial No. 723,121. 4 Claims. (Cl. 40—132.)



1. A device of the character specified comprising a casing, an open panel in said casing, a plate arranged to be mounted in said casing behind said open panel, said plate being provided with open indicia, a translucent plate arranged to be mounted behind said panel and first plate, means for the illumination of said plates, a bracket at each end of said casing, a plate pivotally mounted in each of said brackets, said plates being adapted to bear against the license and translucent plates for the purpose of securing them in position, means for holding the retaining plates normally in locking position under tension, and means for operating the retaining plates simultaneously to release the translucent and license plates.

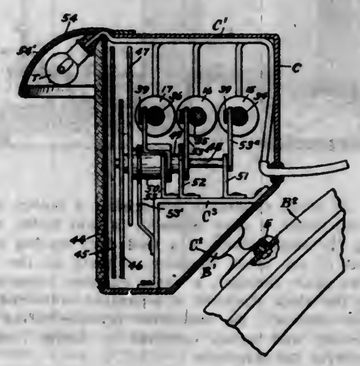
1,619,521. METHOD FOR INSTALLING WELL STRAINERS. JOSEPH P. LAWLOR and JAMES I. SEAY, Memphis, Tenn. Filed Jan. 13, 1926. Serial No. 80,963. 5 Claims. (Cl. 166—4.)



1. The method of installing a casing in a well, comprising, removably securing an enlarged hollow point on the lower end of a lowering and guiding pipe, assembling and lowering strainer units and well casing units closely

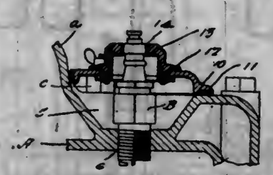
surrounding said pipe, and supported by said point to the water bearing sands, surrounding the strainer units with a gravel envelope, removing the sand through the central

pipe and permitting the gravel enveloped units to lower in the sands as the sand is removed, sealing the cone and removing the central guiding and lowering pipe.



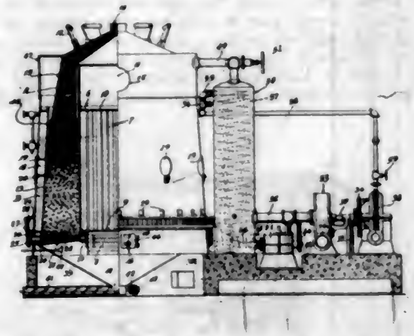
1,619,522. MANIFOLD SHEET. OSCAR LOEWENBACH, Milwaukee, Wis. Filed July 6, 1925. Serial No. 41,841. 1 Claim. (Cl. 282—9.)

A manifold device comprising a base, a block of sheets attached to the base and bound along one side edge, the sheets being arranged in groups of three consisting of a top sheet, a transparent sheet, and a bottom sheet, the top and transparent sheets having registered corners cut away adjacent their free edges, and the bottom sheet being provided with a cutout in its free edge spaced upwardly from the cutaway corners of the first mentioned sheets, a group of carbon sheets secured along an edge opposite the bound edge of the block of sheets, each being cut out at the corner adjacent its secured edge and adapted to be folded between the transparent and bottom sheets of the group of three to expose a strip of carbon between its cutout portion and the cutaway-corners of the top sheets of the group, whereby a pointer may be used to progressively swing the first two sheets outwardly from their bound edges and thereafter swing the carbon sheet in the opposite direction and finally swing the third sheet of the group outwardly in the same direction as the first mentioned two sheets.



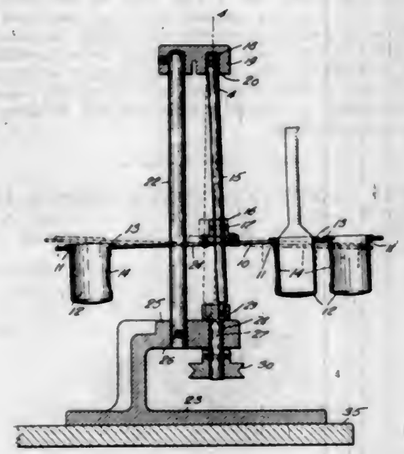
1,619,523. TRAFFIC SIGNAL FOR MOTOR VEHICLES. RONALD C. LUPLOW, Calistoga, Calif. Filed Feb. 2, 1923. Serial No. 616,525. 1 Claim. (Cl. 177—327.)

A signal comprising a casing, a bracket mounted in the casing, a pair of bearing posts connected to the bracket, a sleeve rotatably mounted in the bearing posts, a third bearing post connected to the bracket, a second sleeve mounted in the third bearing post and extending through the first sleeve, a fourth bearing post connected to the bracket, a rock shaft mounted in the fourth bearing post and extending through the second sleeve, an arm fixed to the inner end of the first sleeve, a second arm fixed to the inner end of the rock shaft, a pair of coils mounted transversely above the plane of the first sleeve and spaced apart endwise and having a common core, a stud fixed in the common core between the coils and connected to the first arm, a second pair of coils mounted similar to the first pair of coils and having a second core, a second stud fixed in the second core and connected to the second arm, a third pair of coils mounted similarly to the first and second pair of coils and having a third core, a stud fixed



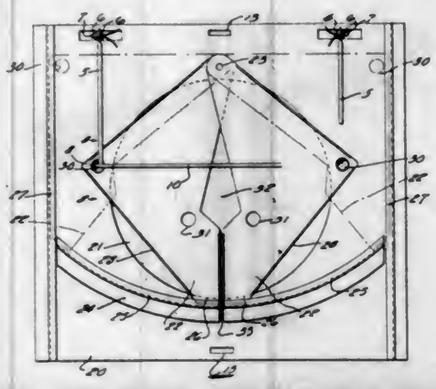
to the third core and connected to the third arm, an indicating arrow fixed upon the front end of the first sleeve, a second indicating arrow fixed upon the front end of the second sleeve in front of the first arrow, a concealing segment fixed upon the front end of the rock shaft in front of the second arrow, and a glass plate in the casing in front of the concealing segment, said first mentioned arrow normally pointing upwardly and adapted to swing to the right to a horizontal position, said second mentioned arrow normally pointing downwardly adapted to swing to the left to a horizontal position, said concealing segment normally being in vertical position adapted to swing to a horizontal position.

1,619,524. COMBUSTION-ENGINE-SPARK-PLUG PROTECTOR. ADAM MANCHESTER, Central Bridge, N. Y. Filed Dec. 30, 1925. Serial No. 78,372. 4 Claims. (Cl. 123—198.)



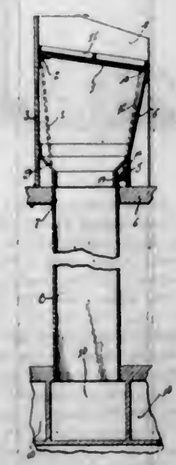
1. In a protector for internal combustion engine spark plugs wherein the engine is formed with pairs of closely related spark plug openings surrounding which are plug wrench receiving pockets, of a plate member formed of a plurality of circular portions adapted to be disposed over said pockets, each of said circular portions being provided with an opening for permitting the upper end of the spark plug to be projected therethrough, a cap formed of insulated material arranged in each of said openings, the top of each cap having an opening provided therein through which the upper end of the spark plug extends, and means for securing the plate on the engine.

1,619,525. OIL-SHALE APPARATUS. HOWARD E. MARSH, Lompoc, and CHARLES J. DUNTEN, Santa Maria, Calif., assignors of one-sixth to Verner B. Lee, Santa Barbara, Calif., and one-sixth to James H. Lee, Grand Junction, Colo. Filed June 7, 1926. Serial No. 114,064. 7 Claims. (Cl. 202—14.)



1. An oil shale apparatus comprising a boiler, means to heat the boiler, a shale chamber in said boiler, means for firing the shale chamber, a feed duct leading to the upper end of the shale chamber, a grate at the lower end of the shale chamber, a vapor chamber communicating with the shale chamber, a separator connected with the vapor chamber, an exhauster communicating with the separator, and means operated by steam from the boiler to drive the exhauster.

1,619,526. RECEPTACLE-SHAKING MACHINE. JOHN A. MEEKER and EMMETT J. ROACH, Potsdam, N. Y.; said Meeker assignor to said Roach. Filed Mar. 5, 1923. Serial No. 622,798. 10 Claims. (Cl. 259—72.)

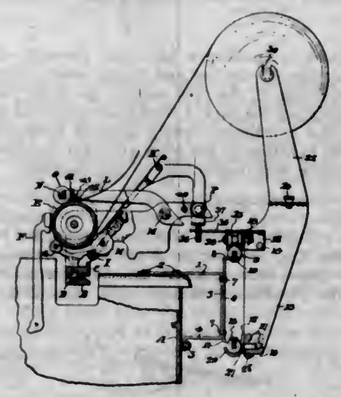


1. In a machine of the character described, the combination of a receptacle carrier suspended from above so that it is adapted to swing around and tilt about its point of suspension, and means for so moving the carrier a receptacle adapted to contain material to be agitated, supported by the carrier and located thereon at one side of said point of suspension, said receptacle having an imperforate bottom and being vertically extended to prevent discharge of the material from the receptacle under agitation action, and the upper portions of said receptacle receiving less movement than the lower portions thereof.

1,619,527. TRAP-NEST ATTACHMENT. MAX J. MOORE, Newark, N. J., assignor to Walter H. Collins, Summit, N. J. Filed Oct. 4, 1922. Serial No. 592,320. 7 Claims. (Cl. 119—49.)

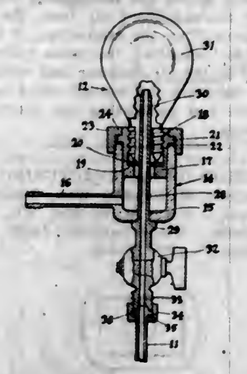
1. A trigger mechanism for a trap nest, comprising a pair of vertically extending arms pivoted at their upper ends, closure-engaging shoulders carried at the lower ends of the vertical arms, and a horizontally extending arm connecting the vertical arms extending across the nest opening in a position to be engaged by the hen.

1,619,528. MONEY TRAY FOR BANKERS AND THE LIKE. ALBERT MORTIMER, Chicago, Ill. Filed Nov. 8, 1924. Serial No. 748,725. 1 Claim. (Cl. 109—1.)



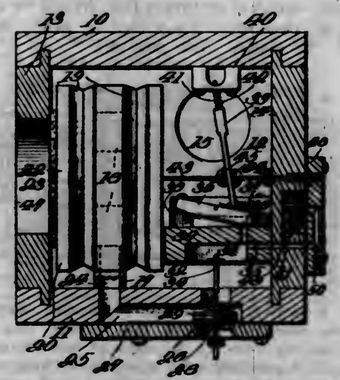
A device of the type described comprising a casing having relatively small openings in the sides thereof, a tray hingedly secured to said casing for holding bills of various denominations thereon, a plurality of bottomless compartments loosely mounted upon said tray for separating the bills from each other and into their various positions, arms hingedly secured to the sides of said casing and provided with inwardly extending portions adapted to be received in the openings for holding said tray in operative position, means for forcing said arms outwardly permitting the inwardly extending portions to release said tray, whereby said bottomless compartments will slide free of said tray, the bills falling free of said compartments as soon as the compartments slide free of said tray, and a receptacle for receiving said bills.

1,619,529. BOX FOR STORING FURS. HANS MÜLLER, Munich, Germany. Filed July 8, 1926, Serial No. 121,151, and in Germany Mar. 17, 1926. 1 Claim. (Cl. 206—11.)



A fur box comprising in combination a frame of wooden laths forming the back, the two long sides and the two short sides, the top lath of the two short sides and of the one long side having each a groove in the inner surface, plates of alder wood ends filling said frame, a lid consisting of a frame of wood laths covered with a plate of alder wood, a tongue on the lath of each short side of the frame and on the lath of the inner long side said tongues being designed to engage with said grooves in the top laths of the box frame, a chub-lock for locking said lid in the closed position, a bar fixed in the long side of said lid frame and engaging with the groove of the lath of the corresponding long side of the box frame.

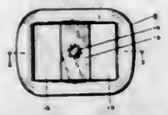
1,619,530. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 5, 1926. Serial No. 92,491. 8 Claims. (Cl. 197—133.)



1. A roll carrying attachment for writing machines comprising brackets supported by the machine frame and provided with upper and lower track rails; and a roll supporting frame having double coned rollers running on top of said upper rail, and rollers running on the rear side only of said lower rail; the center of gravity of the roll supporting frame being in the rear of a vertical plane passing through said track rails.

1,619,531. OIL INDICATOR. JOSEPH C. NANGANO, San Pedro, Calif. Filed Sept. 4, 1924. Serial No. 735,898. 1 Claim. (Cl. 116—117.)

An indicator of the class described comprising a body portion having a chamber open at the top and a projecting externally threaded nipple extending from one side, there being an opening at the center of the bottom of the chamber, the upper end of the body around the chamber being finished, a gasket upon the finished upper end of the body, an internally threaded socket member fitting within the chamber and having a flange resting upon the gasket, an internally threaded sleeve screwed upon the body and having a flange engaging the flange of the socket, an old electric light bulb screwed into the sleeve, the filament and support being removed from the bulb, there being an internal shoulder at the lower end of the sleeve and a gasket upon the shoulder against which the light bulb presses, and a nozzle extending upwardly through the central opening of the body and into the light bulb.

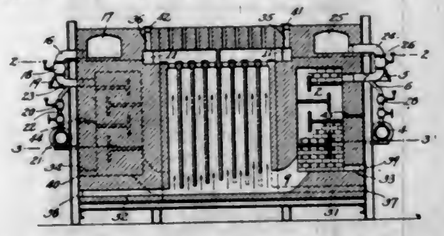


1,619,532. TREMOLO. FRANK H. NIEMANN, Philadelphia, Pa. Filed Aug. 4, 1925. Serial No. 48,113. 9 Claims. (Cl. 84—348.)

7. The combination of an organ tremolo box in which air under pressure is delivered, a pneumatic controlling the discharge of air through an opening in said box, means for conducting air from the box to the pneumatic and for discharging the air from the pneumatic to the atmosphere, a valve for controlling the admission of air

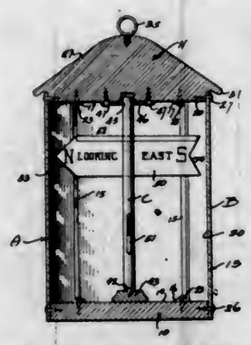
from the box to said means and the discharge of air from said means to the atmosphere, an air chamber located in the box and having a diaphragm, means for connecting the controlling valve to the diaphragm, said air chamber having an intake port and exhaust duct, a valve for controlling the supply of air to the air chamber through the port, means actuated by the pneumatic for operating the valve for cutting off the supply of air to the air chamber whereby the diaphragm will be actuated by the air pressure in the box for causing the controlling valve to cut off the supply of air from the box to the pneumatic and permitting the exhausting of air from the pneumatic, and for actuating the valve whereby the air will be admitted to the air chamber and acting upon the diaphragm for operating the control valve to admit air to the pneumatic and preventing the discharge of air to the atmosphere.

1,619,533. METHOD OF MANUFACTURING BUCKLES. CLAIR P. NOURSE, Milwaukee, Wis., assignor to The Midland Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed July 20, 1925. Serial No. 44,799. 2 Claims. (Cl. 29—3.)



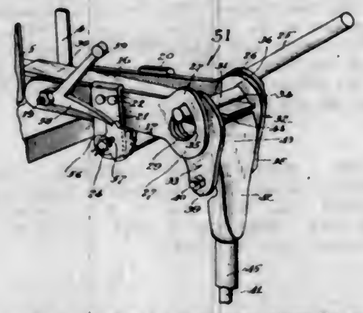
1. The method of manufacturing a buckle which consists in drawing the mid-portion of a blank to form a pocket and simultaneously cutting a small opening in the center of the pocket, utilizing the small opening thus formed to center the blank in a die and stamping a pair of openings in the end portions of the pocket, the medial portion of the same containing the small opening forming a transverse strip, and inserting a pin through said small opening and riveting it to said transverse strip.

1,619,534. OXYCHLORIDE CEMENT AND METHOD OF MAKING SAME. HANS MARTINUS OLSON, Burbank, Calif. Filed Oct. 13, 1923. Serial No. 668,366. 2 Claims. (Cl. 106—29.)



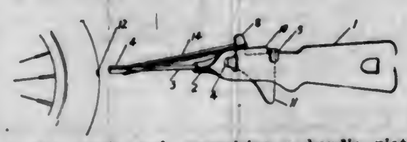
1. A cement comprising magnesium oxide, one percent of a mixture consisting of seventy-five parts of mineral oil and twenty-five parts of beef fat, and magnesium chloride within the percentages of fifteen to twenty-five parts.

1,619,535. VERTICAL-CHAMBER OVEN. CARL OTTO, Bochum, Germany. Filed Feb. 5, 1925. Serial No. 6,992. 15 Claims. (Cl. 202—9.)



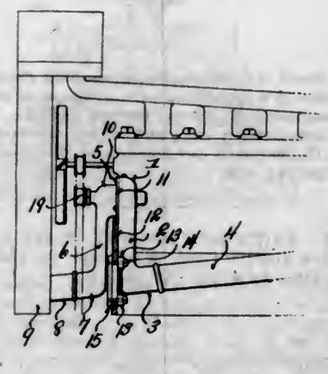
1. In a vertical horizontally enlongated chamber coke oven the combination with the vertical oven chamber having heating walls at the sides of said chamber, each heating wall provided with a series of flues, means for so connecting the flues of one heating wall with the flues of another heating wall of the said oven chamber that the burning gases may pass from the flues of one heating wall to the flues of another heating wall, and means at each front face of the oven, in front of the narrow sides of the oven chambers for preheating the air supplied to the flues of each heating wall.

1,619,536. DIRECTION INDICATOR. WILLIAM J. PARKS and LINCOLN B. EVANS, La Salle, Ill. Filed Mar. 12, 1923. Serial No. 624,516. 5 Claims. (Cl. 33—222.)



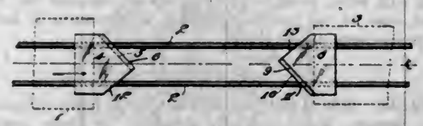
1. As an article of manufacture, a housing for direction indicating mechanisms including a disc shaped supporting base, a conical shaped top being provided with a downwardly tapered top surface, means supporting said base and top in spaced relation, transparent side walls extending intermediate said base and top and providing an enclosed compartment, said top having an annular drip flange extending outwardly and over the marginal top of said side walls, and magnetized direction indicating means movable in the housing and visible through said side walls.

1,619,537. SPRING-EYE BENDER. JACOB O. PARRISH, Pomona, Calif. Filed Aug. 11, 1924. Serial No. 731,444. 10 Claims. (Cl. 153—46.)



1. A bender comprising a bed, bars pivotally mounted against the sides of the bed and having heads with alined mandrel openings at the free ends of the bars, an eccentric for operating the bars, a bender lever having mandrel openings, and a mandrel loosely inserted across the bed through the openings of the lever and bars, the lever having a working edge concentric to the mandrel.

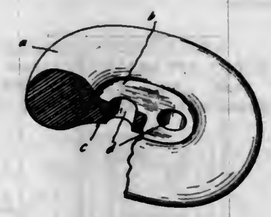
1,619,538. TIRE-REPAIR TOOL. EWALD F. PAWSAT, Maysville, Ky., assignor to Wald Manufacturing Company, a Corporation of Kentucky. Filed Sept. 29, 1926. Serial No. 138,524. 9 Claims. (Cl. 152—27.)



1. A tire repair tool, comprising a handle plate, a needle having a bifurcated end secured in one end of said handle plate, a trigger plate rotatably mounted on said handle plate, holding means on said trigger plate for a resilient band, interlocking means between said handle and trigger plates, said interlocking means being maintained in effective engagement by tension between the bifurcation on said handle plate and said holding means.

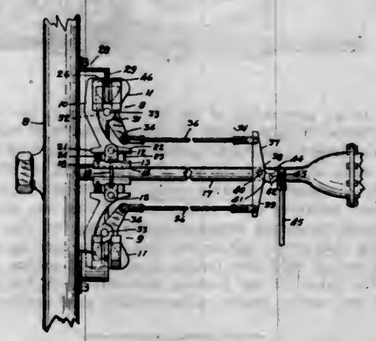
1,619,539. CIRCULATING PUMP. EDWARD M. PFAUSER, Milwaukee, Wis., assignor to Blackhawk Manufacturing Co., Milwaukee, Wis. Filed Oct. 20, 1926. Serial No. 142,891. 3 Claims. (Cl. 123—195.)

1. The combination of an internal combustion engine having a transverse front supporting plate, a circulating pump mounted above said plate and having a spaced inlet and outlet portion adapted to straddle said plate and extending downwardly on opposite sides of said plate, and means for clamping said pump to said plate.



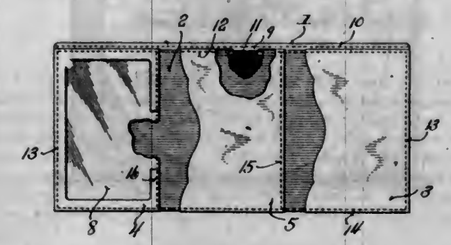
1,619,540. COLLISION BUMPER DEVICE. WILLIAM H. RADEMAEKERS, Sr., and WILLIAM H. RADEMAEKERS, Jr., Newark, N. J. Filed Aug. 28, 1926. Serial No. 132,092. 10 Claims. (Cl. 105—6.)

2. Cooperative collision bumpers, respectively for connection with the forward end of locomotives and the rear end cars of railway trains, comprising a locomotive bumper having at its free end a transversely oblique sheer face inclining forwardly and outwardly from its inner side, a rear car bumper having at its free end a transversely oblique sheer face inclining rearwardly and inwardly from its outer side, an under shot shoulder bordering the lower margin of said latter sheer face, the upper surface of said shoulder being formed to provide an outwardly ascending inclined plane, and said locomotive bumper having an over shot shoulder bordering the upper margin of its sheer face, the under surface of said latter shoulder being formed to provide a reverse inclined plane cooperative with the ascending inclined plane of said rear car bumper.



1,619,541. RUBBER BUTTON. CHARLES A. REHOR, Portland, Oreg. Filed Apr. 14, 1925. Serial No. 23,100. 3 Claims. (Cl. 24—90.)

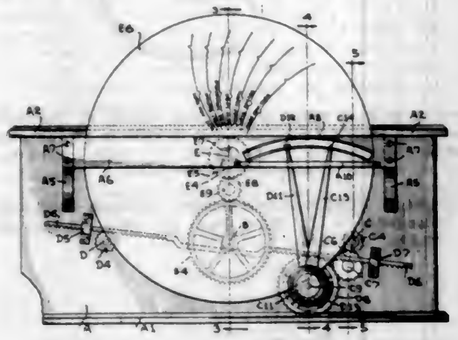
1. A button of elastic homogeneous, non-absorbent material consisting of a relatively thick rim substantially inflexible and a thinner central web integral with the rim, with the maximum thinness of the web at its centre, the



rim adapted to resist bending and folding on diametric lines under normal pressures, but to yield to greater pressures.

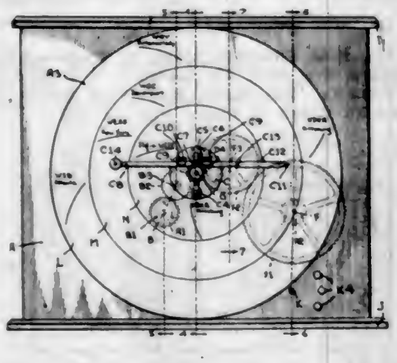
1,619,542. BRAKE MECHANISM. EDWARD RIEDINGER, Bloomfield, N. J. Filed Dec. 29, 1924. Serial No. 758,523. 8 Claims. (Cl. 188—72.)

1. A vehicle brake comprising a pivoted gripper member, means for actuating said member, a supplemental gripper member pivotally mounted on said first mentioned member and means for actuating said supplemental member under the action of said first mentioned member.



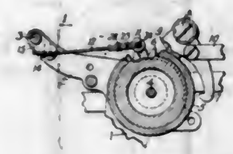
1,619,543. BILL FOLDER. ROBERT H. ROLFS and HARRY J. ROLFS, West Bend, Wis., assignors to Amity Leather Products Co., West Bend, Wis. Filed May 8, 1925. Serial No. 28,843. 1 Claim. (Cl. 150—38.)

A bill folder formed from a single integral blank and comprising a body portion, a main flap joined integrally thereto at one end and folded over said body portion and stitched thereto along two of its edges, a plurality of laterally extending auxiliary flaps folded over said main flap and having their free edges folded beneath said main flap, a line of stitching joining the free edges of said auxiliary flaps and said main flap, and lines of stitching join-



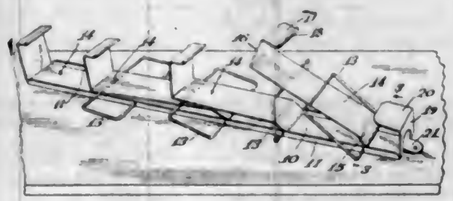
ing said auxiliary flaps and said main flap to form a plurality of pockets with their mouths opening longitudinally of the main flap, said auxiliary flaps being integral with said body portion.

1,619,544. RADIO APPARATUS. ALFRED F. SANFORD, Knoxville, Tenn. Filed Aug. 21, 1925, Serial No. 51,637. Renewed Oct. 7, 1926. 21 Claims. (Cl. 250—40.)



5. In an apparatus of the kind described, the combination of a tuning shaft, a movable member bearing a record-receiving surface, gearing connecting said member and said shaft, two other tuning shafts, a stationary guide, two guides movable along the stationary guide, two rocking members on a common axial line one supporting one and the other supporting the other of the movable guides, and means connecting one of the rocking members with one of said two tuning shafts, and means connecting the other of the rocking members with the other of said two tuning shafts, substantially as described.

1,619,545. RADIO APPARATUS. ALFRED F. SANFORD, Knoxville, Tenn. Filed Sept. 23, 1925, Serial No. 58,154. Renewed Oct. 7, 1926. 16 Claims. (Cl. 250—40.)



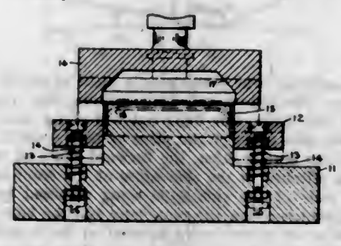
1. In a radio-receiving mechanism the combination of a wall having a record-receiving surface, two shafts to be turned for tuning, a pointer bar, and means located at the rear of said wall in operative relation with said pointer and with said shafts whereby rotation of one of said shafts and movement of the pointer bar in one direction are simultaneous and whereby turning of the other shaft and movement of the pointer in another direction are simultaneous, substantially as described.

1,619,546. TYPEWRITING MACHINE. HERBERT C. SHEPARD, Frankfort, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed July 10, 1925. Serial No. 42,752. 14 Claims. (Cl. 197—114.)

1. In detent mechanism for typewriting machines, the combination of a supporting arm, a detent roller, a pivot piece comprising a barrel portion for the roller to turn on and flattened end portions, and means for rigidly securing the flattened end portions of the pivot piece to said supporting arm.

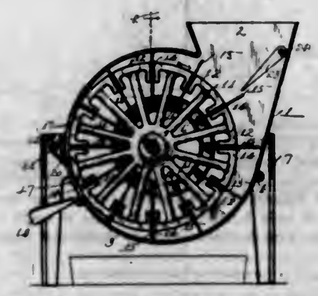
1,619,547. PAPER-BAG HOLDER. HARRY L. SNYDER, West Los Angeles, Calif. Filed Sept. 18, 1925. Serial No. 57,146. 3 Claims. (Cl. 211—2.)

1. A paper bag holder comprising a support, a plurality of panels secured to the support and extending downwardly and outwardly therefrom, each panel having its lower end bent to provide a shelf, and a bail associated with each panel and pivoted to said support, each bail being capable of being swung against the forward side of its respective panel to maintain a series of paper bags thereagainst.



1,619,548. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor, by mesne assignments, to Electric Refrigeration Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Mar. 14, 1925, Serial No. 15,477, Patent No. 1,549,335, dated Aug. 11, 1925. Divided and this application filed June 22, 1925. Serial No. 38,679. 4 Claims. (Cl. 62—116.)

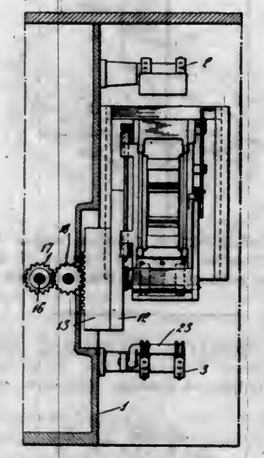
1. In a mechanical refrigerator unit, comprising refrigerant compressing mechanism: a refrigerant expansion unit comprising a horizontal inlet manifold provided with a plurality of outlets, and with an intake; a horizontal outlet manifold provided with a plurality of inlets, and with a discharge; duct means for connecting such compressing mechanism to said intake; duct means for connecting said discharge to such compressing



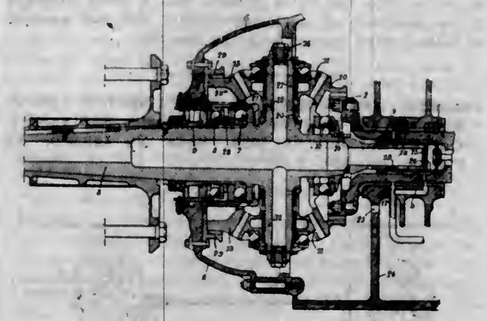
mechanism; and a plurality of vertically spaced substantially flat substantially horizontally disposed coils each connected between one of said outlets and one of said inlets.

1,619,549. METHOD OF FORMING BAND BRAKES. MELVIN STRINGER, Pottstown, Pa. Original application filed Aug. 28, 1924, Serial No. 734,698. Divided and this application filed Oct. 19, 1925. Serial No. 63,534. 3 Claims. (Cl. 153—3.)

1. The method of forming an article of the class described consisting in first forming a strip of material to the desired diameter, then bending the upper part in a stamping press forming a flange part of the distance said flange is to be bent, and then thereafter completing the bending of said flange with another tool.



1,619,550. MACHINE FOR MASHING FRUITS AND VEGETABLES. VICTOR E. THERAUD and SYBRANT WESSELIUS, Grand Rapids Township, Kent County, Mich. Filed Jan. 30, 1926. Serial No. 84,864. 5 Claims. (Cl. 146—174.)

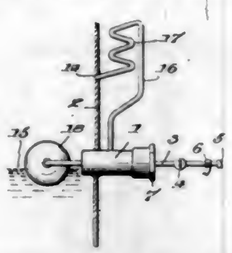


1. In a machine of the character described: a receptacle having a screen portion; a circuitous guide; an element rotatable about an axis eccentric to that of the guide; vanes engaging the guide and severally movable thereby on said element toward the screen portion and independently thereof and of the receptacle.

1,619,551. FRAMING MECHANISM FOR MOTION-PICTURE MACHINES. THEODORE F. UHLEMANN, New York, N. Y., assignor to Nicholas Power Company, Inc., New York, N. Y., a Corporation of Delaware. Filed June 3, 1920, Serial No. 386,143. Renewed May 8, 1926. 6 Claims. (Cl. 88—17.)

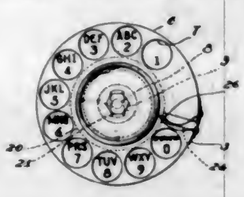
1. In a framing mechanism for moving picture machines, film driving mechanism mounted in the frame of the machine, a fixed projection aperture, a sprocket adjustable with reference thereto to frame the picture, and film guides for maintaining the film in position for projection at said aperture, said film guides with said sprocket constituting a movable unit shiftable relative to the projector mechanism.

1,619,552. SPEED-REDUCING GEAR. CHARLES WASEIGE, Ruell, France. Filed Apr. 1, 1926, Serial No. 99,086, and in France Apr. 23, 1925. 14 Claims. (Cl. 74—34.)



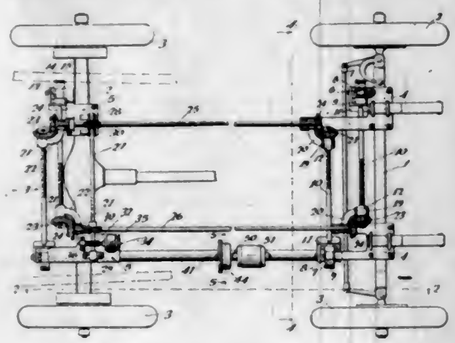
1. In combination with a driving shaft and a driven shaft: a differential speed reducing mechanism comprising a rotary bevel sun wheel adapted to be driven by said driving shaft and to slide axially with respect to the same, a relatively stationary bevel sun wheel, planetary pinions rotatably supported by said driven shaft and meshing with both sun wheels and an adjustable stop piece for limiting the axial motion of said rotary wheel.

1,619,553. LIQUID-LEVEL INDICATOR. FRANK E. WELLMAN, Kansas City, Kans. Filed May 24, 1923. Serial No. 641,100. 3 Claims. (Cl. 73—82.)



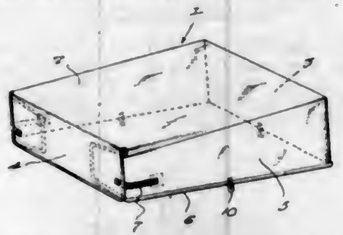
1. A liquid level indicator for high pressure stills comprising a hollow float, a tubular arm and rock-shaft supporting said float and communicating with the interior thereof, a stuffing box for said shaft arranged to be

mounted in the wall of the still, said shaft extending through the stuffing box and having its end sealed beyond the stuffing box, indicating means mounted on said shaft



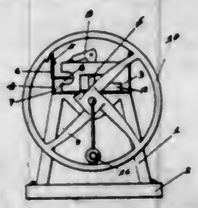
outside the stuffing box, a chamber within the stuffing box in communication with the interior of said tubular shaft and means connecting said chamber with the interior of the still.

1,619,554. AUTOMATIC TELEPHONE APPARATUS. TOM B. WILLSON, Pittsburgh, Pa. Filed June 5, 1925. Serial No. 35,129. 3 Claims. (Cl. 179—90.)



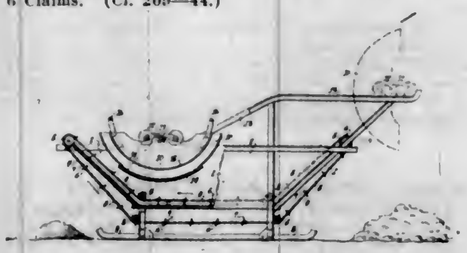
1. The combination with an automatic telephone dialing mechanism comprising a fixed dial face and a rotary manipulating disk, of a supplementary disk positioned between the dial face and the manipulating disk mounted to rotate with the latter element, and a brush attached to the underside of the supplementary disk and adapted to make wiping contact with the dial face.

1,619,555. AUTOMOBILE PARKING DEVICE. ERNST WISROTH and ARMOND J. HIRSCHFIELD, Los Angeles, Calif. Filed July 21, 1926. Serial No. 123,939. 12 Claims. (Cl. 180—1.)



1. An automobile parking device comprising in combination a vehicle having front and rear axles, brackets connected to said axles, legs pivotally connected to the brackets, transverse wheels at the base of said legs, jack rods connected to said wheels, said rods crossing each other, and means mounted in a fixed position on opposite sides of the vehicle to actuate the jack rods to elevate and lower the transverse wheels.

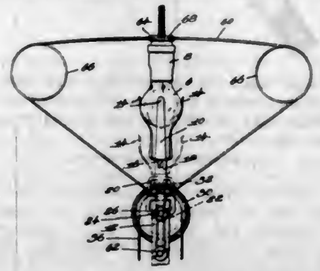
1,619,556. AUTOMOBILE SEAT-CUSHION COVER. MAURICE F. AARON, Mizpah, N. J. Filed May 29, 1925. Serial No. 33,720. 1 Claim. (Cl. 155—182.)



A seat cushion cover comprising a piece of fabric adapted to cover the top of the seat cushion, and including front and rear flaps, side flaps stitched along their upper edges to the side edges of the piece of fabric which covers the top of the seat cushion, the forward edges of the side flaps being stitched to the side edges of the front flap, the rear free ends of the side flaps being disposed inwardly and interposed between the rear flaps and the back of the seat cushion, an elastic strip secured at its forward end to the outer side of each of the side flaps adjacent the rear free end thereof, cooperating detachable securing means associated with the free end of each elastic strip, and the adjacent end of the rear flap, and loop members associated with the lower edges of the flaps for facilitating the attachment of the cover to the seat below the cushion.

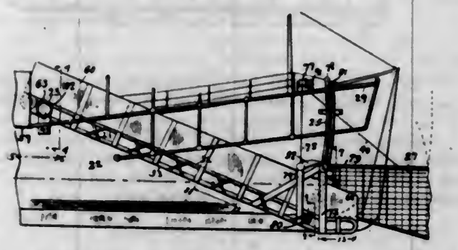
1,619,557. VEGETABLE AND SOAP SLICING MACHINE. EDWARD ANDERSON and ROSS W. ADAMS, Minneapolis, Minn. Filed Aug. 26, 1925. Serial No. 52,616. 4 Claims. (Cl. 146—113.)

1. In a slicing machine, the combination of a trough for receiving a substance to be sliced, an angle plate hinged to said trough and having one leg extending substantially horizontal into said trough thru an aperture in one wall thereof, a downwardly extending lip on the inner edge of said horizontal plate and a knife edge extending from said horizontal plate inwardly beyond said lip.



1,619,558. GOLD WASHER. THEODORE F. X. BEAUDET, Blaine, Wash. Filed Jan. 29, 1925. Serial No. 5,646. 6 Claims. (Cl. 209—44.)

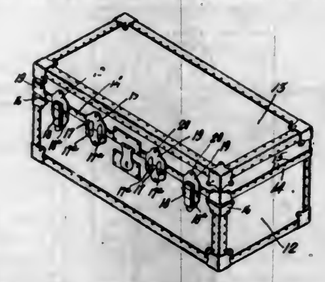
1. A gold washer comprising a water tank having a bottom and inclined ends, means shiftable from end to end of said tank and located within the upper portion



thereof for screening the sand from the gravel, and another means movable along the bottom and inclined ends of said tank and including a conveyor with pins for raking the sand deposited in the bottom of the tank and with angle bars for removing from the tank the upper stratum of sand.

1,619,559. APPARATUS FOR REMOVING AND INSERTING ELECTRIC BULBS. JOHN L. BERRY and WALKER HOLDEN, Andover, Mass. Filed June 23, 1926. Serial No. 117,998. 6 Claims. (Cl. 294—21.)

1. An apparatus for removing and inserting electric bulbs comprising a support, a bulb gripping device mounted on one end of the support and having provision for angular adjustment with respect to the support, actuating means in fixed position with relation to the support and associated with the gripping device to rotate the latter independently of the angular position thereof, and a flexible connection from the opposite end of the support to the actuating means for operating the latter independently of any movement of the support.

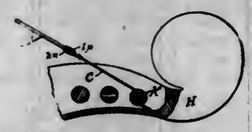


1,619,560. FISH-CATCHING APPARATUS. HERBERT E. BLECKER, New York, N. Y. Filed Aug. 21, 1925. Serial No. 51,676. 12 Claims. (Cl. 43—4.)

1. In an apparatus of the class described, the combination with a suitable vessel, of side elevators attached thereto and having hollow side rails in alignment with sprocket wheels, endless chains in mesh with the said sprocket wheels, cross connecting rods attached at intervals to the said chains and having roller members adapted to run within the said hollow rails, spreader bars secured at intervals to the said chains, and cordage secured to the said connecting rods and spreader bars forming therewith a mesh construction, a receiving net secured to the said side elevators and means to actuate the conveying members therewith connected.

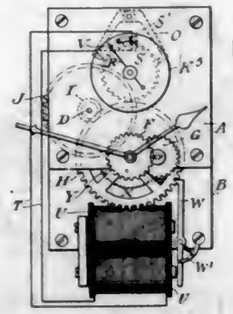
1,619,561. TRUNK. JULIUS A. BOLZ, Everett, Mass. Filed May 1, 1926. Serial No. 105,905. 2 Claims. (Cl. 190—28.)

1. A trunk cover having a sheet metal band attached to and projecting therefrom, to overlap the upper portion of a trunk body when the cover is closed, and a plurality of latching members complemental to latching members on the body, each cover-latching member including a plate riveted to the cover above the band, extending across the outer side of the band, and provided with spaced apart hooks composed of ears seated on the inner side of the overlapping portion of the band, and necks connecting the ears with the plate and seated on the lower edge of said



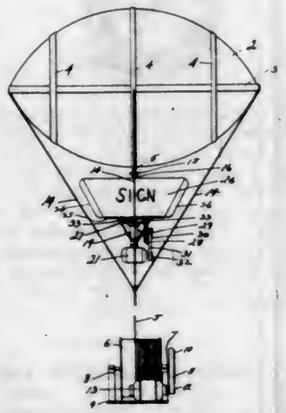
overlapping portion, the hooks reinforcing the overlapping portion, supporting the same against lateral displacement, and adapted to slide on the upper edge portion of the body when the cover is being closed, and thereby prevent chafing contact between the band and the body.

1,619,562. TRAFFIC SIGNAL. DAVID G. BOND, Quitsna, N. C. Filed Jan. 25, 1926. Serial No. 83,649. 2 Claims. (Cl. 116—51.)



1 A traffic signal including a casing having a window, a shaft journaled through a wall of the casing, a signaling member carried by said shaft within the casing and provided with a signaling device, means for rotating the shaft and turning said member to dispose said device opposite the window for display, means within the casing in the rear of said member for illuminating said signaling device when displayed, and an opaque member closing the space between the signaling member and the wall of the casing for cutting off the passage of light between said signaling member and the casing.

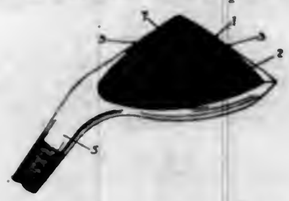
1,619,563. FASTENING CONNECTER FOR STRINGS OF MUSICAL INSTRUMENTS. AARON BURDWISE, Baltimore, Md., assignor to Musical Manufacturers' Corporation, Baltimore, Md., a Corporation of Maryland. Filed Jan. 18, 1926. Serial No. 82,150. 1 Claim. (Cl. 84—297.)



A musical instrument string comprising a main portion of gut or the like, and a key-connecting portion of comparatively stiff but bendable and comparatively non-elastic metal wire wound around and tightly embracing the front end of said main portion and extending forward beyond said front end and being of a size and shape which enables it to be inserted through the usual hole that extends laterally through a violin-key or the like, said wire thus being bendable by rotation of a violin-key or the like and thereby lockable to the latter for drawing the front end of said main portion onto and around the violin-key or the like.

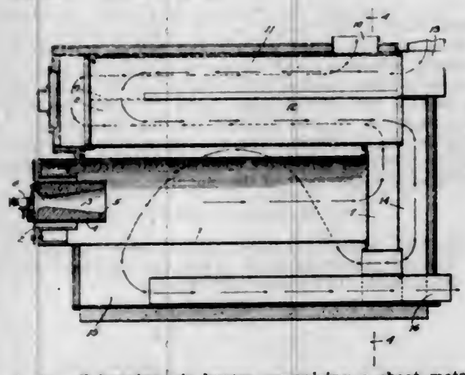
1,619,564. ELECTRICALLY-OPERATED CLOCK. BURT COLIN CAMPBELL, Cleveland, Ohio. Filed Aug. 21, 1924. Serial No. 733,350. 11 Claims. (Cl. 58—41.)

1. In an electrically controlled clock, in combination with the arbor of the spring second hand wheel, a spring second hand thereon, a dial therefor, a pinion and barrel, and a coiled spring operatively connecting said barrel and arbor, spaced contact members upon said dial, and a wedge shaped bridging contact member upon said second hand.



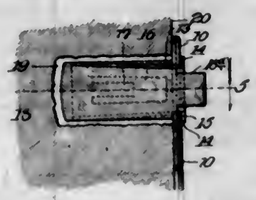
1,619,565. AERIAL ADVERTISER. JOSEPH CHVOJKA, Philadelphia, Pa. Filed Jan. 24, 1925. Serial No. 4,417. 2 Claims. (Cl. 40—29.)

1. An aerial advertising device including a balloon, a cable, means for connecting said cable to the balloon, means for reeling said cable in and out, an electric motor supported by the cable, a tubular support connected with the motor and through which the cable passes, said tubular support being in fixed relation to the cable, a tube on the cable above the tubular support, a ball bearing between the tube and said tubular support, a bearing fixed on the cable and projecting into the upper end of the tube, driving means for transmitting motion from the motor to said tube, a skeleton sign frame connected with said tube to revolve therewith, transparent material covering the sides of said sign frame on which advertisements may be delineated.



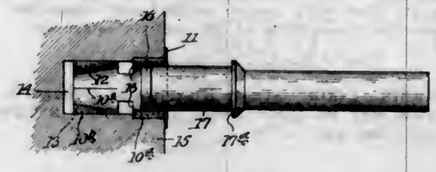
1,619,566. GOLF CLUB. RICHARD LOUIS CRANKSHAW, Dunlewy, Gweedore, Ireland. Filed Sept. 7, 1926, Serial No. 134,016, and in Great Britain Sept. 14, 1925. 8 Claims. (Cl. 273—77.)

1. A modern type of golf club head, a base comprising two surfaces, one of which slopes downwards from approximately the point at which the shaft merges into the head and meets the other sloping surface at a point in alignment with substantially the vertical centre line of the driving face, thereby providing a substantially



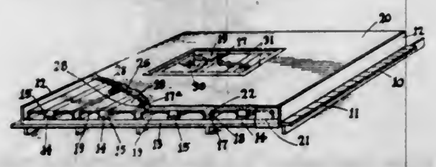
V-shaped lower edge for the driving face, the driving face being at an angle to the axis of the shaft of the club so as to bring into prominence the centre of the front edge of the base.

1,619,567. SHEET-METAL OIL-BURNING AIR HEATER. WALTER B. CROAN, Chicago, Ill., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed Jan. 18, 1926. Serial No. 82,026. 2 Claims. (Cl. 126—104.)



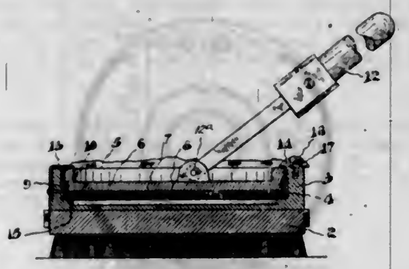
1. An oil burning air heater comprising a sheet metal structure forming a combustion chamber and a plurality of narrow flue gas passageways communicating with the combustion chamber and alternating with narrow passageways for air, means forming an air space surrounding the combustion chamber, and said air space being in communication with said air passageways.

1,619,568. EXPANSIBLE FASTENING. JOSEPH A. DEDOUCH, Oak Park, Ill. Filed Dec. 19, 1925. Serial No. 76,464. 3 Claims. (Cl. 72—105.)



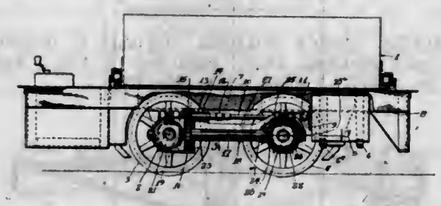
2. In a device of the class described, a hollow member having a passage therethrough and being open along one side, and a soft metal plug therein adapted to spread said member so as to expand said device into contact with the walls of a hole into which it is inserted when said plug is spread by a tool inserted through the outer end of said member, said soft metal also passing around the bottom end of the hollow member.

1,619,569. EXPANSIBLE FASTENING. JOSEPH A. DEDOUCH, Oak Park, Ill. Filed Dec. 19, 1925. Serial No. 76,465. 5 Claims. (Cl. 72—105.)



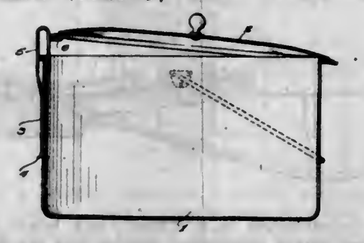
2. In a device of the class described, a hollow slitted member adapted to be inserted into a hole, a metal disk adapted to be driven therein to expand said hollow member into contact wtih the walls of said hole, means on the outer face of said hollow member for gripping the walls of said hole, and an annular rib on the outer face of said hollow member for gripping the walls of said hole.

1,619,570. METHOD OF BUILDING HOLLOW-WALL CONSTRUCTIONS. HOWARD A. DUCHEMIN, Los Angeles, Calif. Filed Oct. 13, 1924. Serial No. 743,337. 3 Claims. (Cl. 25—155.)



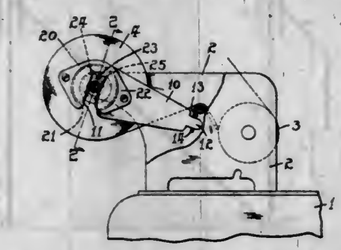
1. The method of building a hollow wall which consists of pouring a slab of self-hardening plastic material in a substantially horizontal position, supporting a plurality of rigid collapsible core forms at their ends in spaced parallel relation over said slab, pouring self-hardening plastic material between and over the core forms, collapsing and withdrawing the core forms when the material has set, and raising the wall from the horizontal position into a substantially vertical position.

1,619,571. FLOOR-FINISHING APPARATUS. JOHN THOMAS GARTON, Toronto, Ontario, Canada. Filed June 5, 1925. Serial No. 35,222, and in Canada Feb. 9, 1925. 3 Claims. (Cl. 91—39.)



1. A floor finishing tool formed with a solid back having a recess in its upper surface forming a shallow chamber wtih a closed bottom; a handle carrying member adapted to be snugly received in said recess and formed with a flat under surface; and means for supporting said member with its under surface spaced from the bottom of the recess.

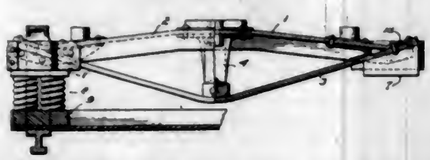
1,619,572. LOCOMOTIVE. WALTER S. GRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1924. Serial No. 758,000. 1 Claim. (Cl. 105—117.)



In a locomotive having two axles, driving mechanism comprising a centrally disposed longitudinal driving shaft having geared connections at each end thereof with one of said axles, a motor mounted upon said locomotive, flexible means substantially parallel to said driving shaft connecting said motor therewith at a point adjacent one of said axles, a centrally disposed longitudinal housing for said driving shaft, and means permitting rocking movement of either or both of said axles.

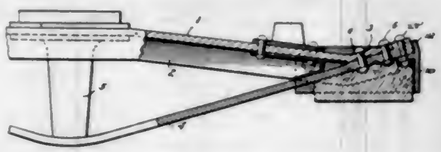
1,619,573. LID SUPPORT. ELIZABETH HAINES, Concord, Mass. Filed May 25, 1926. Serial No. 111,577. 2 Claims. (Cl. 53—8.)

1. A lid support for a cooking utensil, the same comprising an elongated spring strip folded intermediate its length to provide jaws normally in contact for some distance from their free ends whereby to obtain an extended grip against the sides of the utensil and having the portions adjacent the fold spaced apart for some distance to provide clearance for the rib or reinforcement at the upper edge of the utensil and permit vertical adjustment of the support upon the utensil, and an abutment projecting laterally from one jaw adjacent the fold to engage and support the lid at the required distance above the utensil.



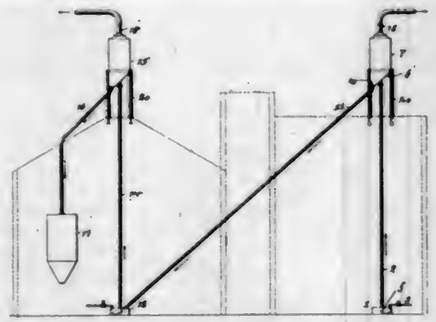
1,619,574. RETARDING DEVICE. ALLEN A. HORTON, Plymouth, Mich., assignor to Burroughs Adding Machine Company, a Corporation of Michigan. Filed Dec. 21, 1925. Serial No. 76,913. 9 Claims. (Cl. 188—83.)

1. The combination in an accounting machine, of a paper spool mounted for rotation, a member held against rotation and positioned to engage said spool, a second



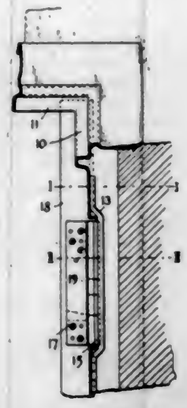
member having a surface inclined toward said spool, and means carried by the first member in resilient engagement with the inclined surface of the second member to urge said first member into engagement with the spool.

1,619,575. TRUCK BOLSTER. CHARLES F. HUNTOON, South Pasadena, Calif. Filed Sept. 3, 1925. Serial No. 54,277. 1 Claim. (Cl. 105—229.)



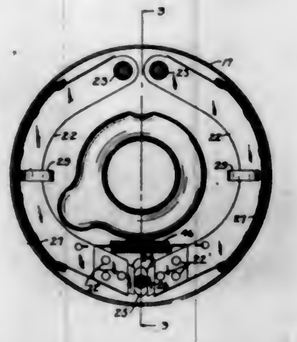
In combination, in a truck bolster, wear plates riveted on either side of the ends of the bolster and having upset portions or shoulders formed thereon, and at each end a plate having portions overlying the outer ends of the wear plates and riveted to said plates.

1,619,576. TRUCK BOLSTER. CHARLES FRANCIS HUNTOON, South Pasadena, Calif. Filed Oct. 12, 1925. Serial No. 62,049. 5 Claims. (Cl. 105—229.)



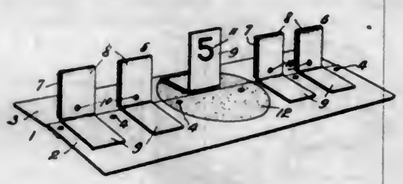
1. In combination in a trussed truck bolster having a channel-shaped compression member with the marginal flanges extending downwardly, a tension member having its ends secured to the ends of the web of the compression member, and a strut between the medial portions of the said members, guide plates riveted to the flanges of the compression member at each end of the bolster, and end members riveted to the end of the tension member and to the two adjacent side plates.

1,619,577. METHOD OF COOLING COMMINUTED SOLID MATERIAL. JENS O. JENSEN, Baltimore, Md. Filed June 8, 1921. Serial No. 476,091. 1 Claim. (Cl. 62—170.)



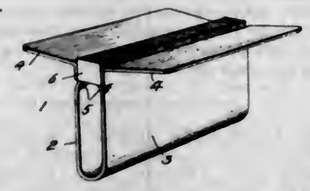
In the treatment of pulverulent filtering material for the purpose of reducing its temperature, the process which comprises distributing said pulverulent material in and exposing it to the cooling effect of an upwardly ascending air blast, settling the material and separating the air therefrom, and again distributing it and exposing it to the cooling effect of an upwardly ascending air blast with another settling and separation, to lower the temperature of the material stage-wise.

1,619,578. DOOR. ALBERT KIRSCHBAUM, Newark, N. J. Filed May 10, 1926. Serial No. 108,063. 3 Claims. (Cl. 189—46.)



1. The combination of a door jamb provided with a corner bead having a cylindrical surface, the bead having gaps to receive hinges each hinge being set with the axis of its pin in line with the axis of the bead, and a door carried by the hinge with an edge in close proximity to the bead of the door jamb.

1,619,579. BRAKE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Original application filed Sept. 28, 1923, Serial No. 665,442. Divided and this application filed Apr. 22, 1926. Serial No. 103,875. 6 Claims. (Cl. 188—250.)



4. A pressed metal brake shoe having a recess at one end and a cam contact member having a projection extending into and secured in said recess, the inner face of said cam contact member engaging the end of said shoe.

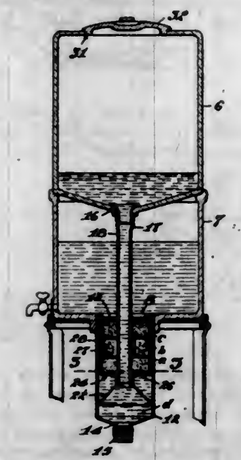
1,619,580. AMUSEMENT APPARATUS. EUGENE McLEAN LONG, New York, N. Y. Filed Dec. 16, 1925. Serial No. 75,764. 5 Claims. (Cl. 273—127.)

1. In an amusement apparatus, a base, angular, movable members connected to said base by a flexible means so arranged and disposed that they may be shifted by a ball passing over the apparatus and the shifted movable members then indicate a score.

1,619,581. SCISSORS SHARPENER. EUGENE McLEAN LONG, Port Washington, N. Y. Filed Mar. 8, 1926. Serial No. 93,012. 1 Claim. (Cl. 76—82.)

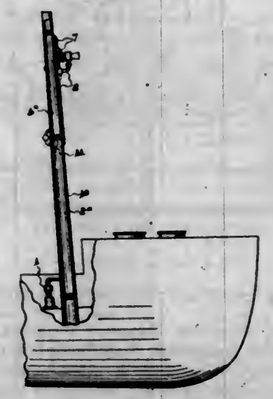
A scissors sharpener having a loop with four inwardly projecting ears and having outwardly projecting flanges, and a file held adjacent to the flanges and by the loop and against the ears.

1,619,582. KEY HOLDER. EUGENE McLEAN LONG, Port Washington, N. Y. Filed Mar. 8, 1926. Serial No. 93,013. 2 Claims. (Cl. 59—97.)



1. A key holder composed of an end, two converging spring sides and overlapping parts adapted to pass through the openings in keys and hold the same in place, the sides being so arranged and disposed that they will grip the keys and hold them with a frictional contact.

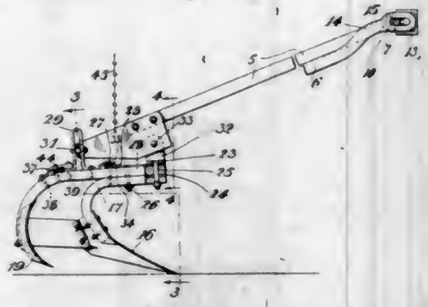
1,619,583. STEAM IRON COUPLING AND HOSE. JOSEPH J. MULCONROY, Germantown, Pa., assignor to Mulconroy Company, Inc., Philadelphia, Pa., a Corporation of New Jersey. Filed June 17, 1925. Serial No. 37,608. 2 Claims. (Cl. 285—72.)



1. In a device of the character stated a one-piece body screw-threaded at each end and having a restricted opening at one end, a restricted hose part extended through said member and fitted into said opening, a nipple, a union nut screw-threaded to said body and connecting said nipple and the end of said member engaged by said hose, a packing within said body and surrounding said hose, a packing nut having screw-threaded engagement with the end of said body opposite that end having the union nut, which nut has an enlarged open end to receive an enlarged hose part, and a set screw penetrating said packing nut adjacent said enlarged open end to lock said hose part to place.

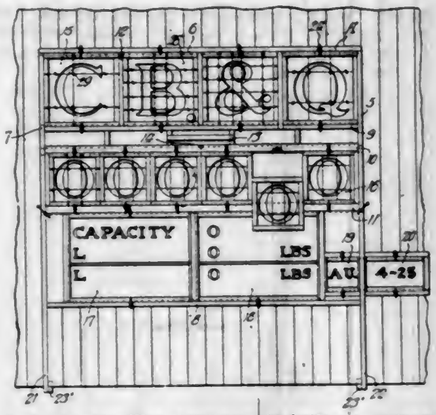
1,619,584. FILTER. JOSEPH F. NELSON, Los Angeles, Calif. Filed Mar. 25, 1926. Serial No. 97,414. 4 Claims. (Cl. 210—101.)

1. In a filtering apparatus, a filtrate container having an opening in its bottom wall, a depending jar extending, over said opening fitted with a drain outlet, a closure for said outlet, a filter in said jar extending over the opening in the container and spaced from the lower end of the jar, and a feed pipe having its discharge end opening within the jar beneath said filter.



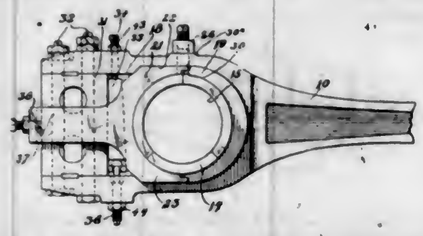
1,619,585. SOUND-SIGNALING INSTALLATION. JOHN PELL NORTHEY, Toronto, Ontario, Canada. Filed June 8, 1926, Serial No. 114,475, and in Great Britain June 8, 1925. 3 Claims. (Cl. 116—147.)

3. In sound signaling installations the combination of a sound producing device of the siren or diaphone type adapted to use air for driving and separately supplied air for sound producing purposes; separate air storage sys-



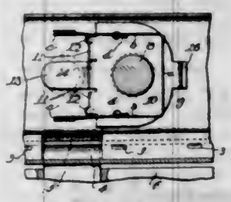
tems, one connected to the device to provide air for driving and the other, of larger capacity, connected to the device to provide air for sound producing; an air compressor adapted to supply compressed air directly to the larger system and a direct communication between the two air storage systems adapted to permit air to pass from the sound producing air system to the driving air system and to prevent equalization of pressure while the sound producing device is in operation and air is being used at a faster rate from the sound producing air system than from the drifying air system.

1,619,586. AGRICULTURAL MACHINE. FREDERICK L. SCHLEY and CLEMENS ERNST, Brooklyn, N. Y. Filed Jan. 29, 1925. Serial No. 5,445. 7 Claims. (Cl. 97—161.)



1. In an agricultural machine, a yoke member adapted to have connection to a draft means, an implement beam having pivotal support from the yoke member, a guide member on the implement beam engaging about said yoke, and means for adjustably connecting said yoke to said guide member whereby to hold the implement beam in an adjusted angular position.

1,619,587. STENCILING APPARATUS. WILLIAM H. SCHOGER, Aurora, Ill. Filed Apr. 12, 1926. Serial No. 101,247. 4 Claims. (Cl. 101—114.)



1. A car stenciling apparatus including a rectangular frame having a plurality of appropriately positioned stencil receiving openings therein, interchangeable stencils for insertion in said openings, means for readily removably holding the stencils in the openings whereby they are readily interchangeable according to the matter desired to be stenciled, and depending legs having laterally extending stops adapted to be placed under the sill of the car to properly position the frame on the side wall thereof.

1,619,588. CONNECTING-ROD BEARING. CHARLES J. SCUDDER, Scranton, Pa. Filed Feb. 19, 1926. Serial No. 89,270. 7 Claims. (Cl. 308—68.)

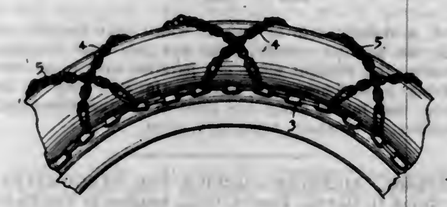
1. In a connecting rod bearing for a crank pin, a divided bearing member having a circular outer surface, retaining means having at least one movable part with arms partially embracing the bearing member and having a curved inner surface fitting the outer surface of the bearing member whereby said bearing member is free to turn in the retaining means, means for varying the position of the movable part of the retaining means longitudinally of the connecting rod to compensate for wear of the bearing member, and means carried by the arms of the movable part of the retaining means and cooperating with a stationary part for preventing the arms from closing inwardly of the crank pin.

1,619,589. LOOSE-LEAF BINDER. WILLIAM J. STEENROD, Benton Harbor, Mich., assignor to Baker-Vawter Company, Benton Harbor, Mich., a Corporation of Michigan. Filed Oct. 24, 1925. Serial No. 64,490. 4 Claims. (Cl. 129—12.)

1. A post bar consisting of a strip of sheet metal folded to form a hollow flattened post bar proper and contiguous parallel flanges at one side thereof, and a slotted tube extending over said flanges and secured thereto.

4. In a hollow orificed post bar, a spring-pressed normally inclined orificed plate having legs seated at one side of the post orifice in the lower wall of the bar and also having on such side a lever arm and having on the opposite side a stop arm arranged to contact wth the upper wall of the bar when the plate is shifted to position parallel with the walls of the bar, and a push button having a flanged convex lower end engaging said lever arm for rocking said plate.

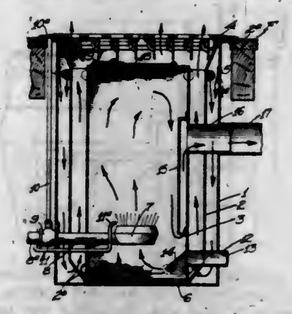
1,619,590. CASTER WHEEL. GEORGE W. TANNER, Otis, Colo. Filed Nov. 30, 1925. Serial No. 72,178. 1 Claim. (Cl. 16—45.)



A caster wheel comprising an annular, flat-sided, resilient tire; disks extending from a position parallel to each side of said tire, and parallel to each other, inwardly toward each other and the axis of said tire, the peripheral edges of said disks being turned outwardly away from said tire; an axle collar passing through axial openings in said disks and projections on said collar adapted to maintain said disks against said tire.

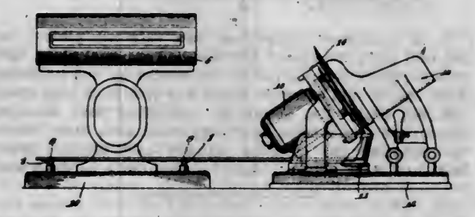
1,619,591. PIPE HANGER. CARL H. VOELLMECKE, Cincinnati, Ohio. Filed Mar. 5, 1925. Serial No. 13,158. 1 Claim. (Cl. 248—32.)

A pipe hanger comprising a strap adapted in substantial U shape to embrace a pipe to be supported, a bendable bolt passing through and extending between the branches of the strap, and a wedge adapted to be passed between the ends of the strap and between the bolt and the pipe to be supported, said wedge being of less width than the distance between the branches of the strap and having a lip for engaging a supporting member, the body of the wedge consisting of two lugs on its under side adapted to engage the surface of the pipe to be supported, and a notched upper surface for engagement with the bendable bolt, said pipe engaging lugs being curved to permit the wedge to be rocked as its lip is driven into supporting engagement with the supporting member, whereby the notch occupied by the bolt will simultaneously effect a bending spring-like action of the bolt and a consequent gripping of the wedge in adjusted position.



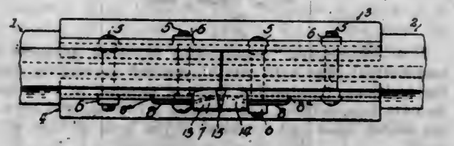
1,619,592. ANTISKID CHAIN. HERMANN T. VULTÉ, New Rochelle, N. Y. Filed Mar. 31, 1926. Serial No. 98,700. 2 Claims. (Cl. 152—14.)

1. An anti skid chain for a rubber-tired vehicle wheel which comprises side sections, right diagonal tread sections, and left diagonal trend sections, each of which is free of the other tread sections and crosses over or under adjacent tread sections at points which will come at the sides of a tire when applied to a vehicle wheel, the chain being constructed so that the tread sections are each in direct contact with the tire at the middle of its tread and are held away at one or the other of its sides.



1,619,593. FLOOR HEATER. THOMAS P. BLAIR, San Diego, Calif. Filed Mar. 11, 1925. Serial No. 14,698. 5 Claims. (Cl. 126—116.)

1. In a gas floor heater, an outer casing, outwardly extending flange means at the upper end of the casing for supporting the latter on the floor of a room, and provided in the side wall thereof, and near its upper end with openings connecting the interior of the casing with fresh air, not from said room, an inner casing positioned in the outer casing and spaced from the side walls thereof, and a fire box casing positioned within and spaced from said inner casing, said inner casing being provided with a plurality of ports at the lower ends of its side walls connecting the space between the inner and outer casings

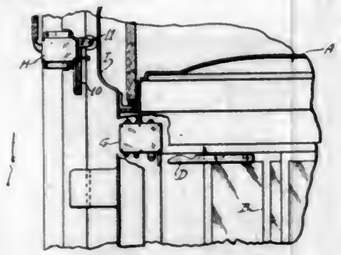


with a space between the inner and the fire box casings, and the openings, in the outer casing communicating with the fresh air, through said ports with said room.

1,619,594. WEIGH-SCALE PLATFORM. EMIL BUECHLER, Chicago, Ill. Filed July 1, 1926. Serial No. 119,798. 4 Claims. (Cl. 263—27.)

1. As an article of manufacture, an elongated plate including a goods containing part, an arm part and an enlarged part of a form and size for attachment to and support upon the weighing mechanism of weigh scales, substantially as described.

1,619,595. RAIL-JOINT SPRING. ROBERT L. CAIRNCROSS, Chicago, Ill. Filed Mar. 17, 1926. Serial No. 95,206. 7 Claims. (Cl. 238—259.)

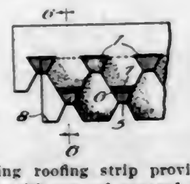


1. A rail joint member embodying therein, an elongated apertured plate having a body portion and flat end portions, said body portion being formed as a part of a sphere and of a transverse width greater than said end portions.

1,619,596. DOOR-LOCKING MECHANISM. FENTON G. CHAPIN, East St. Louis, Ill. Filed May 5, 1926. Serial No. 106,885. 7 Claims. (Cl. 187—31.)

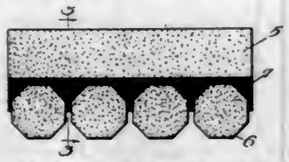
5. An elevator door locking mechanism, comprising a spring-actuated door latch, a member on the door with which said latch co-operates, constructed so as to move said latch in opposition to its actuating spring when the door is moved into its open position, a pivotally-mounted locking element adapted to engage and hold said latch, a spring for normally maintaining said locking element in engagement with the latch, an electric magnet for dis-

engaging the locking element from the latch, a switch in the circuit that is used to energize said magnet, and a shoe on the elevator car arranged so as to close said



switch and maintain it in its closed position when the floor of the elevator car reaches and remains in a position approximately level with the sill of the door opening.

1,619,597. ELECTRICAL CONDENSER. MICKLE CLARK, Chicago, Ill. Filed Feb. 1, 1926. Serial No. 83,179. 5 Claims. (Cl. 175—41.5.)

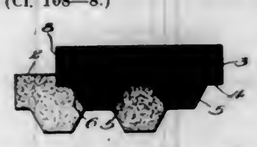


1. A condenser comprising two external plates; an internal plate interposed between said external plate, said internal plate being attached to, carried by but insulated from one of said external plates and free from said other external plate nad means for adjusting said external plates laterally toward and away from each other thereby adjusting the distance between said internal plate and said other external plate, substantially as described.

1,619,598. ROOFING ELEMENT. HARRY A. CUMFER, Chicago, Ill., assignor of one-half to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 2, 1924. Serial No. 741,115. 2 Claims. (Cl. 108—8.)

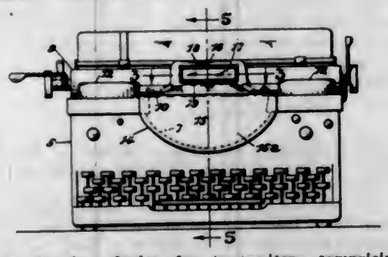
1. A self-spacing roofing strip provided adjacent one longitudinal edge with sets of opposed converging, tapering incisions, terminating short of meeting to form intermediate tabs between the opposed incisions, said tabs being folded upon and attached to the body portion of the strip.

1,619,599. SHINGLE ELEMENT. HARRY A. CUMFER, Chicago, Ill., assignor of one-half to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 2, 1924. Serial No. 741,116. 4 Claims. (Cl. 108—8.)



1. As a new article of manufacture, a roofing strip having a body portion, two sides and an upper edge, a base provided with spaced notches and interposed tabs between the notches and an integral overlying strip attached to the body portion, the strip having the characteristics of having been formed by first making spaced angled incisions adjacent the lower edge of the strip, and then folding said lower edge on the lines of the incisions back upon the body portion of the strip.

1,619,600. ROOFING ELEMENT. HARRY A. CUMFER, Chicago, Ill., assignor of one-half to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 2, 1924. Serial No. 741,117. 4 Claims. (Cl. 108—8.)

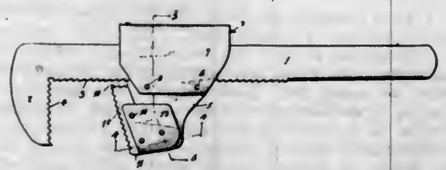


1. As a new article of manufacture, a strip of roofing material substantially rectangular in shape, provided with spaced rectangular notches extending inwardly from the lower edge and integrally connected overlying portions folded upon and attached to the upper surface of the strip, said integrally connected portions comprising the material severed between individual sets of notches, a portion of the outer end of each overlying folded portion forming a shoulder with which the lower edge of an overlying strip is adapted to align and abut.

1,619,601. SHINGLE STRIP. HARRY A. CUMFER, Chicago, Ill., assignor of one-half to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 2, 1924. Serial No. 741,118. 5 Claims. (Cl. 108—8.)

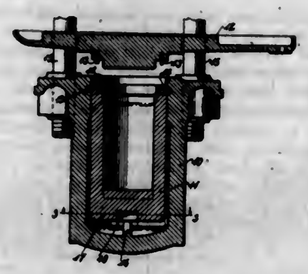
1. A shingle strip of greater width than length, having two parallel straight sides and two sides staggered relative the straight sides but parallel with each other, having a semi-hexagonal incision in the body of the strip, and folded along the lines of the semi-hexagonal incision to produce hexagonal areas.

1,619,602. SILENCING DEVICE FOR TYPEWRITERS. ROYAL G. DANIEL, Denver, Colo., assignor to The Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Refiled for abandoned application Serial No. 672,589, filed Nov. 3, 1923. This application filed June 29, 1926. Serial No. 119,775. 10 Claims. (Cl. 197—186.)



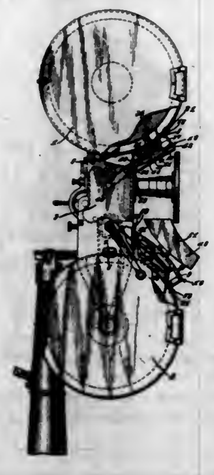
1. A silencing device for typewriters comprising in combination with a machine having a frame, and a platen, a cover exclusively enclosing a portion of the surface of the platen around and including the point at which the impressions are produced by action of the keys.

1,619,603. BUNG-SEAT CONSTRUCTION. HENRY M. DILLHOEFER, Cleveland Heights, Ohio, assignor to The Byrne Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 16, 1925. Serial No. 56,682. 7 Claims. (Cl. 220—39.)



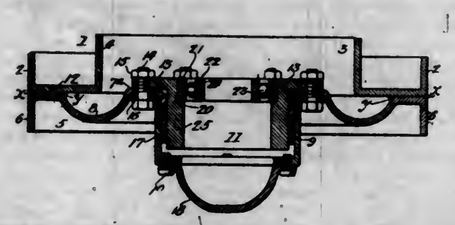
1. A bung-seat structure for metal containers and the like comprising a pair of tubular members adapted to be telescopically arranged in an opening in the wall of the container and having laterally projecting flanges upon the interior and exterior of the container between which the container wall is adapted to be clamped to form a sealed joint therewith.

1,619,604. PIPE WRENCH. CHARLES F. DOW, Poughkeepsie, N. Y. Filed Mar. 17, 1925. Serial No. 16,169. 1 Claim. (Cl. 81—179.)



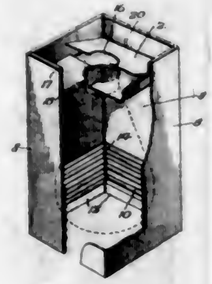
In a pipe wrench, in combination with a shank and a fixed jaw thereon, ratchet teeth on said shank, a movable jaw member slidably mounted on said shank and having ratchet teeth adapted to engage the teeth on the shank, means to maintain said ratchet teeth in engagement, said movable jaw member provided with a V-shaped groove in its face opposite the fixed jaw, a pipe-engaging block slidably mounted on said movable jaw adapted for movement towards the shank through engagement with a pipe and having a face shaped to engage said V-shaped groove, spring actuated means to project said block away from and in spaced relation to the shank so that it may be moved toward the same when a pipe is engaged and the face of the block adjacent the shank provided with ratchet teeth adapted to engage the ratchet teeth on the shank through said inward sliding movement.

1,619,605. RAM. MICHAEL W. FAHERTY, Los Angeles, Calif. Filed Sept. 21, 1925. Serial No. 57,771. 4 Claims. (Cl. 138—10.)



1. In combination, a cylinder having an end wall element, a ram element in said cylinder, and an abutment on one of said elements intermediate the two elements, said abutment being normally adapted to abut the other of said elements on the inward stroke of said ram element, said other element having a recess, said elements being relatively adjustable for permitting said abutment to enter said recess.

1,619,606. MOTION-PICTURE-PROJECTING MACHINE. JOHN FAIT, Glenburnie, Md. Filed May 13, 1926. Serial No. 108,867. 2 Claims. (Cl. 88—17.)

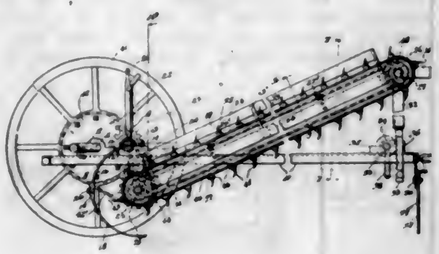


1. In a fire extinguishing attachment for motion picture machines a casing adapted to be secured to and exteriorly of a film magazine and the projecting mechanism of the machine, slotted webs within said casing, socketed bosses within the casing and opposing and spaced from said webs, slotted protuberances within the casing and spaced from the slotted webs, apertured protuberances within the casing and opposing and spaced from said slotted protuberances and further opposing and spaced from said socketed bosses, guide rollers journaled in said sloted webs and slotted protuberances, guide rollers journaled in said socketed bosses and apertured protuberances, the guide rollers journaled in the slotted webs and protuberances opposing the guide rollers journaled in the socketed bosses and apertured protuberances and arranged in close proximity therewith, and said casing provided with means for the passage of film therethrough between the housing and the film magazine.

1,619,607. VEHICLE WHEEL. CHARLES B. FAIRWEATHER, West Chester, Pa., assignor of one-half to Frederick E. Moore, Coatesville, Pa. Filed Apr. 21, 1926. Serial No. 103,512. 7 Claims. (Cl. 301—6.)

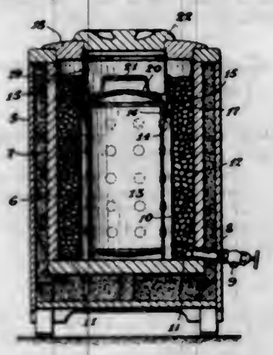
4. The combination of a metallic vehicle wheel made in two sections welded together, each section having an extended peripheral flange, the two flanges forming the felly of the wheel, one section having a laterally extended brake-drum formed integral therewith, and the other section having an extended housing for a bearing, the latter section having an annular groove and an annular depression between the peripheral flange and the housing, the web of the first mentioned section extending over a portion of said depression.

1,619,608. LAMP WRAPPER. WALTER H. FAIRCHILD, Chicago, Ill., assignor to Mid-West Box Company, Anderson, Ind., a Corporation of Indiana. Filed Mar. 10, 1924. Serial No. 697,988. 6 Claims. (Cl. 229—37.)



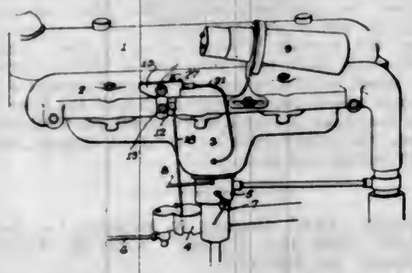
1. A lamp wrapper comprising a sheet adapted to extend around the lamp, and a flap at one end folded against the inner face of the sheet, and provided with means to cushion the enlarged portion of the lamp-sides.

1,619,609. CHASSIS FRAMING MORE PARTICULARLY FOR MOTOR VEHICLES. JENÖ FEJÉS, Budapest, Hungary. Filed Apr. 7, 1926, Serial No. 100,435, and in Great Britain Mar. 19, 1926. 6 Claims. (Cl. 280—106.)



1. A chassis framing for vehicles having girders composed of flat sheet metal plates welded together and stiffening members connecting opposite sheet metal plates of the individual girders, for the purposes set forth.

1,619,610. LOADING DEVICE. EMIL F. LEWIS FRITZ, Chicago, Ill. Filed Sept. 30, 1922. Serial No. 591,625. 3 Claims. (Cl. 19—122.)



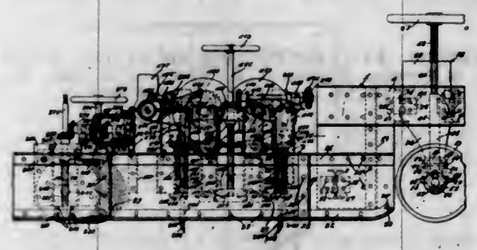
1. In a rake and loader an elevating device comprising a conveyor; a driving shaft supporting one end of the conveyor and arranged to afford a pivot during the elevating and lowering movements thereof; a U-shaped end frame, on the legs of which the opposite end of the conveyor is pivotally mounted for its support; rack plates depending from the connecting bar of said U-shaped frame; and adjusting shaft having teeth with which the rack plates are engaged for support and adjustment; and means for locking the adjusting shaft in adjusted position, substantially as described.

1,619,611. ICE-CREAM CABINET. JOSEPH GOLDSMITH, Seattle, Wash. Filed May 29, 1924. Serial No. 716,666. 5 Claims. (Cl. 217—7.)

1. In a refrigerating device for the storage of refrigerated products, in combination, a refrigerant container, a refrigerated product container disposed within said refrigerant container, a protective collar fitting snugly upon the upper end of said product container and extending upwardly therefrom and an annular cover fitting within the upper end of said refrigerant container having a downwardly directed cylindrical extension secured thereto adapted to project and fit snugly within said collar to completely enclose the contents of said refrigerant container.

1,619,612. THERMOSTATIC GASOLINE VALVE. ALEXANDER GRUDZINSKI, Cambridge Springs, Pa. Filed Feb. 27, 1924. Serial No. 695,600. 1 Claim. (Cl. 123—180.)

In combination with an internal combustion engine provided with an intake pipe, an exhaust pipe and a container for fuel, auxiliary fuel supply mechanism comprising a pipe line extending from said container to said intake pipe, means for controlling the passage of fuel through said pipe line, said means including a thermostat and a movable controlling valve operatively associated therewith, said thermostat being positioned to be subject to the heat within said exhaust pipe, and an adjustable stop member positioned adjacent said valve and constructed to engage the same to limit the extent to which said valve may be opened.

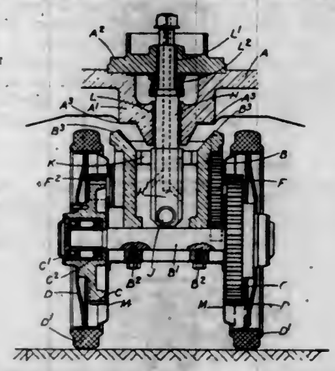


1,619,613. BUTTONHOLE ATTACHMENT. JAMES A. GUY, Semiway, Ky. Filed Apr. 3, 1925. Serial No. 20,565. 7 Claims. (Cl. 112—160.)

1. In a sewing machine attachment of the class described, a supporting plate, a presser foot slidably associated with the plate for engaging the work and movable transversely thereof and having a needle receiving slot formed therein, an operating lever rockably mounted upon the supporting plate, a swinging lever rockably and slidably mounted upon the supporting plate at a point intermediate its ends, means operatively connecting the forward end of the swinging lever with the presser foot,

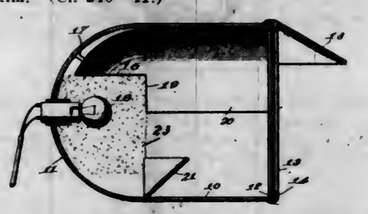
a cam plate pivotally associated with the supporting plate, means pivotally connecting the cam plate and the swinging lever, and means for operating the cam plate from said operating lever.

1,619,614. ROAD-BUILDING MACHINE. FRED MERRILL HARGRAVE, Cedar Rapids, Iowa. Filed Sept. 15, 1925. Serial No. 56,508. 3 Claims. (Cl. 262—8.)



1. In a road building machine, a supporting structure for surface working tools, said supporting structure formed of a front and a rear section connected together, said front section arranged over and projecting forwardly from said rear section, a front wheel truck, means for connecting said front wheel truck to said front section and providing for the vertically adjusting of the truck, a rear wheel truck arranged within said rear section, and means for vertically adjusting said rear wheel truck and further providing a connection between the sides of the truck and the said rear section.

1,619,615. WRAPPER-MAKING MACHINE. BERG HEINRICHS, Chicago, Ill., assignor to Midwest Box Company, Chicago, Ill., a Corporation of Indiana. Filed Jan. 9, 1922. Serial No. 527,819. 18 Claims. (Cl. 93—1.)

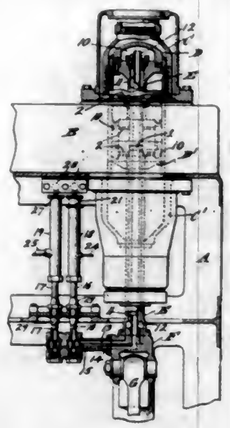


1. In a machine of the class described, the combination of means for continuously folding a web of paper into the form of a flattened tube, means for securing the over-lapping edges of said flattened tube together, means for cutting said flattened tube into lengths, and means for perforating said lengths transversely to form separation lines.

1,619,616. ELECTRICALLY-PROPELLED VEHICLE. PHILIP DENIS IONIDES, Ipswich, England, assignor of one-half to Ransomes & Rapier Limited, Ipswich, England, a Company of Great Britain. Filed Dec. 24, 1925. Serial No. 77,671. 2 Claims. (Cl. 180—42.)

1. A driving and steering unit for an electrically propelled vehicle comprising a vertical steering post adapted to be mounted to rotate in the vehicle frame, a tilting block, a pivot so connecting the tilting block to the steering post that this block can rock about an axis at right angles to the axis of rotation of the steering post, a short dead axle extending across and rigidly carried by the tilting block, a road wheel freely mounted at each end of the axle, two electric motors mounted respectively on the front and rear faces of the tilting block and transmission mechanism whereby one of these motors is caused to drive each road wheel.

1,619,617. HEADLIGHT. WILLIAM B. JOHNSON, Lexington, Ky. Filed June 3, 1926. Serial No. 113,502. 1 Claim. (Cl. 240—41.)



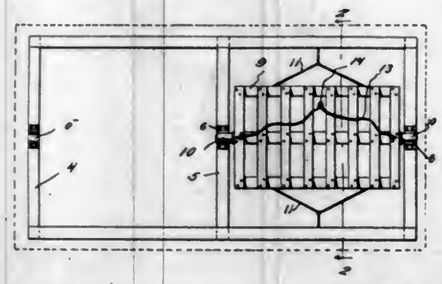
A headlight comprising a housing open at one end, a parabolic reflector located within and across the top of the housing, a semi-cylindrical reflector disposed in front of the parabolic reflector and formed integrally with said parabolic reflector and extending along its opposite edges below the bottom edge of the parabolic reflector, a reflector secured to the bottom of the housing and projecting forwardly of the same, the rear edge of said reflector terminating in a plane with the rear edge of the second mentioned reflector, a lamp carried by the rear wall of the housing, and a dull-surface embracing the lamp and extending forwardly and terminating at points along the housing where the plane which passes through the rear edges of the last mentioned reflectors cuts the housing, said surface also extending upwardly at the rear of the housing to a point adjacent the lower edge of the first mentioned reflector.

1,619,618. PISTON-COOLING DEVICE. OLAV ESKIL JORGENSEN, Forest Hills, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 22, 1924. Serial No. 727,499. 6 Claims. (Cl. 123—176.)

1. An engine piston cooling system, having a liquid-conducting pipe moving with the piston, a stationary pipe

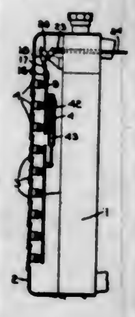
within which the moving pipe telescopes, a stuffing box between the moving and stationary pipes, liquid connections for the stationary pipe, and a flexible mounting

for the stationary pipe and stuffing box permitting the stationary pipe and stuffing box to move sidewise with and in parallelism with the moving pipe.



1,619,619. FARRIER'S KNIFE. VINKO KYFES, St. Joseph, La. Filed July 27, 1925. Serial No. 46,441. 1 Claim. (Cl. 168—48.)

A farrier's knife comprising a stem, a handle on one end of the stem, a U-shaped member having its bight connected with the other end of the stem, the limbs of said member being of wedge-shape in cross-section to form cutting edges which are arranged at the inner part of the member, said limbs inclining upwardly and outwardly, and the extremities of the limbs being curved inwardly to form hooks which are of the same cross-sectional shape as the limbs.



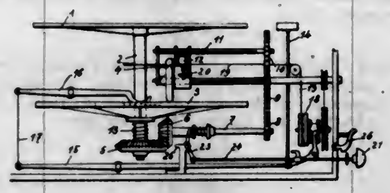
1,619,620. HAY-MOWING MEANS. PEARL G. LIGHT, Exeter, N. Y. Filed Oct. 24, 1925. Serial No. 64,656. 1 Claim. (Cl. 214—5.)

Hay mowing means comprising an overhead support, three, spaced longitudinally disposed and horizontal bearings in longitudinal alignment carried by said overhead support, an overhead longitudinal track disposed above and in the same plane as said alined bearings, a traveller on said track, a rockable and shiftable mower member having extending from its opposite ends longitudinal trunnions removably arranged in one pair of said bearings

and shiftable from said pair of bearings to the other pair, means on the mower member for the connection of the same to the traveller for facilitating the said shifting of the mower member, a pendent cable on the mower member, and means to which said cable is detachably connected for the holding of the mower member against casual lateral tipping.

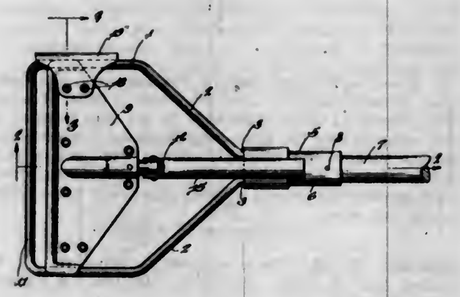
1,619,621. RADIATOR-SHUTTER MECHANISM. RALPH M. LOVEJOY, Meredith, N. H. Filed Nov. 12, 1920. Serial No. 423,729. 10 Claims. (Cl. 189—62.)

6. In a cooling system for engines having a radiator, a shutter, for the radiator, comprising a series of pivotally mounted louvers having laterally extending ears, an actuator bar, a series of transmitters pivotally connected to said actuator bar and to said ears having extensions adapted to engage and close said louvers when said actuator is moved in one direction and resilient means connecting said transmitters and said louvers operable when said actuator bar is moved in the opposite direction to open said louvers.



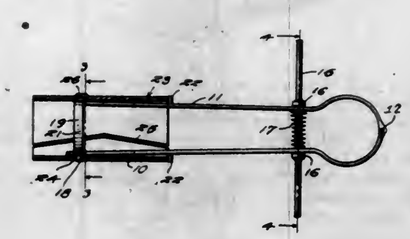
1,619,622. CIGARETTE BOX. GERTRUDE A. MACVEY, Brooklyn, N. Y. Filed Sept. 22, 1925. Serial No. 57,923. 1 Claim. (Cl. 206—48.)

As a new article of manufacture, a cigarette box formed from a single blank, said blank being divided to provide face walls, and intermediate side walls, one of said side walls being formed with a flap for attachment to one of the face walls to maintain the box in assembly, one of said face walls being provided at one end with an extended flap to form an end closing flap, an extension flap at the outer end of the end closing flap, said end closing flap being formed with an opening, the opposite end of said face wall being provided with an extended end closing flap, said extended flap continued by an elongated flap, the second face wall being provided with a flap returned to overlie the same, means for maintaining said flap in



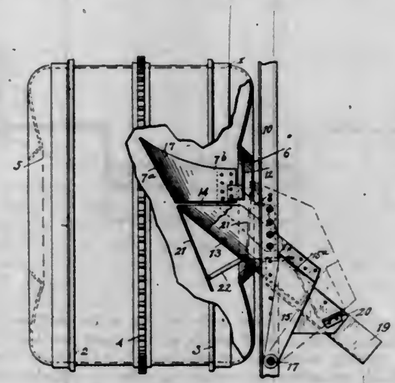
such position, the free end portion of the elongated flap being insertible between said returned flap and the second face wall to hold the elongated flap in closed position, said returned flap being at the end of the box provided with the closing flap having the opening.

1,619,623. PHONOGRAPH. NICOLA MAGNIFICO, Rome, Italy. Filed Mar. 31, 1922. Serial No. 548,300. 4 Claims. (Cl. 74—26.)



1. In a phonograph, a record disk, a spindle on which the record disk is fixed, a drive disk mounted to turn with and slide upon the said spindle, a drive shaft, a friction roller slidable on the drive shaft and adapted to contact with said drive disk for imparting a progressively increasing or decreasing movement to the said drive disk and through the same and the spindle to the record disk, means for yieldingly supporting the said drive disk to maintain the same normally in contact with the said friction roller, and means for shifting the said drive disk on the spindle to separate the same from the said friction roller.

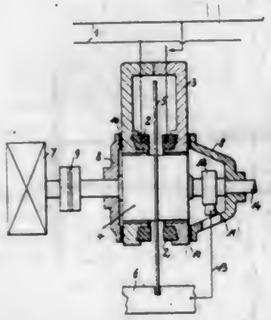
1,619,624. MOP. ALEXANDER MASZCZYK, Chicago, Ill. Filed Mar. 13, 1925. Serial No. 15,314. 1 Claim. (Cl. 15—151.)



In combination, a handle having a socket at one end thereof, a rod extending from the handle and having an end portion confined in the socket and provided with a plurality of opposed spaced grooves, means securing the end portion in the socket, a frame connected to the handle, a clamping member having a substantially channel shaped portion adapted to cooperate with a portion of the frame for clamping a mop fabric between the channel shaped portion and said portion of the frame, and an operating member comprising a handle pivotally connected to the clamping member and having opposite arcuated flanges having end portions adapted to selectively engage the grooves for adjusting the clamping member longitudinally of the rod member to move the clamping member into clamping relation with respect to the mop fabric.

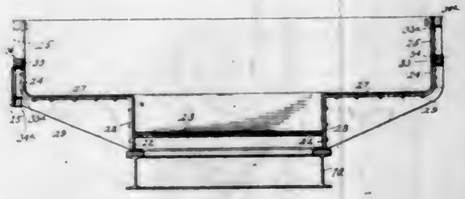
1,619,625. TOOL FOR INSERTING AND REMOVING BEARING SLEEVES. FRED MERDIAN, Vancouver, Wash. Filed May 6, 1926. Serial No. 107,194. 6 Claims. (Cl. 29—88.2.)

1. A tool for inserting and removing bushings comprising a pair of arms connected at one end and resiliently urged apart at their opposite ends, the free end of one arm being provided with a lug for engagement in an opening in the bushing, the free end of the other arm having spaced arms directed toward the first named arm and between the ends of which the free end of the first named arm is confined when the tool is inserted in a bushing of the proper size.



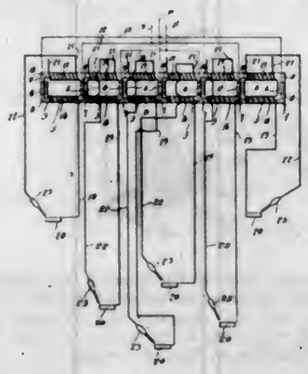
1,619,626. DISCHARGE MECHANISM FOR MIXERS. JOSEPH H. MOSEL, Lakewood, Ohio, assignor to The Lakewood Engineering Company, Lakewood, Ohio, a Corporation of Ohio. Filed Apr. 23, 1923. Serial No. 634,093. 7 Claims. (Cl. 193—10.)

1. The combination with a revoluble drum having a discharge opening, a mechanism for discharging the contents of said drum comprising two trough shaped chute



parts, one part located inside of the drum and stationarily mounted with respect to the drum, and a second part which is movably bodily from outside of the drum through said discharge opening and into co-operating relation with the first mentioned part.

1,619,627. METHOD AND APPARATUS FOR ELECTRICALLY-CUTTING METAL. OSKAR HERMANN LEOPOLD NEISS, Hamburg, Germany, assignor to Elektrotrennmaschinen Gesellschaft mit beschränkter Haftung, Hamburg, Germany. Filed Nov. 28, 1925, Serial No. 72,061, and in Germany July 24, 1925. 6 Claims. (Cl. 219—1.)



1. A method for cutting metal by the aid of disk-like electrodes constructed similar to a rapid friction saw characterized in that the electric current supplied to the cutting place is generated by induction in the rotating disklike electrode.

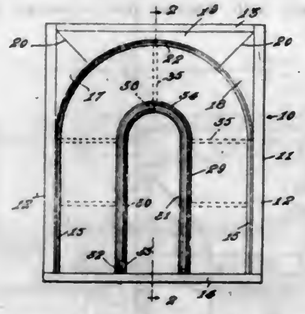
1,619,628. DUMPING VEHICLE. ARTHUR W. OSBORN, Philadelphia, Pa., assignor to The White Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 20, 1921. Serial No. 493,810. 2 Claims. (Cl. 296—28.)

1. A dumping vehicle body having sides each of which is composed of a fixed lower section and an upper section having a hinged connection to the lower section to swing downwardly, means to hold the upper sections in their upstanding positions, the lower side sections having along their upper edges on the outer sides thereof wood bumper bars, and the upper sections having along their upper edges wood bumper bars, said hinged connections permitting the upper sections to swing clear of the first mentioned bumper bars.

1,619,629. TRANSFORMER FOR ELECTRIC ARC CUTTING, REPAIRING, AND WELDING APPARATUS. FREDERICK C. OWEN, Fayetteville, N. C. Filed Nov. 19, 1925. Serial No. 70,084. 9 Claims. (Cl. 171—119.)

1. A transformer comprising longitudinal and transverse legs, a primary winding distributed about one of the longitudinal and the transverse legs, and a plurality of independent secondary windings distributed about the longitudinal legs.

1,619,630. TOY. CHARLES HAMILTON FAJEAU, Glencoe, Ill., assignor to The Toy Tinkers, Inc., Evanston, Ill., a Corporation of Illinois. Filed Oct. 8, 1926. Serial No. 140,322. 14 Claims. (Cl. 46—40.)

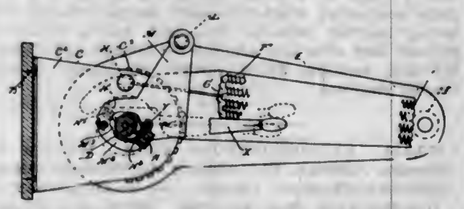


1. A toy figure comprising a handled stem, an upper pivot member swiveled upon the stem, a pair of arms both pivoted at their upper ends to the said member, a head supported by the upper pivot member, a lower pivot member slidable and rotatable on the stem, and a pair of legs pivoted intermediate of their ends to the lower pivot member and pivoted at their upper ends respectively to the two arms.

1,619,631. SASH. DAVID PATASNIK, Brooklyn, N. Y. Filed Apr. 30, 1926. Serial No. 105,801. 3 Claims. (Cl. 20—56.)

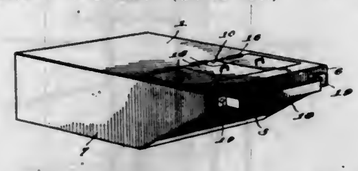
1. A window sash comprising a rectangular frame, a plurality of separate filling pieces supported from the inner sides of said frame and having their meeting ends

bevelled for contacting engagement with each other, said filling pieces having co-acting curved surfaces constituting an arch between the side rails of said frame, and



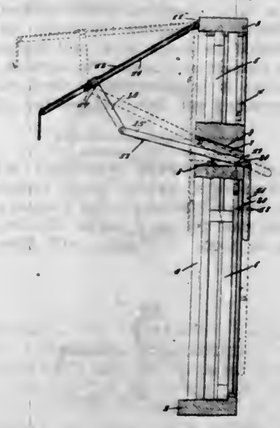
ribs provided on the inner walls of said frame for reception in grooves provided in the outer faces of said filling pieces.

1,619,632. MEAT-GRINDER HEAD. JOSEPH S. PERRAULT and JOSEPH T. MARQUIS, Nashua, N. H. Filed Apr. 21, 1925. Serial No. 24,836. 1 Claim. (Cl. 146—189.)



In a meat grinder including a hollow cylindrical body with feeding and discharging openings, a foraminous plate adapted to be seated over the discharge opening, said plate having an annular rib and being undercut on the inside of the rib, and having its perforations in register with those of the disc.

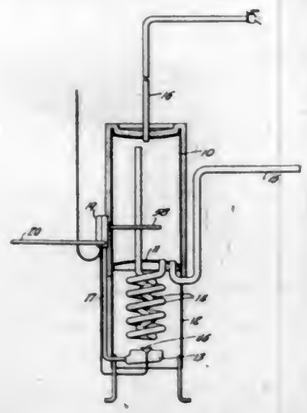
1,619,633. WINDOW-CONTROLLING DEVICE. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed July 17, 1920, Serial No. 397,010. Renewed July 6, 1925. 16 Claims. (Cl. 188—69.)



1. A clutch for a window controlling device including a pivoted lifting element, and an actuating handle therefor, said clutch including a fixed latch member, and a second latch member pivotally mounted upon said lifting element and angularly adjustable to engage said fixed latch member, said second latch member being secured to said actuating handle, the axis of said second latch member being parallel to that of said lifting element, whereby release of said latch members and shifting of said lifting element is effected by a movement of said actuating handle constant in direction.

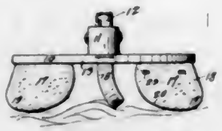
1,619,634. BAIT BOX. HARRY ALBRIGHT ROAT, Manchester, N. Y., assignor of one-half to George M. Messinger, Morganza, Pa. Filed May 1, 1925. Serial No. 27,221. 4 Claims. (Cl. 43—55.)

2. A bait box comprising a top, a rear end, a front end, sides, and a bottom consisting of an imperforate section of less length than the top and a foraminous section extending between said imperforate section of the bottom and the lower end of said front wall of the box, said foraminous bottom section being inclined, and said imperforate bottom section including an inclined flange at the lower end of said foraminous section.



1,619,635. SHADE OR AWNING RAISING DEVICE. HENRY H. ROLLINS, Phoenix, Ariz. Filed May 9, 1925. Serial No. 29,168. 1 Claim. (Cl. 156—42.)

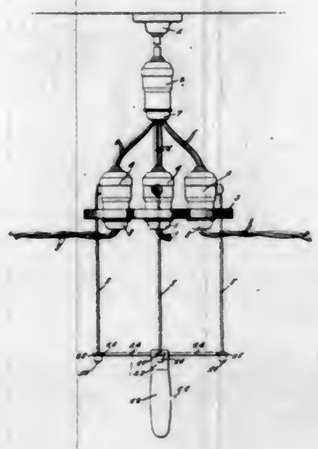
A window awning raising and securing device for use upon a window frame having an appropriately formed slot through one side thereof, comprising an arm formed into an outer, intermediate and an inner section and adapted to extend through said slot, said outer section being adapted to have one end rigidly secured to an awning frame mounted to swing outwardly from said window frame, a hinge connection between said outer section and the intermediate section, a butt hinge connection between said intermediate section and the inner section, permitting the inner section to swing from aligned relation to the intermediate section to nearly right angled relation thereto, said inner portion when in the latter position with the intermediate portion extended through said slot, lying against the inner face of said frame, means for securing the intermediate portion when extended through the slot, and an angled



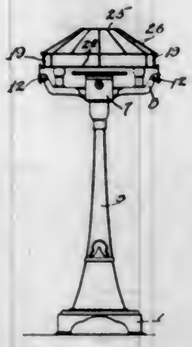
securing member attached to the inner face of the frame with one portion thereof in spaced parallel relation thereto, beneath which said inner portion is adapted to engage to prevent the shifting of the arm from the outside of the window.

1,619,636. THERMOSTATIC CONTROL. HERBERT J. SAUVAGE, Chicago, Ill., assignor to trustees of the Electro Thermostatic Control Company, a Trust Estate, Chicago, Ill. Filed May 4, 1923. Serial No. 636,666. 7 Claims. (Cl. 236—21.)

1. In combination in a water heater having a gas burner with a valve, electrical means normally electrically disconnected, for opening the valve, an electrical igniter, a solenoid in series with said igniter adapted to electrically connect said means for opening the valve when the igniter is excited, and a thermostat in the heater for energizing and de-energizing the solenoid.



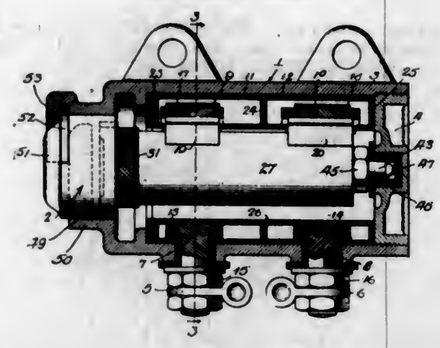
1,619,637. AGITATOR FOR WASHING MACHINES. SIMON E. SCHROEDER, Newton, Iowa, assignor of one-half to One Minute Manufacturing Company, Newton, Iowa. Filed Mar. 24, 1924. Serial No. 701,429. Renewed Mar. 9, 1925. 7 Claims. (Cl. 259—128.)



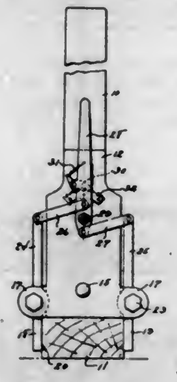
1. An agitator for washing machines comprising a reciprocal member, a plurality of radially extended flexible agitator members providing a substantially continuous yielding, rubbing and agitating surface, and means for attaching said agitator members to the reciprocating member.

1,619,638. ELECTRIC-CIRCUIT-CONTROL DEVICE. CLARENCE E. SICKLER, Endicott, N. Y. Filed Dec. 14, 1925. Serial No. 75,345. 1 Claim. (Cl. 240—123.)

In an electric light fixture, the combination with a plurality of flexibly suspended sockets, having pull chain switches, of means detachably receiving the lower portions of said sockets to rigidly maintain the same in spaced fixed relation to each other, and the pull chains depending loosely therefrom, and a controlling element having a rigid handle and rigid radially disposed arms extending laterally from said handle at the inner end of the same, with terminal eyes to engage the respective pull chains, whereby on manipulation of the handle the group of pull chains can be simultaneously pulled upon to actuate the switch sockets in unison or a single pull chain can be pulled to operate a selective socket switch.



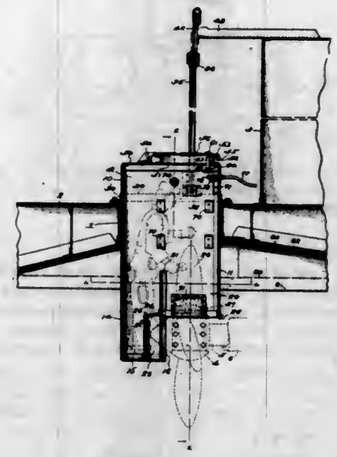
1,619,639. LAMP STAND. OTTO SIERENBRODT, Chicago, Ill. Filed June 22, 1923. Serial No. 647,015. 4 Claims. (Cl. 240—81.)



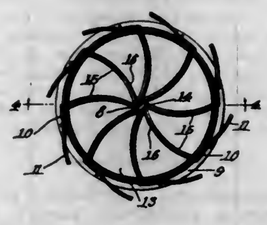
4. In a device of the class described, the combination with a lamp, of a shade therefor, a support for said shade comprising bracket members secured thereto and having notched arcuate slots, and means extending through said slots and adapted for locking and unlocking said supports by a vertical movement of said bracket members.

1,619,640. EXPLOSIONPROOF FUSE. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 24, 1920. Serial No. 391,398. 15 Claims. (Cl. 200—129.)

1. In a device of the class described, a casing, a removable fuse element having a portion thereof adapted to form a closure for said casing, electrical contacts for said fuse element within said casing, contact members associated with said fuse element adapted to engage said contacts, and means independent of said contacts for locking said closure in all positions of engagement between said contacts and contact members.



1,619,641. STACKING DEVICE OR STANDARD. ISAAC NEWTON SPENCER, Follansbee, W. Va. Filed June 19, 1926. Serial No. 117,211. 8 Claims. (Cl. 211—14.)

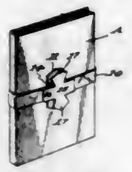


1. A device of the class described, comprising a standard, plate members mounted on the lower end of the standard and spaced from each other, jaws pivoted between the plates, said jaws including shank portions, a pivoted lever connected with the shank portions, the connections for the shank portions being on opposite sides of the pivotal point of the lever, and means for retaining the lever in an adjusted position.

1,619,642. PORTABLE REPAIR CHAMBER. CHARLES E. WARD, Charleston, W. Va. Filed May 24, 1926. Serial No. 111,414. 16 Claims. (Cl. 61—68.)

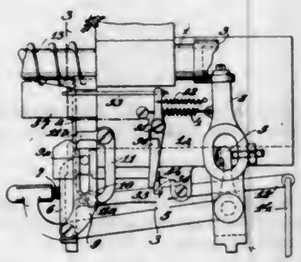
1. In a portable air lock adapted for use in repairing propellers of a vessel the combination of a chamber comprising a plurality of walls, an open bottom, and a cover hingedly secured to one of said walls, said cover adapted to be unlocked from either side thereof; means cooperating with the deck of the vessel to secure said chamber in partial submergence; and means to prevent water entering said chamber while said repairs are being made.

1,619,643. WIND TURBINE. MARTIN L. WEBB, Garden City, Kans. Filed Sept. 14, 1925. Serial No. 56,305. 1 Claim. (Cl. 170—10.)



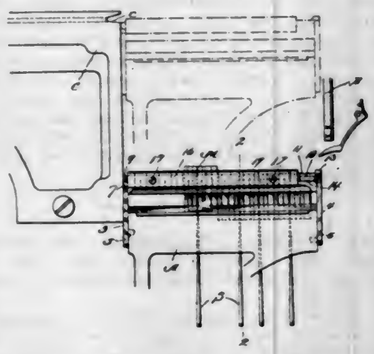
In a wind-wheel, an outer casing embodying an upper circular member and a lower circular member, bars for connecting the circular members, hinged closures connected with the bars, means for adjusting the closures simultaneously to move them to their open or closed positions, an inner rotary member embodying a vertical tube, a vertical tubular bearing, curved blades connected with the tubular bearing, and extending to points adjacent to the circular members, and said blades having openings adjacent to the tubular bearing to allow air to pass therethrough, and a supporting shaft positioned in the tubular bearing.

1,619,644. SAFETY ATTACHMENT FOR POCKETBOOKS, ETC. CHARLES WETZEL, New York, N. Y. Filed Apr. 16, 1926. Serial No. 102,504. 2 Claims. (Cl. 150—47.)



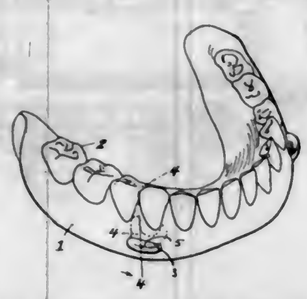
1. A device of the character described comprising an elastic band adapted for engagement about an article, transverse elastic strips secured upon said band at the inside thereof, elastic members secured upon the outside of the band opposite said strips and formed with di-

vergent wings projecting beyond the edges of the band, tines on the inner sides of said wings and facing in opposite directions, and means for forcing the wings out-



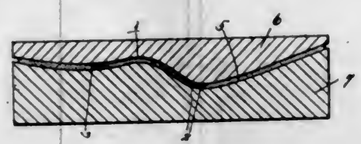
wardly with respect to the band, consisting of tongues on the strips engaging against the wings at their junctures with the band.

1,619,645. FEELING MECHANISM FOR MACHINES FOR PUNCHING CONTROLLING BANDS. OTTO WOLTERS, Magdeburg, and KARL HÖPER, Berlin-Charlottenburg, Germany, assignors to said Otto Wolters. Filed Apr. 15, 1926, Serial No. 102,328, and in Germany June 6, 1925. 12 Claims. (Cl. 164—152.)



1. A feeling mechanism for machines for punching controlling bands, comprising in combination with a punching mechanism and with circulating elements having incisions of different depth, feeling levers designed to engage with said incisions of said circulating elements and a connection between said feeling levers and said punching mechanism designed to transmit the movements of said feeling levers to said punching mechanism.

1,619,646. ASSEMBLING ELEVATOR GATE FOR TYPOGRAPHICAL MACHINES. DAVID L. ANDERSON, Brooklyn, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 22, 1925. Serial No. 38,839. 6 Claims. (Cl. 199—29.)

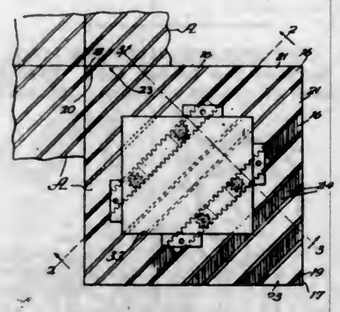


1. An assembling elevator gate for typographical machines comprising a body member and a supporting arm formed in one piece and bent into right angular relation, the upper edge of the body member being unbent and extending to the plane of the outer side of the supporting arm and presenting a square corner.

1,619,647. DENTAL-PLATE RETAINER. WILLIAM R. BADGER, Hubbard, Ohio. Filed Nov. 20, 1925. Serial No. 70,393. 2 Claims. (Cl. 32—4.)

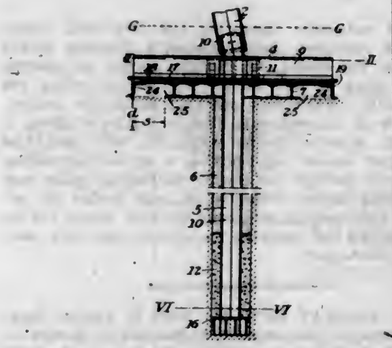
1. The combination with a lower denture, of a retainer for the purpose set forth, comprising a plate constructed of non-absorbing and non-corrosive material adapted to be embedded in said denture with a portion projecting laterally from the outer side thereof between the upper and lower edges of said denture, said plate being crescent-shaped in plan and having its upper surface dished, and its edges rounded, a flange rising from the rear edge of the plate, and bendable prongs projecting upwardly from the corners of said flange as and for the purpose specified.

1,619,648. METHOD OF INCORPORATING A SHANK STIFFENER WITH A SHOE SOLE. REINHARD E. BARTELS, Lynn, Mass. Filed May 1, 1922. Serial No. 560,010. 6 Claims. (Cl. 12—146.)



5. That improvement in the art of shoe-making which consists in molding a metal strip with a lateral curvature and substantially straight lengthwise, assembling said strip with its convex side against a shoe sole, and molding both sole and stiffener to the desired lateral and longitudinal curvature.

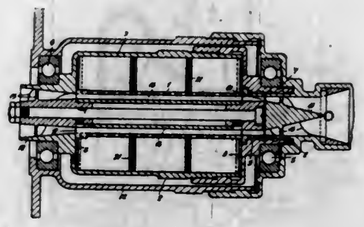
1,619,649. MANUFACTURE OF VEGETABLE CARBON. LEONARD HUGH BONNARD, London, England, assignor of one-half to Alfred Henry Bonnard, London, England. Filed Oct. 8, 1925, Serial No. 61,329, and in Great Britain Aug. 4, 1925. 11 Claims. (Cl. 252—3.)



1. A process for the production of activated vegetable carbon which consists in intimately incorporating hydrated magnesium carbonate into carbonaceous material of vegetable origin, heating the mixture to a temperature such that the hydrated magnesium carbonate is dehydrated and decarbonated with resultant production of a highly activated carbon containing magnesium oxide, and thereafter treating the product to remove magnesium oxide therefrom.

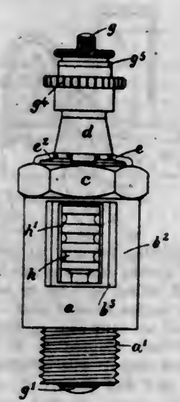
1,619,650. PRINTING-PLATE HOLDER AND CLAMP. WILLIAM F. BRÖMANN, Evanston, Ill. Filed Apr. 18, 1922. Serial No. 555,099. 24 Claims. (Cl. 101—387.)

1. A base having a groove therein, a plate clamping catch adapted to be seated in said groove and freely advanced while entirely seated in the groove, and means for restraining the catch against retrograde movement.



1,619,651. EARTH ANCHOR FOR STRUCTURAL TOWERS. EDWARD E. BUECHELE, West View, and SIDNEY A. MARTIN, Bradfordwoods, Pa. Filed Dec. 18, 1924. Serial No. 755,655. 4 Claims. (Cl. 189—21.)

1. A structural tower having a plurality of spaced legs and earth anchors secured thereto, each anchor comprising a stub extending downwardly in a hole provided therefor and adapted to withstand the tension stresses to which it may be subjected due to the upward pull on the stub caused by forces tending to overturn the tower, said stub having anchor means at its lower end adapted to cooperate with filling material placed above said anchor means to transmit forces due to such upward pull to the surrounding earth and thereby prevent upward movement of the stub, and a laterally extending base at the upper end of the stub for sustaining the portion of the weight of the tower distributed to the leg and adapted to be secured in place after the anchor means is buried.

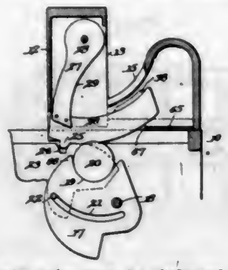


1,619,652. CENTRIFUGAL SEPARATOR. BENJAMIN CHARLES CARTER, London, England. Filed Oct. 23, 1926, Serial No. 143,725, and in Great Britain Mar. 14, 1925. 8 Claims. (Cl. 233—2.)

1. A centrifugal separator comprising a bowl rotatable at high speed upon its axis, longitudinal vanes upon the inner surface of the wall of said bowl, an inlet and an outlet to said bowl at opposite ends thereof, and means continuously dividing the fluid path between said inlet and outlet from the remainder of the bowl throughout the

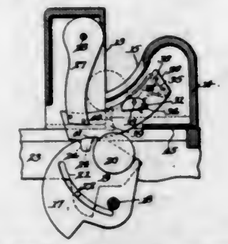
entire length of the bowl said means permitting passage of fluid and fine impurities along such path while checking return of conglomerated solid matter to said path.

1,619,653. SPARK PLUG. PHILIP CHALLIS, Victoria, London, England. Filed Feb. 27, 1922, Serial No. 539,539, and in Great Britain Mar. 17, 1921. 2 Claims. (Cl. 123—169.)



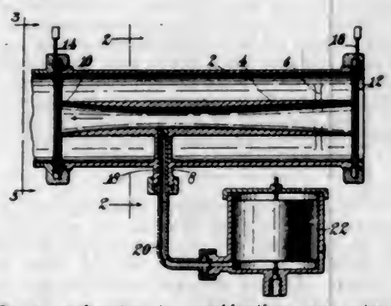
1. A spark-plug, comprising a tubular body, one end of said body being adapted for connection to an engine cylinder and bored to provide a seating; an insulator seated within the bored end of said body, an electrode passing through said insulator; a second insulator surrounding the stem of said electrode, said stem being exposed between the adjacent edges of said insulators; an apertured support for said second insulator, said support resting upon said body; said tubular body being apertured to allow access of air to the exposed length of said electrode within said body and between said insulators; said support being apertured to allow passage of air from within said body and means for holding the parts in position.

1,619,654. FRAUD-PREVENTING DEVICE. DANIEL L. CHANDLER, Boston, Mass., assignor, by mesne assignments, to Vend Ads Corp., a Corporation of Massachusetts. Original application filed Mar. 28, 1923, Serial No. 628,354. Divided and this application filed Mar. 16, 1925. Serial No. 15,988. 8 Claims. (Cl. 194—97.)



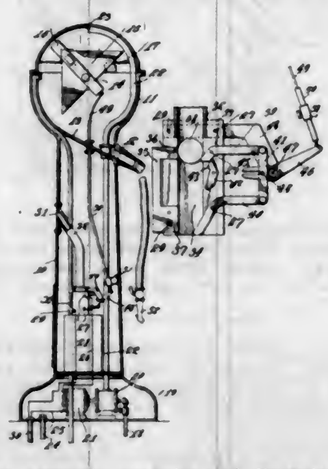
1. A vending machine having, in combination, a casing provided with a coin slot through which a coin may be in-

serted therein and a stop plate extending transversely of said slot and positioned to be engaged by a coin drawn upwardly from the interior of said casing toward said



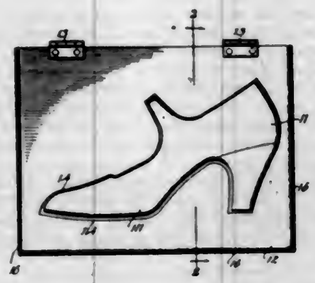
slot, whereby said coin may be deflected to a position transversely of said slot and thereby prevented from being withdrawn through said slot.

1,619,655. FRAUD-PREVENTING DEVICE FOR VENDING MACHINES. DANIEL L. CHANDLER, Boston, Mass., assignor to Vend Ads Co., Inc., Worcester, Mass., a Corporation of Massachusetts. Original application filed Mar. 28, 1923, Serial No. 628,354. Divided and this application filed Mar. 16, 1925. Serial No. 15,989. 4 Claims. (Cl. 194—97.)



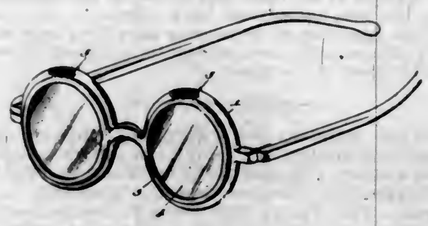
1. A vending machine having, in combination, a casing provided with a coin slot through which a coin may be inserted in said casing, an arm in said slot, means to impart a swinging motion to said arm, a pivotally mounted detent positioned on said arm in alignment with said slot, a stationary cam adapted to be engaged by said detent whereby said detent will be rocked in one direction to open said slot and permit a coin to be inserted in said casing and means to rock said detent in the opposite direction to obstruct said slot so as to prevent said coin from being withdrawn from said casing.

1,619,656. CARBURETOR. WILLIAM MERVYN CROFTON, Dublin, Ireland. Filed Oct. 20, 1923, Serial No. 669,691, and in Great Britain Nov. 13, 1922. 3 Claims. (Cl. 261—63.)



1. In a carburetor, in combination, an outer tube normally open at both ends, an inner tube, a fuel jet opening transversely into said inner tube, and valve means in the outer tube comprising an obturator guided to move past that end of the inner tube which is nearer the engine, and means for moving said obturator, said obturator being adapted during opening to uncover first the end of the inner tube and then to open the space between the two tubes.

1,619,657. COIN-OPERATED GASOLINE PUMP. GREGORY C. DAVISON, New London, Conn. Filed Sept. 2, 1926. Serial No. 133,235. 5 Claims. (Cl. 194—6.)

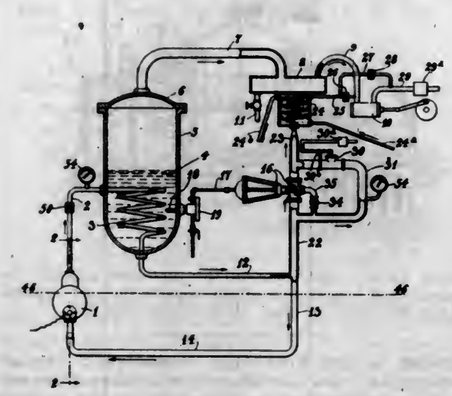


1. In an automatic measuring and dispensing pump, a casing, a container on the casing, a dumping bucket mounted in the casing, an electric circuit, an electric controlled pump in said circuit, means for feeding the liquid to said bucket, coin operated means for controlling the circuit through said electric controlled pump, a second coin operated means cooperable with said first coin operated means for effecting a second controlling of the circuit through the electric controlling pump, and coin releasing means connected to said bucket for cooperation with both of said coin operated means for releasing the coin and breaking the circuit upon each overthrow of the bucket.

1,619,658. DISPLAY DEVICE. BERT E. DRAKE, Rockville Center, N. Y., assignor of one-half to Horace D. Tracy, Rockville Center, N. Y. Filed Sept. 1, 1926. Serial No. 133,038. 3 Claims. (Cl. 35—17.)

2. A display device including a base having a dummy thereon simulating an article and a clamp adapted to be disposed against the base and having an opening for the dummy to project through, for the clamping of material on to the base and extending over the dummy, the said plate having edge portions deflected in a direction toward the back of the base.

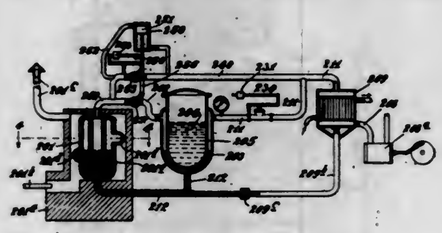
1,619,659. EYEGLASSES OR SPECTACLES. JOSEPH TANNER EVANS, Boise, Idaho. Filed Feb. 12, 1925. Serial No. 8,713. 2 Claims. (Cl. 88—41.)



1. Eyeglasses having two sets of cooperable lenses, a frame carrying each set of lenses, and a pair of hinge connections between the frames, each hinge connection comprising a pair of lugs carried by one frame, a pivot bolt mounted on said lugs, a pair of lugs carried by the other frame member and mounted on said pivot bolt, a laterally directed projection on one of said lugs, the adjacent lug having a cooperable notch, and spring means to urge the lug and notch into engagement.

1,619,660. HIGH-TEMPERATURE-HEATING METHOD. CROSBY FIELD, New York, N. Y., assignor to Chemical Machinery Corporation, a Corporation of New York. Filed Mar. 4, 1920, Serial No. 363,129. Renewed Feb. 1, 1927. 2 Claims. (Cl. 126—370.)

1. The herein described process which consists in subjecting a body of mercury to heat for forming a vapor; applying the vapor in heat transferring relation to a body to be heated, thereby partially condensing the vapor; maintaining a substantial body of the thus condensed mercury in gravity flow relation to the body of mercury being subjected to heat but out of heat receiving relation therewith, thus returning such condensed mercury to the heated body of mercury; withdrawing the remaining mercury vapor from the place of heat utilization and subsequently condensing the same and returning the latter condensate to the heated body of mercury.

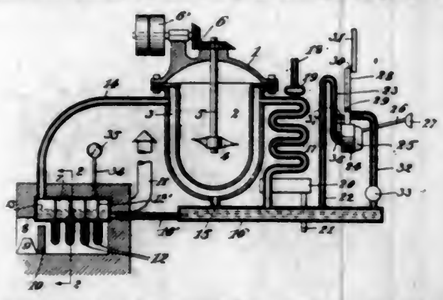


1,619,661. APPARATUS FOR HEAT TRANSFER AT HIGH TEMPERATURES. CROSBY FIELD, Yonkers, N. Y., assignor to Chemical Machinery Corporation, a Corporation of New York. Filed Apr. 17, 1922. Serial No. 553,640. 7 Claims. (Cl. 126—370.)

1. A mercury boiling and condensing system including a mercury boiler, means for heating it, a mercury vapor condenser, conduits for flow of vapor from the boiler to the condenser, and for return flow of condensate to the boiler, and a container for maintaining material in heat absorbing relation to the condenser, in combination with a thermostatically controlled regulating valve insensible to pressures within the system, adapted to vent the system to limit the mercury vapor pressure and thereby regulate the temperature of the condenser

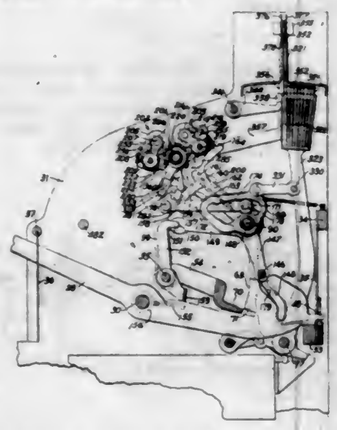
and a second pressure controlled vent valve adapted to relieve internal pressures independently of the temperature in the condenser.

1,619,662. METHOD OF HEATING AND COOLING AT HIGH TEMPERATURES. CROSBY FIELD, Yonkers, N. Y., assignor to Chemical Machinery Corporation, a Corporation of New York. Filed Apr. 20, 1922. Serial No. 555,657. 6 Claims. (Cl. 126—370.)



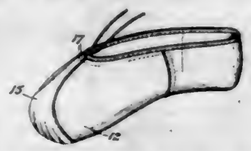
1. The method of transferring heat which consists in imparting heat to mercury to boil off mercury vapor in one region of a circulating system, absorbing heat from the mercury vapor at another region of the system to condense mercury; maintaining a body of condensate in heat absorbing relation to the latter region; and governing the temperature by governing the internal pressure of the condensing vapor.

1,619,663. APPARATUS FOR HEATING AND FOR CONTROLLING REACTIONS AT HIGH TEMPERATURES. CROSBY FIELD, Yonkers, N. Y., assignor to Chemical Machinery Corporation, a Corporation of New York. Original application filed Mar. 4, 1920, Serial No. 363,129. Divided and this application filed July 15, 1922. Serial No. 575,365. 8 Claims. (Cl. 126—370.)



1. A mercury boiler, a container including condensation surfaces in heat transferring relations to the material to be treated therein, an intermediate supply conduit affording a direct low resistance path for conducting vapor from the boiler to the condensation surfaces, drainage passages arranged in parallel for drainage of

the primary condensate and for condensation and drainage of the surplus vapor back to the boiler, in combination with pressure controlling means operating on the



system from a point beyond the container whereby the pressure and temperature of the vaporization are approximately the same as those of the condensation.

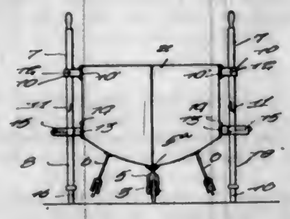
1,619,664. CASH REGISTER. FREDERICK L. FULLER, Bridgeport, Conn., and WILLIAM H. ROBERTSON, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed July 9, 1920. Serial No. 394,974. 18 Claims. (Cl. 235—23.)

1. In a machine of the class described, the combination of manipulative devices, a group of indicator tablets, tablet selecting means including a member having a cam slot and a member projecting therein for moving the group from a previously set position directly to a new position, and a third member connected to and operated by said devices, said third member having a similar cam slot and receiving said projecting member for controlling said selecting means.

1,619,665. TOE SLIPPER. ADOLPH GABRIEL, New York, N. Y. Filed Oct. 25, 1926. Serial No. 143,913. 4 Claims. (Cl. 36—1.)

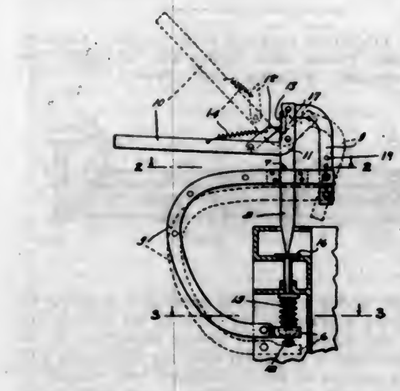
4. A toe slipper, having a box toe, and having a removable covering piece of material extending from the front end of the sole over the front of the toe and up over the vamp, the covering piece being of sufficient width at the toe to take the wear and tapering toward its upper end and having concavely curved side edges, the lower portion of the covering piece being folded with the material at the under side of the toe and extending into the folds thereof and being stitched to the sole, and the upper end of the covering piece being independently stitched to the vamp adjacent the upper edge thereof at the throat of the slipper.

1,619,666. PROCESS FOR THE EXTRACTION OF AMMONIUM-ALUMINUM SULPHATE FROM ALUMINUM-SULPHATE SOLUTIONS CONTAINING FERRIC COMPOUNDS. ROBERT GANSSEN, Grunewald, Germany. Filed Feb. 14, 1921, Serial No. 444,994, and in Germany Sept. 21, 1917. Renewed Dec. 11, 1926. 3 Claims. (Cl. 23—118.)



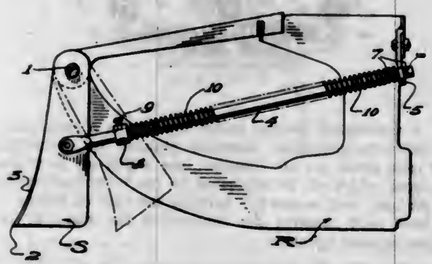
1. The method of extracting ammonium-aluminum sulphate, substantially free of iron, from aluminum sulphate solutions containing ferric sulphate, said method consisting in acting upon said solution of aluminum sulphate with an excess of ammonium sulphate and adding a base in such a quantity as to convert the ferric sulphate, present in the solution, into a soluble basic ferric sulphate before the ammonium-aluminum sulphate crystallizes out.

1,619,667. NECKTIE FASTENER. SAMUEL GOLDSTEIN, Bronx, N. Y. Filed Nov. 29, 1926. Serial No. 151,537. 2 Claims. (Cl. 24—56.)



1. The combination with a collar button having a notched shank, of a necktie fastener comprising a casing formed with a body, a back plate, means at the edge of the body for clamping the back plate thereto, bearing lugs struck from the body engaged with the plate to space the same from said body, the plate and body being formed with openings for receiving the shank of the collar button, a manually releasable latching device confined between the body and plate and engageable with the shank of the collar button to lock the same to the casing, means for fastening the casing to a necktie, and guide members struck from the body of the casing and frictionally engaged by the latching device to effect the releasing of the latter when depressed.

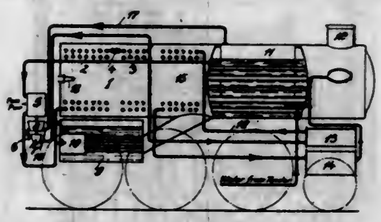
1,619,668. TOY NAVIGATOR. HENRY F. GORDON, Chicago, Ill. Filed Apr. 6, 1925. Serial No. 21,217. 8 Claims. (Cl. 208—41.)



1. In combination, a land vehicle, an oar propeller carried by the vehicle, the propeller provided with yieldable plunger whereby its length may automatically change said means including a spring controlled extension.

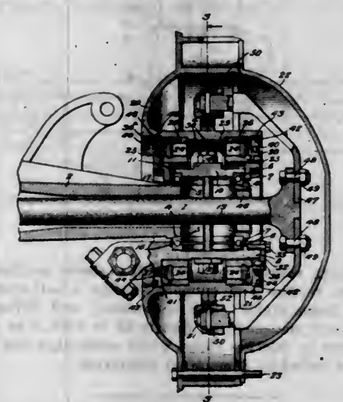
1,619,669. VALVE LIFTER. NED EDGAR GOUGH, Seattle, Wash. Filed Apr. 12, 1921. Serial No. 460,620. 5 Claims. (Cl. 29—86.3.)

1. A valve lifter embodying a U-shaped arm, a slotted foot, on one end portion of said arm, a slot near the end portion on its other end, a thrust arm slidably mounted in said slot, said thrust arm being in alignment with said foot, an adjustable L-shaped fulcrum arm mounted in the end portion of said U-shaped arm, and an L-shaped handle arm pivotally mounted near its angle point to said thrust arm and pivotally connected at its end portion to the end of said fulcrum arm.



1,619,670. STUB-SHOE ATTACHMENT FOR RUNNERS OF CORN PLANTERS OR THE LIKE. FRANK D. HABERMAN, Des Moines River Township, Minn. Filed Oct. 21, 1926. Serial No. 143,284. 2 Claims. (Cl. 97—225.)

1. In combination with the runner of a planter, a vertically disposed shoe pivotally engaged with the forward portion of the planter, a rod pivotally engaged with the shoe and slidably engaged with the rear portion of the runner, and yieldable means coacting with the shoe and rod for normally maintaining the shoe in its working position.

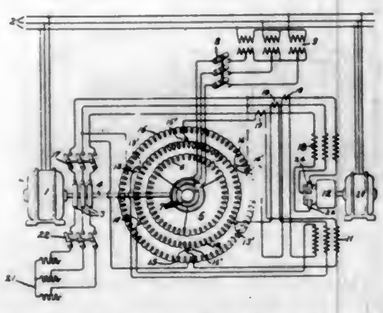


2. In combination with the runner of a planter provided with a laterally disposed projection at its rear portion, a vertically disposed shoe pivotally connected with the forward portion of the runner, a rod pivotally connected with the central portion of the shoe and slidably disposed through the lateral projection of the runner, means carried by the rod and contacting with the projection to limit the forward swinging movement of the shoe, and an expansible spring coacting with the lateral projection of the runner and the forward portion of the rod for normally maintaining the shoe at the limit of its forward movement.

1,619,671. STEAM GENERATOR FOR PORTABLE PLANTS. WILHELM HOJER, Munich, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Nov. 6, 1926, Serial No. 146,803, and in Germany July 15, 1925. 4 Claims. (Cl. 60—1.)

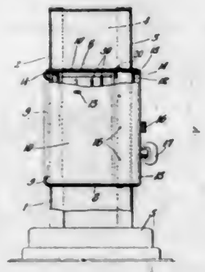
1. In a portable high-pressure high-temperature boiler plant operating on the Benson principle, means for starting and maintaining the operation of the boiler, comprising a main steam generator for producing high temperature steam at high pressure, a feed pump for furnishing water to said generator at the high pressure required, a prime mover for operating said pump and being suitably connected to said main generator to receive steam therefrom during the normal boiler operation, and an auxiliary boiler operable independently of said main generator for furnishing steam to said prime mover of sufficient pressure to start said pump for generating the feed water pressure in the main generator necessary to start its operation.

1,619,672. POWER TRANSMISSION FOR WHEELS. HARLEIGH R. HOLMES, Denver, Colo. Filed July 24, 1923. Serial No. 653,609. 15 Claims. (Cl. 180—48.)



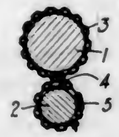
1. A power transmission for vehicles including an axle, an axle housing having a transverse opening therethrough, a spindle, anti-friction bearings interposed between the axle housing and the spindle, and means passing through the transverse opening in the housing and on either side of the axle for securing the spindle, axle housing and bearings together.

1,619,673. SYSTEM OF SPEED CONTROL FOR INDUCTION MOTORS. JOHN I. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 10, 1923. Serial No. 661,768. 9 Claims. (Cl. 172—274.)



1. A system of speed control wherein an induction motor arranged to be supplied with current from a suitable source of power is concatenated with a regulating

machine provided with a shunt field winding and wherein a voltage of the same frequency as that of the slip current of said induction motor is impressed on said shunt field winding and is varied to control the speed of said

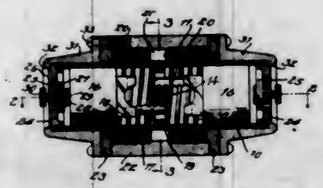


induction motor, characterized by the fact that a machine provided for exciting said winding is arranged to generate independently adjustable component voltages which are substantially proportional to the shunt field ohmic and reactive drops respectively.

1,619,674. CLOCK CASING. RUDOLF VICTOR KOHN, Cedarhurst, N. Y., assignor to The De Luxe Clock and Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1924. Serial No. 697,435. 12 Claims. (Cl. 58—53.)

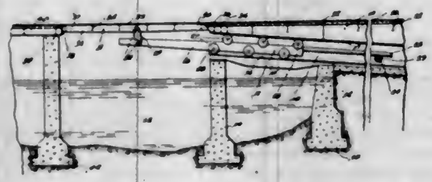
11. A clock casing provided with a sleeve portion constructed to receive and support therein a self-contained instantly demountable clock movement, and fitting the casing of said movement so tightly as to hold it in operative position by friction alone, while permitting the movement to be instantly demounted therefrom.

1,619,675. CHAIN COUPLING FOR LOGS. EDWARD LARSSON, Stockholm, Sweden. Filed Aug. 16, 1926. Serial No. 129,597, and in Sweden Sept. 5, 1925. 1 Claim. (Cl. 9—16.)



A chain coupling for logs comprising a chain placed around the overlapping ends of the logs in the shape of an 8, a short tube piece provided between the logs, the portions of the chain crossing each other being passed through said tube piece, and means for tightening the chain on the logs, substantially as and for the purpose set forth.

1,619,676. LOCKING DEVICE FOR SAFES. CHARLES F. MEILINK, Toledo, Ohio. Filed Jan. 13, 1922. Serial No. 528,909. 8 Claims. (Cl. 109—3.)

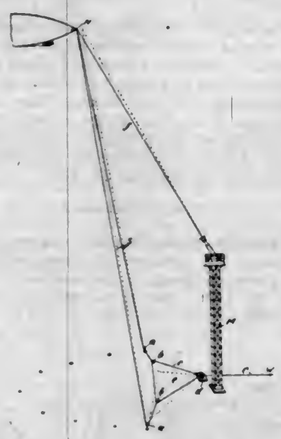


3. A shaft having a polygonal opening, a jamb for the opening having a groove in the plane of the opening providing for the extent of said groove uniformity in the jamb cross-section, a polygonal door for registering with the opening and as so moved thereinto held engaged by the opening against angular shifting, a rock shaft carried by and extending to protrude from the front of the door, a bolt for the door, and a member pivotally connected to both the rock shaft and bolt and rockable relatively to each thereof in shifting the bolt in the plane of the door to protrude marginally therefrom to engage the groove.

1,619,677. WINDSHIELD CLEANER. EARL F. PIERCE, Chicago, Ill., assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Dec. 29, 1921. Serial No. 525,632. 8 Claims. (Cl. 172—126.)

1. A windshield cleaner motor comprising a rock shaft, an electro-magnetically operated plunger for actuating said rock shaft, an air chamber into which air is drawn and from which air is exhausted by the reciprocations of the plunger, and means for varying the rate of escape of air from said chamber for controlling the speed of operation of said plunger.

1,619,678. MOVABLE BRIDGE. HERMAN L. PRINZ, Chicago, Ill. Filed Jan. 4, 1926. Serial No. 79,209. 10 Claims. (Cl. 14—43.)

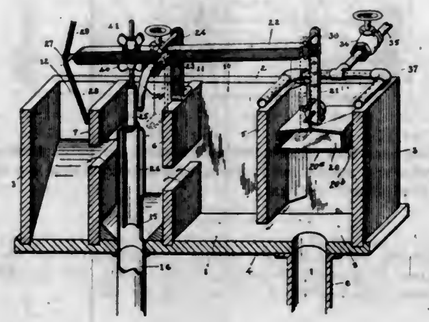


1. A bridge including in combination with a street structure having a guideway formed therein, of a spanning structure, means movable in the guide way and operatively connected to the spanning structure for moving said spanning structure from spanning position into the guideway, and a member pivotally connecting the spanning structure and the moving means providing said operative connection.

1,619,679. MANUFACTURE OF NITROGENOUS FERTILIZERS. ERIC HANNAFORD RICHARDS and HENRY BROUGHAM HUTCHINSON, Hertfordshire, England, assignors to Adco Limited, London, England, a British Company. Filed Apr. 15, 1924, Serial No. 706,717, and in Great Britain Apr. 23, 1923. 40 Claims. (Cl. 71—6.)

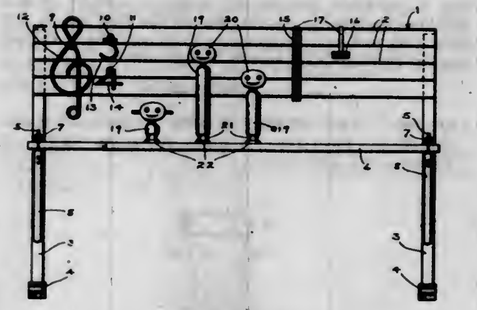
1. The process of manufacture of an organic nitrogenous fertilizer, which comprises bringing together a fermentable carbonaceous substance and a substantially water-insoluble hydrolyzable compound of nitrogen, and maintaining these materials in contact in a highly hydrated state under aerobic conditions for a period of time sufficient to permit the ammonia assimilator organisms in the said carbonaceous substance to ferment the same and transform the initially applied nitrogen into new, water-insoluble, organic nitrogenous compounds in substantial quantity within the fermented mass.

1,619,680. MOORING GEAR FOR AIRSHIPS. VINCENT CRANE RICHMOND and GEORGE HERBERT SCOTT, Cardington, England. Filed Sept. 8, 1926, Serial No. 134,247, and in Great Britain May 20, 1925. 3 Claims. (Cl. 244—2.)



1. Airship mooring gear, comprising a mooring mast and anchored side guys for controlling the movements of the nose of the ship while being hauled in by a mast line or lines, blocks through which the side guys are rove, said blocks being movable laterally under lateral movement of the nose of the ship during the early stages of the mooring operation and remaining stationary and preventing such lateral movement at the end of the mooring operation.

1,619,681. ORNAMENTAL WOOL FELT AND METHOD OF MAKING SAME. JOSEPH ROBINSON, Jersey City, N. J. Filed Jan. 12, 1927. Serial No. 160,773. 3 Claims. (Cl. 26—69.)

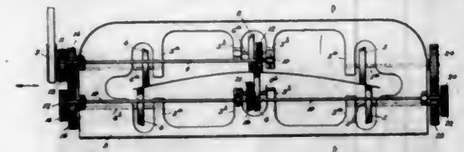


2. The method of applying a coating to wool felt hat bodies resembling frosting comprising pouncing the hat body to pull out the fibers to form a nap, and spraying a thinned colored lacquer against the hat body substantially tangentially thereto, the character of the lacquer and spraying being such as to incompletely change the color of the body and completely color the fiber nap to produce the frost effect.

1,619,682. STOCK REGULATOR FOR PAPER-MAKING MACHINES. WILLIAM J. SHERIDAN, Rochester, N. Y. Filed Mar. 13, 1926. Serial No. 94,567. 8 Claims. (Cl. 92—46.)

1. In an apparatus for regulating the flow of pulp, the combination of a vat having an outlet in the bottom thereof, a pipe mounted in said outlet and projecting into the inside of said vat, said pipe having an opening in the side thereof near the outlet of said vat, a second pipe suspended in said first pipe, and means for raising and lowering said second pipe in said first pipe to regulate the flow of pulp thru the opening in said first pipe into the outlet of said vat.

1,619,683. MUSIC-TEACHING DEVICE. ALEXANDER J. STINSON, Elgin, Ariz. Filed June 26, 1926. Serial No. 118,815. 2 Claims. (Cl. 84—472.)

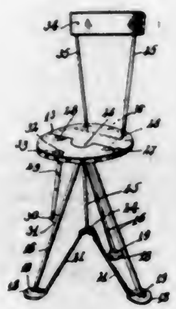


1. A music instruction device comprising a staff, means for supporting the same in horizontal position, means for removably fixing certain music symbols upon said staff, a platform extending beneath said staff, and a plurality of figure members of varying heights having heads symbolizing music notes, said members being designed to stand on said platform to position the heads thereof in desired sequence, before said staff.

1,619,684. MACHINERY EMPLOYED IN THE SHEARING OF METAL PLATES OR SHEETS. HUBERT SPENCE THOMAS, Llandaff, and WILLIAM ROBERT DAVIES, Whitchurch, Wales. Filed Oct. 31, 1924, Serial No. 747,072, and in Great Britain Nov. 15, 1923. 3 Claims. (Cl. 164—60.)

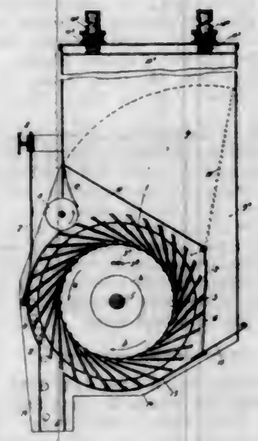
1. Machines for use in the shearing of metal plates and sheets comprising a plurality of pairs of rotary disc cut-

ters the contiguous portions of the cutting edges of the intermediate pairs of which are disposed in different horizontal planes to those containing the corresponding con-



tiguous portions of the cutting edges of the outer pairs of cutters and means for rotating and synchronizing the operation of said cutters.

1,619,685. BED REST. ALICE J. UPDEGROVE and WILLIAM B. MARSH, Brooklyn, N. Y. Filed Mar. 3, 1926. Serial No. 91,996. 1 Claim. (Cl. 5—327.)



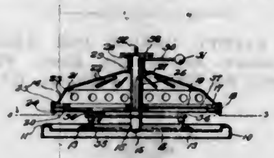
A device of the class described comprising a pair of spaced parallel members, a pair of hingedly connected rest sections, one of said sections being hingedly mounted on said members, and a U-shape brace member having its free ends hingedly connected to the respective parallel members, opposed sets of stops on said last mentioned section for engagement by the U-shaped brace member and sets of oppositely disposed stop members provided on said parallel members for engagement by the free end of said other rest section for holding said rest sections in various angular positions with respect to each other.

1,619,686. CAMP STOOL. WALTER WITKOWSKI, Brooklyn, N. Y. Filed Jan. 22, 1926. Serial No. 82,979. 3 Claims. (Cl. 155—135.)

1. A collapsible stool comprising a seat proper, a seat member hinged thereto, legs hinged to the said seat proper feet hinged to the said legs, radial supports hinged to said feet, a central support rigidly attached to the center of the said seat proper and extending downwards therefrom in a vertical position and a ring slidably mounted on said central support and guided hereby, said radial supports being pivoted at their upper ends to said ring.

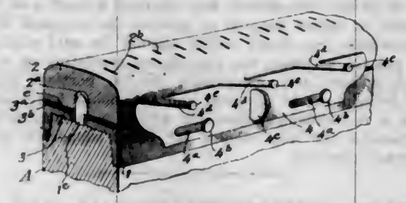
1,619,687. SEED DISPENSER. OTTO WODKE, Rostock, Germany, assignor of one-half to the Firm Actien Gesellschaft "Neptun" Schiffswerft und Maschinenfabrik, Rostock, Germany. Filed Aug. 30, 1926, Serial No. 132,599, and in Germany Apr. 4, 1925. 4 Claims. (Cl. 221—135.)

1. A sowing machine, comprising in combination a seed container, a sowing wheel mounted so as to rotate in the said container, a plurality of driving discs in the said wheel, scoops attached in groups to the said driving discs, a drum surrounding the said driving discs and having openings through which the scoops extend, the driving discs being capable of being rotated jointly relatively to the said drum and also independently with respect to one another as and for the purpose set forth.



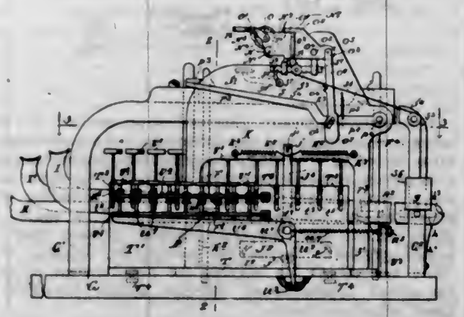
1,619,688. TRUCK SIDE FRAME. GUSTAF A. ANDERSON, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Dec. 27, 1922. Serial No. 609,212. 37 Claims. (Cl. 105—205.)

1. A car truck side frame involving a wrought metal sheet shaped to form inner and outer side walls, each of said side walls having corresponding side frame portions, means including a plurality of welds uniting the side frame portions, and rivet means uniting other of said side frame portions, said rivet means being located at the bottom of the side frame and arranged on a line passing through the longitudinal center of said frame.



1,619,689. SPINNING TOY. LOUIS V. ARONSON, Newark, N. J. Filed Feb. 6, 1924. Serial No. 691,004. 10 Claims. (Cl. 46—32.)

1. A spinning toy comprising, in combination, a base, a post rigid with said base, a spinning member having a sleeve extending through its body and journaled on said post, and an annular flange upon the end of said sleeve remote from said base, said flange spaced from said spinning member to form a drum to receive a flexible driving means.

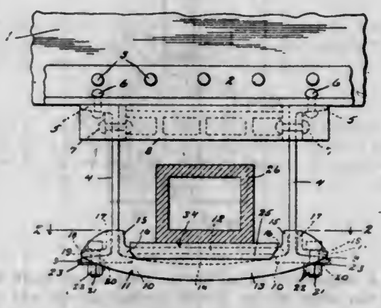


10. A spinning top comprising, in combination, a post, a shell revolubly mounted on said post, forming the body of the top and having a light-emitting opening therein, and gravity controlled illuminating means causing illumination through said opening in the revolution of the shell in a spinning position thereof.

1,619,690. TRACKER BAR. NORMAN G. BAKER, Muscatine, Iowa. Filed Jan. 22, 1925. Serial No. 4,051. 5 Claims. (Cl. 84—64.)

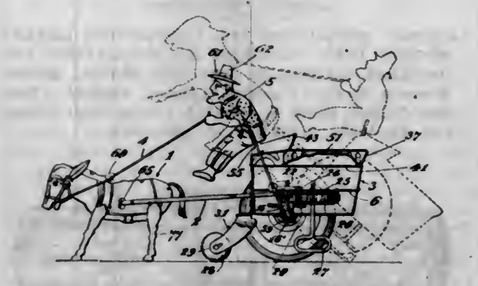
1. A tracker bar comprising two separable sections, a screen between said sections, cam means for detachably locking said sections, together comprising a plate longitudinally slidably mounted on the side of one section and having one or more angularly disposed cam slots therein extending inwardly from one edge and overlying the other section, and one or more pins on the other section adapted to engage said slots.

1,619,691. TYPEWRITING MACHINE. CLYDE C. BALSTON, New York, N. Y. Filed Dec. 25, 1926. Serial No. 157,002. 24 Claims. (Cl. 197—1.)



1. A typewriting machine comprising type supports, mechanism to move a plurality of type simultaneously into assembled position for the production of a word or other group of characters, the said type supports being independently movable, and mechanism operating upon and coacting with said first named mechanism to simultaneously move a number of separately movable characters into printing position by the movement of a single key, substantially as set forth.

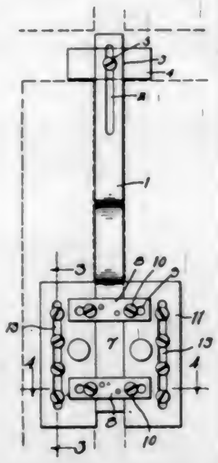
1,619,692. PROCESS OF MAKING MOLDED COMPOSITIONS. LAWRENCE E. BARRINGER, Schenectady, and CHARLES F. PETERSON, Scotia, N. Y., assignors to General Electric Company, a Corporation of New York. Original application filed Sept. 13, 1922, Serial No. 588,079. Divided and this application filed Apr. 10, 1925, Serial No. 22,213. Renewed July 26, 1926. 11 Claims. (Cl. 18—55.)



2. The process of making mica compositions which consists in coating mica fragments with a resin comprising a compound of a polyhydric alcohol and a polybasic acid in the fusible stage, forming blanks therefrom, heating the same under pressure, the temperature being sufficiently high to convert said resin to a partially polymerized condition, cutting said blanks to desired form and thereupon heating the formed product to further polymerize the resin.

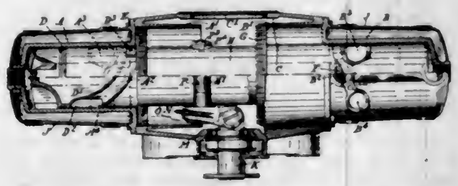
1,619,693. CARRY IRON. DONALD S. BARROWS, Rochester, N. Y., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Aug. 7, 1924. Serial No. 730,689. 5 Claims. (Cl. 213—61.)

1. In a draft rigging, the combination with center sills having oppositely directed lower flanges, of a coupler, and a carry iron therefor, the end portions of said carry iron being adapted to embrace the adjacent portions of said sills and overlie the said flanges.



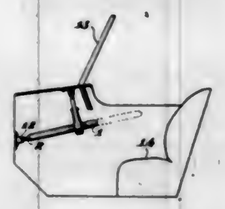
1,619,694. MECHANICAL TOY. SAMUEL I. BERGER, Newark, N. J. Filed Apr. 29, 1925. Serial No. 26,608. 14 Claims. (Cl. 46—45.)

14. In a toy of the character described, a cart having a wheel at each side and a pilot wheel at the front thereof, thills projecting forwardly from said cart, a draft animal figure connected with said thills, means including a spring motor to drive the side wheels to produce alternate forward and rearward movements of the toy, and a downwardly extending winding key carried by the motor and rotated continuously during the unwinding of the motor, the toy being so constructed as to



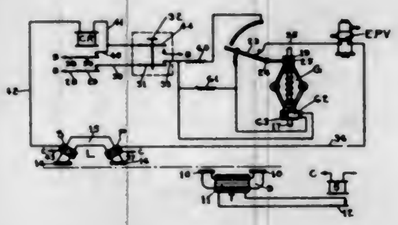
tilt rearward, as an effect of inertia when suddenly reversed at the end of a rearward movement, until the handle of said key rests on the supporting surface whereby, as a result of the rotation of the key handle in contact with the floor, the toy is caused to pivot thereabout and then to continue its advance in another direction.

1,619,695. GAUGE. ALBERT T. BOESE and PETER H. BOESE, Hutchinson, Kans. Filed Feb. 24, 1926. Serial No. 90,411. 2 Claims. (Cl. 33—197.)



2. A carpenter's gauge for the purpose set forth including a bar offset at the central portion thereof and slotted longitudinally near one of its ends, a notched head receiving the said end of the bar in the notch thereof, a binding element passing through the slot of the bar and engaging the head, lateral strips secured near the unslotted end of the bar and having spaced openings adjacent to their ends, gauge plates underlying the strips and parallel with the bar, bolt members passing through one of the openings in the strips and engaging threaded openings in the gauge plates, each of said gauge plates having a longitudinal slot therethrough, pointed members adjustably arranged in said slots, and a head on each of the gauge plates.

1,619,696. MECHANISM FOR CONVERTING ROTARY MOTION INTO COMBINED RECIPROCATING AND OSCILLATING MOTION AND VICE VERSA. ERNEST WINDSOR BOWEN, Chiswick, London, England. Filed Jan. 3, 1924. Serial No. 684,216, and in Great Britain Jan. 18, 1923. 9 Claims. (Cl. 74—14.)



1. In mechanism of the class described, a cylinder, a reciprocatory member mounted within said cylinder, a shaft disposed laterally of said cylinder, a crank arm pivotally connected to the shaft, a self-aligning bearing in said crank arm, a pin connecting the bearing with the reciprocating member on the same side of the member as that on which the shaft is located, and means whereby said shaft can be adjusted longitudinally of its axis.

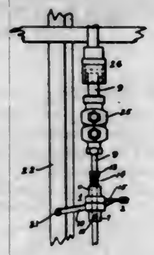
1,619,697. SAFETY DEVICE FOR AUTOMOBILES. HAROLD BROWN, Kansas City, Kans. Filed Dec. 6, 1924. Serial No. 754,346. 4 Claims. (Cl. 280—150.)

1. The combination with the cowl and front body portions of an automobile body having a seat and windshield, of means adapted to prevent the occupant of said automobile from being hurled against the said windshield in case of accident, the said means consisting of a hand grip or arm rest, comprising bracket portions adapted for attachment to the cowl and automobile body portions and a rod slidably adjustable within a tubular bar, the adjustable rod and tubular bar being supported by said bracket portions.

1,619,698. INTERMITTENT-INDUCTIVE TRAIN CONTROL. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Apr. 8, 1925. Serial No. 21,554. 9 Claims. (Cl. 246—6.3.)

1. Inductive influence, communicating means for automatic train control systems comprising; car-carried apparatus including a normally energized flux producing coil; a secondary influence receiving coil; a control relay having a front contact; a secondary circuit including said secondary coil, the winding of said relay, a source of direct current and the front contact of said relay in series; trackway means for inductively coupling said coils; and means for varying the sensitiveness of said car-carried apparatus at different speeds including a speed responsive device.

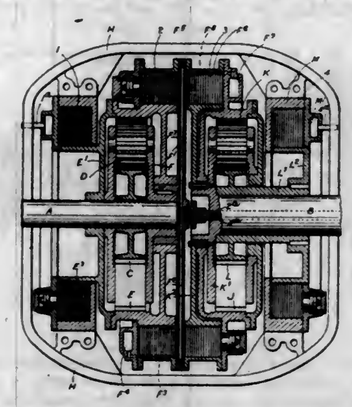
1,619,699. TESTING INSTRUMENT. WILLIAM BROAD, Beaver Falls, Pa., assignor of three-fourths to H. E. McLain, Pittsburgh, Pa. Filed June 5, 1924. Serial No. 718,006. 12 Claims. (Cl. 136—100.)



1. In a voltaic cell, a conductor of the first class forming a casing, a second conductor of the first class therein, and an absorbent material between said conductors main-

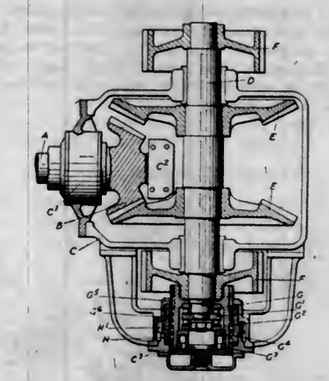
taining them in definite spaced relation, said casing having an opening adjacent one end permitting contact to be established at will with said second mentioned con-

ductor and having an opening adjacent the opposite end enabling the addition of electrolyte, substantially as described.



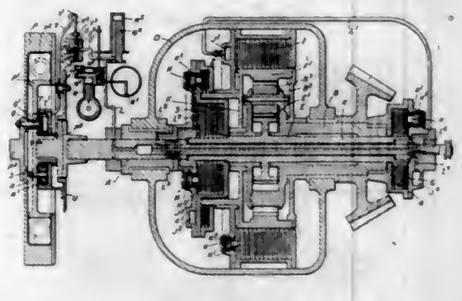
1,619,700. PUMP-ROD-ROTATING DEVICE. JAMES H. COLLINS, Fullerton, Calif., assignor to William D. Shaffer, Brea, Calif. Filed Feb. 26, 1924. Serial No. 695,285. 5 Claims. (Cl. 255—14.)

1. In combination a polished rod, a clutch, one member of said clutch being fixed to the polished rod of an oil well apparatus, the other member of said clutch being rotatably mounted on said rod, means for oscillating said rotatable clutch member as said rod reciprocates to cause said clutch members to disengage on one reciprocating movement of the rod and to engage and turn the rod on its other reciprocating movement, and spring means for forcing said rotatably mounted clutch member toward said fixed clutch member.



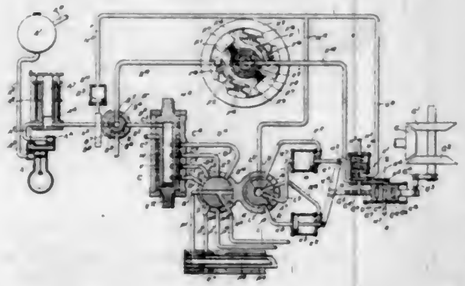
1,619,701. VARIABLE SPEED GEAR AND MEANS FOR CONTROLLING THE SAME. ALAN ERNEST LEOFRIC CHORLTON, London, England. Filed July 7, 1924. Serial No. 724,719. 3 Claims. (Cl. 74—34.)

1. In a variable speed gear, in combination, a driving member, a driven member, means for coupling said driving member to said driven member including an epicyclic gear train comprising a sun wheel loosely mounted concentrically of the driving member, a rotatable arm carrying a planetary pinion connected to the driven shaft, a toothed annulus concentric with the driving and driven members but mounted to rotate independently of either, a disc secured to the driving shaft, a plurality of multiple plate connecting devices operative on the elements of the gear train for changing the speed ratio between the driving and driven members, there being two of said multiple plate connecting devices adapted to hold the sun gear and annulus stationary, and two multiple



connecting devices adapted to connect the sun gear and annulus to said disc secured to the driving shaft, and means for controlling said connecting devices.

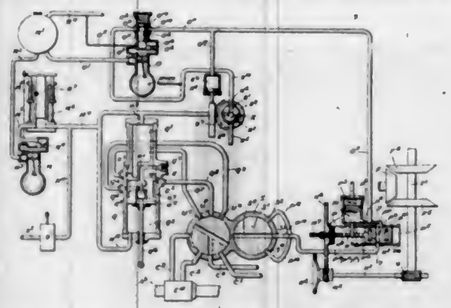
1,619,702. REVERSING GEAR FOR INTERNAL-COMBUSTION-ENGINE LOCOMOTIVES. ALAN ERNEST LEOFRIC CHORLTON, London, England. Filed Nov. 12, 1924. Serial No. 749,500. 3 Claims. (Cl. 74—58.)



1. In a reversing gear for an internal combustion engine locomotive, the combination of a driving shaft, a bevel pinion fixed on this driving shaft, a shaft disposed at right angles to the driving shaft, two bevel pinions fixed rigidly to this second shaft, these wheels being so positioned that either one or the other of them can be brought into engagement with the bevel pinion on the driving shaft, two gear wheels fixed on the said second shaft respectively towards its ends, other gear wheels meshing with these gear wheels and serving to transmit the drive to the track wheels, bearings in which the said second shaft is carried and in which this shaft can be moved in the direction of its axis so as to cause one or the other of the bevel wheels thereon to engage with the bevel pinion on the driving shaft, a sleeve mounted adjacent to one end of said second shaft so as to be rotatable thereon but not to be axially movable relatively thereto, a screwthread on this sleeve, a second outer sleeve engaging the screwthread on the first sleeve and means for rotating this outer sleeve so as to move the first sleeve and hence the said second shaft to which it is connected in the direction of its axis as set forth.

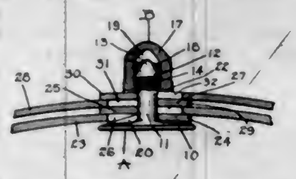
1,619,703. POWER-TRANSMISSION MECHANISM. ALAN ERNEST LEOFRIC CHORLTON, London, England. Filed Nov. 28, 1924. Serial No. 752,748. 18 Claims. (Cl. 74—34.)

1. In a power transmission mechanism the combination of a driving member, a driven member, a variable driving connection between these two members, a fluid pressure system for controlling the variable driving connection, a device connected to one of the members comprising two flexibly connected parts between which relative movement is produced by variations in the torque transmitted through the member to which the device is connected irrespective of the speed of such member, and means whereby such relative movement acts on the fluid pressure system and thereby controls the variable driving connection.



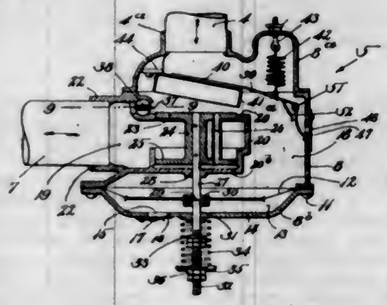
1,619,704. INTERNAL-COMBUSTION-ENGINE LOCOMOTIVE. ALAN ERNEST LEOFRIC CHORLTON, London, England, assignor of one-half to William Beardmore, London, England. Filed Jan. 5, 1925, Serial No. 657, and in Canada Nov. 29, 1923. Renewed Jan. 15, 1927. 25 Claims. (Cl. 303—21.)

1. In an internal combustion engine locomotive, the combination of a variable speed gear, a fluid pressure system for controlling the gear ratio of the variable speed gear, and means whereby the fluid pressure system is controlled partly by hand and partly automatically in accordance with the road speed of the locomotive.



1,619,705. INTERNAL-COMBUSTION-ENGINE LOCOMOTIVE. ALAN ERNEST LEOFRIC CHORLTON, London, England. Filed Feb. 11, 1925, Serial No. 8,591, and in Canada Nov. 29, 1923. 38 Claims. (Cl. 105—62.)

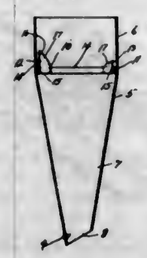
1. An internal combustion engine locomotive, comprising an internal combustion engine of the heavy oil type, an epicyclic variable speed gear, a plurality of plate clutches operative to control the gear ratio of the variable speed gear, a bevel reversing mechanism so connected to the gear that the full range of speeds of the gear is available either in the forward or in the reverse direction of motion, a set of coupled track wheels, means for transmitting the drive from the internal combustion



engine through the variable speed gear and the reversing mechanism to the track wheels, and a fluid pressure system for controlling the plate clutches of the gear.

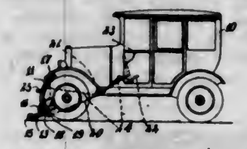
1,619,706. COLLAR BUTTON. ERWIN FREDRICK COATES, St. Paul, Minn. Filed Jan. 8, 1926. Serial No. 79,989. 4 Claims. (Cl. 24—105.)

1. A collar button comprising a flanged back, a shank issuing outwardly therefrom, an elongated head formed at the end of said shank terminating in a conical shaped point, said head being of a diameter slightly greater than that of said shank and forming a shoulder therewith, threads formed on said shank commencing at the larger end of said point and extending to said shoulder, the external diameter of said threads being equal to that of the largest portion of said point and a cap adapted to be screwed on said threads.



1,619,707. POWER-CONTROL DEVICE FOR PNEUMATIC-DISPATCH SYSTEMS. JAMES T. COWLEY, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Mar. 4, 1926. Serial No. 92,182. 44 Claims. (Cl. 243—9.)

1. Power control apparatus for a pneumatic dispatch system of the minimum flow type having a transmission tube, said apparatus comprising a pair of independent

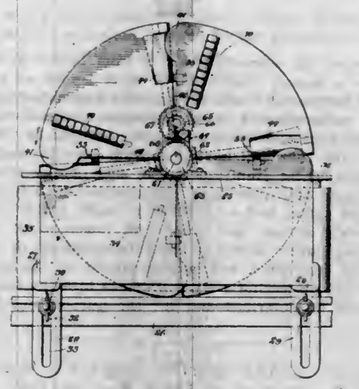


controlling devices for cutting off carrier impelling air flow through the transmission tube, one of said devices normally being so disposed as to cut off carrier impelling air flow, but opening in response to the introduction of a single carrier into the transmission tube, and the other of said devices normally being open but closing in response to delivery of the last carrier from the tube.

1,619,708. COMBINED RECEPTACLE OPENER AND FLUID CONDUCTOR. HERMAN T. DIETRICK, Philadelphia, Pa. Filed Oct. 28, 1925. Serial No. 65,329. 3 Claims. (Cl. 226—29.)

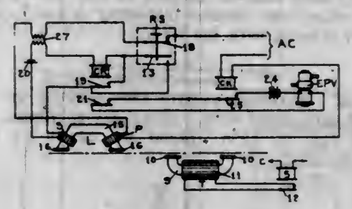
3. The combination with a substantially funnel-shaped device having a cylindrical portion formed at its larger end, of can-opening devices with the cylindrical portion of the device, and a ring within the cylindrical portion supporting the can-opening devices from the line of intersection between the cylinder and funnel-shaped portions of the device.

1,619,709. AUTOMOBILE SAFETY ATTACHMENT. MARIA DOUJAK, New York, N. Y. Filed July 26, 1926. Serial No. 124,908. 3 Claims. (Cl. 293—34.)



1. A device of the class described, comprising frame members, a screen between said frame members, a fender pivotally connected to said frame members, rollers rotatably fastened to said fender, a segmental gear meshing with said gear, said segmental gear being rotatably supported by brackets depending from said frame members, a lever depending from said segmental gear, a cord attached at one end to said lever, a hand lever pivotally mounted to the floor of the vehicle, the free end of said cord being attached to said hand lever, a latch device pivotally connected to said frame members, a cord attached to said latch device, a foot pedal pivotally mounted to the floor of the vehicle, and the free end of said second mentioned cord being attached to said foot pedal.

1,619,710. DUST CAP. WILLIAM F. DURYEA, Hackensack, N. J. Filed Dec. 28, 1925. Serial No. 77,909. 1 Claim. (Cl. 152—12.)

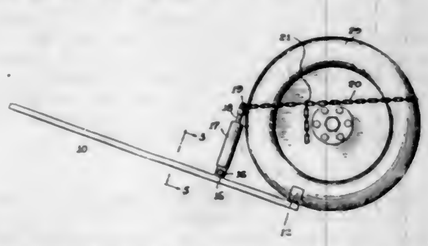


The combination with a cylindrical dust cap having a plurality of longitudinally extending alternate ribs and grooves at its interior, of a member disposed within the dust cap, including a split spring ring portion frictionally engaging the ribs, and a plurality of spring fingers integral with the ring portion adapted for selective disposition either against the ribs or in the grooves, whereby the fingers may snugly engage a plurality of sizes of valve stems.

1,619,711. APPARATUS FOR FEEDING FOLDED PAPER TUBES OR THE LIKE. ELMER ENGSTROM, South Windham, Conn. Filed Apr. 27, 1926. Serial No. 105,023. 9 Claims. (Cl. 271—29.)

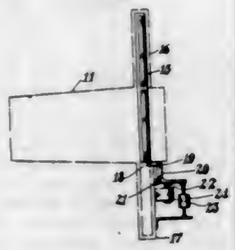
1. A paper sheet feeding mechanism including a rotating turntable, a frame arranged above the turntable and laterally supporting a stack of sheets which rest on the turntable, said turntable having a radial slot therein, a separating tongue at the following edge of the slot, and roller means operating at the surface speed of the turntable for drawing the corner of the lowermost sheet downwardly under the separating tongue.

1,619,712. INTERMITTENT INDUCTIVE TRAIN CONTROL. CHARLES F. EASTWICK, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Apr. 8, 1925. Serial No. 21,551. 7 Claims. (Cl. 246—63.)



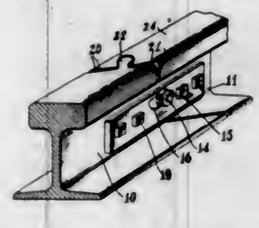
1. Influence communicating means for automatic train control systems of the intermittent inductive type, comprising a car-carried influence receiving element including a core of laminated magnetic material of general inverted U-shape having a primary coil on one leg and a secondary coil on the other leg, a stick relay, an alternating current source of energy for energizing said primary coil, a direct current source of energy, a secondary circuit including in series said secondary coil, said stick relay and said source of direct current, trackway means for effecting an inductive coupling between said primary and said secondary coil under predetermined traffic conditions ahead, and separate car-carried means for inductively coupling said secondary and said primary circuit.

1,619,713. TRAP DEVICE FOR SEPARATING WATER FROM PETROL. NORMAN ALFRED FREAN, Mount Barker, South Australia, Australia. Filed July 7, 1926, Serial No. 121,016, and in Australia Oct. 28, 1925. 1 Claim. (Cl. 210—57.)



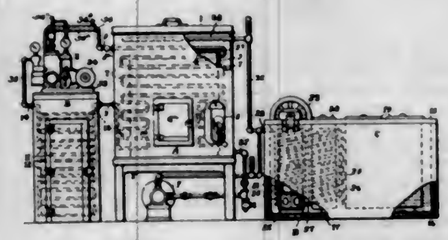
A device for separating water from petrol in its passage to a motor, comprising a short length of tube arranged horizontally and having inlet and outlet openings at its ends adapted to be connected respectively with a supply pipe and a motor, a sump secured to the under side of the tube and having a drain plug in its bottom, pipes projecting from the under side of the tubes into the sump, and providing communication between the tube and sump, and a plurality of baffle plates arranged alternately across the upper and lower parts of said tube, the lower baffle plates corresponding in number with the said pipes and each arranged at the center of a pipe and projecting a short distance into the same, substantially as described and for the purpose set forth.

1,619,714. BRAKE-TESTING DEVICE. WALTER L. FRY, New York, N. Y. Filed Sept. 23, 1925. Serial No. 58,091. 2 Claims. (Cl. 265—1.)



1. A brake testing device comprising a lever adapted to fulcrum against the periphery of a wheel, a flexible and adjustable element adapted to loop over a portion of the wheel, and tension indicating means connecting the said element with the lever.

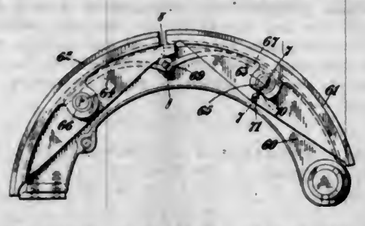
1,619,715. PHOTOGRAPHIC APPARATUS TO IDENTIFY HOLDUP MEN. JOHN GAGL, Bronx, N. Y. Filed Apr. 14, 1925. Serial No. 22,949. 3 Claims. (Cl. 67—31.)



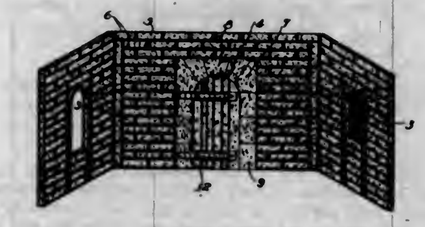
1. In a device of the class described, a camera arranged to accommodate a vertically shiftable plate holder adapted to carry a pair of plates, a bolt holding said plate holder in raised position, a receptacle for a flashlight powder, a sparkplug therein, a shutter-operating lever, an electro-magnet for moving said lever in one direction, an electro-magnet for releasing said bolt, and a switch controlling said electro-magnets and sparkplug.

1,619,716. RAIL JOINT. GYULA GÁL, Szeged, Hungary, assignor of one-half to Balint Gellen, New Brunswick, N. J. Filed May 13, 1926. Serial No. 108,824. 3 Claims. (Cl. 238—235.)

1. A rail joint comprising diagonally cut rail ends, one of the said rails provided with a central protruding portion having an enlarged circular extremity to engage an aperture cut in a second rail, between diagonal cuts at the edges of its extremity, said projecting portion being provided at the upper portion of the rail, and a block adapted to be inserted between said rail ends to engage the lower surface of said projection, said block being removable.



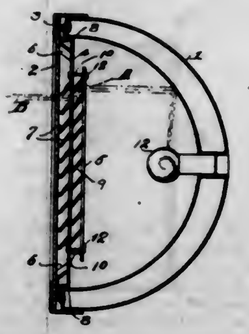
1,619,717. MANUFACTURING, HARDENING, STORING, AND DISPENSING PLANT FOR ICE CREAM AND OTHER FROZEN FOOD PRODUCTS. RALPH W. GEARHART, Clearfield, Pa., assignor to Gearhart Sales Cabinet Co. Inc., Clearfield, Pa., a Corporation of Delaware. Filed May 22, 1925. Serial No. 32,067. 7 Claims. (Cl. 62—101.)



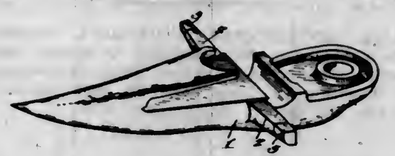
1. In a unitary apparatus for the purpose described, the combination of a pair of cabinets, one of said cabinets being provided with a bath of brine, a brine coil in said bath, an expansion coil in the other cabinet, a compressor-condenser mechanism in circuit with the expansion coil, a pump having its discharge connected to one end of said brine coil, and means interposed between the other end of said brine coil and the intake of said pump whereby the brine for said brine coil is refrigerated by said expansion coil.

1,619,718. BRAKING MECHANISM. ALBERT HENRY GODFREY GIRLING, Harlow, England. Filed Aug. 18, 1926, Serial No. 129,950, and in Great Britain May 12, 1925. 12 Claims. (Cl. 188—78.)

1. In an expanding brake of the character described, the combination with a lever mounted to rock towards and away from a member to be braked, and means for rocking the lever, of brake shoes so movably supported in tandem on said lever that when one end of either shoe moves away from its supporting lever and towards the member to be braked, the other end of the same shoe, respectively, can move towards its supporting lever and away from the member to be braked.

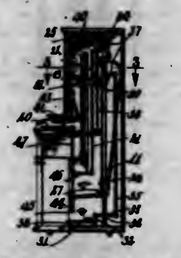


1,619,719. DISPLAY BACKGROUND. MATTHEW S. GOLDMAN and ERNEST W. HUTTIG, Pittsburgh, Pa., assignors to McCallum Decorative Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 7, 1926. Serial No. 107,499. 6 Claims. (Cl. 272—11.)



1. A display background comprising a supporting frame structure, and composition cork material attached to said frame, said cork material being shaped and assembled to resemble masonry.

1,619,720. ANTIGLARE ATTACHMENT FOR HEADLIGHTS. HARRY L. GORDON, New York, N. Y. Filed Feb. 27, 1926. Serial No. 91,135. 3 Claims. (Cl. 240—48.4.)



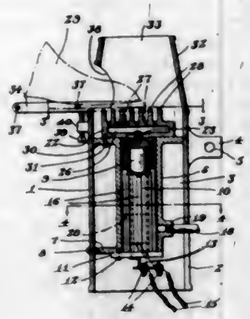
1. In a device of the class described, the combination of a front plate provided with outwardly extending spacing fingers, said front plate provided with anchoring prongs and with slats, said front plate provided with tongue receiving apertures, a back plate provided with slats positioned parallel to the slats of the front plate, and spacing elements on the back plate and provided with tongues extending through the tongue receiving apertures of the front plate and bent back upon said front plate.

1,619,721. REPAIR GUARD FOR MOWERS AND THE LIKE. SIEGFRIED W. GREGERSEN, Crookston, Nebr. Filed June 3, 1925. Serial No. 34,588. 2 Claims. (Cl. 56—307.)

1. A sickle bar replacement guard having lateral arms, and terminal extensions secured to the extremities of the arms and in continuation thereof.

1,619,722. CONTINUOUSLY-SOUNDING PIANO DEVICE. JACOB B. GRINOCH and SIMON GRINOCH, Bronx, N. Y. Filed Dec. 18, 1925. Serial No. 76,157. 5 Claims. (Cl. 84—257.)

5. In a musical instrument with sonorous strings, a band-bow with means for a continuous motion engageable with the said strings, means for guiding said band-bow comprising rollers placed behind said band-bow and straddling said strings, said rollers being supported by shafts having bearings in the body of the said musical instrument, an idler wheel, tension adjustment for said band-bow comprising means for changing the position of said idler wheel, positioning means for said strings characterized by operating rods, upright rods, cross arms, bell cranks, springs, substantially as set forth, and a rosin member engageable with said band-bow actuated by a foot lever.

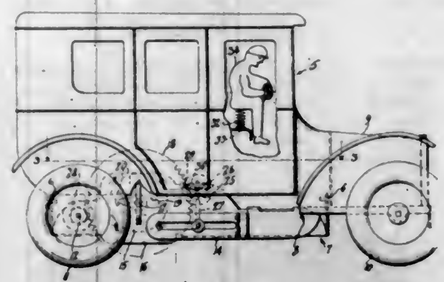


1,619,723. TOY STOVE. JOHN H. HABTMAN, Lancaster, Pa., assignor to The Hubley Manufacturing Co., Lancaster, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1926. Serial No. 127,879. 7 Claims. (Cl. 46—37.)

1. In combination with a toy range having an imitation grate, a subjacent member carrying upstanding projec-

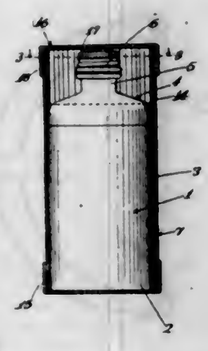
tions in imitation of flame jets normally below but adapted to be raised so as to protrude up through the grate, and means for raising and lowering said member.

1,619,724. SHOE-TEMPERING MACHINE. DONALD B. HEATH, Whitman, Mass., assignor to Boston Electric Heating Corporation, Whitman, Mass., a Corporation of Massachusetts. Filed May 25, 1926. Serial No. 111,620. 3 Claims. (Cl. 12—1.)



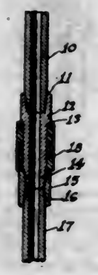
1. Apparatus of the kind described, comprising an annular cabinet, a steam generating chamber affixed to the interior of said cabinet, means to maintain a predetermined water level in said steam generating chamber, a heating unit contained in a casing in said steam generating chamber, said casing having a plurality of webs for increased heat radiation, a distributing head secured to said steam generating chamber, means to limit the volume of steam passing to said distributing head, a plurality of ribs on said head, perforations between said ribs, said cabinet being formed at its uppermost portion as a truncated cone, adjustable shoe supporting means and an opening through which the shoe to be steamed may be inserted into the path of the steam.

1,619,725. COMBINATION FOOT REST AND ROBE CONTAINER. EARL R. HELLER, Wapwallopen, Pa. Filed Apr. 23, 1923. Serial No. 634,146. 1 Claim. (Cl. 296—75.)



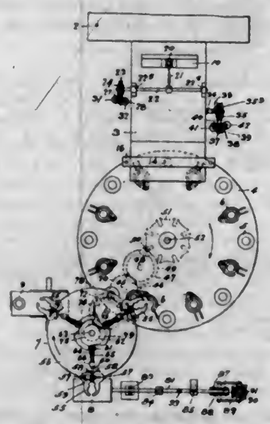
A device for the purpose set forth, comprising side plates which are hingedly supported, each of said plates having its free portion widened to provide a rounded outer end and an inner flanged edge, both of which are flanged inwardly, a split tubular body received in the flanges of the sides, said body having an angle portion designed to align with he angle edges of the sides, removable securing means passing through the sides for sustaining the split tubular body thereon, said body designed for the reception of a lap robe whose end projects through the split portion thereof, and the body as a whole susceptible for swinging to provide a foot rest when the lap robe is not in use and likewise susceptible for swinging away to a second position to permit of the angle face of the body serving as a foot rest and to likewise permit of the withdrawing of the robe from the body.

1,619,726. MECHANICAL AUTOMOBILE TOY. DAVID HEYMAN, Newark, N. J. Filed Nov. 14, 1925. Serial No. 68,972. 13 Claims. (Cl. 46—45.)



1. In a toy of the nature described, a fowardly disposed hood portion, a body portion pivotally associated with the hood portion, an arm on said hood portion having a slot therein and means operating within the slot of said arm to oscillate the hood in an up and down direction.

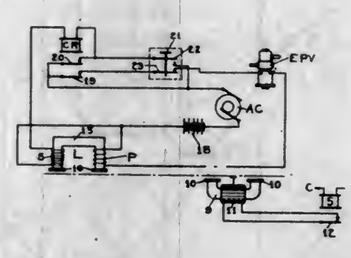
1,619,727. CONTAINER. ROLO D. HILL, Los Angeles, Calif., assignor of one-half to Nella H. Hill, Los Angeles, Calif. Filed Mar. 22, 1926. Serial No. 96,557. 5 Claims. (Cl. 206—46.)



1. In combination a bottle or other receptacle, a container formed of a wrapping of a plurality of sheets, said sheets being in the form of a circular or pamphlet, the edge of one of the sheets being cemented to the outside of the container, and caps secured on opposite ends of the wrapped circular or pamphlet forming end closures.

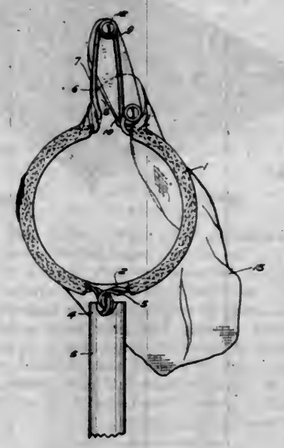
1,619,728. CUSHION JOINT FOR ROTARY DRILL PIPES. ARTHUR C. HOPKINS, Compton, Calif., assignor to U. S. Tool Co., a Corporation of California. Filed Feb. 4, 1924. Serial No. 690,507. 6 Claims. (Cl. 308—4.)

1. A string of rotary drill pipe in a hydraulic rotary well drilling apparatus, comprising a plurality of pipe sections, couplings uniting said sections at different points along the string, and resilient cushions mounted on and held by said couplings.



1,619,729. REGULATION OF GLASS FEEDERS. GEORGE E. HOWARD, Butler, Pa. Filed June 9, 1923. Serial No. 644,391. 25 Claims. (Cl. 49—5.)

1. The method of regulating the weight of mold-charges delivered by a glass feeder that comprises periodically weighing one of the articles formed from mold-charges delivered by said feeder, and varying the rate at which glass is delivered by said feeder in automatic response to substantial variation of said article from the normal weight of said articles.

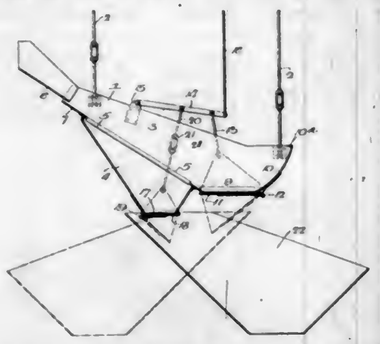


1,619,730. INTERMITTENT-INDUCTIVE TRAIN CONTROL. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Apr. 8, 1925. Serial No. 21,597. 11 Claims. (Cl. 246—63.)

1. Influence communicating means for automatic train control systems of the intermittent inductive type comprising, a car element having a primary and a secondary coil thereon, a direct current and an alternating current source of energy connected in series for energizing said primary coil, a secondary influence receiving coil, and means governed in accordance with traffic conditions

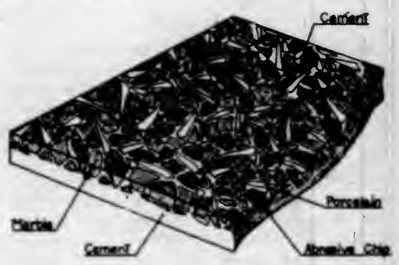
ahead for causing the induction of a voltage in said receiving coil in response to flux emitted from said primary coil, whereby voltage is induced in the secondary coil by constant flux and movement of the vehicle by said means or is induced by varying flux alone.

1,619,731. FRUIT PICKER. WILLIAM D. HUGHES, Miami, Fla. Filed June 18, 1924. Serial No. 720,823. 1 Claim. (Cl. 56—339.)



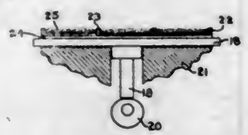
A fruit picker including a frame formed with a stem guiding channel comprising a pair of superposed wire loops of generally similar shape, a knife frictionally supported between said loops, the latter having coiled portions forming aligned rings, and securing means for said knife passing through said rings.

1,619,732. INSPECTION AND WEIGHING APPARATUS. GEORGE S. JAXON, Huntington, W. Va., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 21, 1924. Serial No. 733,422. 3 Claims. (Cl. 209—255.)



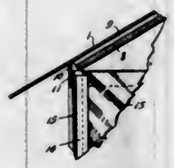
1. The combination in an inspection and weighing apparatus, of a pan; means for suspending the pan, said pan being made in two sections separated by an inclined screen, each section having a discharge opening, the open-

ing in the lower section being located directly in advance of the opening in the upper section; and a receiving hopper having an inclined portion over which the material



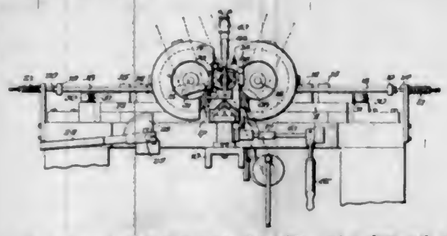
flows as it is discharged from the sections of the pan, the coal discharged from one section acting as a cushion for that discharged from the other section.

1,619,733. AGGREGATE-CEMENT TILE. GEORGE N. JEPPSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 28, 1922. Serial No. 603,805. 1 Claim. (Cl. 94—5.)



A tile comprising a precast cement body having embedded in its top surface aggregates of ceramic bonded abrasive grains interspersed with colored chips of vitrified ceramic material which are so arranged with the surrounding areas of cement that the aggregates will contact with and prevent foot gear from slipping thereon, the tile being dense and substantially non-absorbent of water and having a ground and polished surface made up largely of the aggregates and the ceramic chips which are adapted to receive substantially all of the wear and protect the surrounding cement.

1,619,734. TERRAZZO TILE AND METHOD OF MAKING THE SAME. GEORGE N. JEPPSON and CARL L. LEAFE, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 13, 1923. Serial No. 645,183. 5 Claims. (Cl. 18—60.)

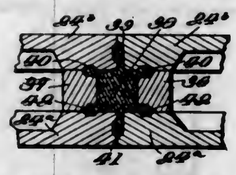


1. The method of making a terrazzo tile comprising the steps of wetting porous chips of bonded abrasive grains with water, mixing them with dry cement, and thereafter developing a desired moldability therein, shaping a tile therefrom and grinding off a layer from the tile to provide plane faces on the exposed chips.

1,619,735. COMBINED TOMB MARKER AND DECORATION CONTAINER. PERRY JOHNSON, Topeka, Kans. Filed Aug. 12, 1925. Serial No. 49,859. 1 Claim. (Cl. 47—19.)

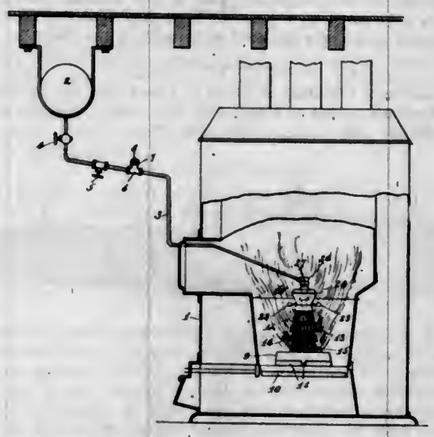
A combined tomb marker and decoration container comprising a housing having transparent sides, a metallic framework for said transparent sides, a roof for said housing, said roof terminating in a ridge, hinge means connecting the sides of the roof with each other at the ridge whereby said sides may be swung in a vertical plane, a spaced insulation means for each of the roof sides open at top and bottom, said frame adjacent the upper edges of the housing sides provided with a plurality of ports in alignment with the space between the roof and the insulation means, said roof provided with a plurality of aligned ports adjacent said ridge and in alignment therewith, said last named ports communicating with the spaces between the roof and the insulation, a cresting adapted to be positioned over said ridge and last named ports, said cresting projecing a substantial distance above the ridge for forming a longitudinal air channel, said cresting extending for substantially the entire length of the roof, hinge means connecting one side of said cresting with one side of the roof, catch means carried by the other side of the roof for normally retaining said cresting in position, said cresting adapted to swing upwardly upon the raising of either side of the roof, said first and second named ports and said cresting adapted to provide an air circulating means for said roof.

1,619,736. GRINDING MACHINE. MICHAEL M. KAUFMANN, JOHN P. LYNN, and FRANK C. DELI, Chicago, Ill., assignors to Autopoint Company, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1925. Serial No. 28,596. 9 Claims. (Cl. 51—89.)



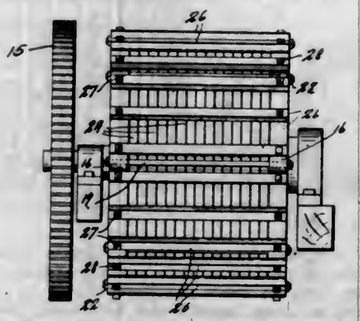
1. A machine for grinding the sides of polygonal objects, comprising, in combination, a bed, a pair of slides thereon, grinding wheels mounted on said slides, means for simultaneously moving said slides and grinding wheels toward and from each other, spindles for holding the work, means for effecting bodily reciprocation of said spindles and work laterally relative to the reciprocation of the slides, and means for rotating the spindles and work by a step by step movement.

1,619,737. PRECAST PLASTIC COMPOSITION STRUCTURAL PARTS AND MEANS FOR UNITING THE SAME. LOUIS CHARLES KRUMMEL, Brooklyn, N. Y. Filed Apr. 1, 1926. Serial No. 99,065. 3 Claims. (Cl. 72—29.)



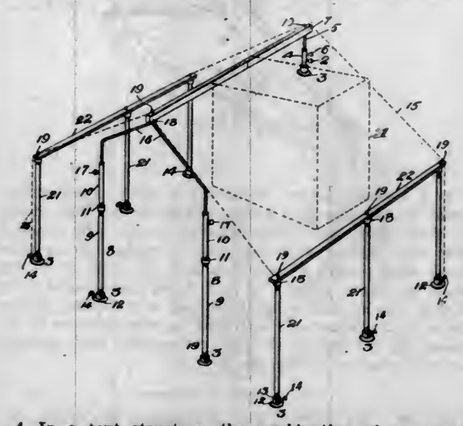
1. A joint construction comprising adjacent parts formed from a plastic composition, one of which is in the form of a plate having the front and rear faces thereof adjacent the ends disposed in parallel planes, and

the end walls disposed in planes substantially at right angles thereto, each of said parts having recesses in faces thereof disposed at an angle to each other, said



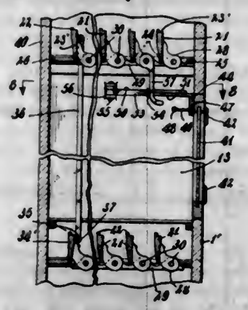
recesses being associated and connected so as to form channels, and a cementitious holding key in said channel and extending into said recesses from one angular face to the other.

1,619,738. OIL BURNER. HARRY ANTHONY LACERDA, Watervliet, N. Y. Filed Mar. 6, 1926. Serial No. 92,899. 3 Claims. (Cl. 158—91.)



1. A burner, including a base member, a pile of superimposed bricks thereon, an open cap member on the upper brick, a deflector supported in said member, a discharge nozzle directing oil onto said deflector, the upper brick having a recess receiving the lower end of the deflector, the upper end of the deflector being of general mushroom shape, and outwardly projecting arms on the deflector and said cap member having slots therein receiving the arms.

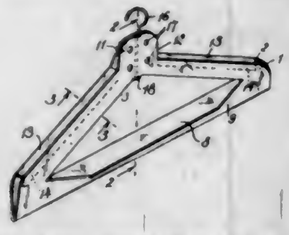
1,619,739. ROLLER MILL. EDWARD FITZ-GERALD LAW, Reno, Nev., assignor to United States Engineering Company, a Corporation of Nevada. Filed Oct. 12, 1926. Serial No. 141,191. 5 Claims. (Cl. 83—9.)



1. A roller mill including opposed heads, transversely extending bracket bars mounted between said heads and having flanges, and arcuate liner bars extending circumferentially of the barrel and having their ends resting upon and supported by said flanges, and having their inner faces flush with the inner faces of the bracket bars, there being a plurality of liner bars disposed side by side between the heads, the liner bars being adapted to be spaced from each other by means of shims inserted between the liner bars.

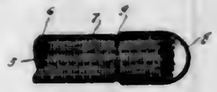
1,619,740. TENT STRUCTURE. THOMAS J. LONG and JAMES L. TUTTLE, Wellington, Kans. Filed June 21, 1926. Serial No. 117,461. 4 Claims. (Cl. 135—4.)

4. In a tent structure, the combination of a pair of vertical door standards, constituting a door opening of a tent, angle hip members having their lower ends slidably adjustable in the upper ends of said door standards, said hip members having their upper ends in engagement, an inverted cuplike cup encircling said upper ends and holding the same snugly together, a ridge pole supported at one end by said cap, and means supporting the other end of said ridge pole whereby canvas may be supported thereon.



1,619,741. ICE-SAVING REFRIGERATOR. LOUIS LOWY, Bronx, N. Y. Filed Feb. 4, 1926. Serial No. 85,922. 2 Claims. (Cl. 62—48.)

1. In a device of the class described, having a door, for each provision compartment, the combination of a frame, a plurality of shutter elements pivotally mounted in said frame, a bracket attached to each of said shutter elements, said brackets being formed with yoke shaped extremities, a bar pivotally attached to said extremities, a lever depending from one of the shutter elements, a bell crank pivotally mounted to one wall of said compartment, one arm of said bell crank being abutable against said lever, the other arm of said bell crank being formed with a slot, a pin engaging said slot, an angle shaped member supporting said pin, a support hingedly connected to said angle member, said support being fastened to said



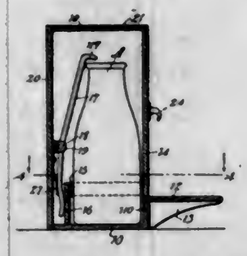
door, a curved member depending from said support, a lug depending from said angle shaped member, said curved member being slidably engaged in said lug, and said curved member being formed with a large extremity.

1,619,742. GARMENT HANGER. JAMES E. MATHEW, Brooklyn, N. Y. Filed Aug. 29, 1925. Serial No. 53,279. 4 Claims. (Cl. 223—66.)

1. A clothes hanger comprising a piece of sheet material having two open center triangular portions united at their bases and folded together along their common base line, one of said triangular portions having flaps along those edges corresponding with the arms of the triangle, at least a portion of each flap being adapted to be folded into a plane substantially at right angles to the plane of the hanger and said flaps and the openings in the triangular portions being corelated so that said openings are unobstructed by the flaps.

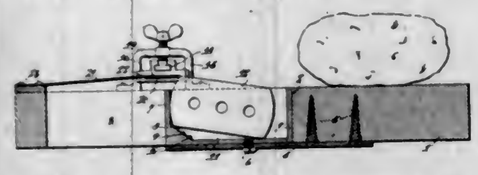
1,619,743. HAIR CURLER. KATHERINE MCCLAIRE, Chicago, Ill. Filed Aug. 22, 1923. Serial No. 658,679. 4 Claims. (Cl. 132—43.)

1. A hair curler comprising a central core of pliable metal; a covering for said core of relatively softer material; a fabric covering for said core covering; and metallic caps secured over the ends, the edges of said caps being turned inwardly and impressed into said core covering to form a resilient locking groove therein, substantially as described.



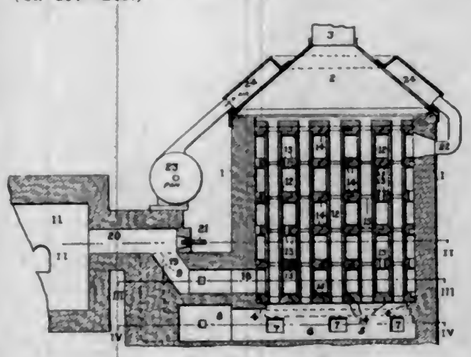
1,619,744. MECHANIC'S FISHING TOOL. PAUL J. MCCLOSKEY, Roselle, N. J. Filed Mar. 28, 1921, Serial No. 456,355. Renewed Feb. 10, 1926. 1 Claim. (Cl. 7—16.)

A tool for the purpose described comprising a pair of spaced elongated members, a transverse web secured to the inner faces of the members and extending the entire width thereof, the members at one side of the web being rectangular and in parallel relation with each other while the members at the opposite side of the web are somewhat longer and taper and converge toward their extremities, and a handle having a forked end which embraces the members and is pivotally secured to the said web.



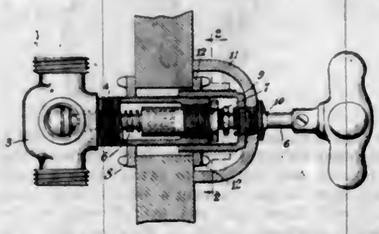
1,619,745. MILK-BOTTLE PROTECTOR. JAMES A. MCNAMARA, New York, N. Y. Filed June 17, 1926. Serial No. 116,068. 2 Claims. (Cl. 232—41.)

1. A milk bottle protector including a receptacle having a support at the front to receive a milk bottle and having an open front side above said support, and a panel movable from an outer position adjacent the outer edge of said support, to an inner position closing the front of said receptacle, said panel adapted to displace



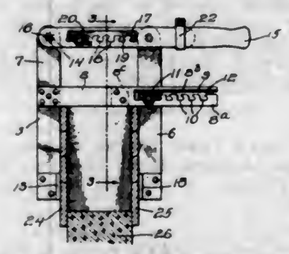
the milk bottle from said support and deposit it within the receptacle; together with a member below the front opening of the receptacle, and a stop element movable with said panel to a position to engage said front member and arrest the outward movement of the panel.

1,619,746. POTATO SLICER. FREDERICK H. MILLER, Portland, Oreg. Filed Feb. 26, 1926. Serial No. 90,825. 14 Claims. (Cl. 146—78.)



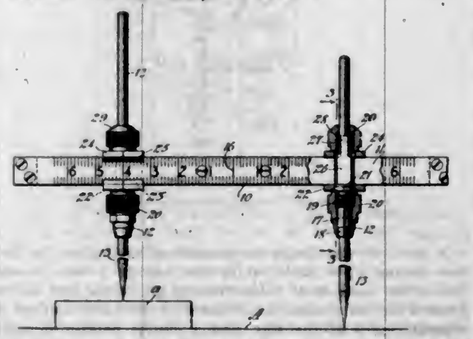
1. A device of the class described comprising a base board having a recess therein, a slicer unit removably mounted in the recess and having vertical slicing blades projecting above the top surface of the board, and a cross knife mounted upon the board in cooperative relation with the projected blades for traversing the slices made thereby.

1,619,747. RECUPERATOR. WILLIAM A. MORTON, Pittsburgh, Pa., assignor to The Amsler-Morton Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 25, 1925. Serial No. 52,336. 8 Claims. (Cl. 257—245.)



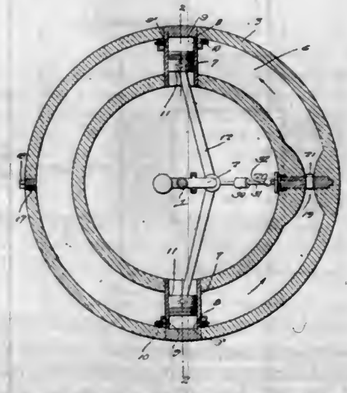
1. In a recuperator comprising a chamber inclosed by side walls, the combination of a plurality of spaced apart, vertically disposed waste gas flues formed of flue tile assembled in alined relation and interlocking flange-tile interposed between the alined flue-tile, the flange tile in the same horizontal plane interengaging to brace the flue-tile in proper position, flange-tile at the top and bottom of said flues forming air-tight floors between the parallel flues, and means for passing the air horizontally between said floors and in contact with the walls of the flue-tile.

1,619,748. VALVE CONSTRUCTION. CHARLES J. MUEND, Philadelphia, Pa., assignor to Haines, Jones & Cadbury Company, a Corporation of Pennsylvania. Filed Feb. 12, 1926. Serial No. 87,753. 3 Claims. (Cl. 251—155.)



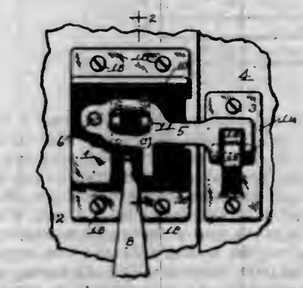
1. In a valve construction, a valve housing having a threaded cylindrical extension, a valve spindle operating therein, an interiorly and exteriorly threaded sleeve telescoping on said threaded cylindrical extension, a clamping nut threaded on said threaded cylindrical extension and a cooperating clamping nut threaded on the telescoping sleeve.

1,619,749. CLAMP. RICHARD MURRAY, New York, N. Y. Filed Jan. 29, 1926. Serial No. 84,581. 7 Claims. (Cl. 144—277.)



1. A clamp of the class described comprising two jaw parts, a member attached to one part and with which the other part is adjustably coupled, and means involving a lever and link lever construction independent of said member and pivotally connected to the separate jaw parts for moving said parts into predetermined position.

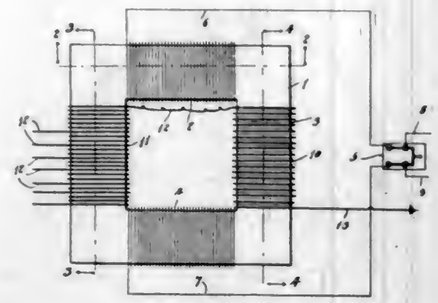
1,619,750. BEAM COMPASS. EMIL NELSON, Gary, Ind. Filed Apr. 16, 1926. Serial No. 102,513. 3 Claims. (Cl. 33—158.)



1. In a beam compass, a beam, and points disposed along said beam, and chucks for said points, longitudinally adjustable along the beam toward and from each other to vary the distance between the points, each of said chucks including a clamping terminal, a shank integral with the clamping terminal and adapted to receive a point, clamp members on said shank above and below the beam, and means to engage said clamp members firmly with the beam for holding the points in adjusted positions along the beam.

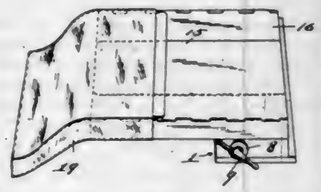
1,619,751. HYDRAULIC CLUTCH. VERNER A. NELSON, Lynden, Wash. Filed Apr. 21, 1926. Serial No. 103,580. 1 Claim. (Cl. 192—60.)

In a hydraulic clutch and in combination, a shaft adapted to be driven by a suitable motor and having a crank, a hollow rotor rotatable about said shaft and containing the crank thereof and having an oil race with a restricted portion, diametrically opposite piston cylinders intersecting said race and having opposite valve controlled ports, pistons movable in said cylinders and connected with the crank of said shaft, a valve of rotary type mounted to control the restricted portion of the oil race, a shaft fixed with respect to the rotor and alined with the first-named shaft, a member movable rectilinearly on said shaft, a rack bar connected with said member and movable in an aperture in one wall of the rotor, a shaft mounted within the rotor and having a spur gear meshed with said rack bar, and a shaft section journaled in the rotor and interposed between and connected with the shaft carrying the spur gear and the said rotary valve.



1,619,752. LATCH. ELMER C. OSBECK, Grand Rapids, Mich., assignor to Grand Rapids Brass Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Nov. 23, 1925. Serial No. 70,733. 4 Claims. (Cl. 292—226.)

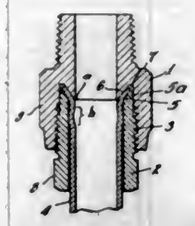
1. In combination with a keeper therefor, a door latch comprising a bolt adapted to latchingly engage the keeper; an operating handle movable to move the bolt to, and re-



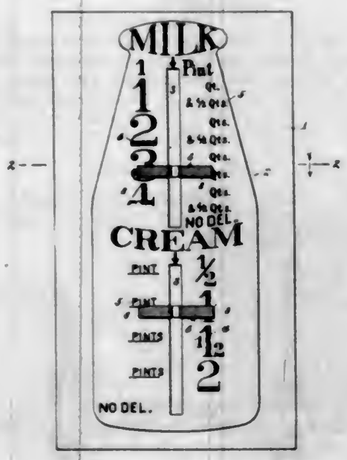
leasably hold the same in, partially retracted position and movable farther to move the bolt to retracted position, the bolt and handle having parts which mutually engage to hold the bolt in partially retracted position, the bolt being also movable from partially retracted held position to retracted position by striking the keeper in the closing movement of the door.

1,619,753. TRANSFORMER FOR ELECTRIC-ARC-WELDING APPARATUS. FREDERICK C. OWEN, Fayetteville, N. C. Filed July 26, 1924. Serial No. 728,447. 4 Claims. (Cl. 171—119.)

2. A transformer comprising a core providing a closed magnetic path, a primary coil distributed about the major portion of the core, a secondary coil on the minor portion of the core, and a second secondary coil connected to the first secondary coil and arranged on the major portion of the core.

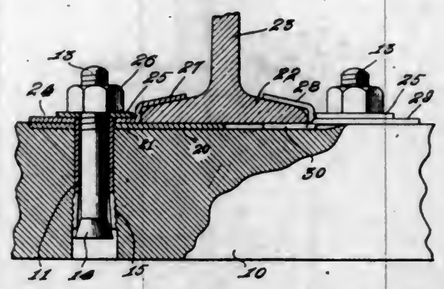


1,619,754. UPHOLSTERING DEVICE. JENS PAASKE, Clinton, Iowa. Filed May 7, 1924. Serial No. 711,740. 1 Claim. (Cl. 226—44.)



A portable upholstering device including a frame comprising fixed side and end members, a slide in said frame and movable from end to end thereof, said slide having a screw-threaded bore, a screw swivelled in one of the end members of said frame and engaging the bore of said slide, and a pair of pans each comprising a side, a bottom integral with said side and a top hinged to said side, one of said pans having its bottom secured to the upper part of said frame and the other of said pans having its bottom secured to said slide with its open side in telescopic relation to the open side of said first-named pan, said pans each having one end projecting beyond one side of said frame.

1,619,755. TUBE COUPLING. ARTHUR L. PARKER, Cleveland, Ohio. Filed Feb. 27, 1925. Serial No. 12,020. 5 Claims. (Cl. 285—124.)

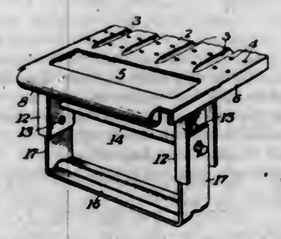


3. A tube coupling comprising cooperating male and female members threaded together, said female member having a tapered seat adapted to extend into a flared tube end, said male member having a tapered seat adapted to surround said flared tube end, said threads on the male and female members being so disposed that the seats are brought into contact with the flared tube end before the threaded portions having reached the limit of their threading movement, the portions of the male member and the portions of the female member carrying the tapered seats being dimensioned and positioned relative to each other and the tube end so that when the male member is threaded into said female member, said portions will yield, and the tapered seats be brought into intimate contact with the inner and outer faces of the flared end of the tube throughout substantially the entire length of the seats, said female member having a smooth cylindrical surface radially opposed to the tapered seat thereon throughout approximately the entire length of said tapered seat, and said male member having at the nose end thereof, a smooth cylindrical surface adapted to cooperate with said cylindrical surface on said female member.

1,619,756. MILK CARD. ANTON PEARSON and DAVID N. LINDQUIST, Lindsborg, Kans. Filed July 13, 1926. Serial No. 122,218. 1 Claim. (Cl. 146—135.)

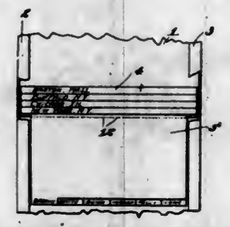
A card of the character described having on its face the outline of a milk bottle and having a slot located within the confines of the outline of the bottle and having printed matter within the confines of the bottle outline at opposite sides of the slot, and a double pointer movable in the slot and adapted to register with the said printed matter.

1,619,757. LOCK BOLT. MILTON PELKEY, Milwaukee, Wis. Filed Aug. 2, 1926. Serial No. 126,558. 5 Claims. (Cl. 238—290.)



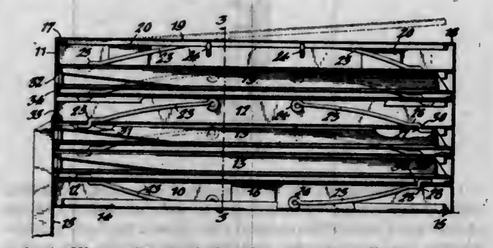
1. A locking device comprising a bolt, a split sleeve carried by the bolt, seat and gripping plates connected with one end of the bolt, and means provided at an appropriate point in the length of the bolt to cause the expansion of the sleeve in the anchoring of the bolt.

1,619,758. PROCESS OF MAKING MOLDED ARTICLES. CHARLES F. PETERSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 14, 1925, Serial No. 23,140. Renewed July 26, 1926. 8 Claims. (Cl. 18—55.)



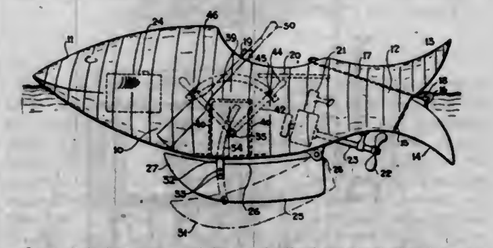
1. The method of making laminated mica articles with a binder of the glyptal class which consists in heating in a vacuum mica laminations containing said binder at a temperature sufficiently high to cause partial polymerization of said binder and thereupon continuing the polymerization under pressure.

1,619,759. PALLET. ROBERT V. PROCTOR and HARRY M. SCHAAR, Youngstown, Ohio, assignors to The Commercial Shearing & Stamping Company, Youngstown, Ohio, a Corporation of Ohio. Original application filed Mar. 31, 1925, Serial No. 19,008. Divided and this application filed Feb. 17, 1926. Serial No. 88,829. 7 Claims. (Cl. 34—17.)



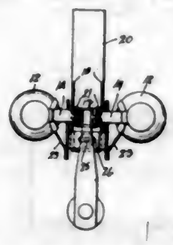
1. As an article of manufacture, a pallet comprising a metallic supporting body having at least one opening therethrough for the circulation of air, means for reinforcing said body to prevent bending thereof, and supporing legs projecting downwardly from said body, each of said pallets being provided with a portion depressed below the face of the pallet and adjacent each end thereof adapted to receive the leg of a pallet superimposed thereon, substantially as described.

1,619,760. INDEX ELEMENT. JAMES H. RAND, North Tonawanda, N. Y., assignor to Rand Kardex Bureau, Inc., Tonawanda, N. Y., a Corporation of Delaware. Filed Dec. 26, 1923. Serial No. 682,642. 4 Claims. (Cl. 129—16.7.)



1. An index element comprising a transparent supporting sheath and a pad of superposed leaves having its upper margin enclosed within the sheath, a lower marginal portion of each leaf of the pad being provided with identifying indicia and indicia upon that portion of the pad disposed within the sheath.

1,619,761. FILING CABINET. BENJAMIN G. RAND, North Tonawanda, N. Y. Filed Mar. 19, 1924. Serial No. 700,250. 7 Claims. (Cl. 45—2.)

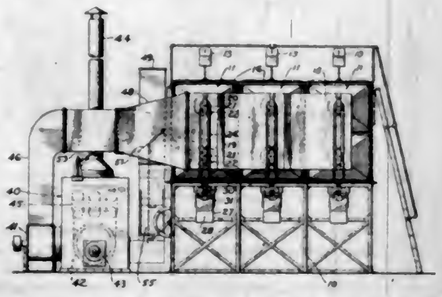


1. A filing cabinet of the character described, comprising a plurality of separable sections arranged in a vertical row, the side walls of the sections having inturned flanges, and detachable locking devices disposed lengthwise of the sections and occupying the spaces formed between the side walls thereof and their flanges, one end of each of said devices interlocking with the contiguous portions of adjoining sections, while the other end thereof engages under the flange of one of the sections.

1,619,762. FISH BOAT. ADOLF REINHART, Hoboken, N. J. Filed Mar. 26, 1926. Serial No. 97,496. 11 Claims. (Cl. 115—34.)

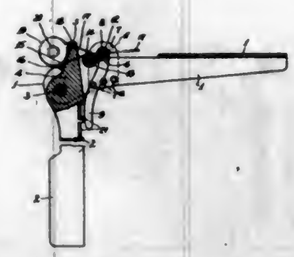
2. A fish boat comprising a hull shaped at the bow to represent the head of a fish, and having a stern shaped to represent the tail of a fish, and provided with an upper fin projecting therefrom, and a lower fin hinged to the said stern and provided with a tiller post attached thereto, and having a flexible member attached to a cross member of the said tiller post, as a means of steering the said fish boat, said fish boat provided with a gasoline motor operatively connected to a propeller wheel, as a means of propelling the said fish boat.

1,619,763. MOVABLE DOLL EYES. CHRISTIAN REINHARDT and BRUNO PELZ, New York, N. Y. Filed Mar. 27, 1926. Serial No. 97,843. 4 Claims. (Cl. 46—40.)



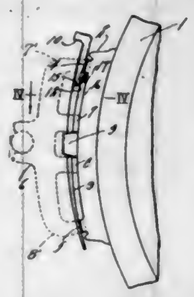
3. A movable eye mechanism for dolls, comprising a hanger, a carrier pivotally mounted on the hanger, a weighted arm loosely mounted in the carrier, a cupped friction spring bearing on each side of the hanger, and a pair of spherical eyes secured to the weighted arm and supported for rotation in the spring bearings.

1,619,764. FASTENING DEVICE. DANIEL I. REITER, New York, N. Y. Filed Aug. 16, 1926. Serial No. 129,535. 4 Claims. (Cl. 24—152.)



1. A fastening device of the class described including a pin portion adapted to penetrate and lie behind a piece of fabric to which the fastener is to be attached, a plate portion connected to the unpointed end of the pin and a separable fastener element carried by the plate portion, said plate portion adapted to overlie the outer face of the fabric, and a spur element associated with the plate portion for penetrating the fabric and coacting with the pin to prevent twisting or slipping of the plate, said spear and spur being integrally connected to the plate at diametrically opposed points and the spear being formed with a channelled portion to guide the bending of the spur.

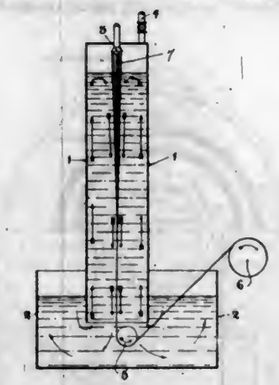
1,619,765. DESICCATOR. GRAHAME B. RIDLEY, San Francisco, Calif., assignor to Edward B. Ward, San Francisco, Calif. Filed Oct. 22, 1924. Serial No. 745,103. 10 Claims. (Cl. 34—34.)



1. A desiccator comprising a bin adapted to receive material to be dehydrated at its top and to draw said material off therefrom at its bottom, means for creating a cross current of heated air through the bin, and means for optionally changing the direction of flow of said air current.

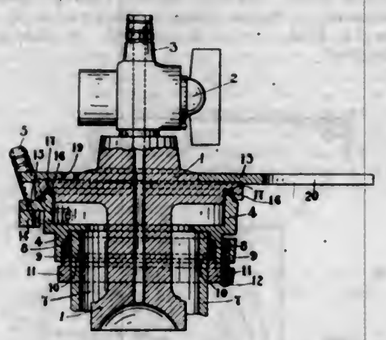
1,619,766. HOSE CLAMPING TOOL. JAMES PETER PAUL RIORDAN and WALTER MURRAY, Johannesburg, Transvaal, South Africa. Filed July 17, 1924, Serial No. 726,526, and in Union of South Africa July 20, 1923. 2 Claims. (Cl. 81—9.3.)

1. A tool of the kind described for securing clamping devices, comprising a lever bifurcated at one end, a second lever pivoted to said lever in the bifurcation and constructed with an extension beyond its pivot and having a groove in the extension, bearings at the sides of the bifurcated end of the lever, and a rotatable piece journalled in said bearings and formed between the bearings with a hole passing therethrough and constructed with a tail piece adapted to pass through the bifurcation in the lever and to be engaged by the second lever to rotate the rotatable piece in order to retain a wire while the levers are being closed or operated to strain the wire, as set forth.



1,619,767. BRAKE-SHOE-KEY HOLDER. LYNN H. SANFORD, Toledo, Ohio, assignor of one-half to Charles L. Mann, Toledo, Ohio. Filed Nov. 2, 1925. Serial No. 66,230. 3 Claims. (Cl. 188—243.)

1. A brake shoe having an eye portion and a lug, a key having a wedge acting quill portion insertable through said eye portion, said key adjacent said lug terminating in a head and provided with a way in said quill portion, a pivot pin transversely of said way, and a trigger friction tight held in said way against shifting, mounted by said pin in said way and swingable by prying to project from said key.

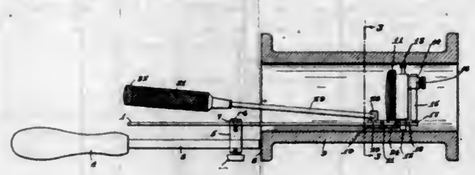


1,619,768. MANUFACTURE OF ARTIFICIAL SILK. FRIEDRICH WILHELM SCHUBERT, Apperley Bridge, near Bradford, England, assignor to Brysilka, Limited, Apperley Bridge, near Bradford, England. Filed June 21, 1926, Serial No. 117,533, and in Great Britain July 2, 1925. 2 Claims. (Cl. 18—54.)

1. A new and improved process of manufacturing artificial silk which consists in introducing a viscous solution filament into a spinning vessel containing a coagulating liquid, delivering the filament to a collecting device through an opened top trough into which the spinning vessel extends so that the coagulated liquid will be supplied to the spinning vessel through the bottom thereof by atmospheric pressure and in accordance with the drawing out of the filament and the speed of the

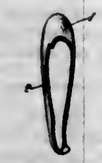
collecting device, the liquid being circulated due to the surface friction of the threads through the liquid in a direction opposite to the movement of the filaments.

1,619,769. APPARATUS FOR USE IN THE MANUFACTURE OF ARTIFICIAL SILK. FRIEDRICH WILHELM SCHUBERT, Apperley Bridge, near Bradford, England, assignor to Brysilka, Limited, Apperley Bridge, near Bradford, England. Filed June 21, 1926, Serial No. 117,535, and in Great Britain July 2, 1925. 4 Claims. (Cl. 18—8.)



1. In an apparatus for the purpose described, the combination with a spinning vessel, of a suspending ring surrounding the upper end of said vessel, a spinneret top extending into said ring and over the upper edge thereof, a gasket interposed between said top and ring, and a locking plate adjustably supported on the top and provided with hook shaped members adapted to engage the ring to retain the top in position and clamp the gasket to provide a fluid tight joint between the ring and top.

1,619,770. DISPENSING CONTAINER. ROBERT STEWART, New York, N. Y. Filed Mar. 19, 1926. Serial No. 96,006. 6 Claims. (Cl. 215—73.)



1. A container for liquids including a shiftable cap having an outlet opening therein, a compressible tube in the outlet opening, and means operable upon movement of the cap for pinching the tube to close the outlet.

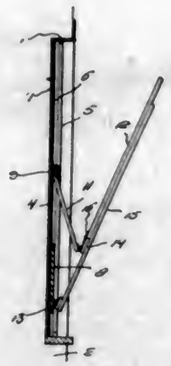
1,619,771. CYLINDER GAUGE. LEONARD C. TINGLEY, Providence, R. I., assignor to Federal Products Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 21, 1925. Serial No. 64,001. 6 Claims. (Cl. 33—178.)

1. A cylinder gauge of the kind described, comprising an elongated base adjustable to a fixed predetermined position within a cylinder, and an indicating gauge mounted on said base for reciprocation longitudinally thereof.

1,619,772. EAR PROTECTOR. ARTHUR A. THOMPSON, Oakland, Calif., assignor of one-half to Edward R. McGinnis, Oakland, Calif. Filed May 21, 1924. Serial No. 714,990. 2 Claims. (Cl. 132—45.)

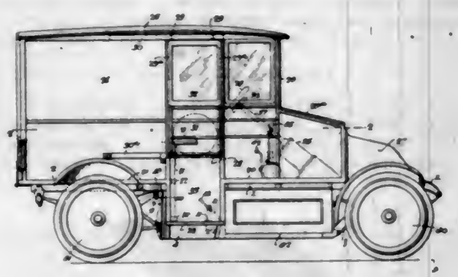
2. An ear guard for barbering purposes impervious to barbering instruments of substantially oval shape, curved edges extending back from the face thereof, the whole forming a bowl-shaped chamber adapted to loop over a person's ear and form a protector against a sharp instrument.

1,619,773. SAFETY-TREAD UNIT. EDWARD VAN DER PYL, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1923. Serial No. 630,102. 3 Claims. (Cl. 20—79.)



1. A safety tread unit comprising anti-slipping tiles of bonded abrasive grains partially imbedded in a plastic and deformable backing material which is not meltable under ordinary climatic conditions and is capable of adhering to and supporting the tiles and yet adapted to conform to slight irregularities in a substantially plane supporting surface and make a firm contact therewith so that the tiles may be supported on a good foundation through which shocks and vibrations are not easily transmitted and an open meshed reinforcement embedded in said backing and adapted to position and maintain the tread faces substantially in one plane.

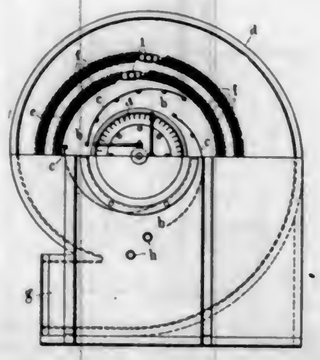
1,619,774. IRONING-BOARD INSTALLMENT. LEO EDWARD WATTS, Amarillo, Tex. Filed Oct. 27, 1925. Serial No. 65,165. 2 Claims. (Cl. 68—10.)



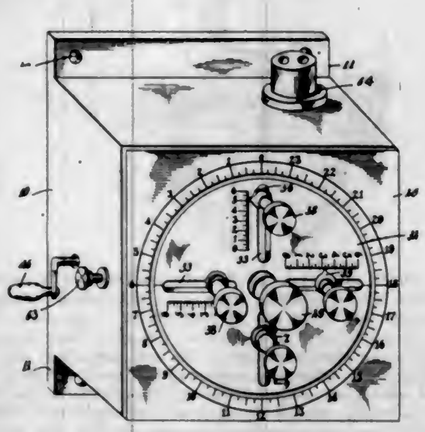
1. In means for the purpose described, the combination of a casing having vertical runways on the inner

sides of opposed walls thereof, a body disposed and movable in said runways, a stop for said body also movable in the runways and equipped with means for preventing

casual downward movement thereof, a board hingedly connected to said body, and a link hingedly connected at one end to the board and at the other end to said stop.



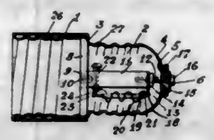
1,619,775. DELIVERY TRUCK. EDDY R. WHITNEY, Philadelphia, Pa., assignor to Commercial Truck Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1923. Serial No. 617,540. 3 Claims. (Cl. 280—2.)



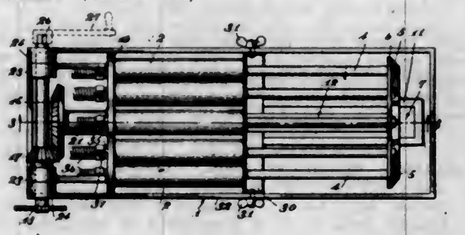
1. The combination in a motor vehicle of a main frame made in two sections, and a depression between the two sections of the frame forming a transverse passage; means for suspending the floor of said passage from the said main frame; and a battery carrier, the floor of which is attached at its inner end to the suspended floor atructure of the passage, while the forward end is suspended from the main frame.

1,619,776. HEAT-EXCHANGING APPARATUS. WALTER YATES and SYDNEY YATES, Swinton, near Manchester, England. Filed Feb. 13, 1924, Serial No. 692,553, and in Great Britain Jan. 18, 1924. 3 Claims. (Cl. 257—39.)

1. A heat exchanging apparatus comprising a fan casing, a fan rotor mounted therein, partitions about the rotor defining volutes therearound, each volute extending approximately a third of the distance about the rotor, air heating means disposed around said partitions including plates extending substantially parallel with the general direction of flow of the air from the rotor, said means being positioned eccentrically with respect to the peripheral wall of the casing so as to provide another volute through which the air passes prior to passing from the casing.

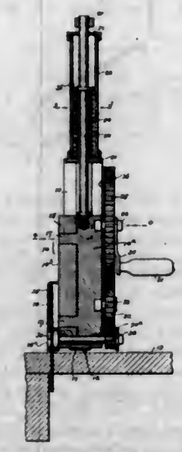


1,619,777. AUTOMATIC ELECTRIC TIME SWITCH. DESIDER ZORGO, Montreal, Quebec, Canada, assignor of four-tenths to Miklos Szakacs, Brooklyn, N. Y. Filed May 13, 1926. Serial No. 108,789. 8 Claims. (Cl. 200—35.)



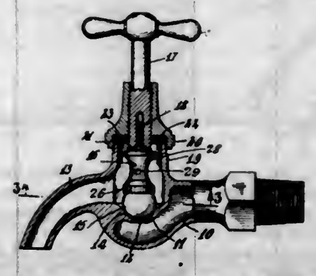
1. In a time switch, a time rotated dial formed of an insulated front member, and a conductive rear member, both members being provided with certain radial elongated slots, a time scale adjacent said slots, brushes slidable in said slots, and provided with pointers to said adjacent scale, a time sector cam element, provided with a rear insulation member, stationarily mounted behind said dial, said brushes engageable against said cam or against said insulation member, said cam being formed with a beveled vertically disposed portion to allow said brushes to ride from said rear insulation member onto said cam, the lower extremity of said beveled portion leading into a cam edge, and a stationary brush depending from said rear insulation member, and bearing against said conductive rear member of said dial.

1,619,778. FLASHING PLUG. NATHAN ABRAMSON, Brooklyn N. Y. Filed Mar. 6, 1926. Serial No. 92,863. 4 Claims. (Cl. 200—122.)



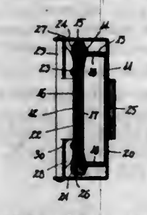
1. In a flashing plug, a supporting member, a means for electrical connection with a lamp arranged at one end of the supporting member, a thermostatic switch, an adjusting means in metallic contact with the first mentioned means and in close proximity to the thermostatic switch.

1,619,779. LUBRICATOR. MORTON LEE ADAMS, Seattle, Wash. Filed Sept. 27, 1924. Serial No. 740,361. 9 Claims. (Cl. 184—37.)



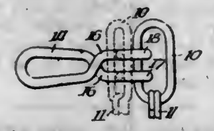
1. A pressure lubricator comprising a base, a lubricant cylinder mounted upon the base, a cross head slidable upon the base carrying a piston operable in the cylinder, driving means mounted upon the base having operative connection wtih the cross head for advancing it in one direction for forcing out lubricant, means by which reverse movement of the cross head is accomplished to back the piston out of the cylinder preparatory to refilling the cylinder with lubricant, and means providing a pivotal mounting permitting tilting the cylinders at an angle to the base to permit filling.

1,619,780. CIRCULAR SAW. FREDERICK W. ADLOF, New Brighton, Pa. Filed Feb. 19, 1926. Serial No. 89,390. 2 Claims. (Cl. 143—47.)



1. In a tool of the class described, a guide frame having teeth at one end thereof engageable with the surface of the material to be sawed, a saw carriage slidable in the guide frame, and normally spring retracted to retain the saw out of engagement with the work, a transverse shaft mounted in the carriage, and a disc saw carried by the shaft, traction means at the ends of the shaft adapted to engage the surface of the work before the carriage engages the end of its guideway, and means permitting retraction of the guide frame to disengage the teeth, whereby the tool may travel on the traction means.

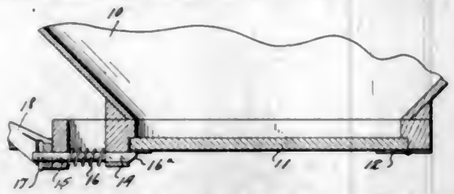
1,619,781. COMPRESSION FAUCET. ERNEST M. ALFONZO, Brooklyn, N. Y. Filed Sept. 9, 1925. Serial No. 55,241. 1 Claim. (Cl. 251—139.)



A compression cap for a device of the class described, comprising a member having a screw portion for attaching to a relatively stationary part at its upper end, and an aperture at its lower end, and another member having a shank at its upper end rotatably engageable in the said aperture of first mentioned member, said latter mentioned member having a concave base.

1,619,782. WATERPROOF CASE. FULGENCIO ARCHILA, Bogota, Colombia. Filed Apr. 23, 1926. Serial No. 104,213. 4 Claims. (Cl. 220—46.)

1. A case comprising a body, a cover having a marginal groove to accommodate the rim of the body, a gasket of normally flat material secured to the inner surface of the cover and having a free edge portion extending across said groove to be forced into said groove and partly around the rim of the body at the inner and outer sides thereof, and means for clamping said cover and body together.

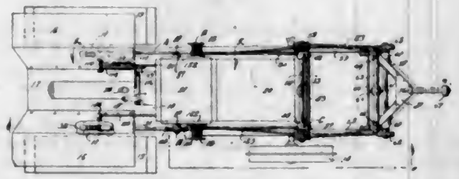


1,619,783. TIRE CHAIN. WILLIAM G. CHASE, Oak Park, Ill. Filed Feb. 5, 1925. Serial No. 6,947. 2 Claims. (Cl. 24—237.)

1. A cross chain for vehicle tire anti-skid chains having a terminal element consisting of rigid wire bent to form a loop, said loop being adapted to be connected to the cross chain and to lie flat on the tire, the wire extending from said loop being bent to form two substantially circular hooks arranged in parallel planes and placed coaxially

and facing in opposite directions, hooks being spaced apart a distance substantially equal to the diameter of the wire of a side chain link, said hooks being so arranged that they can only be applied and removed from a side chain link when the plane of that link is at substantially a right angle to the longitudinal axis of the terminal element.

1,619,784. DOOR FOR COTTONSEED BOXES. CHARLES B. COUNTS, Hampton, Ark., assignor of one-half to H. B. Easterling, Hampton, Ark. Filed May 8, 1926. Serial No. 107,829. 1 Claim. (Cl. 221—144.)

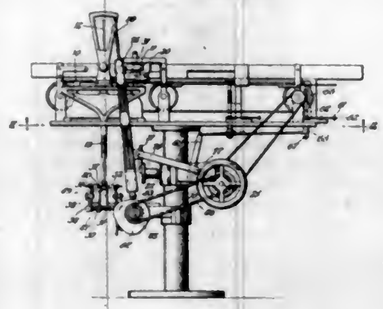


In a cotton gin, a seed box having a hopper-like bottom and a discharge opening, the opening being defined by a frame, the frame including two parallel members, a spring-projected latch having sliding engagement in the two parallel members and normally projecting into a position beyond the inner edge of the innermost member, a door hinged to said frame and having its free end normally engaged by the latch, a lever fulcrumed against the outermost of said parallel members and having its end bifurcated and operatively engaging the extremity of the latch, the lever projecting beyond the member upon which it is mounted and having means for holding it in operative position.

1,619,785. LINING MATERIAL FOR ALKALI-RECOVERY FURNACES. JAMES BEVERIDGE, Richmond, Va. Filed Nov. 7, 1925. Serial No. 67,674. 4 Claims. (Cl. 106—9.)

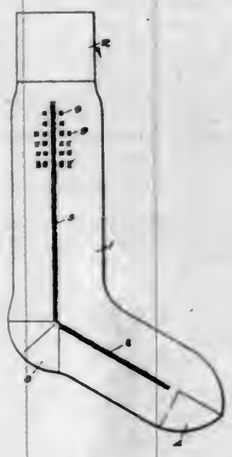
2. A lining material for alkali recovery furnaces consisting essentially of a concrete of soapstone in broken pieces and Portland cement, the proportion of soapstone exceeding the proportion of cement.

1,619,786. LOADER ATTACHMENT FOR TRACTORS. SIGURD E. ANDERSON, Des Moines, Iowa, assignor to New Monarch Machine & Stamping Company, Des Moines, Iowa. Filed May 24, 1926. Serial No. 111,265. 22 Claims. (Cl. 212—142.)



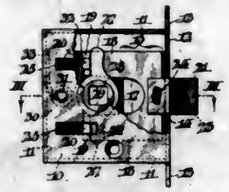
1. In combination with a tractor having a driving engine thereon, a U-shaped main frame having its side bars positioned along the sides of the tractor and having its connecting member positioned along the front of the tractor and having the free ends of said side bars secured to the tractor and a fitting mounted upon each side of the tractor near the forward end thereof and having portions received in recesses formed in the tractor and portions secured to said side bars,

---



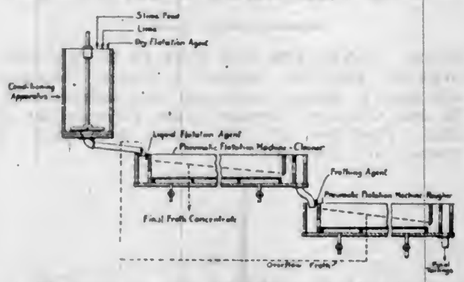
1,619,787. MACHINE FOR CHECKWEIGHING AND GRADING BY WEIGHT. EARL B. ELDER, Oak Park, Ill., assignor to Elder & Robinson Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1923. Serial No. 627,805. 36 Claims. (Cl. 209—121.)

1. In a machine for check-weighing and grading by weight, a stationary scale for weighing articles to be check-weighed, mechanism for feeding articles to the scale, means independent of the incoming article for removing all the articles from the scale over the same path after weighing, a single carrier for receiving all the articles



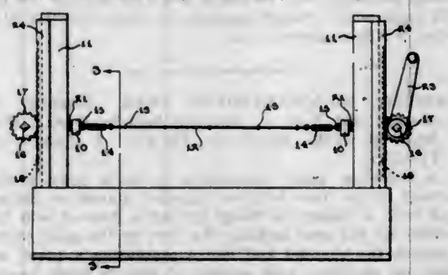
upon removal from the scale, and mechanism including said carrier controlled by this scale for sending the articles to different paths after leaving the scale, depending upon whether they are standard or underweight.

1,619,788. SEAMLESS KNIT, CLOCKED STOCKING AND METHOD OF MAKING SAME. CLARENCE H. TAUBEL, Riverside, N. J., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed July 29, 1926. Serial No. 125,660. 5 Claims. (Cl. 66—180.)



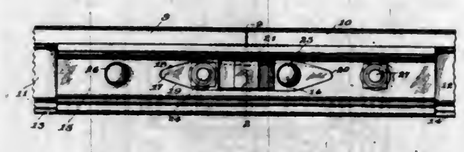
5. That method of knitting a circular knit or seamless stocking which includes supplying the main or body yarn, and at one of the clocking areas introducing a contrasting clocking yarn in such manner as to cause it to appear at the outer face of the stocking for the comparatively few wales embraced within the width of the clocking area at the point of introduction, then continuing the knitting with the main or body yarn but floating the said clocking yarn to the opposite clocking area and there causing said yarn to appear upon the outer face of the stocking to substantially the same extent as at the clocking area where first introduced, then floating said clocking yarn back to the first mentioned clocking area, and similarly there reintroducing the same, continuing this operation throughout the formation of the clocking areas, and removing the floating yarn or yarns from between the clocking areas.

1,619,789. LATCH. CLARENCE VOGT, Wenonah, N. J., assignor to Vogt Bros. & Squier Company, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 30, 1923. Serial No. 628,704. 6 Claims. (Cl. 292—169.)



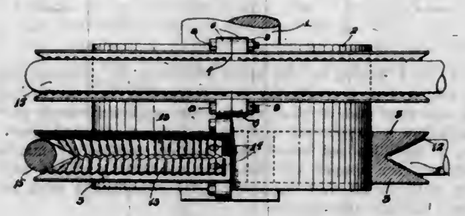
1. In a latch of the type described, the combination of a sheet metal casing having integral flanges and a slotted face plate, a latch member movable through the slotted face plate and provided with a forked extension having angled terminal ends slidable in parallel slots in the aforesaid casing, a sheet metal actuator journalled in the casing and having opposed wings operatively engaging the angled terminal ends, and a closure plate having an inwardly swaged flare concentric with the actuator hub.

1,619,790. CONCENTRATION OF SLIMES BY FLOTATION. GILBERT A. BRAGG, East Orange, N. J., assignor to Metals Recovery Company, New York, N. Y., a Corporation of Maine. Filed Sept. 28, 1926. Serial No. 138,180. 11 Claims. (Cl. 209—166.)



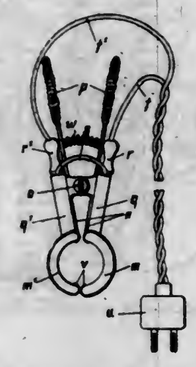
1. The improvement in the treatment by flotation of ore slimes in which the solid particles are for the most part of a size that will pass through 200 mesh which comprises subjecting the slime to violent agitation with lime for a sufficient length of time to condition the sulfide minerals in the slime for subsequent flotation, and then subjecting the so-conditioned slime to a pneumatic flotation operation in the presence of a non-oleaginous mineral-collecting agent.

1,619,791. GREENHOUSE PLANT-SUSPENSION FRAME. OSCAR G. FRITCH and JAMES E. FRITCH, Ashland, Nebr. Filed June 26, 1926. Serial No. 118,696. 5 Claims. (Cl. 47—44.)



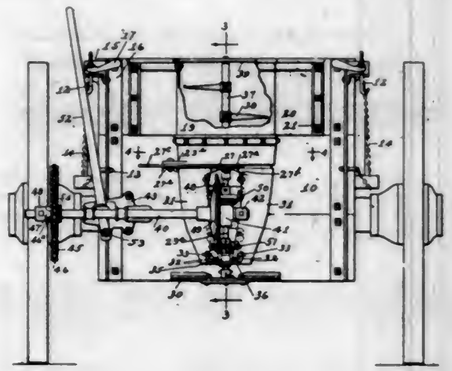
1. A plant supporting frame comprising opposed crossheads spanned by connecting wires and provided with tensioning springs connecting them with said wires, and means for elevating and lowering said cross-heads independently.

1,619,792. RAIL JOINT. WILLIAM DANIEL HUFF, Lafayette, La., assignor of one-half to John A. Gorr, Lafayette, La. Filed July 7, 1926. Serial No. 120,986. 3 Claims. (Cl. 238—260.)



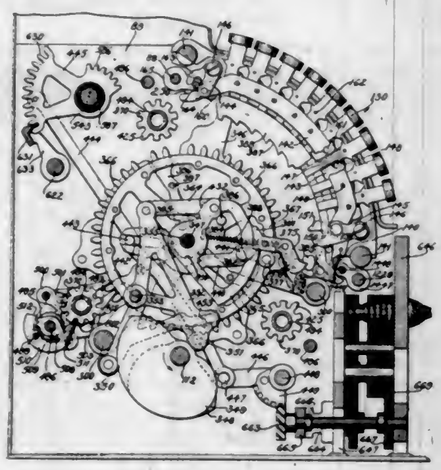
1. A rail joint construction comprising a splice bar having an opening therein with wedge-shaped end portions, and a wedge block fitted adjustably in said opening also having wedge shaped end portions.

1,619,793. WIRE LINE BELT GUIDE. HERBERT W. KERR, Augusta, Kans. Filed Feb. 24, 1925. Serial No. 11,312. 2 Claims. (Cl. 64—17.)



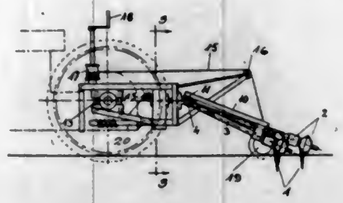
1. A replaceable wear element for a pulley provided with an annular groove of V-shaped cross section, consisting of a semi-circular plate conforming in curvature to the curve of the groove and of a width less than the depth of the groove, said plate being formed throughout with transverse corrugations and flaring throughout from its inner to its outer edge to have its inner face seated throughout against one wall of the groove, and spaced counter-sunk means for securing said plate against one of the walls of the groove.

1,619,794. PERMANENT-HAIR-WAVING APPLIANCE. JOSEF MAYER, Karlsbad, Czechoslovakia. Filed Mar. 19, 1925. Serial No. 16,784. 3 Claims. (Cl. 132—36.)



1. Permanent hair waving apparatus, including a heating apparatus comprising two semi-cylindrical electrically heated side members, spring means for pressing said members towards each other, arms carrying said side members and pivoted together, said arms having insulated handles, and insulating casings on the arms and having sockets for the plugs of the current supply wires.

1,619,795. FERTILIZER DISTRIBUTOR. LUTHER E. ROBY, Peoria, Ill. Filed Dec. 1, 1924. Serial No. 753,360. 2 Claims. (Cl. 275—8.)



1. In a device of the class described, in combination, a wagon box, a scattering unit fashioned for attachment to the rear end of said wagon box, said scattering unit including a supporting portion, a hopper attached thereto, a fan disposed below said hopper, conducting means between the hopper and fan, said conducting means having both radial and circumferential adjustment with respect to said fan member.

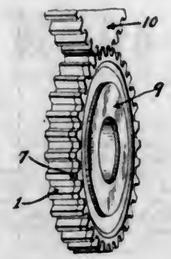
1,619,796. CASH REGISTER. BERNIE M. SHIPLEY, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Mar. 11, 1921. Serial No. 451,508. 73 Claims. (Cl. 235—3.)

1. In a machine of the class described, the combination of a main operating device, a totalizer, printing elements, indicating means, means for entering items in the totalizer for setting the printing elements and for setting the indicators corresponding to the items, indicator exposing means, total controlling mechanism, and means for disabling the indicator exposing means upon operation of said total controlling mechanism.

1,619,797. CULTIVATOR. JANNE MARTIKAINEN, Ryttyla, Finland, assignor to J. Alfred Anderson, Suffolk County, Mass. Filed Aug. 17, 1921. Serial No. 493,020. 1 Claim. (Cl. 97—38.)

A cultivator arranged to be connected to and operated by a tractor and comprising a frame arranged to be rigidly attached to the rear of a tractor; a second frame arranged to be pivotally mounted on said rigid frame; a plurality of shafts mounted in said second frame; a gear train mounted on said rigid frame and arranged to be driven by a worm shaft of said tractor, certain of the gears of said train having shafts rearwardly extending therefrom which have flexible coupling connection with the shafts mounted in said second frame whereby said pivoted frame and said shafts mounted therein may be raised and lowered, each of said shafts of said second frame having cutting heads mounted thereon.

1,619,798. CONTAINER FOR HAIR IN PERMANENT-WAVING PROCESS. WILBUR S. LEWIS, Cleveland, and JOHN C. MURRAY, Lakewood, Ohio, assignors to S. Le Mur Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 28, 1925. Serial No. 12,288. 9 Claims. (Cl. 132—36.2.)



1. A wrapper for enclosing hair during the application of heat in forming permanent waves, comprising a casing including a sheet of soft pliable heat conducting metal, and a textile pad secured to said casing, said casing forming a self retaining seal intermediate the pad and scalp when crimped against the strand of hair after being wrapped therearound.

1,619,799. NONCHATTERING GEAR. CHARLES W. ROUNDS and JOHN C. ROUNDS, Seattle, Wash. Filed Sept. 23, 1924. Serial No. 739,315. 1 Claim. (Cl. 74—28.)

A noiseless gear, comprising a main gear section formed in one face with an annular concentric channel and with a concentric flange extending beyond said face axially of the gear section, the face of the gear section between the channel and flange presenting a plane surface, an auxiliary gear section of similar tooth number and pitch to the main gear section and formed with a central opening to fit over said flange, said auxiliary gear section bearing squarely on the plane surface of the main gear section and overlying and covering said channel, and a spring arranged in coils and having one

axially directed terminal extended in one direction and a diametrically opposed axially directed terminal extended in the opposite direction, said spring being seated in the channel with one terminal removably fitted in an opening in the base of the channel and the other terminal

removably fitted in an opening extending through the auxiliary gear section, a washer fitted over the flange and overlying and concealing the opening in the auxiliary gear section, and means cooperating with the flange to hold the parts in connected relation.

1,619,800. BUTTON AND FASTENER THEREFOR. HARRY R. LICHTENSTEIN, New York, N. Y., assignor to M. Lichtenstein & Bro., a Firm consisting of Marvin Lichtenstein, Long Beach, N. Y., and Harry R. Lichtenstein, New York, N. Y. Filed Aug. 28, 1926. Serial No. 132,206. 4 Claims. (Cl. 24—104.)

1. In a device of the class described, a button mold having an eye secured thereto and a separate fastener, said fastener having an opening through which said eye may pass, and a swingable latching member engageable with the eye, as well as a keeper to which said latch member engages.

Patents Nos. 1,619,801 to 1,620,619.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 356—No. 2. TUESDAY, MARCH 8, 1927. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. Patent Office, *Washington, Feb. 21, 1927.*

Beyer Bros. Commission Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Corbin & Wiesmer, 17 Ferry Street, Binghamton, N. Y., for registration of a trade-mark and trade-mark registered February 6, 1917, No. 115,285, to Beyer Bros. Commission Co., 182 Duane Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Beyer Bros. Commission Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Beyer Bros. Commission Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. Patent Office, *Washington, Feb. 17, 1927.*

Deane's Coffee Shoppe, Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Albert F. Multer, sr., 611 Chillicothe Street, Portsmouth, Ohio, for registration of a trade-mark and trade-mark registered February 10, 1925, No. 194,787, to Deane's Coffee Shoppe, Inc., 701 Smithfield Street, Pittsburgh, Pa., and a notice of such declaration sent by registered mail to said Deane's Coffee Shoppe, Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Deane's Coffee Shoppe, Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Notice of Cancellation.

U. S. Patent Office, *Washington, Feb. 9, 1927.*

The Ohio Filler & Shield Co., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of The Ironsides Company, Columbus, Ohio, to effect the cancellation of the trade-mark registration of The Ohio Filler & Shield Co., Columbus, Ohio, No. 41,955, granted January 26, 1904. The Ironsides Company has placed of record an affidavit to the effect that a registered letter sent to The Ohio Filler & Shield Co. at its address of record has been returned by the post-office authorities with the remarks that said company is out of business, and that the president of said company, J. A. Mackin, 705 Gilbert Street, Columbus, Ohio, refuses to accept service of papers. In view of the foregoing, notice is hereby given that unless said The Ohio Filler & Shield Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

NOTICE—CHANGES IN PATENT OFFICE FEES—EFFECTIVE APRIL 14, 1927.

The act of Congress approved February 14, 1927, amends section 4934, Revised Statutes, so as to provide (except in design cases) a fee on filing each original application for a patent of $20 and of $1 for each claim in excess of twenty, and on issuing each original patent, of $20 and of $1 for each claim in excess of twenty.

The new rates are effective in connection with all applications filed on or after April 14, 1927, and all final fees paid on or after that date.

In every case which contains more than twenty claims, the payment after April 13, 1927, of a final fee of $20, or less than $20 plus $1 for each claim in excess of twenty, will not save the case from forfeiture.

Condition of Applications Under Examination at Close of Business February 25, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 54,720; Trade-Mark Division, 1,912. Oldest new case, July 12, 1926; oldest amended, July 17, 1926. The dates given are 1926 except where † indicates 1927.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

VICTOR TALKING MACHINE COMPANY *v.* THE AMERICAN SPECIALTY COMPANY.

Decided March 9, 1926.

1. TRADE-MARKS—OPPOSITION—ADOPTION OF OPPOSER'S IDENTICAL MARK—DOUBTS RESOLVED AGAINST NEWCOMER.

Where a company adopts and uses the identical trade-mark of the opposer company, which mark has been extensively advertised and is widely and favorably known as indicating the product of the latter company, the choosing of the mark of the opposer company must be regarded as an act performed for the purpose of obtaining some advantage from the opposer's expenditures and established goodwill, and all doubts should be resolved against the newcomer.

2. SAME — SAME — SAME — "ELECTROLA"—TALKING MACHINES—RADIO RECEIVING SETS—CONFUSION IN TRADE.

Where the opposer adopted its mark "Electrola" to distinguish the electrically-driven phonograph from the spring-driven type, where, prior to the adoption and use of the mark by the applicant, opposer put upon the market and sold phonograph machines of such a character that they could be equipped with radio receiving sets and employ the sound transmitting and amplifying devices as the loud-speaking elements of the radio receiver, and where opposer subsequently produced and put upon the market the complete dual mechanism including the phonograph and the radio receiving set, *Held* that confusion in trade would be probable if the applicant should be permitted to use the same mark upon its goods as the opposer uses upon its products.

APPEAL from Examiner of Interferences.

Opposition No. 5,967 to registration of trade-mark of The American Specialty Company for radio apparatus, application filed September 11, 1924, Serial No. 202,479, published November 18, 1924.

Messrs. Mauro, Cameron, Lewis & Kerkam for Victor Talking Machine Company.

Mr. D. Lewis Mattern for The American Specialty Company.

KINNAN, *First Assistant Commissioner:*

This case comes on for review, on appeal of the applicant, The American Specialty Company, of the decision of the Examiner of Trade-Mark Interferences sustaining the opposition filed by the Victor Talking Machine Company and adjudging the applicant not entitled to the registration for which it has applied.

The applicant company seeks registration of the notation "Electrola" for radio receiving sets, etc. The opposer company obtained registration on November 14, 1911, No. 84,199, of the same trade-mark used upon talking machines, talking-machine parts, etc.

Opposer only has taken testimony, and since the applicant company has taken none the latter is restricted to its filing date of September 11, 1924, for its date of adoption and use. The opposer company has fairly proved continuous use of its mark since 1911, and there is evidence of wide sales, even reaching 24,000 machines, on which the mark has appeared. The mark has, in consequence, become widely and favorably known, and has been extensively advertised, and these factors constitute a valuable asset of opposer company's business.

[1] In view of the foregoing there is presented the situation of a company adopting and using the identical mark of another company, which trade-mark has been extensively advertised, and is widely and favorably known as indicating the product of the latter company. Under these circumstances since the applicant company had an unlimited field from which to select its trade-mark the choosing of the mark of the opposer company must be regarded as an act performed for the purpose of obtaining some advantage from the opposer's expenditures and established goodwill. All doubts should, in consequence, be resolved against the newcomer.

The applicant company, appellant, has urged that the goods do not possess similar descriptive properties, do not belong to the same class within the meaning of the trade-mark statute, and, since if such be true, there is no objection to adopting a mark used by another, and the opposition should not be sustained.

[2] It is in evidence that the opposer adopted its mark to distinguish the electrically-driven phonograph from the spring-driven type and that, since the appearance and popularity of radio receiving sets, opposer has sought to construct phonograph machines of such a character that they could be equipped with radio receiving sets and employ the sound transmitting and amplifying devices as the loud-speaking elements of the radio receiver. In those cases where a construction of this character was put upon the market and sold prior to the adoption and use of the mark by the applicant the radio receiving set was not actually installed with the talking machine, but provision was made for its installation, the selection of the particular radio receiving set being left to the purchaser of the phonograph machine. Subsequently opposer has been producing and putting upon the market the complete dual mechanism including the phonograph and the radio receiving set, all arranged in a common cabinet and provided with shifting mechanism whereby the amplifier of the phonograph may be used also as the amplifier of the radio receiving set. It is thus established that opposer had already sought to expand its phonograph business to include the radio receiving set construction. Under these conditions the pertinent question is raised: Would the use of the same mark upon opposer's output or product and upon that of the applicant be likely to cause confusion or mistake in the mind of the public or deceive purchasers by leading the purchasing public to think both products were the output of the opposer company?

It is clearly enough settled law that no one should be permitted to select a trade-mark similar to one already in use by another who is engaged in a business of the same general nature where the use of both marks would be likely to confuse or mislead the ordinary individual as to the ownership or origin of the goods. *The O. & W. Thum Company* v. *Dickinson*, 240 O. G. 337, 46 App. D. C. 306; *The Kaut-Reith Shoe Company* v. *International Shoe Company*, 239 O. G. 939, 45 App. D. C. 545.

It has been urged on the part of the appellant, applicant, that the radio receiving set belongs to a totally-different class of goods from that to which the phonograph belongs, that they are produced by different firms and may be used for widely-different purposes, that each has its established mark and place in the commercial world, and that those purchasing could not be deceived into thinking the receiving set was made by the manufacturer of phonographs.

It is plain enough radio receiving sets are capable of a wider use than phonographs, in that the former are used for electric signaling between widely-different points and for many commercial purposes of this character to which phonographs are not adapted. The transmission of the electromagnetic waves through the ether and the interception of the energy of such passing waves by an antenna and the conversion of that electric energy into mechanical force to operate a diaphragm are all radically different in principle from the diaphragm-operating means of a phonograph.

The wide adoption and use of the radio receiving set has brought about its use as a substitute for a phonograph in the home. It is notorious that many persons who formerly used or would have purchased phonographs have purchased radio receiving sets instead and installed them in the home for the same general purpose of amusement and entertainment. Music, speeches, lectures, and other similar matter are reproduced and heard in the room alike by the receiving set and the phonograph. Both converters of energy into sound vibrate a diaphragm and use an amplifier, and it is in evidence that the diaphragm and amplifier of the phonograph may be used for these same purposes with the radio receiving set. Under these conditions it is believed that confusion in trade would be probable if the applicant should be permitted to use the same mark upon its goods as the opposer uses upon its products. This view is supported by the holding of the court in the case of *The Steinola Company* v. *Steinway & Sons*, 284 O. G. 183, 50 App. D. C. 204, in which the court held, in effect, that high-grade pianos and phonographs are goods of the same general descriptive properties. Also in the case of *The Thomas Manufacturing Company* v. *The Aeolian Company*, 249 O. G. 505, 47 App. D. C. 376, the court reached the same conclusion as in the Steinola decision. The fact should not be overlooked, though the decision is not controlling here, that in the case of *Wilcox & White Co.* v. *Leiser*, 276 F. R. 445, the United States District Court of New York also held phonographs and self-playing musical instruments belong to the same general class of goods.

It is believed the applicant should not be permitted to use the long-established and widely-known trade-mark of the opposer upon radio receiving sets.

The decision of the Examiner of Trade-Mark Interferences sustaining the opposition and adjudging the applicant not entitled to the registration applied for is affirmed.

Court of Appeals of the District of Columbia.

IN RE MCCLAIRE.

No. 1,573. Decided December 6, 1926.

NOVELTY—UTILITY—INVENTION—COMMERCIAL SUCCESS—BENEFIT OF DOUBT.

Commercial success of an article is persuasive evidence of novelty, utility, and invention, and if there be any doubt in such a case it should be resolved in favor of the applicant.

APPEAL from the Commissioner of Patents. Affirmed in part.

Mr. Joshua R. H. Potts for McClaire.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and HATFIELD, Judge U. S. Court of Customs Appeals.

MARTIN, *C. J.*:

This is an appeal from concurring decisions of the Patent Office refusing to allow any of the five claims presented by the applicant in the case. The invention consists of a hair curler formed of short lengths of insulated wire with a fabric covering, having metallic caps secured over the ends thereof. The caps are so constructed as to fit snugly over the ends of the curlers and their edges are flared outwardly to facilitate this purpose, and also to insure stretching of the fabric sheath on the rubber insulation of the wire.

Claim 1 is copied for illustration:

1. A hair curler comprising a central core of pliable metal; a covering for said core of relatively softer material; a fabric covering for said core covering; and metallic caps secured over the ends, the edges of said caps being turned inwardly and impressed into said core covering to form a resilient locking groove therein, substantially as described.

The references were appellant's prior patent, [1,397,532] Nov. 22, 1921, for a similar hair curler having tied or sewed ends instead of caps; Weaver's patent, [1,369,994] March 1, 1921, for a hair curler having two insulated wires twisted together surrounded by a fabric covering, with tips at the ends composed of nonmetallic waterproof material as by dipping in a waterproof solution; Kelly's patent, [1,392,339] Oct. 4, 1921, disclosing cords with various kinds of metallic tips on the ends; Cumming's patent, [851,037] April 23, 1907, disclosing a lacing in which the tip has an interior metal piece rolled and to be cut in two, forming an outer metal cap over the end of the tip; Gregory's patent, [374,246] Dec. 6, 1887, disclosing a hair curler composed of a long thin strip of lead or other pliable material covered with silk and provided with small caps at the ends to prevent fraying; and Illoway's patent, [1,163,343] Dec. 7, 1915, showing a hair curler bent into loops.

The applicant's claims were held to be unpatentable on the ground that no invention would be involved in forming metal tips on hair curlers of the type shown in the McClaire and Weaver patents, in view of the common practice of forming such tips on the ends of cords of various kinds as shown by the references. It was also held that claim 3 is barred under the rule of res adjudicata.

We do not agree with the Commissioner's decision. The applicant's claims are combination claims, and as such we do not think them anticipated by the references. The improvement in question is a simple one, but it is useful and novel, and discloses invention. The commercial success of the article is persuasive evidence of this. If there be doubt in such a case it should be resolved in favor of the applicant. We think however that the rejection of claim 3 upon the ground of res adjudicata must be sustained.

Accordingly the decision of the Commissioner of Patents rejecting claims 1, 2, 4 and 5 is reversed. The rejection of claim 3 is affirmed.

PATENT SUITS.

(C. C. A. Pa.) The Engelbrecht reissue patent, No. 15,829, for making brick and hollow tile, *Held* invalid. *Toupet-Taylor Engineering Co.* v. *Red Dog Mfg. & Supply Co.*, 16 F. (2d) 454.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,461,560, G. R. Rich, Valve tappet for internal-combustion engines, decided January 25, 1927, claims 1 to 5, inclusive.

Pat. 1,492,582, L. D. Smith, Cooking apparatus, decided January 24, 1927, claims 1 to 9, inclusive.

Pat. 1,559,548, J. Buchli, Combined steam and internal-combustion engine locomotive, decided January 17, 1927, claims 1 and 2.

Pat. 1,571,404, W. Gardocky, Machine for placing flipper strips on tire beads, decided January 29, 1927, claims 1, 2, 4, 6, and 7.

Final decision in interference has been rendered against the following trade-mark:

T. M. 197,607, Coffee, Briner-Null Coffee Company, Vincennes, Ind. Registered April 21, 1925. Decided January 28, 1927.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 8, 1927.

[VOL. 356. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

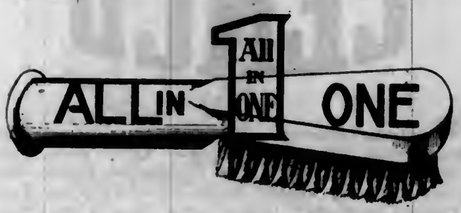
As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 148,050. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) AMERICAN AUTOMATIC PRODUCTS CORPORATION, Chicago, Ill. Filed May 23, 1921.

AVTROLA

Particular description of goods.—Phonographs and Parts Thereof.

Claims use since about June, 1919.



Ser. No. 188,526. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BROGDEX COMPANY, Winter Haven, Fla., and Los Angeles, Calif. Filed Nov. 19, 1923.

BROGDEX

Particular description of goods.—Fresh Deciduous and Citrous Fruits Surface Treated to Enhance Their Marketability.

Claims use since on or about Oct. 1, 1921.

Ser. No. 203,941. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) RAY W. EYSTER, doing business as All in One Hair Brush Co., Chicago, Ill. Filed Oct. 16, 1924.

The picture of a hairbrush shown in the drawing is disclaimed apart from the mark shown.

Particular description of goods.—Hairbrushes.

Claims use since Sept. 1, 1924.

Ser. No. 204,220. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) COMPAÑIA GENERAL DE ACEITES DE OLIVA, S. A., Seville, Spain. Filed Oct. 21, 1924.

The words "Aceite Virgen Fino Puro De Oliva, Marca Registrada, Compañia General De Aceites De Oliva S. A. Sevilla—Tortosa—Bilbao—Jaen—Spain" are disclaimed apart from the mark shown in the drawing.

Particular description of goods.—Olive Oils.

Claims use since September, 1920.

Ser. No. 205,953. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPH G. SALVATO, doing business as Revere Wholesale Grocery Co., Chicago, Ill. Filed Nov. 28, 1924.

All the words except "Revere" are hereby disclaimed apart from the mark shown in the drawing.

Particular description of goods.—Salad Dressing, Tomato Catchup, Pickles, Evaporated Fruits. Dried

Raisins, Canned Plum Pudding, Vinegar, Cocoa, Coffee, Maple Sirup, Cane Sirup, Mincemeat, Tea, Shelled Nuts in Their Natural State, Olive Oil, Peanut Butter, Honey, Ham, Bacon, Sausage; Fresh Vegetables and Fruits, Including Onions, Carrots, Potatoes, Cabbage, Ear Corn, Cucumbers, Apples, Prunes, Oranges, Bananas, Peaches, Figs, Dates, Pears, and Pineapples; Bread, Cakes, Pastries, Candy, Assorted Fresh Fruits and Candies, Fruit Cake, Sugared Ginger, Sugared Kumquats, Sugared Dates, Canned Chicken, Canned Deviled Chicken, Canned Deviled Ham, Canned Tongue, Canned Bacon; Canned Soups, Including Vegetable Soup, Bean Soup, Chicken Soup, Pea Soup, Tomato Soup, Oxtail Soup, Clam Chowder, and Beef Soup; Butter, Eggs, Shredded Coconut; Packaged Grains—Namely, Barley, Rice, Oats, Dessert Tapioca, Pearl Tapioca, Cake Flour, Corn Meal, Farina, Wheat Breakfast Food, Lye Hominy, Granulated Hominy, Pearl Hominy, Pancake Flour, Pop Corn in Its Natural State, Fresh Sweet Corn, Rice Flour, Self-Rising Buckwheat Flour, Wheat Bran, Graham Flour, and Gluten Flour; and Filberts, Walnuts, Almonds, Hazelnuts, and Pecans in Their Natural State; Dried Orange Peel, Candied Orange Peel, Dried Lemon Peel, Candied Lemon Peel, Dried Citron, Candied Citron, Birdseed, Bouillon Cubes, Dried Currants, Canned Condensed Milk, Canned Evaporated Milk, Breakfast Cereals, Horse-Radish, Chili Sauce, Fresh Cantaloupes, Fresh Eggplant, and Fresh Rhubarb.

Claims use since Mar. 10, 1922.

Ser. No. 206,554. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE J. B. WILLIAMS COMPANY, Glastonbury, Conn. Filed Dec. 10, 1924.

RAYONA

Particular description of goods.—Soap.
Claims use since Dec. 1, 1924.

Ser. No. 207,189. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) HYE-AMP BATTERY CO., Denver, Colo. Filed Dec. 24, 1924.

HYE AMP

The linings upon the drawing of the mark indicate a red color.

Particular description of goods.—Aerial Insulators and Radiopanels, Air Circuit Breakers, Switches, Coils, Amplifiers Used with Radio Apparatus as Loud Speakers, Audio-frequency Transformers, Sockets for Electric Wiring and Radio Vacuum Tubes, Automobile Spark Timers, Batteries, Battery Chargers, Storage-Battery Clips; Battery Jars, Panels, Covers, and Vents; Plate Separators, Binding Posts, Telephone Test Connecters, Circuit Breakers, Condensers, Cords and Plugs Used to Connect Translating Devices with Lamp Sockets, Vacuum-Tube Detectors, Crystal Detectors for Radiowork, Dynamos, Electromotors and Parts Thereof, Electric Bulbs and Lamps, Electric Generating Plants, Electric Lights and Lighting Fixtures for Motor Cars, Electric Switches; Electric Tail Lights, Stop Lights, and Backing Lights; Electric Flash Lights, Rheostats, Electrically-Illuminated Signs, Spark Plugs; Telegraphic, Telephonic, Wireless Telegraphic and Telephonic Transmitting and Receiving Instruments and Parts Thereof; Variometers, and Variocouplers.

Claims use since Sept. 1, 1923.

Ser. No. 208,498. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) AMERICAN UNBREAKABLE DOLL CORPORATION, New York, N. Y. Filed Jan. 23, 1925.

THE PRINCESS DOLL

The word "Doll" and the representation of a doll are disclaimed as an essential part of the trade-mark except in the particular form and relation shown in the drawing.

Particular description of goods.—Dolls.
Claims use since Oct. 10, 1924.

Ser. No. 211,191. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) S. H. WETMORE COMPANY, New York, N. Y. Filed Mar. 17, 1925. Under 10-year proviso.

72,164. LACE TABLE COVER OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,187. Term of patent 7 years.

The ornamental design for a lace table cover or the like, substantially as shown and described.

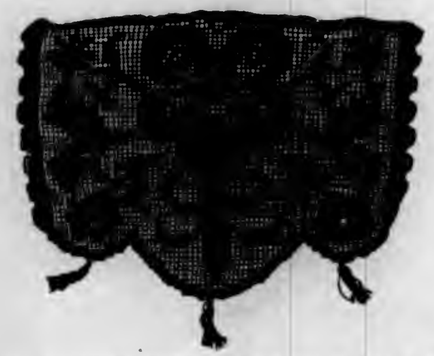
72,165. LACE TABLE COVER OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,188. Term of patent 7 years.

The ornamental design for a lace table cover or the like substantially as shown and described.

72,166. LACE TABLE COVER OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,189. Term of patent 3½ years.

The ornamental design for a lace table cover or the like substantially as shown and described.

72,167. LACE TRAY COVER OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,192. Term of patent 3½ years.



The ornamental design for a lace tray cover or the like substantially as shown.

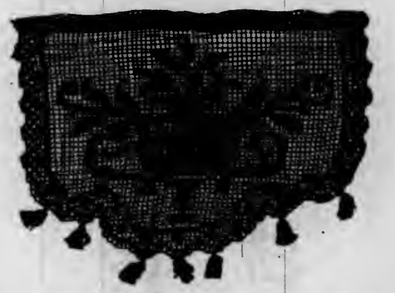
72,168. LACE SCARF OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,193. Term of patent 3½ years.

The ornamental design for a lace scarf or the like substantially as shown and described.

72,169. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,199. Term of patent 3½ years.

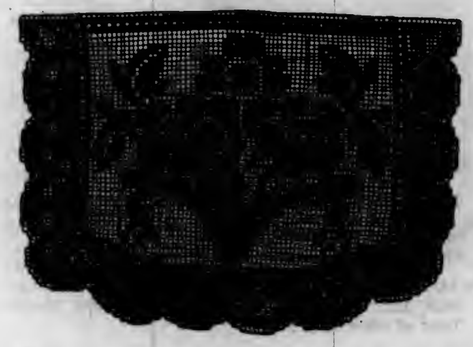
The ornamental design for a lace mat or the like substantially as shown.

72,170. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,200. Term of patent 3½ years.



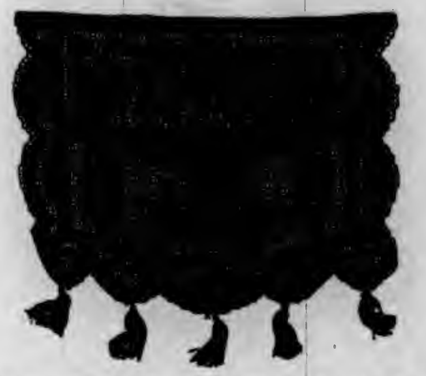
The ornamental design for a lace mat or the like substantially as shown.

72,171. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,201. Term of patent 3½ years.



The ornamental design for a lace mat or the like substantially as shown.

72,172. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,202. Term of patent 3½ years.

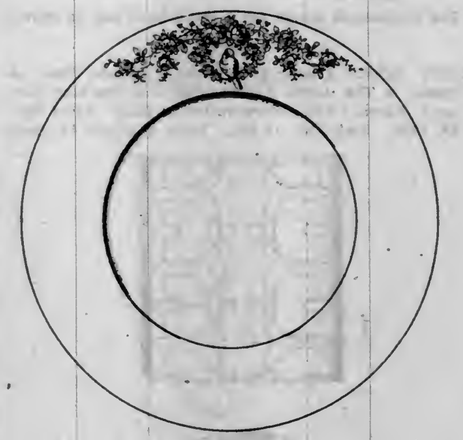


The ornamental design for a lace mat or the like substantially as shown.

72,173. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,203. Term of patent 3½ years.

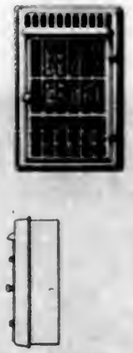
The ornamental design for a lace mat or the like substantially as shown.

72,174. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,204. Term of patent 3½ years.



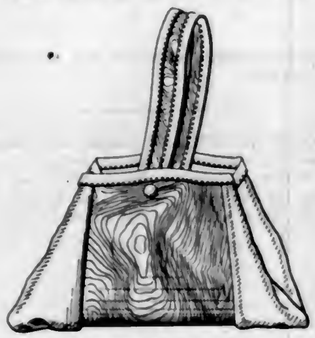
The ornamental design for a lace mat or the like substantially as shown.

72,175. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,205. Term of patent 3½ years.



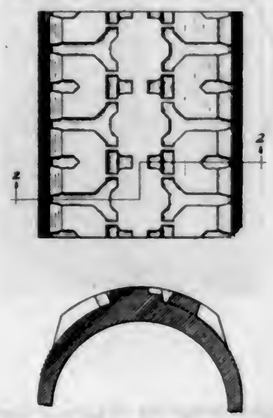
The ornamental design for a lace mat or the like substantially as shown.

72,176. PLATE OR SIMILAR ARTICLE. FRANZ MARKERT, Lindenruh-Glogau, Germany, assignor to Mount Clemens Pottery Company, Mount Clemens, Mich., a Corporation of Michigan. Filed Jan. 7, 1926. Serial No. 15,991. Term of patent 3½ years.



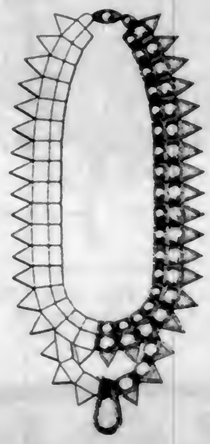
The ornamental design for a plate or similar article as shown.

72,177. HEATER. JOHN E. MCMINN, Louisville, Ky., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Delaware. Filed Sept. 11, 1924. Serial No. 10,756. Term of patent 3½ years.



The ornamental design for a heater, as shown.

72,178. SMALL HAND BAG. JOHN A. METHOT, Worcester, Mass., assignor to Benjamin Josephs and Julius H. Corash, both of Worcester, Mass. Filed Oct. 25, 1926. Serial No. 19,475. Term of patent 3½ years.



The ornamental design for a small hand bag as shown.

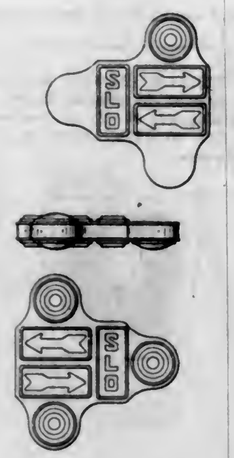
72,179. TIRE. ALBERT S. MICHELSON, Akron, Ohio, assignor to The Akron Rubber Mold and Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 28, 1926. Serial No. 19,192. Term of patent 14 years.

The ornamental design for a tire as shown.

72,180. NECKLACE OR SIMILAR ARTICLE. JANE R. MILLER, Los Angeles, Calif. Filed Nov. 10, 1926. Serial No. 19,665. Term of patent 3½ years.

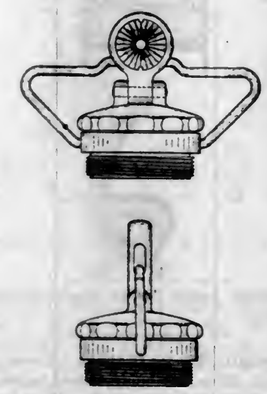
The ornamental design for a necklace or similar article as shown and described.

72,181. SOUND AMPLIFIER LEONARD D. MORRIS, Chicago, Ill. Filed Nov. 22, 1926. Serial No. 19,813. Term of patent 3½ years.



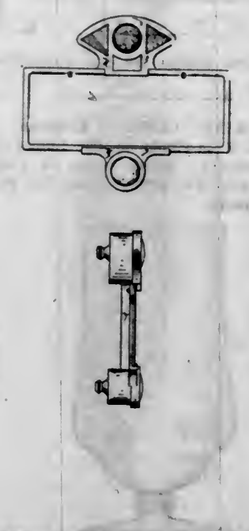
The ornamental design for a sound amplifier as shown.

72,182. AUTOMOBILE RADIATOR CAP ORNAMENT. CARL C. MOSE, Chicago, Ill., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Oct. 7, 1926. Serial No. 19,269. Term of patent 14 years.



The ornamental design for an automobile radiator cap ornament as shown.

72,183. VEHICLE SIGNAL. NELS H. NELSON, Minneapolis, Minn. Filed Nov. 1, 1926. Serial No. 19,559. Term of patent 14 years.

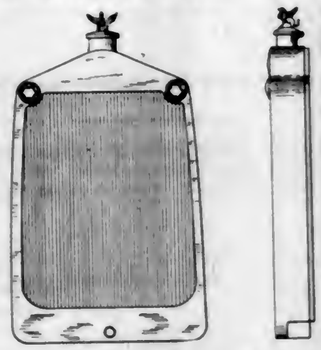


The ornamental design for a vehicle signal, as shown.

72,184. RADIATOR CAP. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed Feb. 11, 1926. Serial No. 16,484. Term of patent 7 years.

The ornamental design for a radiator cap, substantially as shown.

72,185. SIGNAL LIGHT FOR AUTOMOBILES. OTTO E. UHLMANN, Grand Rapids, Mich. Filed Oct. 13, 1926. Serial No. 19,322. Term of patent 3½ years.



The ornamental design for a signal light for automobiles, as shown and described.

72,186. ELECTRICAL HEATING APPLIANCE. ARNOLD PFAU, Jr., Milwaukee, Wis. Filed Jan. 10, 1927. Serial No. 20,323. Term of patent 7 years.

The ornamental design for an electrical heating appliance, as shown.

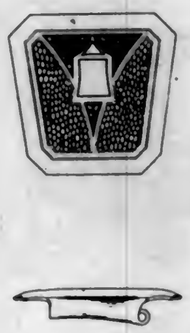
72,187. AUTOMOBILE RADIATOR. THOMAS F. RAINSFORD, Detroit, Mich., assignor of one-fourth to Thomas C. Whitehead, River Rouge, Mich. Filed Dec. 17, 1925. Serial No. 15,775. Term of patent 14 years.

The ornamental design for an automobile radiator, as shown.

72,188. DRINKING GLASS. RICHARD I. RATNER, New York, N. Y., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 24, 1926. Serial No. 19,833. Term of patent 7 years.

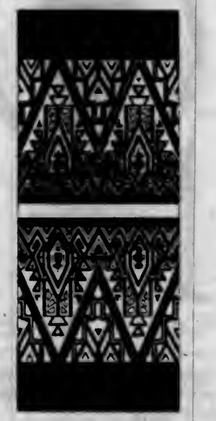
The ornamental design for a drinking glass, as shown.

72,189. GOBLET. RICHARD I. RATNER, New York, N. Y., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 24, 1926. Serial No. 19,834. Term of patent 7 years.



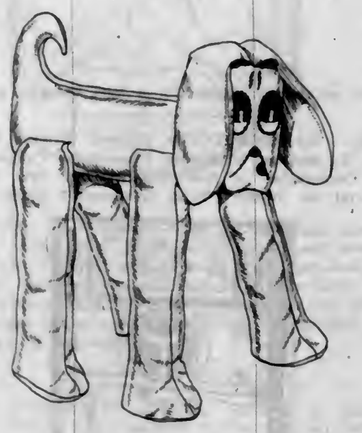
The ornamental design for a goblet, as shown.

72,190. SHERBET GLASS. RICHARD I. RATNER, New York, N. Y., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 24, 1926. Serial No. 19,835. Term of patent 7 years.



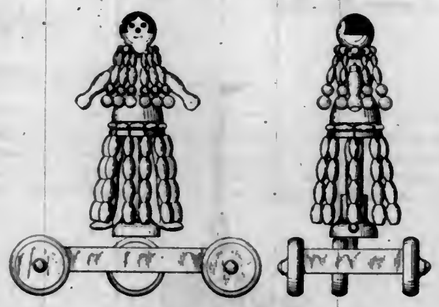
The ornamental design for a sherbet glass, as shown.

72,191. BELT BUCKLE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Dec. 30, 1926. Serial No. 20,237. Term of patent 3½ years.



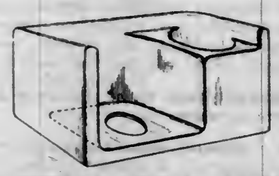
The ornamental design for a belt buckle, as shown.

72,192. TEXTILE FABRIC OR THE LIKE. HARRY SILBERMAN, New York, N. Y. Filed Dec. 21, 1926. Serial No. 20,106. Term of patent 3½ years.



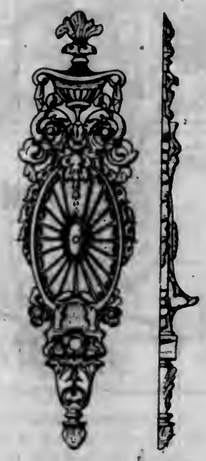
The ornamental design for a textile fabric or the like, as shown.

72,193. TOY DOG. MARION R. SMITH, Portland, Oreg. Filed May 10, 1926. Serial No. 17,628. Term of patent 3½ years.



The ornamental design for a toy dog as shown.

72,194. FIGURE WHEELED TOY. ABRAHAM M. SMOLENS, Brooklyn, N. Y. Filed Nov. 27, 1926. Serial No. 19,860. Term of patent 7 years.

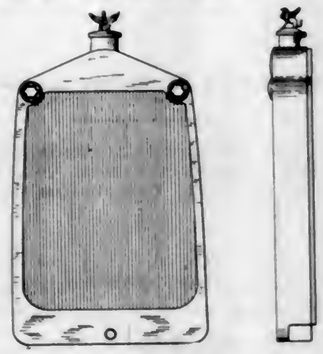


The ornamental design for a figure wheeled toy, as shown.

72,195. COMBINED NICHE SEAT AND LAVATORY. MICHAEL J. TRACY, St. Louis, Mo., assignor to Pauly Jail Building Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 1, 1926. Serial No. 16,355. Term of patent 7 years.

The ornamental design for a combined niche seat and lavatory as shown.

72,196. LIGHTING-FIXTURE WALL PLATE. FRANK H. TRIMBLE, Lankershim, Calif. Filed Aug. 30, 1926. Serial No. 18,900. Term of patent 3½ years.



The ornamental design for a lighting fixture wall plate as shown.

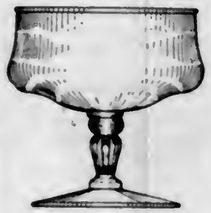
72,186. ELECTRICAL HEATING APPLIANCE. ARNOLD PFAU, Jr., Milwaukee, Wis. Filed Jan. 10, 1927. Serial No. 20,323. Term of patent 7 years.

The ornamental design for an electrical heating appliance, as shown.

72,187. AUTOMOBILE RADIATOR. THOMAS F. RAINSFORD, Detroit, Mich., assignor of one-fourth to Thomas C. Whitehead, River Rouge, Mich. Filed Dec. 17, 1925. Serial No. 15,775. Term of patent 14 years.

The ornamental design for an automobile radiator, as shown.

72,188. DRINKING GLASS. RICHARD I. RATNER, New York, N. Y., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 24, 1926. Serial No. 19,833. Term of patent 7 years.

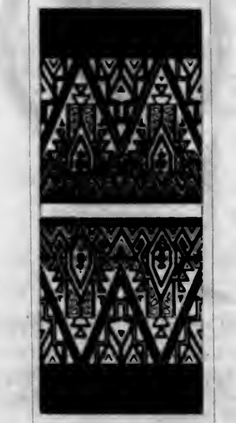


The ornamental design for a drinking glass, as shown.

72,189. GOBLET. RICHARD I. RATNER, New York, N. Y., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 24, 1926. Serial No. 19,834. Term of patent 7 years.

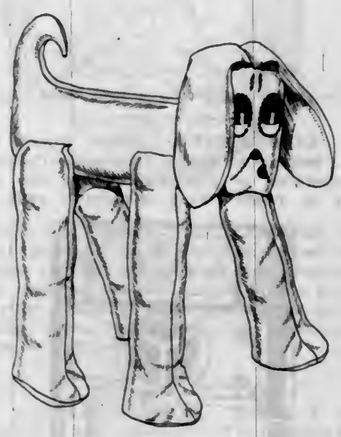
The ornamental design for a goblet, as shown.

72,190. SHERBET GLASS. RICHARD I. RATNER, New York, N. Y., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 24, 1926. Serial No. 19,835. Term of patent 7 years.



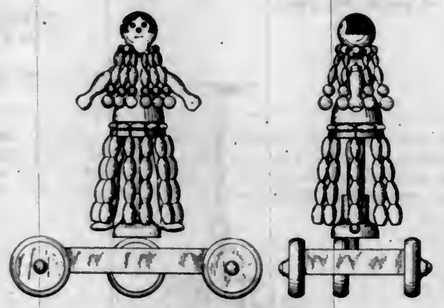
The ornamental design for a sherbet glass, as shown.

72,191. BELT BUCKLE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Dec. 30, 1926. Serial No. 20,237. Term of patent 3½ years.



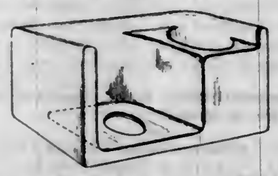
The ornamental design for a belt buckle, as shown.

72,192. TEXTILE FABRIC OR THE LIKE. HARRY SILBERMAN, New York, N. Y. Filed Dec. 21, 1926. Serial No. 20,106. Term of patent 3½ years.



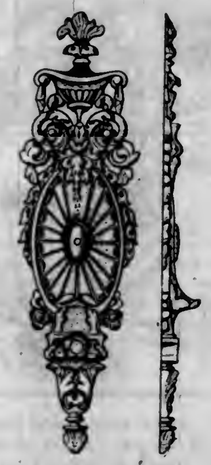
The ornamental design for a textile fabric or the like, as shown.

72,193. TOY DOG. MARION R. SMITH, Portland, Oreg. Filed May 10, 1926. Serial No. 17,628. Term of patent 3½ years.



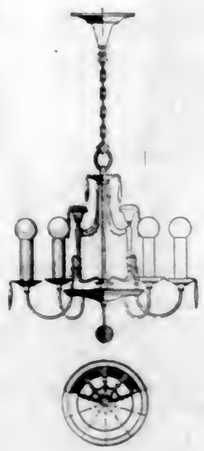
The ornamental design for a toy dog as shown.

72,194. FIGURE WHEELED TOY. ABRAHAM M. SMOLENS, Brooklyn, N. Y. Filed Nov. 27, 1926. Serial No. 19,860. Term of patent 7 years.



The ornamental design for a figure wheeled toy, as shown.

72,195. COMBINED NICHE SEAT AND LAVATORY. MICHAEL J. TRACY, St. Louis, Mo., assignor to Pauly Jail Building Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 1, 1926. Serial No. 16,355. Term of patent 7 years.

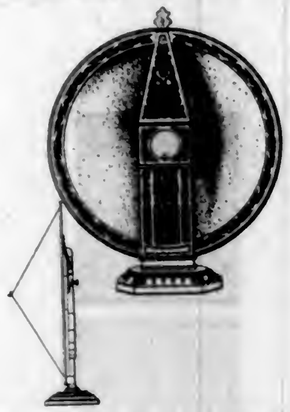


The ornamental design for a combined niche seat and lavatory as shown.

72,196. LIGHTING-FIXTURE WALL PLATE. FRANK H. TRIMBLE, Lankershim, Calif. Filed Aug. 30, 1926. Serial No. 18,900. Term of patent 3½ years.

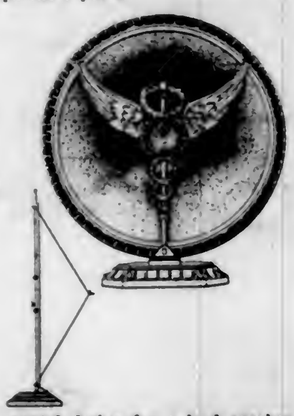
The ornamental design for a lighting fixture wall plate as shown.

72,197. CHANDELIER OR ARTICLE OF SIMILAR NATURE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Globe Lighting Fixture Mfg. Co., Brooklyn, N. Y. Filed Dec. 27, 1926. Serial No. 20,166. Term of patent 3½ years.



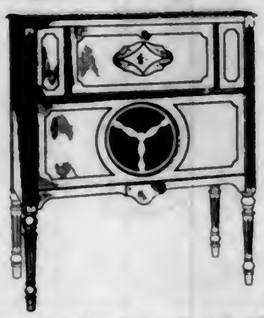
The ornamental design for a chandelier or article of similar nature as shown.

72,198. CARPET. IGNATIUS J. VETTER, New York, N. Y., assignor to Bigelow Hartford Carpet Company, a Corporation of Massachusetts. Filed May 10, 1926. Serial No. 17,622. Term of patent 7 years.



The ornamental design for a carpet, substantially as shown.

72,199. LOUD SPEAKER. OSCAR O. WIDMANN, Brooklyn, N. Y. Filed Oct. 27, 1926. Serial No. 19,494. Term of patent 7 years.



The ornamental design for a loud speaker, as shown.

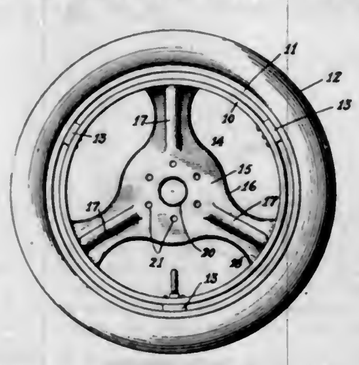
72,200. LOUD SPEAKER. OSCAR O. WIDMANN, Brooklyn, N. Y. Filed Oct. 27, 1926. Serial No. 19,495. Term of patent 7 years.

The ornamental design for a loud speaker, as shown.

72,201. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Oct. 27, 1926. Serial No. 19,492. Term of patent 7 years.

The ornamental design for a radiocabinet, substantially as shown.

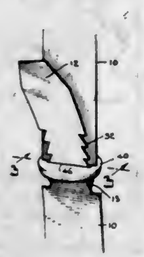
PATENTS



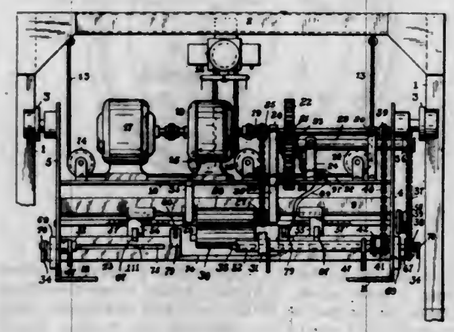
GRANTED MARCH 8, 1927.

1,619,801. PEN AND PENCIL GRIP. ABRAHAM L. BAER, Milwaukee, Wis., assignor of one-half to Frank J. Meyer, Milwaukee, Wis. Filed Feb. 11, 1924. Serial No. 691,987. 5 Claims. (Cl. 120—103.)

1. A pen and pencil grip formed from an integral piece of metal, comprising a tubular portion having a radial extension, an index finger portion connected to the extension and extending at an angle thereto and toward the opposite side of the tubular portion, and a second finger portion connected to the extension and extending at an angle thereto and toward the opposite side of the tubular portion, said finger portions forming in connection with a part of the tubular portion and with relation to each other, substantially triangular arranged finger grips for properly positioning the fingers in writing.



1,619,802. VEHICLE WHEEL. FREDERICK W. BAKER, Stourbridge, England, assignor to Trinity Wheel Corporation, a Corporation of New York. Filed Sept. 23, 1925. Serial No. 58,134. 5 Claims. (Cl. 301—64.)

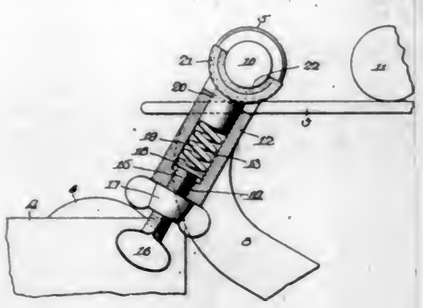


5. A vehicle wheel having a rim and a spoke system comprising a three-arm spider formed of opposed stampings fastened together at the edges and connected to the rim at equidistant points thereon, and a block between the stampings at the central part thereof, the block and stampings having holes therethrough to facilitate attachment to the hub flanges.

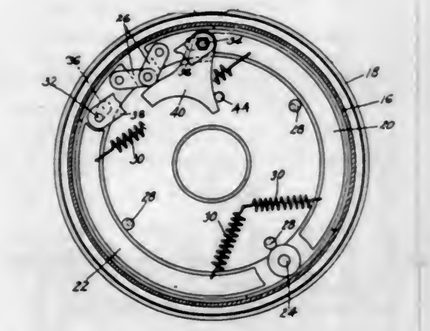
1,619,803. FASTENING MEANS. MARCUS B. BEHRMAN, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 12, 1925. Serial No. 55,910. 9 Claims. (Cl. 24—21.)

1. A fastener for connecting the terminal ends of a tie member of indeterminate length, said fastener comprising a casing, means for securing one end of the tie to said casing, expansible means within said casing constructed and arranged to permit of the insertion of the other terminal end of the tie member but to prevent its withdrawal, said casing being provided with a transverse slot just sufficiently large to permit of an insertion of said other terminal end in overlapping relation to the first end but otherwise completely encasing said second mentioned means to prevent any manipulation or operation thereof, whereby the insertion of such terminal end locks said other terminal end to the fastener against removal without detection.

1,619,804. SHEET-PILING MECHANISM. WILLIAM F. CONKLIN, Tarentum, HOMER S. HOPKINS, Crafton, and JOHN M. HOVER, Pittsburgh, Pa. Filed Mar. 24, 1925. Serial No. 18,068. 19 Claims. (Cl. 214—6.)



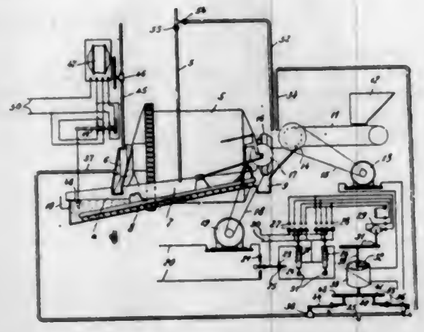
1. In a sheet-metal piling machine, means for supporting sheets above a position where they are to be piled, one upon another, means for feeding sheets to said position, means for moving the supporting means from beneath the sheets and beyond the sides of the pile of sheets and for then lowering the supporting means at the sides of the pile.



1,619,805. FLEXIBLY-ADJUSTABLE DUCT-ROLLER BRAKE. FRED S. BAILEY, Chicago, Ill. Filed Sept. 1, 1926. Serial No. 132,929. 3 Claims. (Cl. 101—244.)

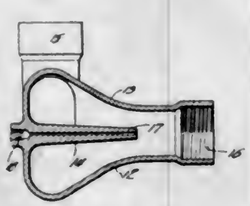
1. In a device of the class described, the combination with a pivotally supported and vertically bored holder for a brake shoe, said holder having, in its lower portion a screw threaded opening communicating with the bore

thereof, of a brake shoe adapted to contact with a roller shaft and having depending therefrom a plunger located in the bore of said holder, an adjusting screw located in said screw threaded opening, a lock nut on said screw externally of the holder and a spring interposed between the plunger and said screw.



1,619,806. BRAKE MECHANISM. VINCENT BENDIX, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1925. Serial No. 36,816. 16 Claims. (Cl. 188—194.)

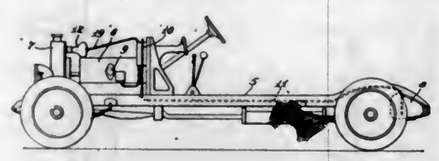
1. A vehicle having, in combination, a swivelled wheel having a brake drum, a friction device circumferentially shiftable to anchor at either end and engageable with the drum, and means for applying the friction device including an operating device acting directly on the friction device and swivelling with the wheel, together with an operating device which does not swivel with the wheel, said operating devices engaging each other in a joint moved substantially at right angles to the swivelling axis in applying the brake, and said means permitting the shifting of the friction device without substantially affecting the brake.



1,619,807. TREATMENT OF PULPS. ALFRED LESLIE BLOMFIELD, Colorado Springs, and ELMER RANDALL RAMSEY, Denver, Colo., assignors to The Dorr Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 18, 1923. Serial No. 632,980. 25 Claims. (Cl. 83—93.)

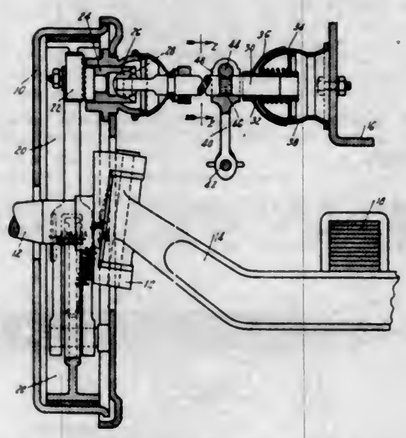
1. The improvement in apparatus for the treatment of pulps including a classifier for effecting a separation of solids of different character in the pulp by overflow and settling, which comprises adjustable means for adding liquid to the pulp to be treated in said apparatus, means

for producing an action representative of predetermined variations in the accumulation of settled solids in said classifier, and means for automatically controlling said adjustable liquid adding means in response to said action.



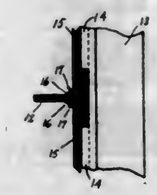
1,619,808. SUCTION-PRODUCING MEANS FOR FUEL-FEEDING SYSTEMS. ROBERT F. BRACKE, Chicago, Ill., assignor, by mesne assignments, to Curtis B. Camp, trustee, Oak Park, Ill. Filed Apr. 13, 1923. Serial No. 631,822. 1 Claim. (Cl. 230—13.)

A suction producing device adapted to be inserted in the pressure circulating water system of an internal combustion engine, comprising a vortex conduit having intake and discharge openings and conformed to receive water tangentially from the intake opening and imparting a spiral motion thereto, the conduit having an increasing constriction longitudinally from the intake for progressng the water with increased velocity toward the discharge end of the casing in its spiral movement, and a suction duct terminating adjacent the region of increased velocity for supplying suction.



1,619,809. FUEL-FEED SYSTEM FOR MOTOR VEHICLES. ROBERT F. BRACKE, Chicago, Ill., assignor to Curtis B. Camp, trustee, Glencoe, Ill. Original application filed Apr. 13, 1923, Serial No. 631,822. Divided and this application filed Oct. 22, 1926. Serial No. 143,364. 3 Claims. (Cl. 158—36.1.)

1. A fuel feed system for motor vehicles, comprising in combination an engine, a carburetor therefor, a fuel feed tank mounted above the carburetor and arranged to feed fuel thereto, a fuel supply tank below the carburetor and communicating with the feed tank, a water circulating

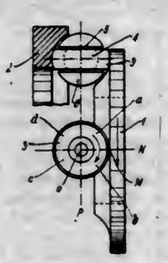


system for the engine, and an ejector in the circulating system located so as to receive the water as it leaves the engine for producing a suction in the feed tank.

1,619,810. OPERATING MECHANISM. JOHN R. CAUTLEY, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 12, 1925. Serial No. 62,077. 7 Claims. (Cl. 188—194.)

1. Operating mechanism comprising, in combination, a shaft having a part formed with gear teeth, a hub encircling said part and having a lever extending rigidly therefrom on one side and split on the side opposite the lever, and an adjusting member bridging the split in the hub and formed to mesh with said gear teeth and operable to adjust the lever and shaft angularly with respect to each other.

1,619,811. SASH. WILLIAM C. CORYELL, Youngstown, Ohio. Filed Mar. 19, 1921. Serial No. 453,685. 6 Claims. (Cl. 189—76.)

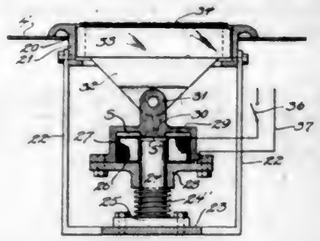


5. In a sash, glass-supporting bars, glass positioned on said bars in a plane intersecting said bars, other bars secured to said first mentioned bars at engaging points and lying wholly on one side of said plane, said other bars having each a main portion spaced from said plane and projecting ribs extending toward said plane, said ribs forming on each said bar a channel next to the glass, and retaining material in said channels.

1,619,812. TIRE FOR VEHICLE WHEELS. MARIE NICOLAS ALBERT DEVELAY, Paris, France. Filed June 10, 1922, Serial No. 567,346, and in France June 14, 1921. 4 Claims. (Cl. 152—10.)

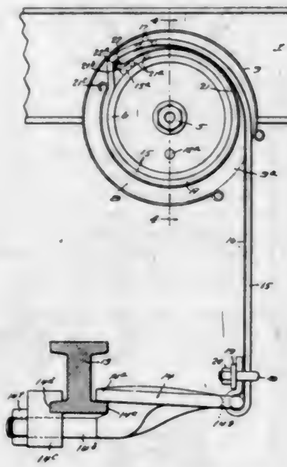
3. In an inner tube for a vehicle wheel tire, a member having air channels therein, a second member of flexible rubber united to said first member, and constituting therewith an inflatable inner tube, and positioning devices on said second member adapted to bear against the beads of the usual outer casing on inflation of the inner tube.

1,619,813. SWIVELING-ROLLER GEARING. RICHARD ERBAN, Vienna, Austria. Filed June 26, 1926, Serial No. 118,661, and in Austria Sept. 21, 1925. 3 Claims. (Cl. 74—26.)



1. A device for displacing swiveling roller gearings comprising in combination two race rings having toric surfaces, a plurality of rollers capable of rolling between the said race rings, means for journalling the said rollers so as to have three degrees of freedom as regards their rotary motion, and guiding means for each roller capable of engaging with the approaching part of the roller, as set forth.

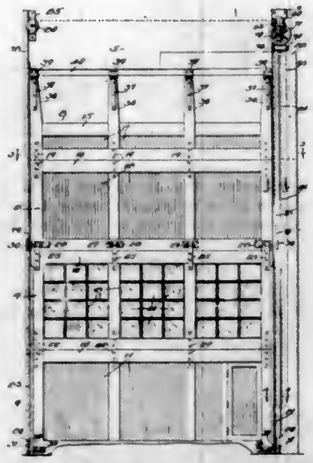
1,619,814. FABRIC-RENOVATING MACHINE. ERNEST F. FISHER, St. Louis, Mo. Filed May 13, 1925. Serial No. 30,133. 2 Claims. (Cl. 15—7.)



1. A fabric renovating machine comprising a table for the support of the fabric, said table being provided with an opening, a movable brush therein, brush actuating

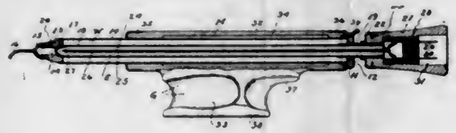
mechanism for projecting the brush through the opening in the table and withdrawing the same, said mechanism

comprising an armature for the support of the brush, and means for setting up an alternating field for vibrating said armature.



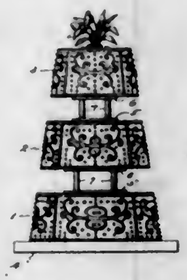
1,619,815. SHOCK ABSORBER. CLAUD H. FOSTER, Wickliffe, Ohio. Filed Apr. 30, 1926. Serial No. 105,621. 12 Claims. (Cl. 188—130.)

1. In a shock absorber, the combination, with a drum, of a strap having its inner end formed into a loop constituting a brake band extending partly about the drum and rotatable thereupon, with an operating portion of the strap surrounding such end of the band and the drum-engaging portion thereof adjacent thereto, and means whereby the thrust of the operating part of the strap will be transmitted through the loop to the inner end of the brake band, thereby to rotate the band freely upon the drum, the inner end portion of the band being provided with a projection adapted to be engaged by the operating portion of the strap exterior thereto when the strap is subjected to a pull, thereby to force such end of the brake band against the drum and cause the band to exert a braking action through the pull exerted upon the strap.



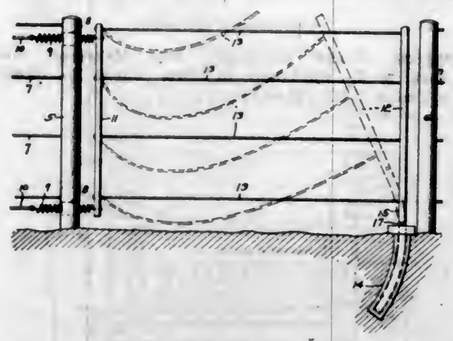
1,619,816. FOLDING CLOSURE AND MEANS FOR OPERATING SAME. WAINWRIGHT B. GERVAIS, Chicago, Ill., assignor to Variety Fire Door Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 13, 1923. Serial No. 657,149. 15 Claims. (Cl. 268—74.)

1. In a closure, a pair of door portions, a flexible connection for opening one of said door portions, a second flexible connection for opening the other of said door portions, means for actuating one of said connections, means for actuating the other connection, separate drive means for said actuating means, said drive means being adapted for operation together until one door is moved into open position and independently to move the other door into



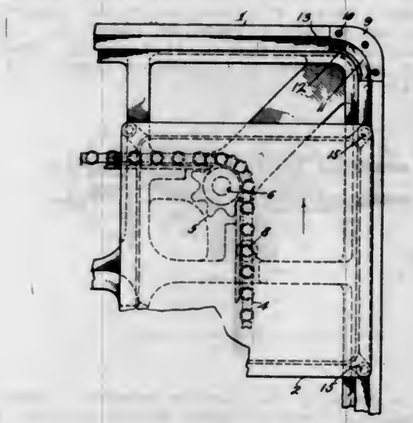
open position, and means for automatically uncoupling said separate drive means as the first door reaches open position.

1,619,817. WAX-APPLYING TOOL. HARRY LEE GIBSON, Chicago, Ill. Filed Jan. 15, 1926. Serial No. 81,386. 9 Claims. (Cl. 219—19.)



1. In a wax applying tool, the combination of a wax container having a discharge outlet, and a heating element within said container mechanically adjustable to cooperate with said outlet to control the flow therethrough.

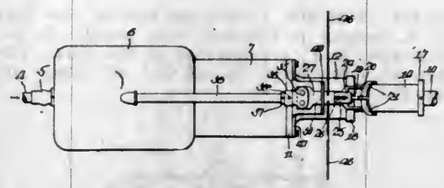
1,619,818. CAKE SUPPORT. JOHN M. GOWANS, Hartford, Conn. Filed Mar. 4, 1926. Serial No. 92,283. 3 Claims. (Cl. 211—14.)



1. A support for cake comprising a pair of plates, posts connecting and detachably holding the plates in spaced relation and pointed projections extending oppositely from the outside faces of both of the plates.

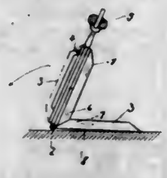
1,619,819. GATE. AUGUSTUS B. HAGEMAN, Broken Bow, Nebr. Filed Nov. 19, 1925. Serial No. 70,138. 3 Claims. (Cl. 39—74.)

1. A combination with a pair of spaced fence posts providing a gate opening, of a gate arranged between the posts including gate end bars, one bar having a curved extension at its lower end, retractile coil springs supported by one fence post and attached to the other gate end bar, anchor means for the coil springs and a curved socket anchored in the ground adjacent to the other gate end post and receiving the said curved extension of the first gate end bar.



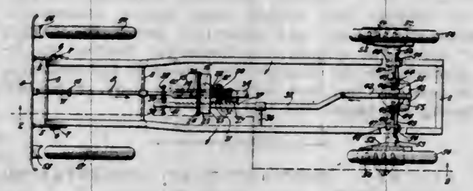
1,619,820. SHOCK ABSORBER FOR POWER PLATE PRESSES. JOHN J. HALLIWELL, Mount Vernon, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 7, 1923. Serial No. 679,111. 9 Claims. (Cl. 101—159.)

1. In a plate printing machine, the combination with the frame and the bed, of guides located adjacent the corners of the frame and having curved guiding surfaces, and rolls depending from the bed and cooperating with the curved surfaces of the guides as the bed swings around the corners of the frame.



1,619,821. BLEEDER ATTACHMENT FOR AIR BRAKES. LE ROY W. HEFFELFINGER and LOUIS J. COURTNEY, Chicago, Ill. Filed May 21, 1926. Serial No. 110,685. 4 Claims. (Cl. 303—80.)

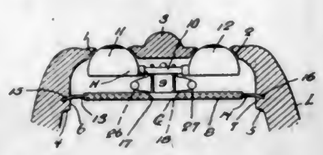
1. In an attachment for air-brakes of the class described, the combination with a train-pipe, of an auxiliary reservoir and brake-cylinder communicatable therewith, a bleed pipe communicating at one of its ends with said reservoir and having its other end located adjacent the said cylinder, a valve-casing having a bleed opening and secured to the bleed pipe, a spring-pressed valve within said casing and having a stem extended



therefrom, a manually operated valve-lever having two fulcrums whereby it may be operated in opposite directions, said valve-stem contacting with one end of said valve-lever, and weighted means co-operating with said valve lever and extended into the path of travel of a movable part carried by said brake-cylinder.

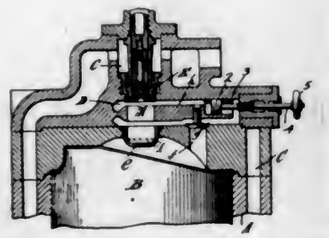
1,619,822. WATCHCASE. WALTER HUBER, Pforzheim, Germany. Filed Mar. 11, 1926, Serial No. 93,927, and in Germany Sept. 30, 1925. 1 Claim. (Cl. 58—88.)

A time piece comprising an open-faced case, a cover for the open face of the case, said case and cover having beveled marginal abutment surfaces, and a hinge uniting the case and cover at the intersection of said abutment surfaces so as to adapt the cover to be swung backward to a horizontal position and at an angle to the case to support said case in an upright position, in which positions of the case and cover the said abutment surfaces are brought into contact to assist the hinge in supporting the weight of the case and its contents.



1,619,823. MOTOR VEHICLE. KARL KLEIN, St. Louis, Mo. Filed July 6, 1925. Serial No. 41,560. 9 Claims. (Cl. 180—83.)

1. In a motor vehicle, the combination of a chassis and an engine supported therein and a clutch device operatively connecting the engine with the rear wheels of the vehicle, of a bumper extending transversely of the chassis and arranged for endwise movement, shoes adapted to be interposed between the ground and the rear wheels to cause said wheels to idle, connections between the shoes and the bumper including an oper-

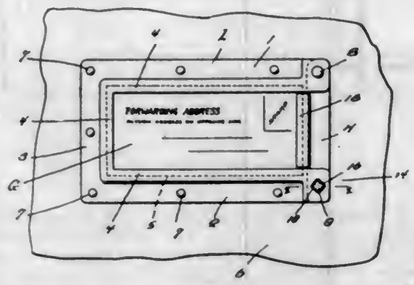


ative device for automatically connecting said means with the engine, operable by frontal contact on the bumper, and a device for releasing the clutch after said shoes have been set.

1,619,824. EYE SET. ALEXANDER KONOFF, New York, N. Y., assignor to Overland Metal Novelty Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 30, 1926. Serial No. 105,678. 16 Claims. (Cl. 46—40.)

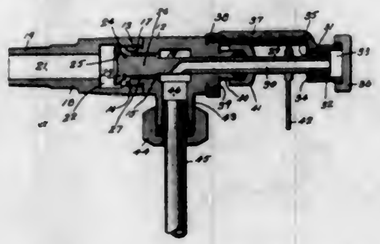
14. In an eye set comprising a pair of eyes, a support for said eyes, and attaching means operative to attach the support to a doll head, the combination therewith of force producing means to positively adjustably move said support upon operation of the attaching means.

1,619,825. INTERNAL-COMBUSTION ENGINE. CHARLES E. LUCKE, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 25, 1921. Serial No. 487,260. 9 Claims. (Cl. 123—33.)



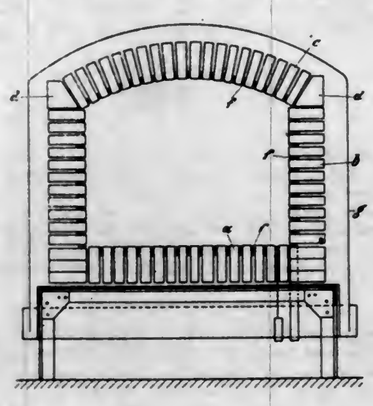
1. In an internal combustion engine, the combination with a precombustion chamber having a fuel feed opening to the cylinder and means for injecting fuel into the chamber during or about the end of compression to secure limited combustion and feed of fuel to the cylinder by the relative pressures in the chamber and cylinder, of a pressure equalizing connection between the chamber and cylinder open during compression, means for closing said connection during the feeding of fuel to the cylinder, and means for dividing the air compressed in the chamber into a body of fuel-combining air near the fuel feed opening and a body of fuel-displacing air behind the fuel.

1,619,826. PREPARATION OF CONCENTRATED ONION JUICE. CARL MARX, Wyoming, N. J., assignor of one-half to Rudolph Weiss, New York, N. Y. Filed Oct. 20, 1925. Serial No. 63,767. 1 Claim. (Cl. 99—11.)



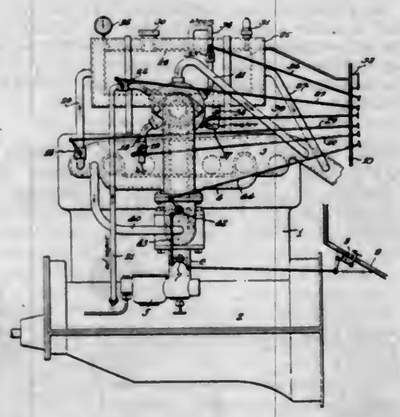
Method of preparing concentrated onion juice, consisting in boiling comminuted onions in a closed container, collecting only the first one-tenth of the distillate produced, continuing the boiling until the total bulk of comminuted onions has been reduced to at least one half of the original bulk, filtering the mass of softened onion pulp thus formed, and re-incorporating with the resultant filtrate the first one-tenth of the distillate obtained during the early part of the boiling operation, substantially as described.

1,619,827. CARD HOLDER. MAX MEYERSON, New York, N. Y. Filed May 15, 1925. Serial No. 30,627. 4 Claims. (Cl. 40—17.)



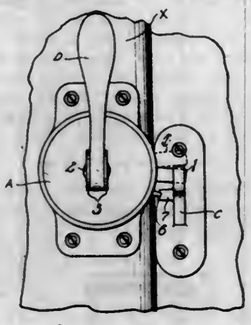
4. The combination with a package, of a card holder therefor having a movable retaining member for the card, said card holder and retaining member having mating apertures therethrough and there being an alined aperture through the wall of the package, a locking bolt extending through said apertures, having a rectangular head thereon received in a rectangular countersink of one of said members, and a nut removably threaded onto said bolt interiorly of the package.

1,619,828. AUTOMATIC SHUT-OFF FOR WATER GAUGES. ERNEST P. PRATOR, Leeper, Mo., assignor of one-third to John T. Fredericks, Leeper, Mo., and one-third to John R. Stephens, St. Louis, Mo. Filed Mar. 3, 1921. Serial No. 449,584. 5 Claims. (Cl. 73—54.)



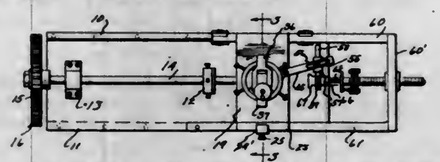
1. In a device of the character described, a water glass, upper and lower conductors whereby the ends of said water glass are placed in communication with a boiler, check valves adapted to control communication between said ends and the boiler, said check valves being movable to their closed positions in response to a rapid discharge of fluid therepast, and fluid-actuated valve-opening means whereby said valves are automatically opened in response to fluid pressure in said water glass, said means including pressure-receiving members carried by the respective valves and said conductors having passageways through which pressure is transmitted to said pressure-receiving members, and one of said valves having a port whereby said water glass is placed in communication with the boiler when said valves occupy their closed positions, so as to provide for the transmission of fluid pressure to said pressure-receiving members.

1,619,829. ELECTRIC RESISTANCE MUFFLE FURNACE. WILHELM ROHN, Hanau-on-the-Main, Germany, assignor to Charles Engelhard, Inc., New York, N. Y., a Corporation. Filed May 3, 1923, Serial No. 636,855, and in Germany May 8, 1922. 5 Claims. (Cl. 204—64.)



1. An electric muffle furnace comprising a closed chamber formed of heat resisting fire bricks, all of whose surfaces are flat, having their smaller sides facing inwardly and a flat heating band imbedded into the spaces between the bricks.

1,619,830. FUEL ECONOMIZER AND DECARBONIZING DEVICE. RUFUS R. ROSS, Detroit, Mich. Filed Oct. 17, 1924, Serial No. 744,120. Renewed May 3, 1926. 7 Claims. (Cl. 123—25.)



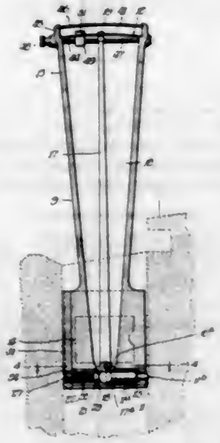
1. A device of the character described comprising a jacket for heating purposes, said jacket having an end thereof fashioned for mounting between the outlet connection of a carbureter and the intake manifold of an internal combustion engine, a conduit in said jacket adapted to be heated by a heating agent in said jacket, said conduit having one end thereof coaxially of said carbureter outlet connection and communicating with said carbureter outlet connection and said manifold by a series of openings so that engine fuel may pass through the end of said conduit, and a mixing chamber at the opposite end of said conduit in said jacket and adapted to be supplied with various kinds of vapor to pass through said conduit and commingle with the engine fuel.

1,619,831. FASTENER FOR REFRIGERATOR DOORS. ADOLPH RUBIN, St. Louis, Mo., assignor, by mesne assignments, to Arcade Manufacturing Company, Freeport, Ill., a Corporation of Illinois. Filed Dec. 5, 1925. Serial No. 73,391. 11 Claims. (Cl. 292—226.)

1. A refrigerator door fastener provided with a latch, means for disengaging said latch from the keeper, a movable trigger for holding said latch in an inoperative position, and a substantially C-shaped spring combined with said latch and trigger for moving both of said elements to render them operative.

1,619,832. LATHE ATTACHMENT. PERL LEE STARR, Detroit, Mich. Filed July 29, 1922. Serial No. 578,481. 4 Claims. (Cl. 82—2.)

1. In a device of the class described, a tool holder; means for adjusting the angular position of said holder relatively to the work piece; wedge members for locking said holder in adjusted position; a ring for supporting said wedge members; and means for rotating said ring for releasing said holder for movement relatively to the work piece without disturbing the angular adjustment thereof.

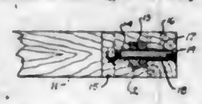


1,619,833. DEVICE FOR SHARPENING STRAIGHT AND SAFETY RAZOR BLADES. CLOYD E. STEGNER, Detroit, Mich. Filed Feb. 4, 1924. Serial No. 690,673. 1 Claim. (Cl. 51—214.)

A razor sharpening device comprising a pair of sharpening plate holders, each of which is provided with an

open side, the open sides being arranged adjacent each other, each of said holders being provided with an inwardly inclined end wall and extended side walls, sharpening plates slidably mounted in said holders between said side walls, the ends of said sharpening plates being adapted to engage the inwardly inclined end walls of the holders, springs mounted in said sharpening plate holders and engaging the opposite ends of said sharpening plates to force them toward said inwardly inclined end walls, transverse springs arranged between said sharpening plate holders beyond said sharpening plates, and means for adjustably retaining said sharpening plate holders in position with respect to each other.

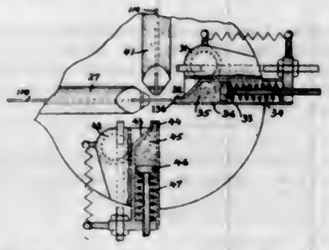
1,619,834. MEASURING GAUGE. LOUIS H. STEIN, Chicago, Ill. Filed Dec. 23, 1925. Serial No. 77,354. 16 Claims. (Cl. 33—178.)



1. In the gauge of the class described, the combination of a body having a lower substantially cylindrical plug portion and an upper tapering stem portion, there being an opening extending through said plug portion and said stem portion, an indicating lever pivoted in said opening adjacent the lower end of said plug portion, a movable gauge contact mounted for transverse movement in said plug portion and adapted to bear against said indicating lever at a point in close proximity to said pivot, a spring pressed plunger in said plug portion bearing against said indicating lever substantially oppositely to said movable gauge contact, a long gauge bar extending longitudinally of said plug portion at a point diametrically opposite to the point of measuring contact of said movable gauge contact, spring pressed means extending from said plug portion for pressing said gauge bar against the wall of said bore, a scale supported in the upper end of said stem portion, and a pointer on said indicating lever for playing across said scale.

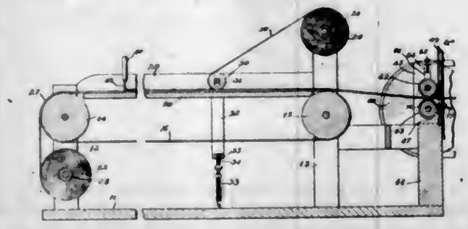
1,619,835. PLATING METALS. BERTRAND S. SUMMERS, Port Huron, Mich., assignor to The Locomotive Terminal Improvement Co., Chicago, Ill., a Corporation of Maine. Filed Feb. 9, 1924. Serial No. 691,832. 2 Claims. (Cl. 204—1.)

1. As an article of manufacture, an article of iron covered with an electro-deposited coating of lead and nickel.



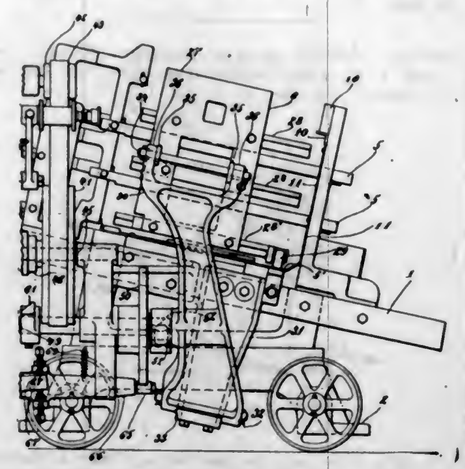
1,619,836. JOINT. GEORGE TASMAN, Brooklyn, N. Y. Filed Aug. 26, 1925. Serial No. 52,495. 4 Claims. (Cl. 20—92.)

1. A joint between a wooden pillar and a wooden rail, said joint comprising a pillar, a rail furcated at its end facing aforesaid pillar, a key, arranged within and glued to the aforesaid furcated end and into a recess in the pillar, having its grain running in the same direction as that of the pillar, an aperture, spacious enough to operate the nut of a bolt therein, arranged in the rail in a short distance from its furcated end, a channel, bored through the pillar and extended in a longitudinally central direction through the key until it connects



with the aforesaid aperture, a tube within and fitting tightly into aforesaid channel, a bolt arranged in aforesaid tube projecting with its screw-threaded end into aforesaid aperture, a washer and a nut tightened on the threaded end of said bolt, holes in an oblique direction through the rail and the key into the pillar, and a grooved pin glued within and filling each of aforesaid holes.

1,619,837. SOLDERING ART. JONATHAN WENZ, JOSEF ALVERA, and GEORG BRUNHÜBNER, Pforzheim, Germany. Filed Apr. 8, 1925, Serial No. 21,513, and in Germany Dec. 2, 1924. 4 Claims. (Cl. 59—1.)

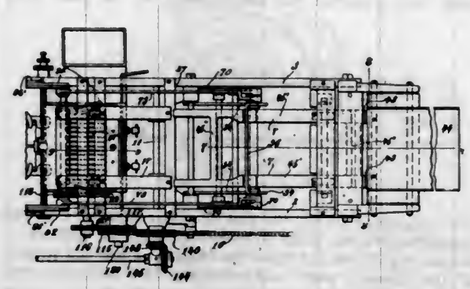


1. In a link forming machine, a link closing stamp having a solder containing chamber and a link closing recess with which latter the said chamber has communication through a solder conducting passage, and jar-operated means for positively feeding the solder through said passage.

1,619,838. MACHINE FOR MAKING LUBRICATING MEANS FOR VEHICLE SPRINGS. ROBERT WHITE, Rochester, N. Y., assignor to J. Lawrence Hill, Rochester, N. Y. Filed Oct. 20, 1921. Serial No. 509,211. 3 Claims. (Cl. 154—1.)

1. The combination of mechanism for supplying a pair of strips of material and for feeding the same longitudinally laid one upon the other, a source of lubricant provided with means for applying the same between said strips, cooperating cutting elements actuated in synchronism with said feeding mechanism for cutting the combined strips into predetermined lengths, a pair of rolls for maintaining the combined strips taut and presenting the same to said cutting elements, said rolls being circumferentially grooved to prevent expression of the lubricant, and means for rotating said rolls.

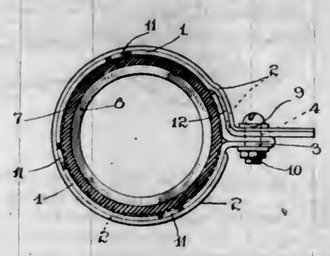
1,619,839. CASE-FILLING MACHINE. CHARLES H. WILD, Baltimore, Md., assignor to Burt Machine Company, Incorporated, a Corporation of Maryland. Filed Dec. 14, 1925. Serial No. 75,366. 29 Claims. (Cl. 226—15.)



1. In a carton or case-filling machine, a load-forming enclosure, supports therein for a plurality of tiers of cans and a plurality of layers, means for feeding cans to said enclosure and supports in a plurality of tires and a plurality of layers, and means for moving the load of cans simultaneously and transversely to the feed.

19. In a machine for filling cases or cartons with cans, load-forming means comprising a can support and an abutment, a track leading to said support, a plunger for moving the load into the case, a motor for actuating the plunger, transmission means from the motor to the plunger including a rotary shaft, and means for communicating a reciprocating motion from the shaft to the plunger at each rotation of the shaft, said transmission means including a clutch whereby the motor may be thrown into and out of connection with said shaft, a dog on said shaft throwing the clutch out of engagement after each operation, means controlled by the operator for throwing the clutch into engagement, positioning means operating after the clutch throw-out for determining the initial position of the plunger after each operation, a gate for separating the cans being fed from the cans comprising the load, and means for operating the gate, said operating means being connected to and operated by the control, means opposite the gate between which and the gate any can partly on the track and partly in the path of the plunger blocks the gate and checks the operation of the gate-actuating mechanism and the plunger, warning the operator of the trouble and preventing the operation of the plunger.

20. In a machine for filling cartons with cans, load-forming mechanism comprising a can support and a track leading thereto, means for moving the load into the carton, a support for the carton opposite the load-forming means and in line with the load-moving means, the can support being spaced from the carton support to admit the bottom flaps of the cartons beneath the can support, and a guide for the carton flaps to deflect and guide the bottom flap beneath the can support.

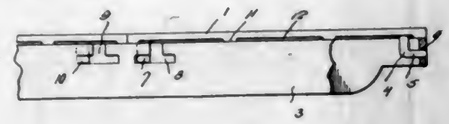


24. In a case-filling machine, the combination of load-forming means, a track downwardly inclined to the load-forming means, means for moving the cans from the load-forming means to the case, and means for indicating the presence of a complete load in the load-forming means comprising means for indicating the presence of stationary cans in the feeding means in front of the load-forming means.

1,619,840. CAN-LABELING MACHINE. CHARLES H. WILD, Baltimore, Md., assignor to Burt Machine Company, Incorporated, Baltimore, Md., a Corporation of Maryland. Filed May 5, 1926. Serial No. 106,885. 32 Claims. (Cl. 216—58.)

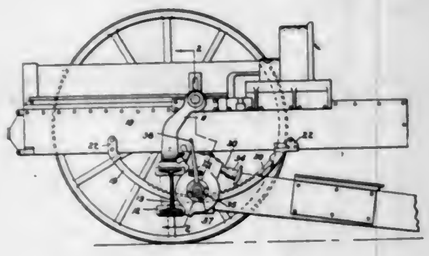
1. In a machine for labeling cylindrical packages, ways, means for rolling the packages along the ways, means for supporting a supply of labels adjacent the ways so that the packages roll over the top label as they pass, a paste pot and a paste roller therein and means for rotating this roller independently of the motion of the packages and means contacting said roller for applying adhesive to the forward end of each label as it comes to the top of the pack and tripping means in the path of the packages at the front end of the machine controlling said adhesive applying means to operate the same as each package is introduced into the machine.

1,619,841. HOSE CLAMP. CHARLES S. WITWER, Yonkers, N. Y. Filed Sept. 26, 1923, Serial No. 664,818. Renewed Jan. 18, 1927. 2 Claims. (Cl. 24—19.)



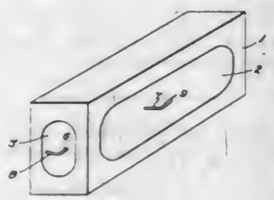
1. A device of the character described comprising an adjustable metal band composed of a long and short portion, said long portion being provided with inwardly projecting concave beads and said short portion being provided with outwardly projecting convex beads arranged for inter-engagement when the ends overlap, a supporting shoulder formed therein by bending said body back upon itself, apertures therein permitting the adjustment of said band to varying diameters, and indents adjacent said apertures to permit of the severance therefrom of any projecting portions thereof.

1,619,842. GRATE CONSTRUCTION. JOHN W. WRIGHT, Olympia, Wash. Filed Jan. 4, 1926. Serial No. 79,150. 1 Claim. (Cl. 126—168.)



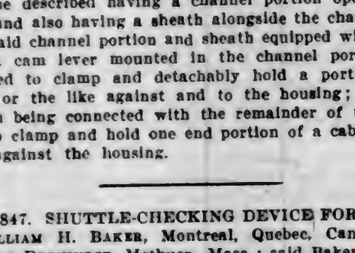
A grate comprising a substantially rectangular shaped supporting frame, a series of plates adapted to be arranged on top of the supporting frame, the sides of the rectangular shaped supporting frame being provided with substantially inverted T-shaped slots, the end of the leg portion of each of the inverted T-shaped slots extending to the top of the respective side of the frame, L-shaped

lugs depending from the bottom of each plate and disposed transversely beyond the outer sides of the plate, said lugs adapted for vertical movement within the leg portion of the inverted T-shaped slots and being adapted for disposition in the arms of the respective T-shaped slots for preventing the displacement of the plate from



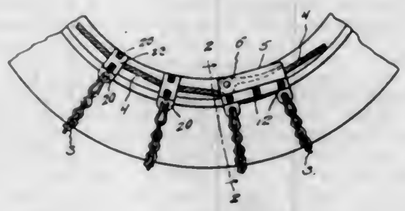
the supporting frame, the end of said rectangular shaped supporting frame being provided with a slot, and an L-shaped lug depending from the bottom of the end portion of the endmost plate and extending longitudinally, said last mentioned lug being adapted for detachable engagement with said last mentioned slot.

1,619,843. TRAINING MECHANISM FOR GUN CARRIAGES. HARRY C. ZIMMERMAN, Washington, D. C. Filed Sept. 16, 1924. Serial No. 738,074. 15 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



15. In a gun carriage, an axle, a top carriage supported thereby, a cradle trunnioned in the top carriage, a training mechanism mounted on the axle, and means detachably engaging the cradle for connecting the cradle and training mechanism.

1,619,844. PAVING BLOCK. ANTHONY M. ZOTTOLI, Quincy, Mass. Filed June 21, 1923. Serial No. 646,798. 4 Claims. (Cl. 94—13.)

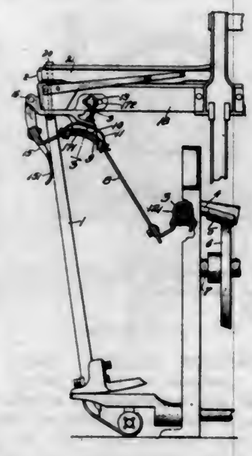


1. A rectangular paving block having a recess in each of its vertical sides, each recess being entirely within the margin of the outer side face of the block and bordered all around by a flush portion of the side face, and rods embedded in the block which respectively extend longitudinally and transversely entirely through the block and project outwardly through said recessed portions beyond the plane of the side face of the block, and having hook like ends.

1,619,847. CHOCK BRAKE. BENJAMIN ZUCKER, New York, N. Y. Filed Nov. 28, 1924. Serial No. 752,704. 2 Claims. (Cl. 188—4.)

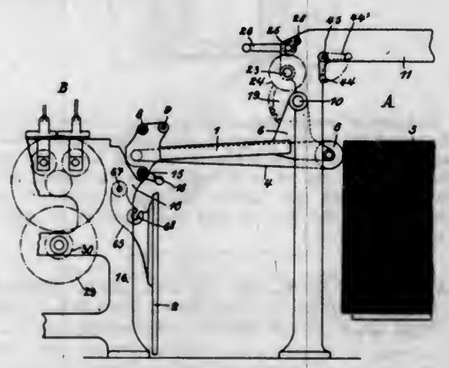
1. In a chock brake, in combination, a base, a plurality of upwardly extended flanges positioned angularly with respect to each other adapted to abut upon the sides of the rim of an inserted wheel thereby preventing the passage of the wheel completely through the device carried by the base and a chain capable of attaching the base to a vehicle.

1,619,846. CHAIN EQUIPMENT FOR TIRES. FRANK H. ARNZEN, Grangeville, Idaho. Filed Jan. 21, 1926. Serial No. 82,728. 3 Claims. (Cl. 24—134.)



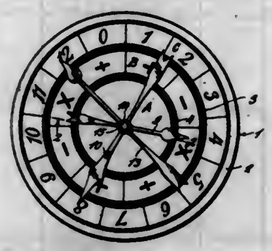
1. As a new article of manufacture, a housing for the purpose described having a channel portion open at its ends and also having a sheath alongside the channel portion said channel portion and sheath equipped with teeth, and a cam lever mounted in the channel portion and adapted to clamp and detachably hold a portion of a cable or the like against and to the housing; the said sheath being connected with the remainder of the housing to clamp and hold one end portion of a cable or the like against the housing.

1,619,847. SHUTTLE-CHECKING DEVICE FOR LOOMS. WILLIAM H. BAKER, Montreal, Quebec, Canada, and JOHN DEWHURST, Methuen, Mass.; said Baker assignor to said Dewhurst. Filed July 28, 1926. Serial No. 125,446. 3 Claims. (Cl. 139—162.)



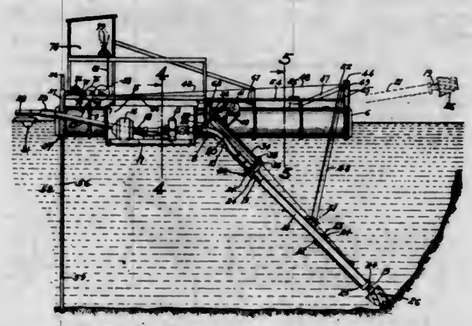
1. The combination with the lay of a loom, and a pivotal mounting at the outer end thereof, of shuttle-checking devices comprising essentially a picker-stick engaging lever engaged with said mounting, a connector connected

with the said lever, friction-surfaces between which the connector is confined and by which movement thereof endwise is retarded frictionally, and means acting



through the connector itself to draw the said lever inwardly to provide for temporarily locating the picker-stick in shuttle-checking position.

1,619,848. APPARATUS FOR WORKING PAPER, CARTON, AND THE LIKE MATERIALS. HENRI BOBST, Lausanne, Switzerland, assignor to Bobst & Fils, Societe Anonyme, Lausanne, Switzerland, a Corporation of Switzerland. Filed Jan. 19, 1924. Serial No. 687,397, and in Switzerland Jan. 26, 1923. 10 Claims. (Cl. 271—45.)

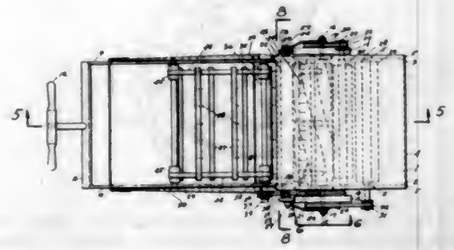


1. In an apparatus for working paper, card and similar materials the combination, with a machine for working, of a feeding machine provided with an automatic feeding table carrying all the transporting mechanism serving for the automatic feed of the working machine, said table being pivoted to the main shaft of the feeding machine, a mechanism by means of which said table may be moved into a raised position, so as to produce a free space to allow a passage between the working machine and the feeding machine, elements actuating the transporting mechanism which are mounted upon the table, said elements being so disposed that during the pivoting of said table into its upper position the said transporting mechanism mounted on the table is automatically uncoupled.

1,619,849. ARITHMETICAL GAME. VERTNER D. BRITTINGHAM, Brighton, Colo. Filed Nov. 10, 1925. Serial No. 68,060. 3 Claims. (Cl. 35—2.)

1. An arithmetical game apparatus for setting up problems comprising, in combination, a disk-like member having two concentric annular areas divided by radial lines into a plurality of sections, each section of one of the annular areas having a number, each section of the other area having one of the arithmetical symbols +, −, × or ÷ and means for determining by chance one of the arithmetical symbols and two numbers, the numbers to be employed in the problem indicated by the symbol.

1,619,850. DREDGING MACHINE. VASCO F. CASEY, Minneapolis, Minn., assignor to Minneapolis Dredging Co., Minneapolis, Minn., a Copartnership composed of Bernard W. Harris, Leo B. Harris, Vasco F. Casey, and Henry I. Meyers. Filed Mar. 12, 1925. Serial No. 15,016. 13 Claims. (Cl. 37—67.)

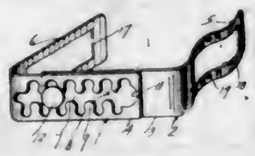


1. A dredge structure, comprising elongated pontoons, arranged in spaced parallel relation, a float as a pump-receiving chamber rigidly connecting the pontoons transversely, rearwardly of the longitudinal middle, and a boom-frame terminally horizontally pivoted between the pontoons substantially at the longitudinal middle thereof, and below the water level, to obtain low center of gravity and balance of the dredge, and maximum working range of the boom.

1,619,851. COMBINATION LAWN CLEANER. JOSEPH COLEY, Detroit, Mich. Filed May 10, 1926. Serial No. 108,005. 3 Claims. (Cl. 55—145.)

1. A lawn cleaning device comprising a partially inclosed semi-circular frame casing, said frame casing being opened along the bottom side thereof and mounted on two drive wheels, a cylindrical rake section rotatably mounted within said frame casing, positioned parallel with the drive wheel axis and near the bottom side of said frame, said cylindrical rake being actuated by direct connection with one of the drive wheels, an extension frame attached to the back side of the frame casing and provided with a propelling handle thereon, a receptacle chamber attached to said extension frame and frame casing, and

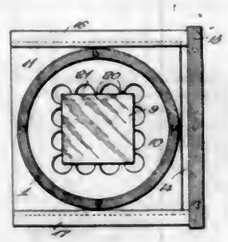
opening into said frame casing directly back of the cylindrical fan, a movable conveyor attached to said frame casing at the receptacle opening and extending back into the receptacle chamber, said conveyor being actuated by direct connection with the drive wheels, a circular fan sec-



tion rotatably mounted within the frame casing on the front side of the cylindrical rake and near the casing opening, said fan being actuated by direct connection with one of the drive wheels for forcing the refuse from the rake back to the conveyor and into the receptacle chamber.

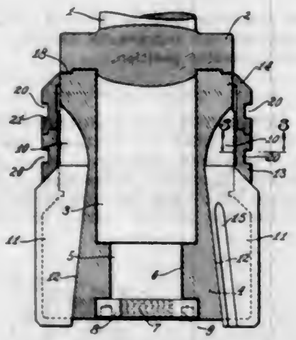
1,619,852. SOLDER FOR ALUMINUM AND ITS ALLOYS. EMILE CONTI, Alfortville, France. Filed Sept. 12, 1924, Serial No. 737,380, and in France July 21, 1924. 1 Claim. (Cl. 148—26.)

A solder for aluminum and its alloys containing from about 52 to 66% of tin; 46 to 23% of zinc and 2 to 11% cadmium, with the addition of a relatively small proportion (from 1 to 5%) of chloride of sodium, sal ammoniac and alum.



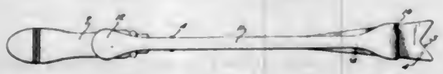
1,619,853. ADJUSTABLE BEDDING CLAMP. FRANK M. CORREA, Honolulu, Territory of Hawaii. Filed Aug. 24, 1925. Serial No. 51,900. 4 Claims. (Cl. 24—72.5.)

1. An adjustable bedding clamp comprising two substantially L-shaped clamping members having certain portions adjustably engaged with one another and the other portions opposed to one another and comprising jaws adapted to engage the under side of a mattress and on top of the bedding mounted on the mattress and means for locking the adjustably engaged portions of said members in adjusted position, said jaw portions having openings therein of sufficient size to permit the bedding to extend into said openings, the jaw portion of the upper member being corrugated.



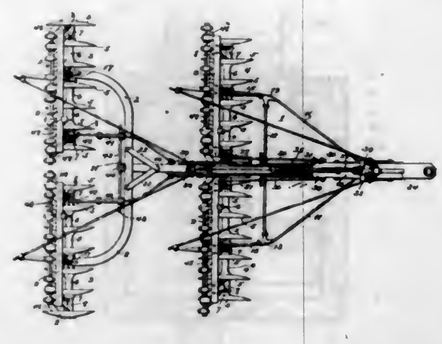
1,619,854. PIEZO-ELECTRIC-CRYSTAL APPARATUS. ALFRED CROSSLEY, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 26, 1926. Serial No. 90,931. 5 Claims. (Cl. 171—327.)

5. Piezo-electric crystal apparatus comprising in combination a pair of conductive plates, a piezo-electric crystal supported between said plates, a retaining ring member of insulating material mounted on one of said plates and extending to a distance substantially less than the thickness of said crystal and substantially spaced away from the other of said plates, said ring member having inwardly directed faces arranged to embrace the sides of said piezo-electric crystal for preventing substantial movement thereof in planes parallel to the plane



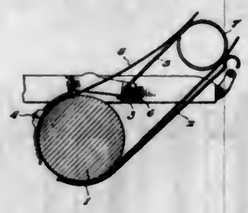
of the retaining ring, while permitting free mechanical vibration of the piezo-electric crystal at the natural frequency thereof.

1,619,855. EXPANSION REAMER. EMERY E. DAVIS, St. Lous, Mo., assignor to Davis Boring Tool Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 27, 1922. Serial No. 597,302. 5 Claims. (Cl. 77—75.5.)



1. A reamer comprising, a shank, a head loosely mounted on said shank and provided with cutting edges, a loose angular driving connection between said head and said shank at the tip of said head, and an overhanging shoulder on one part loosely entering a recess in the other part at the back of said head adapted to provide a dust seal.

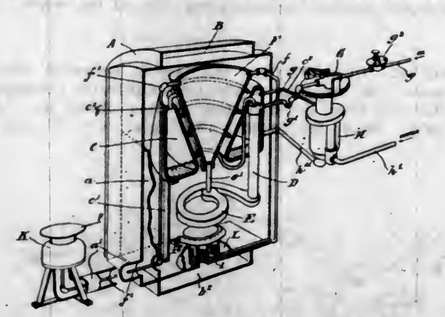
1,619,856. DANDELION DIGGER AND PULLER. HARRY G. DAVIS, St. Paul, Minn. Filed Jan. 7, 1926. Serial No. 79,767. 2 Claims. (Cl. 55—148.)



1. A combined dandelion digger and puller comprising a flat blade having at one end a cutting edge and at its other end a handle-equipped stem, a lever fulcrumed to said stem and having at one end a pulling member arranged for co-operation with the blade, a spring operative on the lever for yieldingly holding the pulling member in contact with the blade, and a thumb piece closely associated with the handle and connected to the lever for moving the pulling member away from the blade against the tension of the spring by pressure toward said handle.

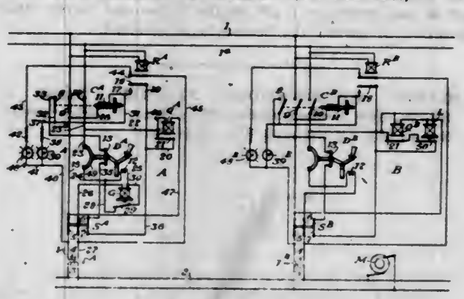
1,619,857. DISK HARROW. WILLIAM D. DEWEND, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Oct. 16, 1922. Serial No. 594,888. 4 Claims. (Cl. 55—83.)

1. In a multiple-gang harrow, the combination with front and rear main frames pivotally connected together, and front and rear gang frames pivotally connected with the respective main frames, of a lever pivotally connected between its ends with the front main frame, rods connecting the lower arm of said lever with the front gang frames, a slide carried by the front main frame, connections between the upper arm of said lever and said slide, rods connecting said slide with the rear gang frames, and manually operable means operatively connected with said lever whereby all the gang frames may be angled simultaneously.



1,619,858. PAPER GUIDE FOR TYPEWRITING MACHINES. VINCENT GAGE, Washington, D. C. Filed July 3, 1926. Serial No. 120,440. 2 Claims. (Cl. 197—127.)

1. As a new article of manufacture, a paper guide for typewriting machines to prevent the paper being carried around the platen a second time, the same consisting of a guide member having a clasp at its lower end to engage the pressure roller rod, and having its upper end re-curved to provide a rest to engage the paper shelf, both the clasp and the rest projecting from the same side of the guide which is straight and flat upon its top side.



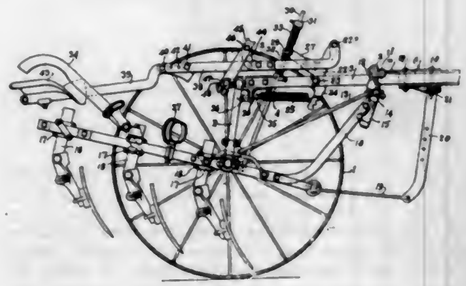
1,619,859. DEVICE FOR VAPORIZING AND BURNING LIQUID FUEL. MANLY M. GILLAM, Flushing, N. Y.; Arthur L. Gillam administrator of said Manly M. Gillam, deceased. Filed July 19, 1924. Serial No. 727,087. 3 Claims. (Cl. 158—56.)

1. A device for generating and utilising fuel gas, having main and auxiliary burners, the main burner being located inside of the furnace that is to be heated and the auxiliary burner, with its adjuncts, together constituting the vapor generator, being located outside of the furnace that is to be heated, the vapor generator consisting of a steam boiler and superheater exposed to the flame and heat of the auxiliary burner, a tubular retort connected at its inlet end to the superheater and at its outlet end to a reservoir from which, through piping means, combustible vapor, or fuel gas, is supplied to the main burner and by another pipe to the auxiliary burner, a liquid fuel supply pipe connected with the superheater, a water supply pipe connected with

the boiler; the described vapor generator parts being metal encased, as a unit and having in said metal casing a conduit, or duct, passing up one side, across the top down the opposite side and discharging into the hollow base of said metal casing to give of its oxygen, heated by contact with high temperature surfaces, to add to the efficiency of combustion in the auxiliary burner, substantially as and for the purposes described.

1,619,860. ELECTRICAL SWITCHING APPARATUS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1925. Serial No. 24,281. 6 Claims. (Cl. 171—97.)

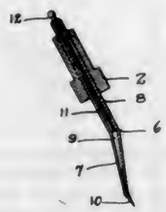
1. In an electrical distributing system the combination with a main and an auxiliary source of alternating current and a transmission line, of means for at times supplying current of one relative polarity from said main source to said transmission line, means for at times supplying current of the opposite relative polarity to said transmission line from said auxiliary source, and means responsive to the excess of current in said line when both said sources are supplying current thereto for disconnecting said auxiliary source but not said main source from said line.



1,619,861. DISINFECTANT COMPOSITION. GEORGE GILLARD GORDON, Dollis Hill, London, England. Filed Dec. 17, 1926, Serial No. 155,543, and in Great Britain June 29, 1925. 9 Claims. (Cl. 167—3.)

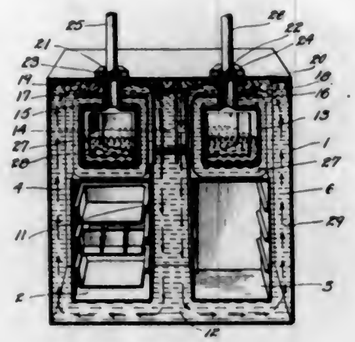
1. A process for the production of a disinfectant composition consisting in mixing an oleaginous substance of the eucalyptus species with an oleaginous ingredient until solution of the latter, and adding an aqueous

alkaline solution, which, together with said oleaginous ingredient, forms a saponaceous vehicle for the eucalyptus content, until the latter approximates 37% of the whole.



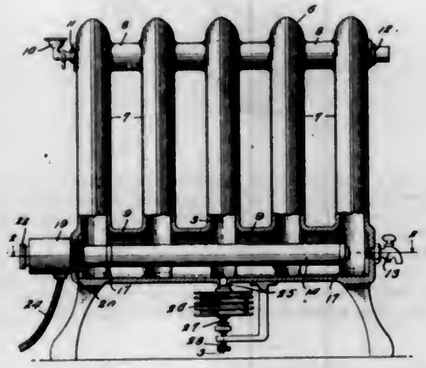
8. A disinfectant composition comprising an oil of the eucalyptus species and a saponaceous vehicle for the eucalyptus including alkali and water, with the eucalyptus content approximating 37% of the whole.

1,619,862. CULTIVATOR. RICHARD H. GRIFFITH, Richmond, Ind., assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Filed Mar. 19, 1925. Serial No. 16,702. 10 Claims. (Cl. 97—147.)



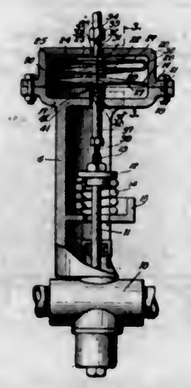
1. In a cultivator, the combination with a wheeled draft frame and shovel beams carried thereby and adapted to act as means for positioning the seat frame, of a seat frame, and connections between the seat frame and such beams whereby such frame is advanced forwardly when the beams are raised and rearwardly when the beams are lowered, such connections including springs which act in one direction to lift on the beams and in the other direction to permit the beams to be lowered.

1,619,863. GRAPHOPHONE NEEDLE. ERNST R. HAASE, New London, Conn. Filed Mar. 5, 1925. Serial No. 13,387. 3 Claims. (Cl. 274—38.)



1. A tubular graphophone needle for use with a reproducer, and having a body portion positioned to be inclined toward a record body and bent intermediate its ends to reduce the angular inclination of the lower end of the needle with respect to the record body, said body portion having its lower end gradually reduced in cross-section, an iridum point on the end of the reduced portion and having an angular inclination reverse to the angular inclination of the lower end of the body portion and laterally with respect to said body portion whereby to effectively contact with the groove of a record, and a member adapted to be inserted into the tubular portion of the needle to partially fill the same to intensify the reproduction of tones by the needle without effecting reproduction of stray noises incident to contact of the needle with a record.

1,619,864. COOLING-MEDIUM CONTAINER. CHARLES W. HACK, Topeka, Kans. Filed July 5, 1924. Serial No. 724,213. 6 Claims. (Cl. 62—95.)

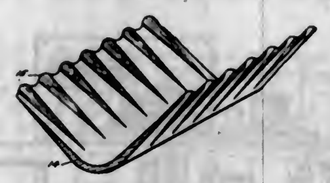


4. In a device of the character described, a container for cooling medium, a ring like conduit for active refrigerant mounted in the upper portion of said container and spaced a substantial distance from the top and sides thereof, said conduit having a central vertical cooling medium opening, and being provided with vertically extending fins projecting laterally therefrom into said opening and toward said side walls, and a pair of cooling compartments spaced a substantial distance from the bottom and side walls of said container below said ring like conduit and having the major portions thereof substantially vertically aligned therewith, said compartments being spaced to provide a cooling medium circulating passageway in alignment with said vertical opening.

1,619,865. ELECTRIC RADIATOR. CECIL A. HEAD, Royal Oak, Mich. Filed May 23, 1923. Serial No. 640,994. 6 Claims. (Cl. 219—38.)

1. In combination with a radiator and a heating element within the radiator to convert water therein into steam; of an expansion chamber outside of the radiator and connected to the lower part of the water space in the radiator, whereby the generation of steam in the radiator and a consequent rise of pressure therein will force water from the radiator into the chamber and reduce the heating effect of the heater by lowering the water in relation thereto.

1,619,866. PRESSURE-ACTUATED-CONTROL DEVICE. HENRY A. HOESCHEN, Omaha, Nebr., assignor of one-half to J. L. Baker, Omaha, Nebr. Filed July 19, 1926. Serial No. 123,352. 9 Claims. (Cl. 137—156.)



9. In a device of the character described, an expansible tubular element which is bent at intervals of its length to provide the tube with communicating extensible and non-extensible portions, the non-extensible portion being located at the bend.

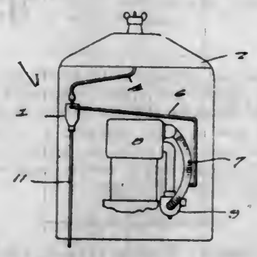
1,619,867. PRIMER FOR CARTRIDGES. ODUS C. HORNEY, U. S. Army, Philadelphia, Pa. Filed July 17, 1925. Serial No. 44,346. 3 Claims. (Cl. 102—18.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)

3. A primer made of an alloy containing a high percentage of nickel.

1,619,868. TIRE FLAP. EDISON G. HULSE, Cumberland, Md., assignor to Kelly-Springfield Tire Company, Cumberland, Md., a Corporation of New Jersey. Filed Aug. 28, 1925. Serial No. 53,139. 7 Claims. (Cl. 152—20.)

7. A tire flap molded to a trough-like cross sectional contour and longitudinally straight characterized by extensible edge portions formed by an excess of fluted material of greatest amplitude at said edges proportioned whereby said excess is dissipated when the flap is circularly distorted.

1,619,869. METHOD OF TREATING HYDROCARBON OILS. LLOYD E. JACKSON, Pittsburgh, Pa. Filed Oct. 4, 1923. Serial No. 666,619. 2 Claims. (Cl. 196—15.)



1. The method herein described of removing from a mineral hydrocarbon oil a fatty-acid impurity together with foreign matter in suspension, which consists in adding to the material to be treated a measured quantity of alkali in aqueous solution, sufficient to neutralize the fatty acid present, with a margin of excess not exceeding ten per cent of the amount required to effect exact neutralization, allowing the consequent precipitate to settle carrying with it into sediment the foreign matter in suspension, and separating from such sediment the purified oil.

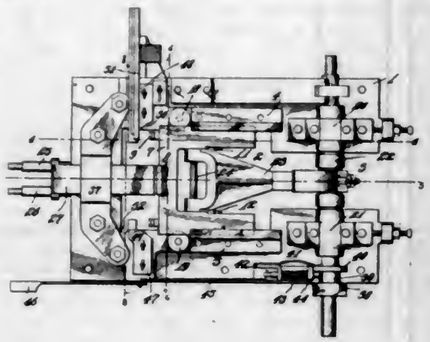
1,619,870. VALVE-SPRING COMPRESSOR. RICHARD J. KIRKPATRICK, Dodge City, Kans. Filed May 29, 1926. Serial No. 112,660. 4 Claims. (Cl. 29—86.3.)

1. A valve-spring compressor, comprising a frame, including spaced members and a yoke connecting the members and having a portion to engage the coils of the spring to be compressed, a runner slidably mounted upon the spaced members of the frame and including a cross-piece adapted to transmit the compressing force to the spring, an operating lever pivoted to the said frame, and links connecting the operating lever with said runner, the pivot connections between the moving parts being adapted to aline to retain the spring when compressed.

1,619,871. DEVICE FOR SUPPLYING MOISTENED AIR TO INTERNAL-COMBUSTION ENGINES. ROLAND A. LABBE, Onaga, Kans. Filed Mar. 24, 1925. Serial No. 17,963. 1 Claim. (Cl. 123—25.)

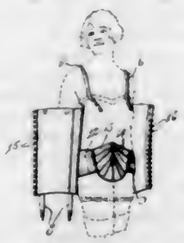
A steam collecting device for supplying moistened air from a radiator to an internal combustion engine including a casing having a lower end restricted and merging into a tubular depending extension, a tube extending through the top of the casing and terminating within the casing at a point between the top of the casing and the center thereof, said tube adapted to have its outer end connected with the radiator, one side of said casing being provided with an opening positioned between the top of the casing and the inner terminal of the tube, said opening adapted to receive a pipe leading from the intake manifold of the engine.

1,619,872. SILVER-REENFORCED TABLEWARE AND METHOD OF MAKING THE SAME. THOMAS B. LASHAR, Fairfield, Conn., and THOMAS H. LASHAR, Chicago, Ill., assignors to Associated Silver Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 18, 1925. Serial No. 24,225. 11 Claims. (Cl. 76—105.)



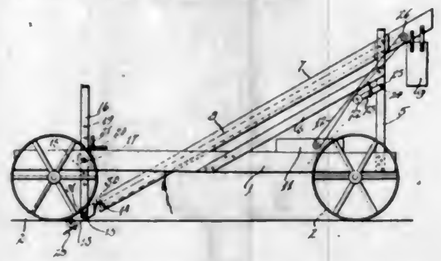
1. That step in the process of manufacturing articles which consists in providing a blank of base metal, die punching a depression in a surface of the base metal blank which slopes entirely about the periphery of the de-

pression on a gradual taper into the surface of the blank in which the depression is formed, and fusing precious metal in the depression to the base metal so that the exposed surfaces of the base and precious metals are substantially flush.



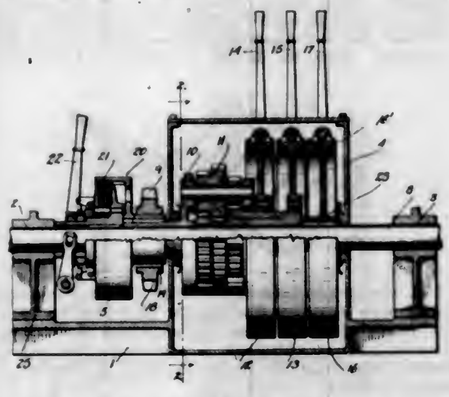
9. An article of manufacture including a piece of base metal provided with a depression therein, protuberances extending outwardly of and disposed within the depression in diverging relation toward their outer ends, and a precious metal filling in said depression covering said protuberances and anchored thereby in said depression.

1,619,873. BAND-BENDING AND BUCKLE-ATTACHING MACHINE. MORTIMER P. LAWTON, Atlanta, Ga., assignor to Atlantic Steel Company, Atlanta, Ga. Filed June 15, 1926. Serial No. 116,190. 17 Claims. (Cl. 153—1.)



1. A machine for preparing the bands for use and for connecting the same to a buckle, comprising a bed plate, a ram slidably arranged thereon, means mounted on and movable with said ram for carrying a tie band; means arranged upon said bed plate for bending the opposite ends of said tie band whereby the tie band is formed into a substantially U-shaped staple.

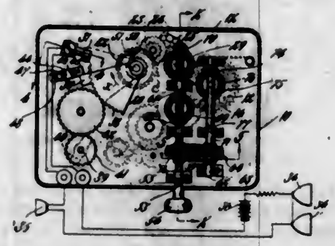
1,619,874. CORSET. ADOLPH LIPMAN, Chicago, Ill., assignor to Venus Brassière Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 20, 1925. Serial No. 24,609. 1 Claim. (Cl. 2—27.)



An undergarment comprising a brassière portion, a girdle portion, an intermediate elastic portion secured to said girdle portion and said brassière portion and extending across the back from one side of the garment to the other, an abdominal supporting member, an elastic webbing secured to each side of said abdominal supporting member and to the interior of the garment, said abdominal supporting member having a central stiffening strip terminating below the waist line, and auxiliary strips secured to said central strip and being inclined downwardly and outwardly with respect to the central strip.

1,619,875. EXCAVATING MACHINE. THOMAS LAWRENCE LOFTUS, Denver, Colo., assignor to Ellen Virginia Timm, Denver, Colo. Filed Jan. 25, 1926. Serial No. 83,695. 1 Claim. (Cl. 37—101.)

An excavator comprising a frame, wheels for supporting said frame, a digging point, cutter discs adjustably carried by said digging point, cutters carried by said digging point, means for adjusting said digging point with respect to said frame, a conveyor hingedly secured at one end to said digging point and pivotally carried by said frame, an endless belt carried by said conveyor, means for actuating said endless belt, a chute disposed beneath the free end of said conveyor a sufficient distance above said frame to permit the substance carried by the conveyor to be emptied into the chute.

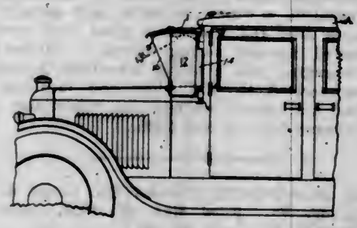


1,619,876. POWER TRANSMISSION. RICHARD C. MASON, Tulsa, Okla. Filed Apr. 27, 1925. Serial No. 26,088. 2 Claims. (Cl. 74—34.)

1. In combination, two spaced aligning bearings, a shaft mounted in said bearings, a planetary gear carried loose on the shaft, means for driving the carrier about the shaft, transmission bands on the shaft having means for operatively connecting and disconnecting the shaft to the planetary gearing, and means on the shaft for directly connecting the driving means to the shaft.

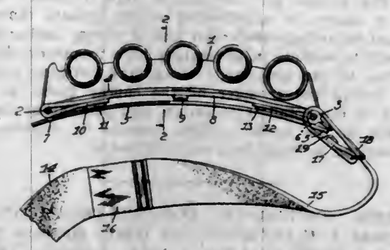
1,619,877. AUTOMATIC SWITCH. CHARLES L. MELHINCH, Carbondale, Pa. Filed Dec. 29, 1923. Serial No. 683,345. 1 Claim. (Cl. 200—35.)

An alarm clock, comprising alarm mechanism including a driving spring, an arbor rotatable thereby; means for timing the release of the alarm mechanism including a rotatively adjustable setting shaft; and time mechanism which includes a driving spring, a spring-winding shaft and a center shaft constituting an element of hands-setting means; a switch arm fixed to and movable by said arbor; circuit terminals adapted to cooperate with said arm in closing an electric circuit, when the alarm mechanism is released; and operating mechanism for manually and separately operating said shafts to time the release of the alarm mechanism, set the hands, and wind the time-



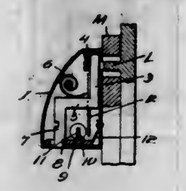
mechanism spring, said operating mechanism including a single operating shaft which is manually rotatable and movable endwise, torque-transmitting connections between said operating shaft and the said alarm setting and center shafts, having provisions for turning said shafts selectively when the operating shaft is turned in a given direction, and torque-transmitting connections between the operating shaft and the spring-winding shaft, having provisions for turning the latter when the operating shaft is turned in the opposite direction.

1,619,878. DOSAGE SPOON. HARRY D. MORGAN and FRANKLIN P. BUSHEY, San Francisco, Calif.; said Bushey assignor to said Morgan. Filed Nov. 13, 1924. Serial No. 749,592. 8 Claims. (Cl. 30—22.)



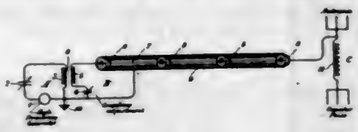
1. A spoon comprising a bowl and a handle, said handle having its outer extremity bent downward to serve as a supporting leg, the lower extremity of which leg is disposed in substantially the same horizontal plane as the lower side of the bowl and flanges depending from the handle intermediate of its ends and serving as a grip portion.

1,619,879. COMBINED SIDE WING AND SUN AND RAIN SHIELD FOR AUTOMOBILES. SHOICHI NAKAGAWA, San Jose, Calif. Filed Feb. 2, 1926. Serial No. 85,431. 5 Claims. (Cl. 296—95.)



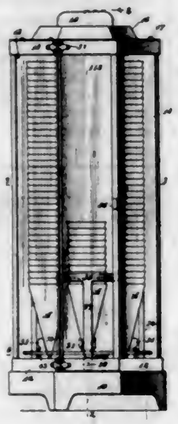
1. A sun and rain shield for automobiles comprising a plate adapted to be secured to the upper portion of a windshield of an automobile and to project outwardly therefrom, glass side shields detachably joined to the ends of said plate and extending downwardly therefrom, frames supporting said upright glass side shields disposed adjacent the ends of said plate, which side shields are movable vertically into and out of position of engagement with said plate and means for rotatably and vertically adjustably supporting said side shields providing for movement of the side shields into position extending outwardly and rearwardly from the sides of the automobile.

1,619,880. MONEY-CHANGER HOLDER. FRANK F. NEAL, Chicago, Ill., assignor of one-half to Frank W. Neal, Chicago, Ill. Filed July 26, 1926. Serial No. 125,012. 1 Claim. (Cl. 224—5.)



The combination with a money changer having rods disposed at each end thereof, of a money changer holder comprising a strap having its ends removably secured to said rods, a guard removably secured to said strap and having relatively large elongated slots in each end thereof, a belt having two substantially identical parts secured together by a buckle, and adjustable catches disposed upon each of said parts, the free ends of said parts being passed around said rods through said openings and removably secured to said catches.

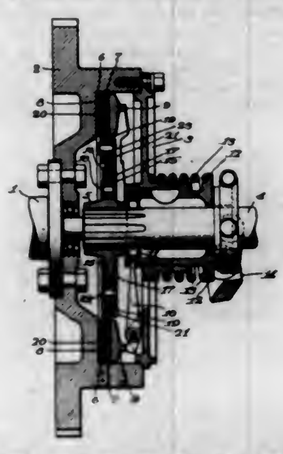
1,619,881. LOCK. MATT A. O'BRANOVICH, Tabasco, Colo. Filed July 28, 1924. Serial No. 728,803. 1 Claim. (Cl. 70—14.)



A lock comprising a casing having an opening formed in its front for passage of the part to be locked, guide strips secured to the interior of the side walls of the casing and disposed in spaced parallelism to the front wall, a locking bolt slidably mounted in the guideways formed between the guide strips and said front wall, the lower end portion of said bolt extending rearwardly at right angles, a spring mounted in the casing and cooperative with said angularly directed end portion of the bolt for moving the latter normally downward, an integral depending guide stem connected with the right angular portion of the bolt and having its free end projectible thru an opening in the bottom of the casing, a tumbler plate slidably arranged in the casing upon the interior of the bottom of the latter and engageable with a notch formed in said guide stem, a shoulder on said tumbler plate with which a key is adapted to be engaged for moving the plate in one direction, and spring means in the casing and acting on the plate for moving it in an opposite direction.

1,619,882. MEANS FOR TRANSFERRING HIGH-FREQUENCY ENERGY. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 4, 1924. Serial No. 753,945. 3 Claims. (Cl. 250—17.)

1. The method for transferring high frequency energy from a source to a radiating circuit remote therefrom without incurring substantial loss of energy during transfer, which consists in generating high frequency current, stepping up the generated voltage and reducing the current during the transfer of the energy from the said source to the point of radiation, and preventing the dissipation of the energy during transfer by shielding the transferring medium from external bodies.



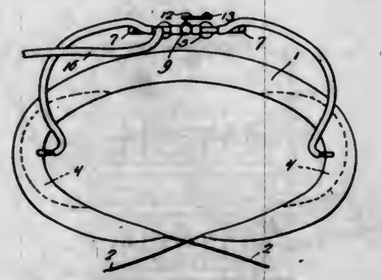
1,619,883. CONTAINER FOR ICE-CREAM CONES. ALBERT J. PUKT, Boston, and ISRAEL HENDLIN, South Boston, Mass. Filed Nov. 7, 1924. Serial No. 748,432. 1 Claim. (Cl. 211—8.)

A container including an outer structure, an inner structure having concave vertical channels adapted to accommodate ice-cream cones in stacks, a door in said outer structure, and a device to center a stack of cones at the door, said device consisting of a vertical strip held to the fixed structure and having a head at the upper end to engage the cones, said head having cross arms adapted to be flexed by engagement of the cones.

1,619,884. CLUTCH. HAROLD V. REED, Chicago, Ill., assignor to The Borg & Beck Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1925. Serial No. 50,167. 4 Claims. (Cl. 192—68.)

1. In a clutch, a friction element comprising a hub adapted to be splined upon a shaft and having a peripheral flange, an inner section secured to said flange on one side thereof, an inner rivet ring secured to the other side thereof, rivets passing through said inner section, said flange and said rivet ring, a flexible cushioning member disposed between said inner section and said rivet ring beyond the edge of said flange, rivets

passing through said inner section, said flexible member and said inner rivet ring, and an outer section secured to said flexible member.



1,619,885. WINDSHIELD CLEANER. LE ROY RUCKEL, Stamford, Conn. Filed Apr. 9, 1923. Serial No. 630,933. 1 Claim. (Cl. 15—255.)

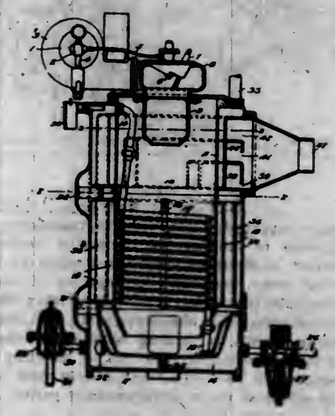
A windshield cleaner comprising a support mounted on a windshield, a wiper carried by said support to be reciprocated over the windshield glass and comprising an elongated metallic casing having a flattened face directly engaging said glass, a convoluted heating element incorporated in said wiper and insulated from the casing, and means whereby the wiper may be actuated, substantially as set forth.

1,619,886. DIAGNOSTIC APPARATUS. DORSY M. RYAN, Hinton, W. Va. Filed Mar. 24, 1926. Serial No. 97,057. 4 Claims. (Cl. 73—44.)

1. An apparatus of the class described comprising a flexible envelope adapted to be secured about the chest, a flexible inflatable tube arranged in said envelope and extending practically throughout the length thereof, flexible inflatable air containers also arranged in said envelope, mercury pots, graduated columns in connection with said pots, a conduit between the pipes, a second conduit connected with the pots, and having branches in connection

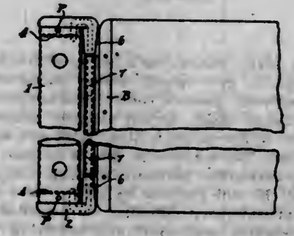
with the inflatable tube and the inflatable containers, a valve intermediate the ends of the first conduit, a valve in the second conduit, and means for actuating the valves in the conduit simultaneously.

1,619,887. PAPER-BAG-SEALING MEANS. CASIAH SAPP, Enterprise, Oreg. Filed June 17, 1924. Serial No. 720,693. 1 Claim. (Cl. 229—62.)



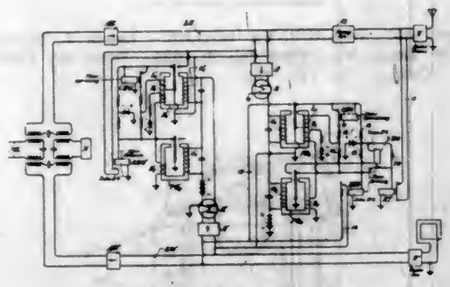
The combination with a flexible receptacle having one end open and adapted to be folded upon itself to close the same, of a longitudinal flexible strip extending the entire length of the receptacle and having both ends permanently attached thereto, the strip being provided with parallel weakened lines and a transverse weakened line, the latter being disposed in close proximity to the open end of the receptacle and adapted to be torn transversely to free one end of the strip, the strip being further adapted to be torn along the parallel weakened lines to provide a pair of parallel securing tapes adapted to be affixed to one wall of the receptacle, when the latter has been filled with merchandise and closed.

1,619,888. FLOWER HOLDER. WILLIAM F. SCHMEISER, Binghamton, N. Y. Filed Oct. 11, 1923. Serial No. 668,016. 1 Claim. (Cl. 24—5.)



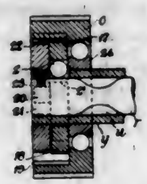
A flower holder formed of springy, resilient material bent so as to form two oppositely disposed jaws, spring controlled lever members for operating the jaws and prongs extending downwardly from the lever members and disposed therebetween, said prongs being formed of round wire and corrugated in parallel so that the corrugations of one prong will rest within the corrugations of the other prong when closed and frictionally engage the turf in which the prongs are inserted.

1,619,889. OIL-BURNER BOILER. LEWIS L. SCOTT, St. Louis, Mo. Filed Feb. 4, 1925. Serial No. 6,910. 7 Claims. (Cl. 122—182.)



1. In a boiler, the combination with a shell having a combustion chamber therein, of a plurality of flues of different lengths communicating with said chamber and with a discharge outlet for the products of combustion, the openings of communication between the flues and said outlet being graduated in size according to the length of the flue, the opening of the shortest flue being smaller as compared with the opening from the longest flue.

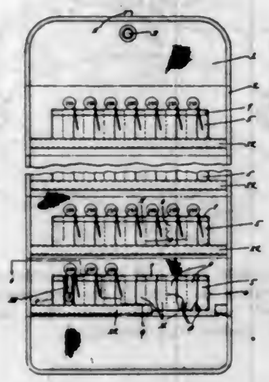
1,619,890. PINTLE FOR HINGES. JACOB SILBERMAN, New York, N. Y.; Clara Silberman executrix of said Jacob Silberman, deceased. Filed Dec. 9, 1925. Serial No. 74,333. 1 Claim. (Cl. 129—12.)



A cap piece for loose leaf binders comprising a base member, a plug on one face of the base member spaced marginally therefrom throughout its extent to fit snugly within the end of a binding bar with the end edge of the bar bearing against said face, a post projecting from said face of the base member in spaced relation to one end of the plug, and a pintle wire having a leg embedded axially in the post with one end projecting therefrom, a second leg embedded in and extending into the plug, and a portion connecting the legs and embedded in the base member between the opposite faces of the same and reinforcing the base member between the post and the plug.

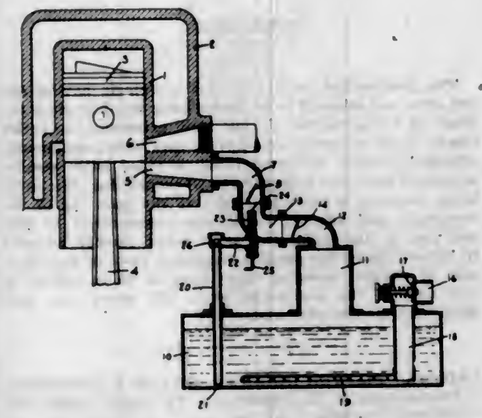
1,619,891. ECHO-SUPPRESSOR RELAY. HAROLD C. SILENT, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 8, 1925. Serial No. 42,288. 12 Claims. (Cl. 178—44.)

1. An echo suppressor comprising a translator, a first relay responsive to impulses of translated current from said translator, a disabling circuit controlled by said relay, a second relay responsive to impulses of translated current from said translator, a hang-over relay controlled by said second relay, said hang-over relay also controlling said disabling circuit, a locking winding for said first relay, and means including said locking winding operating in response to the actuation of said first relay to maintain it actuated for a predetermined period of time.



1,619,892. CLUTCH DEVICE. WILLIAM CHARLES SMITH, Bristol, England. Filed Apr. 13, 1925, Serial No. 22,820, and in Great Britain Apr. 15, 1924. 3 Claims. (Cl. 192—71.)

1. A clutch device comprising a hollow shaft, with a peripheral orifice, a gear wheel loosely mounted on the shaft, a transversely grooved control rod adapted to slide in the said hollow shaft, a ball element housed in the said peripheral orifice of the hollow shaft and adapted to partly sink into the transverse groove of said rod and to be forced outwardly partially through the orifice in said shaft by the full portions of said control rod when same is displaced longitudinally, a detached slidable member surrounding said shaft and revolving therewith and bearing against said ball element, resilient elements urging said slidable member against the ball element in the orifice of the shaft, and a projection on the said slidable member adapted to engage a corresponding recess on the gear wheel.

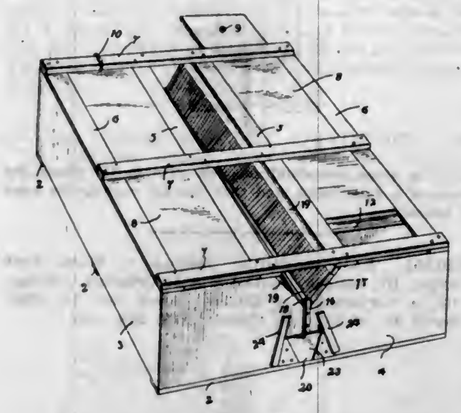


1,619,893. HOLDER FOR LAUNDRY MARKING PINS. BRUNO P. STOER, Cleveland, Ohio. Filed Oct. 6, 1922. Serial No. 592,894. 3 Claims. (Cl. 150—34.)

1. A marking pin holder, comprising a body portion, and a flexible strip suitably secured thereto along lines of securement to produce a series of pocket forming members, said lines of securement being more remotely spaced along the strip than along the body portion to provide fullness in each pocket forming member, the material of all of said members being crowded or folded over laterally in the same direction into pleated or

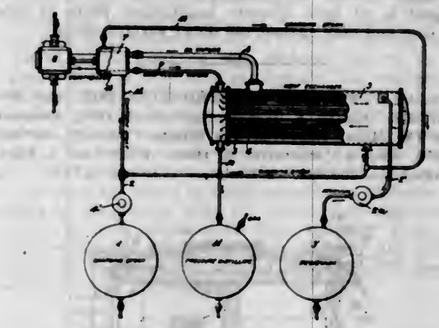
shingled relation, and means at one end of said members for closing the same and securing them in pleated relation, whereby the successive pockets lie in planes inclined to the plane of the body portion.

1,619,894. CARBURETOR. IRA T. SWARTZ, Indianapolis, Ind., assignor, by mesne assignments, to Ira T. Swartz, trustee, Indianapolis, Ind. Filed Mar. 1, 1920. Serial No. 362,591. 2 Claims. (Cl. 261—122.)



1. A charge-forming device comprising a fuel tank having a dome, a pipe leading from said dome to an internal combustion engine, means for admitting air beneath the level of the fuel in said tank, and a spray nozzle extending into said pipe from said tank the passages through said pipe and said spray nozzle being open at all times to the suction of the engine, substantially as set forth.

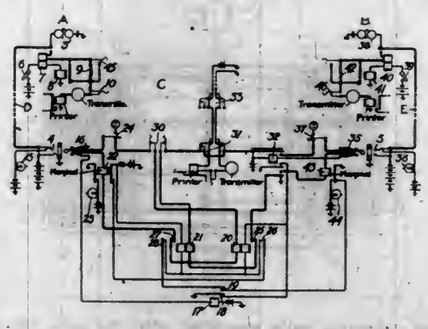
1,619,895. SHIPPING CRATE FOR ANIMALS. BENJAMIN F. TARMAN, Quincy, Pa. Filed Aug. 3, 1926. Serial No. 126,896. 9 Claims. (Cl. 119—19.)



6. An animal crate comprising a body portion, a partition dividing said body into separate compartments, said

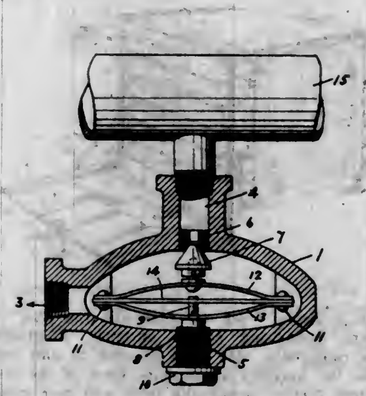
partition being of less height than said body, gratings extending upwardly from said partition and forming perforated upper wall portions spaced from each other

and constituting ventilators, and a trough extending beneath the said partition and constituting food holders in the compartments at opposite sides of the partition.



1,619,896. PROCESS FOR CONVERTING OR CRACKING HYDROCARBON OILS. WALTER EDWIN TRENT, Washington, D. C., assignor to Trent Process Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 27, 1924. Serial No. 740,383. 5 Claims. (Cl. 196—61.)

1. A process of oil conversion, consisting in passing charging stock through a heat interchanger where a portion thereof is vaporised, in subjecting said heated vapors to a compression sufficient to raise the same to a cracking temperature, and in passing said vapors to said heat interchanger to supply heat to vaporize the charging stock.

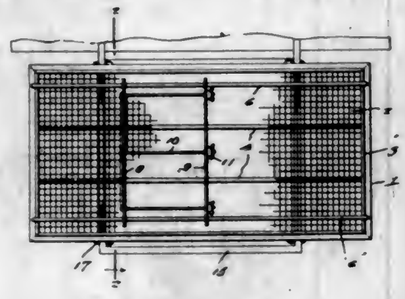


1,619,897. PRINTING-TELEGRAPH-EXCHANGE SYSTEM. GILBERT S. VERNAM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 23, 1922. Serial No. 608,727. 6 Claims. (Cl. 178—2.)

1. A printing telegraph system comprising a plurality of printing telegraph subscriber's lines terminating at a central office, link circuits at the central office for connecting any of the subscribers' lines with any other subscriber's line, relay means in each link circuit operative in accordance with the transmitted impulses for repeating impulses between connected lines, and other means in each link circuit cooperating with said relay

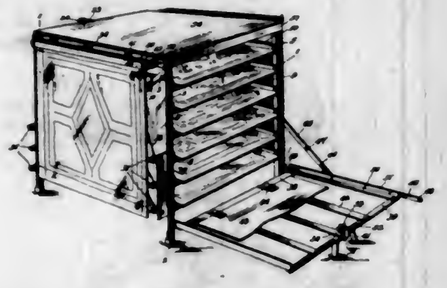
means for reforming received impulses to insure the repetition thereof in the same form as originally transmitted.

1,619,898. STEAM TRAP. FREDERICK THOMAS, Philadelphia, Pa. Filed July 30, 1926. Serial No. 125,897. 1 Claim. (Cl. 236—59.)



A steam trap including a hollow body provided with a water outlet and with two opposed and aligned openings of which one is a water inlet opening and of which the other constitutes a threaded support opening, a valve seat arranged in the inlet opening, a valve for said seat, a screw plug arranged in the support opening and provided with an extension projecting into said body, and strips of metal differing in thermal coefficient and connected at their ends of which the outside strips are connected with said valve and with the screw plug and of which the inside strip is guided by said extension.

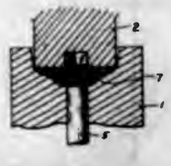
1,619,899. BLACKBOARD-ERASER CLEANER. LEONORA H. WARD, Weatherford, Okla. Filed Dec. 28, 1925. Serial No. 78,039. 3 Claims. (Cl. 15—142.)



1. A device for cleaning black board erasers comprising a substantially rectangular frame, a grating supported thereon, a pair of longitudinally extending guide rods supported at their respective ends on the ends of the frame adjacent the sides of the latter, said guide rods being spaced above the grating, and eraser holding means adapted for reciprocatory movement across the

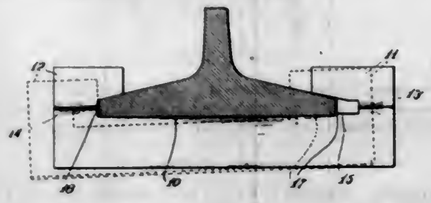
grating, said means including a pair of spaced bars, the ends thereof being provided with openings whereby said bars are adapted for slidable movement on the guide

rods, adjusting bolts associated with the bars, the bottoms of the erasers being adapted to rub across the grating when the eraser holding means is actuated.



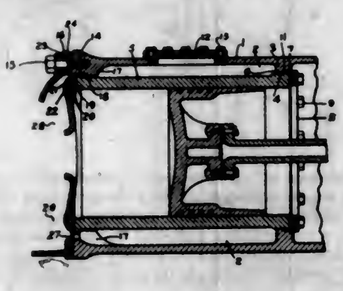
1,619,900. DISPLAY RACK. RICHARD WARREN, Washington, D. C. Filed Apr. 10, 1926. Serial No. 101,125. 9 Claims. (Cl. 211—14.)

1. In a display rack for rugs and the like, a frame structure comprising corner uprights, a plurality of shelves comprising side rails secured to and extending between the uprights at opposite sides of the structure, each shelf further comprising front and rear cross members extending between the front and rear uprights respectively and a plurality of bottom strips extending parallel to and between the side rails, the shelves being arranged one above another and spaced whereby the rugs to be displayed may be supported flatwise thereon, a clamp slidably mounted upon each shelf and guided between the side rails thereof and embodying means for clamping engagement with the margin of a rug disposed upon the respective shelf, counterweights, and connections between the counterweights and respective ones of the clamps, the said counterweights and connections constituting means for yieldably holding the clamps in retracted position upon the shelves and likewise constituting means for retracting the clamps and the rugs connected therewith upon withdrawal of the rugs over the shelves and release of the rugs.



1,619,901. METHOD OF MAKING TWO-PIECE VALVES. WILLIAM H. WASHBURNE, Chicago, Ill., assignor to The Oliver Typewriter Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1922. Serial No. 538,548. 11 Claims. (Cl. 29—156.7.)

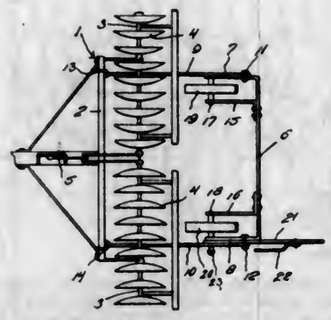
1. The method of making a two-part valve which consists in inserting a stem into a hole of larger diameter in a heated valve-head blank, then forging the blank to cause the metal to flow into intimate contact



with the stem and simultaneously give to the blank the shape of a valve head, and then quickly cooling the head by quenching.

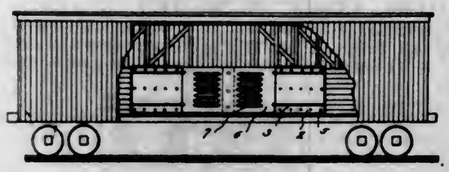
1,619,902. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 13, 1926. Serial No. 80,982. 18 Claims. (Cl. 238—330.)

1. A rail anchor adapted to be moved bodily relative to the rail to its rail gripping position comprising a yoke member, the body portion of which is formed with a substantially straight upper edge adapted to bear against the bottom surface of a rail base, and provided at opposite ends with angularly disposed jaw portions adapted to fit over opposite longitudinal edges of said rail base and bear against the upper surface thereof.



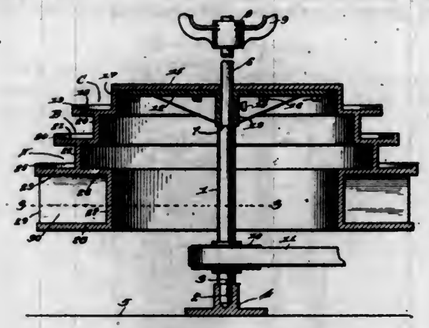
1,619,903. CYLINDER CONSTRUCTION FOR GAS ENGINES. ELMER A. WATTS, Springfield, Ohio, assignor to The Miller Improved Gas Engine Company, Springfield, Ohio, a Corporation of Ohio. Filed Dec. 1, 1924. Serial No. 753,321. 3 Claims. (Cl. 123—173.)

1. In an internal combustion engine, a main casing having an enlarged annular portion at one end extending inwardly and outwardly and having an outer broad, flat bearing surface, a plurality of inwardly extending depending ribs spaced from one another extending below the inner surface of said enlarged portion, a cylinder liner having a flanged head and consisting of bridges with apertures therebetween projecting above the general level of the liner and adapted to engage with the inner wall of the enlarged portion of the main casing and the forward ends of the ribs, the openings between the ribs and bridges being adapted to coincide, and a cylinder head



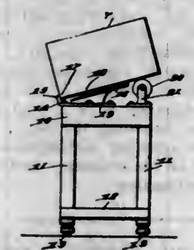
comprising an outer portion and an inner portion, said outer portion having a broad bearing surface with grooves therein, yielding packing members carried in said grooves and extending beyond them to abut against the bearing surface on the main casing, said inner portion of the head having a relatively broad bearing surface to engage the end of the cylinder liner, and a packing member between said head and said liner whereby expansion and contraction of the several parts may take place without danger of leakage.

1,619,904. TRUCK FOR DISK CULTIVATORS. ARNOLD WENNDT, Lowden, Iowa. Filed May 23, 1925. Serial No. 32,348. 1 Claim. (Cl. 280—44.)



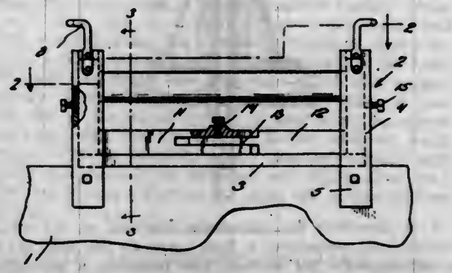
A truck for disk cultivators wherein the disks of the latter are adapted to be raised and lowered, said truck comprising a pair of elongated flat bars, a substantially U-shaped frame having its arms pivotally supported between the rear ends of the bars, a pair of angular brackets secured to the crown portion of the U-shaped frame, the longer arms of said angular brackets being disposed in parallel spaced relation with respect to the respective arms of the U-shaped frame, an axle journaled between each pair of cooperating arms, a ground engaging wheel mounted on each axle, a pair of hooks carried by the forward ends of said bars and adapted for engagement with the frame of the cultivator when the disks are in a raised position, a lever secured to the outer side of one arm of the U-shaped frame whereby said frame is adapted for swinging movement to facilitate the raising and lowering of the ground engaging wheels, and means for securing the frame in a rigid position to maintain the wheels in engagement with the ground, said means comprising an eye member extending laterally from the elongated flat bar which is adjacent the lever, and a hook carried by the lever and adapted for detachable engagement with said eye member.

1,619,905. ADJUSTABLE BULKHEAD. JOSEPH C. WHISLER and CLAYTON R. MCELWEE, Peru, Ind. Filed July 1, 1926. Serial No. 119,904. 5 Claims. (Cl. 105—369.)



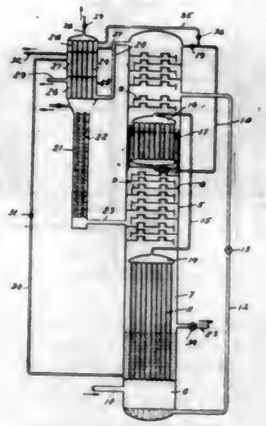
5. In a bulkhead unit, a pair of vertically spaced guide rods adapted for horizontal disposition, blocks slidable on said rods, a gate hingedly connected with said blocks, and means for mounting said guide rods on the wall of a car body.

1,619,906. MOTION STORAGE AND CONVEYING APPARATUS. EDWARD A. WHITE, Lewiston, Idaho. Filed Mar. 30, 1926. Serial No. 98,629. 4 Claims. (Cl. 209—124.)



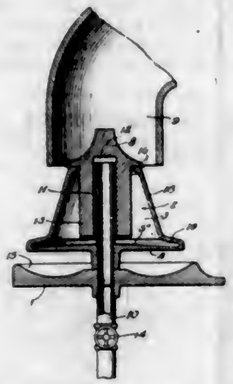
1. A motion storage mechanism comprising, a circular bin body having a plurality of peripherally disposed circular bins in stepped and partially overhanging relation with respect to each other, said bins overhanging radially outwardly toward the periphery of said body.

1,619,907. TRANSPORT STAND. EDWARD A. WHITE, Lewiston, Idaho. Filed Apr. 5, 1926. Serial No. 99,871. 1 Claim. (Cl. 214—84.)



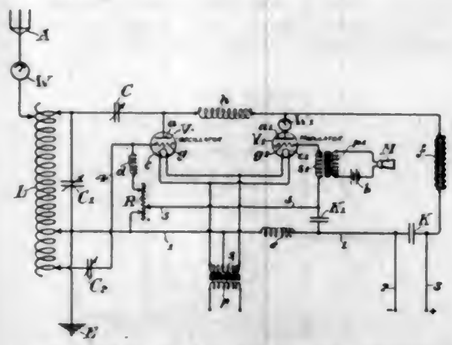
In a transportable box support, a rolling box stand, said stand having loading and unloading box supporting means comprising a roller, and a rest head having an abutment section, said head having an elongated supporting section inclined toward said roller and on which the box may slide down into position.

1,619,908. RAIL-HANDLING DEVICE. JOSEPH WHITE, Columbus, Ohio. Filed Aug. 9, 1926. Serial No. 128,154. 2 Claims. (Cl. 198—42.)



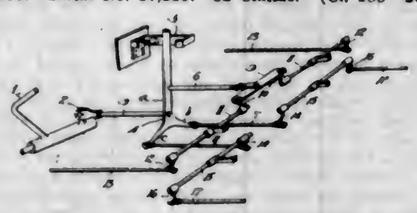
1. In a rail handling device of the class described, a support including uprights having guide channels, a unit including bearing blocks slidable in said channels, a roller carried by said bearing blocks, and adjustable connecting means between the bearing blocks.

1,619,909. SEPARATION OF THE CONSTITUENTS OF TERNARY GASEOUS MIXTURES. WALTER WILKINSON, Jersey City, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 15, 1925. Serial No. 62,509. 7 Claims. (Cl. 183—115.)



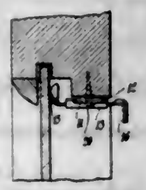
1. The method of separating the constituents of ternary gaseous mixtures, which comprises separating the mixture by primary liquefaction and rectification into a liquid consisting principally of the least volatile constituent and a gas consisting principally of the most volatile constituent, withdrawing vapors containing a constituent of intermediate volatility, subjecting the vapors to a thermally remote auxiliary rectification, liquefying the gaseous product of the auxiliary rectification by heat exchange with a cold product of the primary separation, returning the liquid product of the liquefaction to the auxiliary rectification and returning the liquid product of the auxiliary rectification for use in the primary rectification.

1,619,910. FUEL-OIL BURNER. ANDREW J. WOODCOCK, Wilmette, Ill. Filed Nov. 30, 1925. Serial No. 72,070. 3 Claims. (Cl. 158—53.)



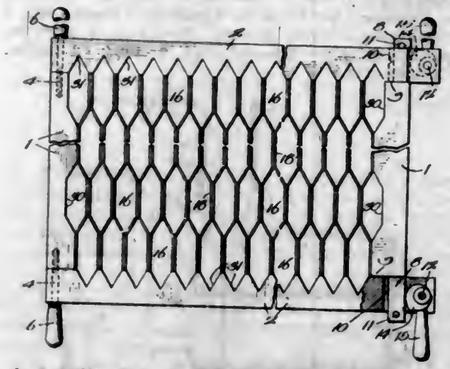
1. A generator for vaporizing the fuel oil for an oil burner and comprising a body open at the top, having a substantially flat bottom, and inclosing a generating chamber, the bottom of the body being accessible to the flame from the generator, an oil fuel supply tube projecting through the bottom of the body and through the chamber therein to the top of the body, and a weighted cap arranged to rest upon the open top of the body to close the same and having an extension projecting into the vaporizing chamber and provided with a recess to receive the oil fuel supply tube, there being a clearance between the walls of said recess and the tube at the side and at the top thereof.

1,619,911. CONTROL METHOD AND APPARATUS. THOMAS APPLEBY, Philadelphia, Pa., assignor of one-third to Cornelius D. Ehret, Philadelphia, Pa. Filed July 6, 1921. Serial No. 482,827. 27 Claims. (Cl. 179—171.)



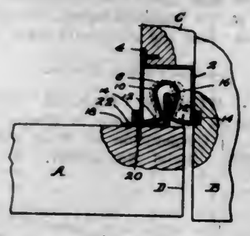
1. The combination with a thermionic oscillator, of a thermionic modulator and a thermionic amplifier, each comprising an anode, grid and cathode, said amplifier controlling the potential of the grid of said modulator, and means for biasing the grid of said amplifier to a potential derived from the grid of said oscillator.

1,619,912. BRAKE-EQUALIZING MECHANISM. PAUL D. BARRETT, San Francisco, Calif. Filed June 15, 1925. Serial No. 37,219. 12 Claims. (Cl. 188—204.)



1. A four wheel brake pressure compensating mechanism with transmission from a common operating member through said compensating mechanism to the braking members of all four wheels, said compensating mechanism comprising a unitary means for equalizing between one pair of brakes and simultaneously maintaining a ratio of braking pressures between the two pairs of brakes.

1,619,913. ANTIRATTLING DEVICE. SAMUEL BARUCH, New York, N. Y. Filed May 28, 1926. Serial No. 112,203. 4 Claims. (Cl. 291—145.)

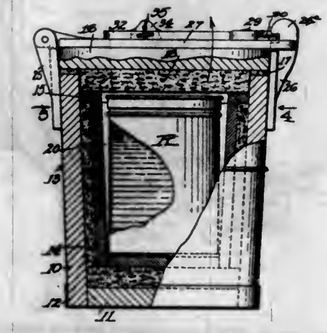


1. An anti-rattling device including a pair of sheet metal plates secured together and so formed as to provide a guideway therebetween, one of said plates having a lug projecting into said guideway and a slide movable in said guideway and having an aperture adapted to receive said lug, said slide being of less thickness than said guideway, and resilient means for holding said slide against the plate having said lug.

1,619,914. MULTICELLULAR MOLD. DOMINIK M. BERNOTOW, Chicago, Ill., assignor to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1922. Serial No. 540,437. 4 Claims. (Cl. 107—19.)

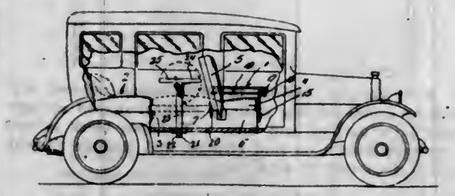
1. A multi-cellular mold having a frame and a plurality of removable partitions therein running, in the main, parallel to each other, each partition having bends for creating mold spaces between it and the adjacent partition, and the frame having recesses formed in the inner surfaces corresponding to the configuration of the partitions to thereby complete each mold cavity and prevent the formation of partial castings.

1,619,915. WEATHER STRIP AND GUIDE. FRED W. BRAZELL and OTIS W. BRAZELL, Kansas City, Mo. Filed June 12, 1925. Serial No. 36,647. 1 Claim. (Cl. 20—69.)



A device of the character described consisting of a channel portion, and a loop portion which latter is spaced from and projects into the former and has oppositely curved guide wings of substantial width connected to the margins of said channel portion.

1,619,916. RETAINER FOR AUTOMOBILE CUSHIONS. WILLIAM BREWSTER, New York, N. Y. Filed Feb. 4, 1926. Serial No. 85,903. 1 Claim. (Cl. 155—179.)

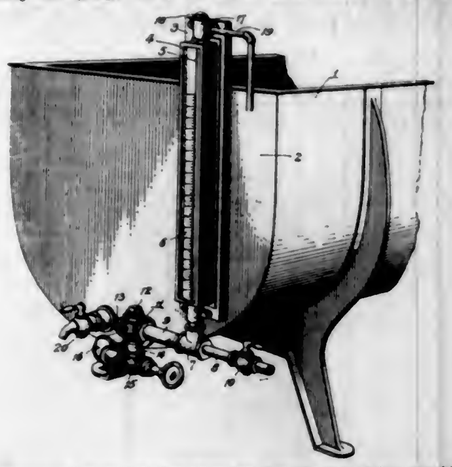


A cushion retainer for automobile seats, including a block, and means to attach the block to the front portion of the base of the seat frame, the block being of tapering formation so as to removably and conformably engage the adjacent volute springs of the cushion frame and being of substantial length so as to engage a substantial length of said spring thereby to prevent forward shifting of the cushion frame, by having binding engagement with the spring throughout the length of the block.

1,619,917. SHIPPING CONTAINER. WILLIAM R. BROWN, Wichendon, Mass. Filed Sept. 4, 1925. Serial No. 54,429. 5 Claims. (Cl. 217—5.)

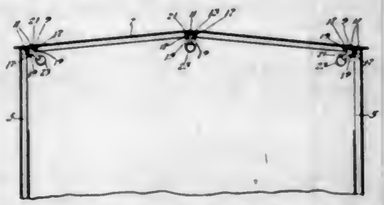
4. A shipping container comprising a casing having a gasket of packing material over its upper edge and having a hinge plate and a hook plate secured to said upper edge, an inner casing for said container, a cover having a disc of compressible material on its lower face, a bar secured to said cover and pivoted to said hinge plate, and means coacting with said bar and hook plate to compress the packing and disc and thereby form a seal between the cover and the casings and means on said bar to secure the cover in position.

1,619,918. AUTOMOBILE BODY. FRANK BUNEVAC, South Bend, Ind. Filed May 3, 1926. Serial No. 106,415. 1 Claim. (Cl. 155—7.)



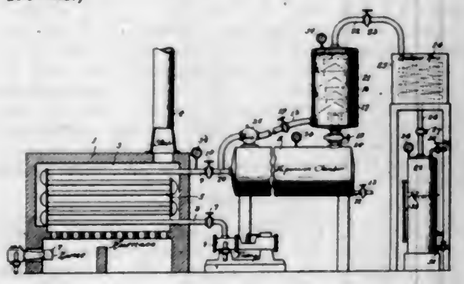
In a structure of the class described, an automobile seat comprising a base, a cushion resting upon said base, said base being provided with a recess, a hingedly mounted back rest having an extension on its lower end projecting into said recess, a screw threaded socket carried by said back rest, a pocket in association with said socket, a substantially right angular retaining device including a horizontal arm and a depending leg, the horizontal arm having its free end disposed in such pocket, a keeper carried by the base portion of the seat, the lower end of the depending leg of said retaining device being removably received in said keeper, said leg being provided with an opening, a bolt passing through said opening and having its threaded end fitting into said socket and having a head on its outer end resting against said leg.

1,619,919. LIQUID-MEASURING GAUGE. JOSEPH COOK, Chicago, Ill., assignor to Blue Valley Creamery Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 12, 1925. Serial No. 61,903. 5 Claims. (Cl. 73—54.)



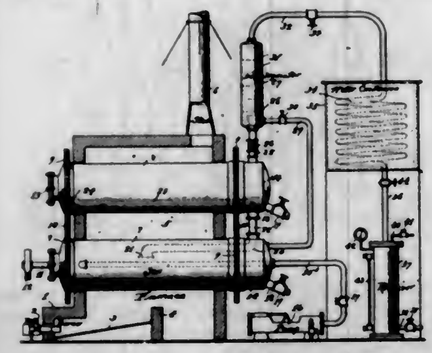
1. The method therein described of measuring a supply of liquid contained within a receptacle provided with

a gauge tube having at its lower end a valve-controlled connection with the receptacle, which method consists in filling the gauge tube, with its valve closed, to a pre-



determined point with measuring liquid of heavier specific gravity than the liquid to be measured, then opening the valve to permit the measuring liquid in the tube to flow to the bottom of the receptacle.

1,619,920. FREIGHT CAR. EARL T. CUNNINGHAM, Lansing, Mich. Filed May 2, 1925. Serial No. 27,519. 5 Claims. (Cl. 105—355.)



1. A freight car having, in combination, a roof supported by a pair of side walls, a channel shaped stringer supporting a part of said roof, a T-shaped block carried by inturned flanges on said stringer and slidable therein, and a ring carried by said block.

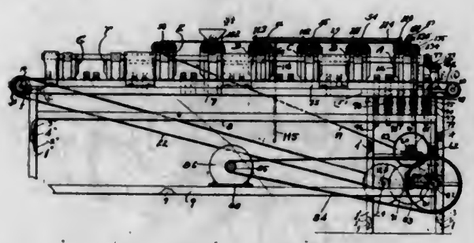
1,619,921. PROCESS OF CRACKING PETROLEUM OIL. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 13, 1920, Serial No. 430,126. Renewed June 9, 1926. 3 Claims. (Cl. 196—48.)

1. A process of cracking oil, consisting in passing the oil through a heating zone where it is subjected to the action of heat and pressure, delivering it through a transfer line in substantially liquid form to an expansion chamber where vaporization takes place, taking off the vapors from the end of the expansion chamber remote from its connection with the transfer line, subjecting such vapors to reflux condensation and returning the reflux condensate to said transfer line, where it is mixed with the heated oil and the combined mixture then passed to the expansion chamber.

1,619,922. APPARATUS FOR CRACKING OIL. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Sept. 1, 1920, Serial No. 407,402. Renewed Sept. 2, 1926. 6 Claims. (Cl. 196—112.)

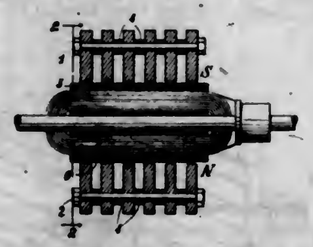
5. In an apparatus for treating oil, the combination with a rotating still member having a non-rotating part, a vapor chamber having a main rotating part and a non-rotating part connected therewith, means connecting said still and said vapor chamber whereby they rotate in unison, an oil inlet to said still, a residuum discharge from the non-rotating part thereof, a vapor discharge from said still leading outwardly therefrom through the non-rotating part and entering said vapor chamber through an opening in the stationary part thereof for transferring the vapors from the still to the vapor chamber, and means for discharging vapors from the stationary part of the vapor chamber.

1,619,923. WINDOW CHANNEL STRIP. HENRY FAUROT, Chicago, Ill., assignor to Western Felt Works, Chicago, Ill., a Corporation of West Virginia. Filed Aug. 26, 1925. Serial No. 52,507. 2 Claims. (Cl. 296—44.5.)



1. A channel strip comprising, a fibre filler having a loosely woven fabric covering the face thereof to be presented toward the glass, said fibre being intermeshed with said fabric, and a felt cover for said filler and fabric surrounding said filler and fabric.

1,619,924. RAIL FILLER. ALBERT C. FISCHER, Chicago, Ill. Filed Dec. 12, 1925. Serial No. 75,151. 2 Claims. (Cl. 238—9.)

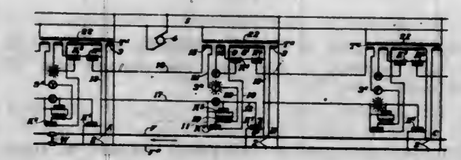


1. A rail filler of the class described, comprising a preformed block-like member comprising a homogeneous mixture of bituminous material and ground corn cob.

1,619,925. MACHINE FOR WASHING, CLEANING, WAXING, AND POLISHING SHEET MATERIAL. JAMES. FLOCKHART, San Francisco, Calif. Filed Dec. 8, 1925. Serial No. 74,218. 9 Claims. (Cl. 91—39.)

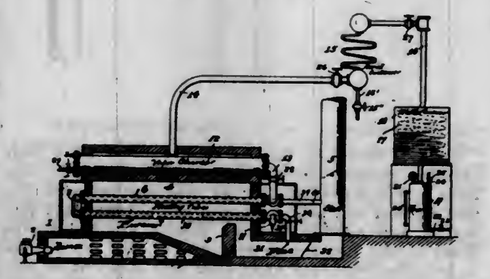
1. A machine of the class described comprising a frame, an endless apron therein, a series of rollers bearing upon said endless apron, a plurality of polishers bearing upon said apron, means to reciprocate the polishers over the apron, a cloth extending around each polisher, means to supply certain of the cloths with a cleaning fluid, a hopper for supplying one of the cloths with a wax, and means to cause the cloth to travel to present a fresh surface to the materials being treated upon the endless apron.

1,619,926. MAGNETO-ELECTRIC MACHINE. ADOLF FRIEDRICH GERDES, Berlin, Germany. Filed Feb. 1, 1922, Serial No. 533,394, and in Germany June 20, 1916. 3 Claims. (Cl. 171—209.)



1. In a magneto-electric machine, a field magnet structure and an armature coacting with the pole pieces thereof, said structure consisting of a plurality of independent magnets each composed of a plurality of parts adjustably connected together, said magnets being magnetically insulated from each other and each separated from adjacent magnets by a distance greater than that which separates the pole pieces from the armature, said armature being composed of a plurality of insulated aggregates each coacting with one of the magnets.

1,619,927. LEAD PENCIL. MICHAEL F. GLENNON, Glen Ridge, N. J. Filed Feb. 4, 1926. Serial No. 85,827. 12 Claims. (Cl. 120—18.)

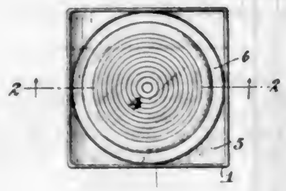


2. In a lead pencil, the combination with tip and holder portions fitted detachably together and relatively rotatable, said tip portion having a bore for holding a lead, of plunger means for manually projecting the lead, said plunger means comprising a threaded stem adapted to act against the upper end of the lead, and a threaded runner movable along the stem in accordance with the desired forward adjustments of the lead, means whereby one of the portions aforesaid acts to hold one of the plunger portions from rotation, while the other of the portions first mentioned serves to cause rotation of the other of the plunger parts.

1,619,928. RAILWAY SIGNALING. LARS O. GRONDAHL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1921, Serial No. 521,147. Renewed Aug. 2, 1926. 11 Claims. (Cl. 246—34.)

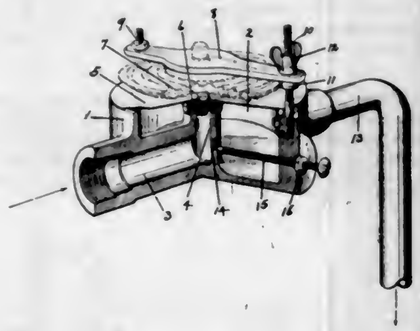
3. In combination, a stretch of railway track comprising a plurality of successive sections, signals for said sections, and train-controlled means for governing said signals comprising thermo-sensitive relays each made up of a heater and a thermo-sensitive element and all such thermo-sensitive elements having negative temperature coefficients.

1,619,929. APPARATUS FOR TREATING PETROLEUM OIL. HIRAM J. HALLE, New York, N. Y., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Sept. 1, 1920, Serial No. 407,329. Renewed Sept. 18, 1926. 2 Claims. (Cl. 106—117.)



1. In an apparatus for cracking petroleum oil, the combination with a coil located in a furnace through which oil is continuously passed, of a second coil disposed within said oil coil forming an annular oil passageway, spirally arranged spacing lugs carried by said second coil, to space the same from the oil coil and act as baffles for the oil passing through said annular passageway, a flue leading from the furnace, means for withdrawing heated gases from said flue to be passed through said second coil to internally heat the oil passing through said annular passageway.

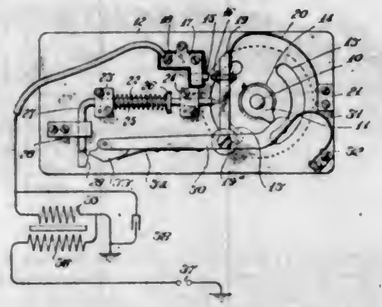
1,619,930. FOLLOWER FOR PAINT PACKAGES. JOHN W. HASBURG, Chicago, Ill. Filed Feb. 19, 1925. Serial No. 10,179. 1 Claim. (Cl. 41—4.)



In a package of the character described, a square box, a palette resting loosely in the box, a cover for the

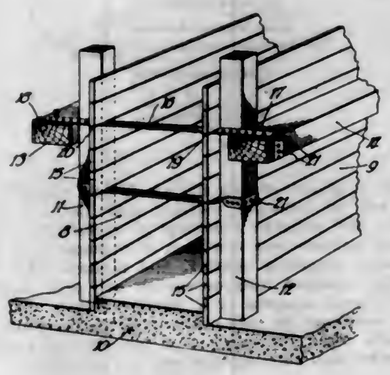
palette comprising a dome-shaped central portion and flat marginal portions resting on said palette, and a fol-

lower in the form of a ring or annulus resting on the marginal portions of said cover and engaged with the side walls of the box.



1,619,931. AUTOMATIC GAS FEED. HAROLD W. HART, Los Angeles, Calif. Filed June 8, 1926. Serial No. 114,389. 2 Claims. (Cl. 236—99.)

1, In a device of the character referred to, a body having a chamber therein, one outside wall of said body being a thin flexible member, an inlet pipe extended into said chamber and having an open end adjacent said thin flexible wall member, a valve element attached to the inside of said thin flexible wall member over and adapted to be moved onto and away from said open end of said inlet pipe, outlet for pipe connection from said chamber, and a thermostat element mounted on the outside of said thin flexible outside wall member and adjustable toward and from it and means for adjusting and holding the same thereagainst, whereby expansion and contraction of said thermostat element flexes said thin outside wall member and opens and closes the open end of said inlet pipe to said chamber.

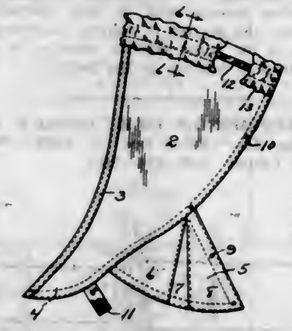


1,619,932. BREAKER MECHANISM FOR IGNITION MAGNETOS. WILLIAM W. HAWKINS, Brooklyn, N. Y., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 14, 1921. Serial No. 522,434. 4 Claims. (Cl. 200—30.)

2. A breaker mechanism for an ignition magneto comprising a stationary contact, a movable contact, a pivoted contact arm by which the movable contact is carried, spring means normally urging the contact carrying arm into a position where the contacts are in engagement, a hammer, spring means normally tending to hold the hammer in a position where it engages the contact carrying arm and holds the contact separated against the pressure of the spring associated with said contact carrying arm, said hammer provided with a cam surface, and means

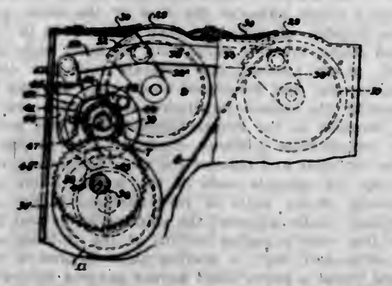
operated by the magneto rotor shaft adapted to move in one direction without moving said hammer and when moved in the opposite direction adapted to cock the hammer against the influence of its associated spring means and then release it.

1,619,933. FORM TIE FOR CONCRETE STRUCTURES. JOHN B. HAWLEY, Jr., Minneapolis, Minn., assignor to Hawley Inventions, Incorporated, Minneapolis, Minn., a Corporation of Delaware. Filed Mar. 13, 1926. Serial No. 94,458. 1 Claim. (Cl. 25—131.)



In combination, spaced apart concrete forms, and means for maintaining said forms a desired distance apart comprising a relatively thin strip of metal having a non-flat cross section to provide stiffness in bracing the forms, the metal being of a malleable nature and flattened at spaced portions wherever desired for the purpose of fitting between adjacent form sections.

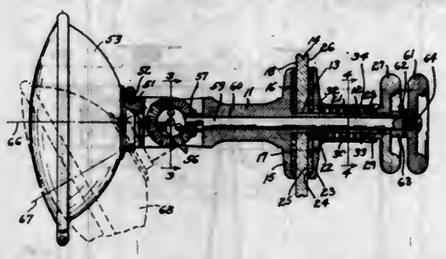
1,619,934. RUBBER PROTECTOR FOR STOCKINGS. ADA HENDERSON, Wampsville, N. Y. Filed July 2, 1926. Serial No. 120,168. 2 Claims. (Cl. 86—2.)



2. A stocking protector comprising a member for covering the leg and ankle of the wearer, said member being

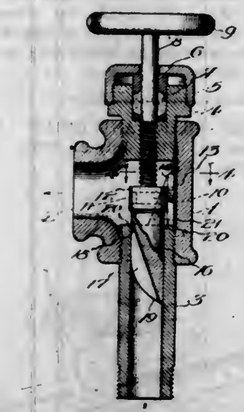
open, fasteners for connecting the edges together, a triangular shaped member connected with one edge of the main body of the protector for covering the rear of the

ankle, and fastening means for connecting the other edge of the member with a portion of the other edge of the device.



1,619,935. SHUTTER FOR MEASURING-MACHINE CHARTS. GREENE CARLTON HOSCH, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 15, 1920. Serial No. 424,173. 16 Claims. (Cl. 33—133.)

1. In a fabric measuring and cost computing machine, in combination with means adapted to function in the measuring operation for indicating the cost of the material measured by the machine embodying columns of computations based on a unit of measure and multiples or divisions thereof at different prices per unit, a shutter operating normally to cover the field of vision to be occupied by said columns, and automatic means for periodically moving said shutter from such field of vision actuated during the measuring movement at the instant that the amount of goods measured by the machine corresponds to the unit of measure of the machine or a multiple thereof, or a fractional part of said unit of measure upon which computations have been based.

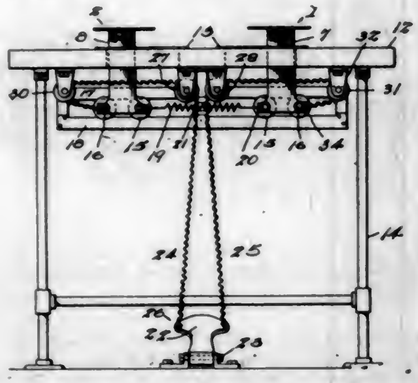


1,619,936. SPOTLIGHT. FRED C. HOWE, Pasadena, Calif. Filed Feb. 2, 1925. Serial No. 6,246. 4 Claims. (Cl. 240—61.)

1. In a device of the class described, the combination of: a rotatable body, said body comprising a clevis formed at one end of said body and a tubular projection formed at the opposite end of said body, said tubular projection being adapted for extension through an orifice in a plate; a sleeve disposed on the end of said projection projecting through said plate; a spring for resiliently holding said body and said sleeve in contact with the faces of said plate; a handle secured to said tubular projection whereby said body is rotated; a lamp supporting member pivotally secured to said clevis; a gear secured to said lamp supporting member; a pinion gear meshing with said gear whereby said gear is rotated, thus pivotally swinging said lamp supporting member relatively to said body; a shaft extending through said body, said shaft supporting said

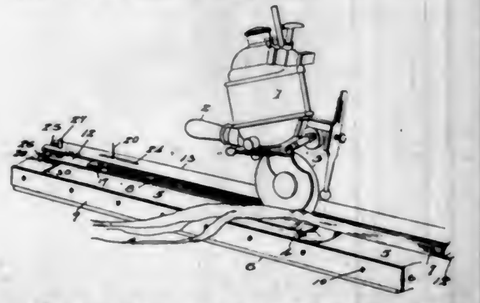
pinion gear; and a handle secured on the end of said shaft whereby said shaft is rotated, thus rotating said pinion gear.

1,619,937. VALVE. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 15, 1925 Serial No. 37,124. 3 Claims. (Cl. 251—77.)



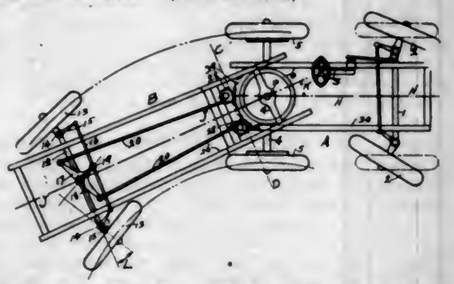
1. The combination with a T-joint of conventional construction, of a valve structure adapted to be applied thereto, comprising a closure cap having a central bore for one of the alined openings of said T-joint, a valve stem adapted to extend through the bore in said closure cap, packing means associated with said closure cap to prevent leakage around said valve stem, an inlet pipe extending into the opposite alined openings of said T-joint, said inlet pipe terminating in a slotted projection extending into the T-joint a reciprocable valve body having a seat adapted to cooperate with a seat carried by said inlet pipe, a connection between said valve stem and valve body for permitting rotation of the valve stem relative to said valve body, whereby said valve is reciprocated by rotation of said valve stem, a projection carried by said valve body adapted to ride in said slotted projection of the inlet pipe, to prevent rotation of said valve body.

1,619,938. METHOD OF PRESERVING LATEX AND PRODUCT. ALFRED E. JURY, Rutherford, N. J., and OMAR H. SMITH, New York, N. Y., assignors to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Substitute for application Serial No. 16,045, filed Mar. 16, 1925. This application filed June 8, 1926. Serial No. 114,560. 15 Claims. (Cl. 18—50.)



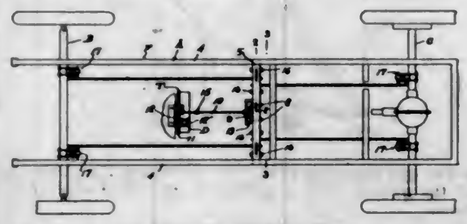
1. The method of preserving latex which comprises treating the latex with an organic antiseptic and an alkaline phosphate.

1,619,939. COLLAR-STRETCHING MACHINE. MORRIS L. KAPLAN and MICHAEL BRANDISH, Hazleton, Pa. Filed July 12, 1926. Serial No. 121,941. 5 Claims. (Cl. 223—19.)



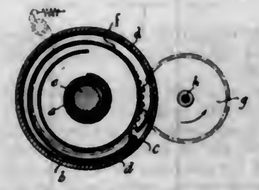
1. In a machine as described the combination with a pair of relatively movable carriers, means for extending said carriers, and automatic means for returning said carriers to normal position, of a pair of detachable, complementary templets, whereby an article may be stretched and shaped, as set forth.

1,619,940. CUTTING BOARD AND GUIDE. MORRIS L. KAPLAN, Hazleton, Pa. Filed July 21, 1926. Serial No. 123,926. 9 Claims. (Cl. 164—79.)



1. The combination with a cutting board of a holder having adjustable pin plates and means for retaining said plates in adjusted position, and a presser plate, for the purpose described.

1,619,941. MOTOR VEHICLE. WILLIAM P. KENNEDY, New York, N. Y. Filed May 25, 1925. Serial No. 32,664. 5 Claims. (Cl. 280—33.1.)

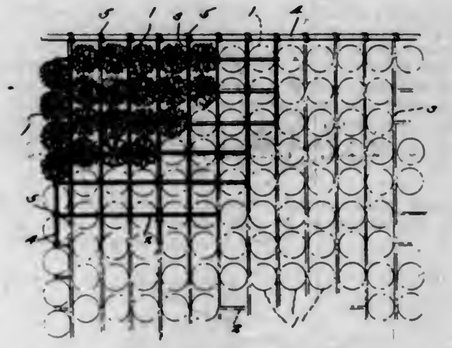


1. In an automobile consisting of a tractor flexibly connected with a semi-trailer, said semi-trailer equipped with a rear axle having steering wheels mounted on pivots for steering angular movement and a mechanical connection interposed between said tractor and said steering wheels to change the steering angle of said wheels when the angular relation of said tractor to said trailer is changed, means incorporated in said mechanical connection to vary the degrees of angular movement of said steering wheels for equal angular changes in movement of the tractor with relation to the trailer.

1,619,942. AUTOMOBILE JACK. GEORGE P. LEE, East Stroudsburg, Pa. Filed Dec. 5, 1925. Serial No. 73,305. 1 Claim. (Cl. 254—86.)

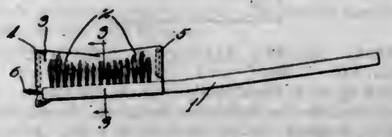
The combination with an automobile having an engine with teeth on the periphery of its flywheel and a compartment beneath the seat thereof, a U-shaped frame having a cap-plate secured to the automobile frame beneath the seat thereof, said cap-plate and bottom of the compartment being provided with laterally extending slots disposed in alignment, a shaft journaled in the ends of the U-shaped frame adjacent the base of the same, aligned shafts slidably supported at their outer ends in the U-shaped frame, brackets supporting the inner ends of said shafts, power transmitting elements including clutches carried by the first mentioned shaft, rigid shifting levers carried by the second mentioned shafts with their free ends disposed in the compartment beneath the seat and their intermediate portions extending through the slots of the cap-plate and base of the seat, fastening elements securing the opposite ends of the levers to the second mentioned shafts, pairs of yokes secured to the second mentioned shafts adjacent the shifting levers and having their free ends engaging certain of the clutches on the first mentioned shaft, a bearing plate secured to the U-shaped frame, a power shaft having one end supported by the bearing plate, a lever pivoted on the inner side of the bearing plate and having one end projecting into the compartment beneath the seat and its other end disposed adjacent opposite the first mentioned shaft, a yoke journaled in that end of the lever adjacent the first mentioned shaft with its free ends engaging certain of the clutches, and power controlling means between the engine and that end of the power shaft remote from the bearing plate.

1,619,943. CLOCKWORK MECHANISM. EDOUARD ERNEST LEHWESS, Paris, France. Filed June 14, 1926, Serial No. 115,835, and in Belgium July 22, 1925. 3 Claims. (Cl. 58—83.)



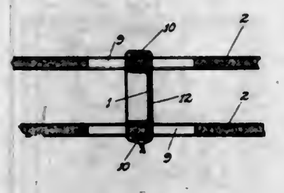
1. In a spring driving mechanism, a barrel, a winding spindle rotatable in the barrel, a blade spring frictionally gripping and extending substantially throughout the inner surface of the barrel, and a winding spring connected at its inner end to the spindle and coiled about the same within the barrel, the outer end of the winding spring being formed as a hook to engage over one end of the blade spring, the frictional engagement between the blade spring and barrel permitting the winding spring to be wound to a degree determined by such frictional engagement.

1,619,944. NAIL. FRANK P. LEONARD, Troy, N. Y., assignor of one-half to Frederick C. Claessens, Troy, N. Y. Original application filed Jan. 25, 1923, Serial No. 614,900. Divided and this application filed Sept. 18, 1925. Serial No. 57,206. 4 Claims. (Cl. 85—20.)



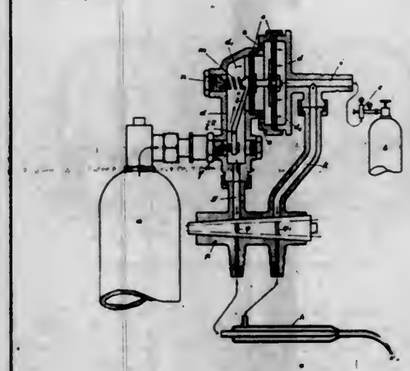
4. As an article of manufacture, a nail including a shank portion having a spiral rib and barbs extending laterally therefrom, said rib and barbs providing triangular shaped flat surfaces facing in one direction and disposed in a like plane, said plane passing through the longitudinal axis of the shank.

1,619,945. CURTAIN. MAUD LESLIE, Paintsville, Ky. Filed Dec. 10, 1925. Serial No. 74,574. 4 Claims. (Cl. 156—10.)



4. A curtain including an open mesh fabric and hard cellular balls mounted on certain of the strands of the fabric to provide heat insulating means, there being hard sharp prongs radiating from each of the balls and constituting rodent repelling means.

1,619,946. TOOTHBRUSH AND CONTAINER FOR SAME. JOHN MAGEE, Hartford, Conn. Filed Oct. 21, 1925. Serial No. 64,007. 4 Claims. (Cl. 206—46.)

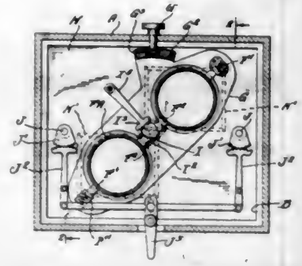


1. The combination of a tooth brush and a container therefor, said brush having main bristles and a supplemental tuft of bristles which are of like character to said main bristles, said container enclosing said main bristles and having provision for exposing said supplemental tuft of bristles for the purpose described.

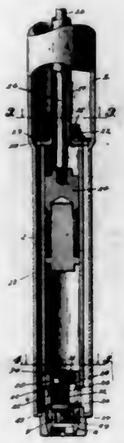
1,619,947. METHOD OF MOUNTING LATHING STRUCTURES FOR PLASTER WALLS. JOHN F. MAKOWSKI, Stockton, Calif., assignor, by mesne assignments, to Fire Proof Wall Company, Reno, Nev., a Corporation. Filed Oct. 26, 1926. Serial No. 144,235. 7 Claims. (Cl. 72—46.)

1. The method of erecting a lathing structure for plaster lath walls comprising setting the studs, laying plaster lath strips against the faces of the studs, forming slots in pairs in the faces of the strips intermediate their edges, the slots of each pair being disposed on opposite sides of a stud, and positioning fastening elements through the slots and around the studs and plaster lath strips between each pair of slots.

1,619,948. DEVICE FOR PROPORTIONATE FEEDING OF GASES. FRANCESCO MANOIAMELI, Corleone, Italy. Filed Mar. 15, 1922, Serial No. 544,065, and in Germany Mar. 26, 1921. 4 Claims. (Cl. 48—184.)



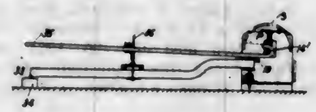
1. Apparatus for bringing gases to blow-torches and similar apparatus, comprising a gas conduit for conducting one of said gases, a separate conduit for conducting the other of said gases, a regulating means operated by the service pressure of one of said gases and operating to regulate the service pressure of the other of said gases, such regulating means comprising a double diaphragm with a space between the two portions of said diaphragm, and a gas connection between the outside of the apparatus and said space, and means for regulating or stopping the flow of said gases from such apparatus to the point of use.



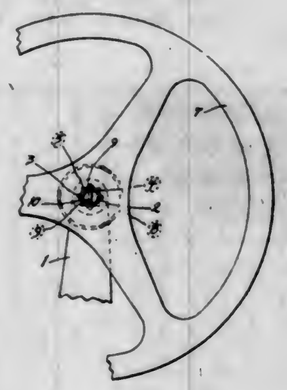
1,619,949. METHOD AND APPARATUS FOR PRODUCING COLORED MOTION PICTURES. LEOPOLD D. MANNES, New York, N. Y., and LEOPOLD GODOWSKY, Jr., Los Angeles, Calif. Filed June 28, 1920. Serial No. 392,215. 7 Claims. (Cl. 88—16.4.)

1. In the apparatus of the class described, the combination with means for supporting a film or plate, of a lens support angularly adjustable about an axis sub-

stantially normal to said film or plate and a pair of lenses mounted on said support with their axes substantially parallel to and at opposite sidee of the first mentioned axis and a wedge member associated with said lenses and adapted to effect adjustment of the lenses toward and away from one another.



1,619,950. WELL PUMP. BENJAMIN F. MARTY, Friant, Calif. Filed June 22, 1925. Serial No. 38,768. 4 Claims. (Cl. 103—155.)

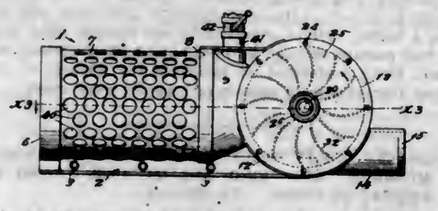


1. A well pump comprising a casing; a cylinder mounted within the lower end of the casing; valve means mounted within the bottom of the cylinder for admitting water into the cylinder and casing; an annulus mounted within the casing and engaging the upper end of the cylinder, said annulus having openings communicating between the lower and upper portions of the casing; a plunger mounted within the cylinder; an actuating rod connected to the plunger and extending upwardly through the annulus to the top of the well; a casing connected between the annulus and the top of the well and loosely enclosing the actuating rod; an annular valve plate mounted above the annulus and adapted to be seated thereon for closing the openings; a flange mounted upon the casing and spaced above the valve plate; and a spring mounted between the plate and said flange to normally hold the plate seated upon the annulus to prevent the return of water from the upper to the lower portion of the cylinder.

1,619,951. MACHINERY FOR BENDING METALLIC RODS, WIRES, OR THE LIKE. ALEXANDER MELVILLE and DAVID MCDOUGALL, Glasgow, Scotland. Filed Aug. 27, 1926, Serial No. 131,876, and in Great Britain Aug. 12, 1926. 3 Claims. (Cl. 153—40.)

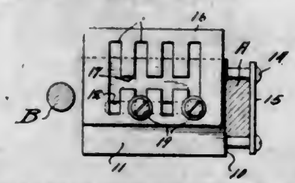
1. In a bending machine for the purpose specified, in combination, an oscillatory bending shaft presenting a jaw face, a die member co-operative with said jaw face to clamp rods or the like to be bent, a track, a carrier for the rods or the like to be bent, said carrier mounted to travel on said track, and an adjustable resistance member constituted as a carriage sustained by said track and engageable by the rods or the like to be bent when said shaft is oscillated.

1,619,952. REEL. ROBERT F. MIEHLE, Jr., Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 26, 1926. Serial No. 104,574. 7 Claims. (Cl. 242—70.)



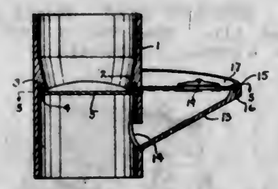
1. A motion picture film reel or the like provided with a spindle opening comprising non-circular portions angularly offset whereby to form intermediate shoulders facing longitudinally of said opening in opposite directions, each of said portions being adapted to engage on an inner non-circular portion of a spindle for centering the reel and to engage on an outer portion of the spindle, beyond which said inner portion of the spindle extends laterally, for centering the reel.

1,619,953. HIGHER ALDEHYDE DERIVATIVES OF REACTION PRODUCTS OF ALDEHYDES AND AMINES AND PROCESS OF MAKING SAME. CLAYTON OLIN NORTH, Tallmadge Township, Summit County, Ohio. Original application filed Mar. 24, 1923, Serial No. 627,325. Divided and this application filed Mar. 5, 1926. Serial No. 92,616. 14 Claims. (Cl. 260—130.)



10. The process of making a hard resinous compound, which comprises reacting an aliphatic aldehyde higher than formaldehyde on the reaction product of an aliphatic aldehyde and an aromatic primary amine.

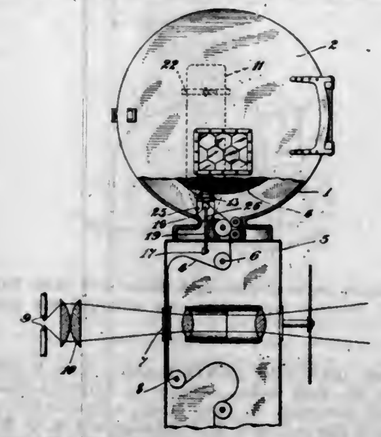
1,619,954. AIR STRAINER FOR COMBUSTION ENGINES. WILLIAM L. OLMSTEAD, Pomona, and EDWARD L. OLMSTEAD, Anaheim, Calif. Filed July 21, 1919. Serial No. 312,446. 4 Claims. (Cl. 183—44.)



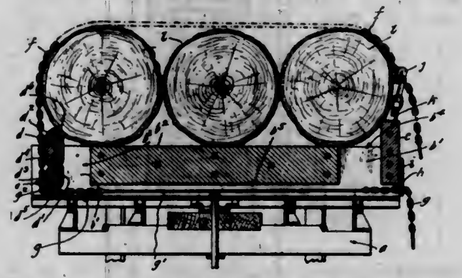
1. An air cleaner for combustion engines, comprising an air filtering receptacle; and means adapted to be interposed between said receptacle and the air intake of an engine for drawing air into said receptacle by suction and then forcing the air from said receptacle into the intake of said engine.

1,619,955. GEAR-SHIFT STOP. FRANK REINHARD, Eau Claire, Wis. Filed Oct. 23, 1926. Serial No. 143,676. 2 Claims. (Cl. 74—39.)

1. As an article of manufacture, a stop for preventing movement of the gear shifting lever from a neutral position when the emergency brake is set comprising a plate adapted to be applied against the face of the braking lever and having an angularly projecting portion adjustable as to length, the plate having a plurality of bolt holes arranged concentrically, and a clamp to engage over the lever having bolts passing through the bolt holes.



1,619,956. CUT-OFF. CLAUDE RIVERS RENEHAN, Texas City, Tex. Filed Mar. 23, 1926. Serial No. 96,900. 4 Claims. (Cl. 251—18.)

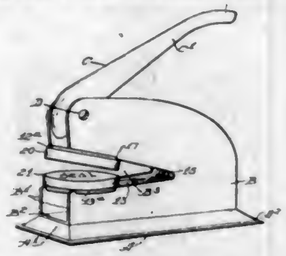


1. A cut-off valve for pipes including a tubular housing for connection in a pipe, an inwardly tapered skirt in said housing forming a seat, a valve plate pivoted to swing in contact with said seat to close or open a passage through said housing, and a casing to receive said valve plate when in open position, said casing having a drain opening into said housing.

1,619,957. METHOD AND APPARATUS FOR FIRE PROTECTION IN MOVING-PICTURE MACHINES. JOSEPH E. ROBIN, New York, N. Y. Filed Sept. 10, 1920. Serial No. 409,356. 9 Claims. (Cl. 169—2.)

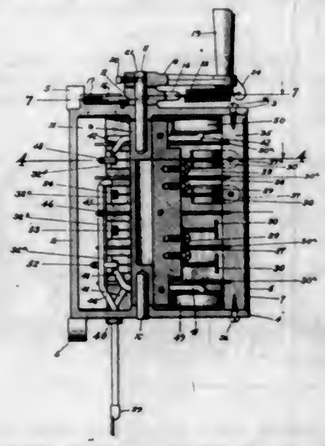
1. In a moving picture projecting machine, a reel housing provided with an opening through which film is adapted to be fed, a container for fire extinguishing liquid mounted upon the outside of said housing, a conduit leading from said container and terminating within said housing, means for normally closing the end of said conduit, said means comprising a fusible link mounted adjacent the path of movement of said film as it is being fed from said housing, and fire extinguishing liquid under pressure in said container whereby said housing is sprayed with said liquid when said fusible link parts.

1,619,958. LOG-SECURING DEVICE. JOHN T. SANNAR and CHESTER R. LAWLER, Enterprise, Oreg. Filed Mar. 11, 1925. Serial No. 14,703. 5 Claims. (Cl. 105—384.)



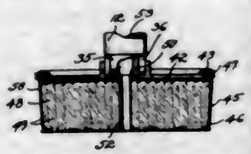
1. In a logging truck, log securing means comprising a chock at one side thereof, said chock composed of a plurality of co-operating members adapted to be moved into log engaging and disengaging and releasing positions, a pin carried by one member of said chock, and a wrapper chain, one end of which is fastened at the opposite side of said car, with its free end mounted over said pin, said chain when engaged with said pin being arranged to support one of said chock members in log engaging position.

1,619,959. SEAL PRESS. DAVID C. SASSEMAN, River Forest, Ill., assignor to F. H. Smith Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 31, 1925. Serial No. 53,453. 4 Claims. (Cl. 100—57.)



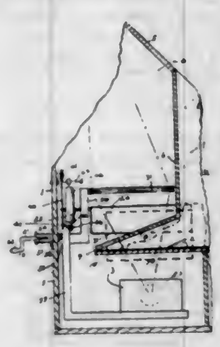
1. A seal press and the like comprising a hollow rigid jawed open front and open top standard; a bell crank lever comprising a longer and a shorter arm fulcrumed in the upper part of the standard with the longer arm extending out through the open top and the shorter arm depending in the cavity of the standard normally trending back from the fulcrum; a seal carrier comprising two equal bars hinged together at one end and enlarged at the opposite end for carrying respectively the co-operating seal members, and a spring reacting about their pivot for holding the seal carrier enlargement normally spread apart; said seal carrier being dimensioned as to width

of the bars back of the enlargements for entering the open front of the standard and fitting in the horizontal width of the cavity, said enlargement being dimensioned



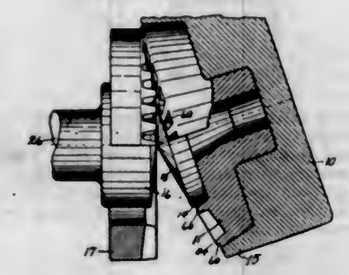
for entering between the rigid jaws, said jaws having notched recesses for seating the enlargements respectively.

1,619,960. ELECTRIC CONTROLLER. JOHN E. SEDERHOLM, St. Paul, Minn., assignor to American Hoist & Derrick Company, St. Paul, Minn., a Partnership composed of Oliver Crosby, T. J. Johnson, and W. O. Washburn. Filed Mar. 3, 1922. Serial No. 540,817. 6 Claims. (Cl. 200—10.)



1. In an electric controller, the combination with a casing, insulating blocks supported at intervals around the interior walls of the casing, an insulating bar journaled in the casing to oscillate therein intermediate the blocks, contact members carried by the insulating blocks and the insulating bar respectively, insulating strips substantially horse-shoe-shaped and embracing the oscillatable journaled bar, said strips being located between the contacts and supported at each end and middle position by said insulating blocks.

1,619,961. MARBLE-POLISHING BUFFER. CHARLES R. ABBOTT, Los Angeles, Calif. Filed Nov. 24, 1924. Serial No. 751,864. 2 Claims. (Cl. 51—195.)

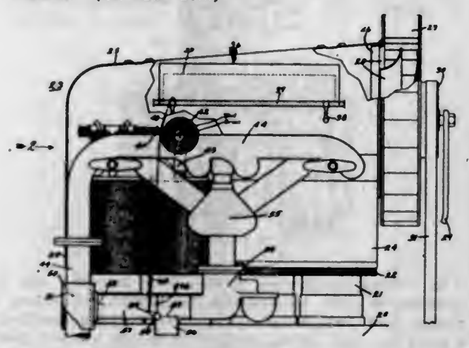


2. In a buffer, the combination of: a mounting head having a depending peripheral skirt converging from said head outwardly and constituting a housing; and a buffing element consisting of a plurality of longitudinally disposed strands of rope tightly compacted in said housing and extending only slightly beyond the outer edge of said skirt, the ends of said strands of rope forming a relatively firm buffing element capable of withstanding applied pressure without appreciable distortion and having a buffing surface of relatively soft texture, there being a fluid passage through said head and buffing element, said skirt being perforated to facilitate the removal of portions thereof as said strands of rope are worn away.

1,619,962. X-RAY MACHINE. MATTHEW B. ADRIAN, Milwaukee, Wis. Filed Jan. 22, 1923. Serial No. 614,074. 36 Claims. (Cl. 250—34.)

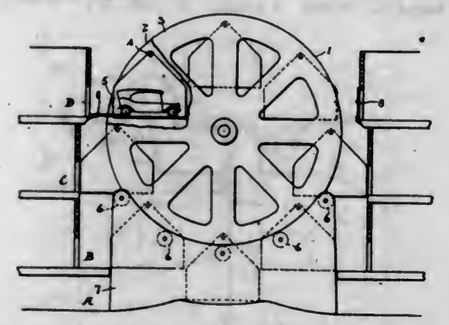
1. In a device of the character described, the combination with a cabinet, of an X-ray tube housed therein and mounted for rotative adjustment, whereby to be adjustable to emanate rays in a plurality of directions, and motion transmitting connections for the rotative adjustment of said tube and including a manually operable portion exterior of said cabinet, said cabinet providing supporting means adapted to carry the weight of a patient's foot in operative relation to said tube in the several positions thereof, whereby said foot may be viewed by rays passing vertically or laterally therethrough and emanating from a single tube within said cabinet.

1,619,963. TOOTHED GEAR. HAROLD N. ANDERSON, Cleveland, Ohio. Filed Mar. 5, 1923. Serial No. 622,869. 4 Claims. (Cl. 74—41.)



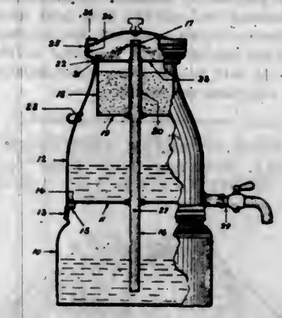
1. A bevel gear having straight teeth similar to involute teeth, but differing therefrom in that their addenda and dedenda become gradually thinner, beginning at the pitch line of the gear, than they would be were the tooth faces true involutes, such thinning of the teeth being insufficient to prevent their addenda and dedenda from functioning, but sufficient to enable the teeth to assume their load gradually, as described.

1,619,964. LUBRICATING OIL. JOSEPH F. ANDERSON, Kansas City, Kans. Filed Aug. 13, 1923. Serial No. 657,114. 1 Claim. (Cl. 87—9.)



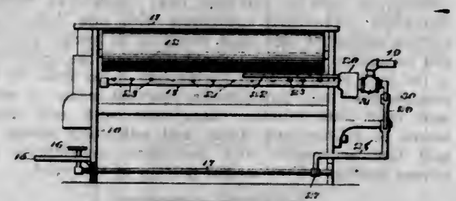
A lubricating oil consisting in a mixture of one gallon lubricating oil with substantially one fluid ounce of a mixture of substantially one ounce rubber cement, five ounces gasoline and substantially twenty-four ounces of lubricating oil.

1,619,965. INTERNAL-COMBUSTION ENGINE. FRED E. ASELTINE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 2, 1923. Serial No. 629,261. 2 Claims. (Cl. 123—171.)



1. In an engine cooling system, the combination with air circulating means including a draft tube arranged adjacent the head of the engine and surrounding a portion thereof, and a fan driven by the engine and adapted to induce a flow of air past the portion aforesaid and through said draft tube by suction, said draft tube having an opening through which air may enter thereinto without flowing past the engine cylinder; a valve carried by said draft tube and adapted to control the flow of air thereinto through said opening; and a thermostat operatively connected with said valve to control the same.

1,619,966. ELEVATOR. NINIAN A. BLACKHAM, Long Branch, and GODFREY N. ROBILLARD, Toronto, Ontario, Canada; said Blackham assignor to said Robillard. Filed June 7, 1922. Serial No. 566,596. 2 Claims. (Cl. 214—16.1.)



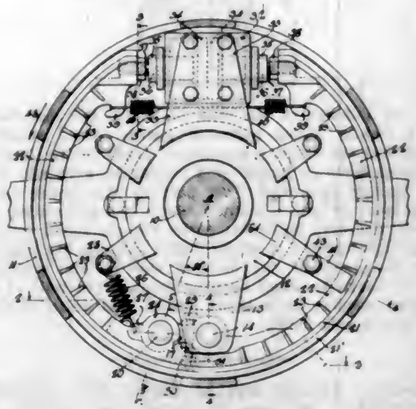
1. In an elevator, a pair of vertically arranged rotatable members spaced apart and rotating in unison, a plurality of pivots spaced adjacent to the peripheries of said members, carriers pivotally suspended from said pivots between said rotatable members and a plurality of landing stages arranged at different levels and disposed transversely of the axis of said rotatable members and leading directly to the periphery thereof.

1,619,967. COFFEEPOT. MARIO BONTEMPI, New York, N. Y. Filed Dec. 5, 1924. Serial No. 754,042. 2 Claims. (Cl. 53—3.)

1. In a device of the class described, the combination of a tightly closed boiler, a tightly closed receptacle associated therewith, a percolating container for flavoring material mounted within said receptacle, a tubular member leading from the lower part of said boiler to the upper part of said receptacle above said percolating container, a faucet controlled outlet for the liquid collected in said receptacle, a steam outlet through the walls of said receptacle at the delivery side of said container, and a relatively small opening through the wall of said tubular member at a point within said boiler close to the top of said boiler.

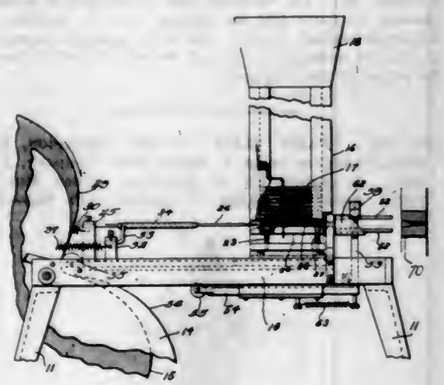
1,619,968. STATIC NEUTRALIZER FOR PRINTING PRESSES. WILLIAM M. CARMICHAEL, Atlanta, Ga. Filed Oct. 20, 1923. Serial No. 669,849. 3 Claims. (Cl. 34—18.)

1. An ink drier and static neutraliser for cylinder presses comprising a gas heater including a burner tube disposed rearwardly of the printing cylinder in close proximity to the lower side thereof, said tube being coextensive with the cylinder and presenting a series of openings or flame jets for heating both the cylinder and the sheet carried thereon, and filler elements engageable in selected openings or jets of the said tube for limiting the range of the said heater.



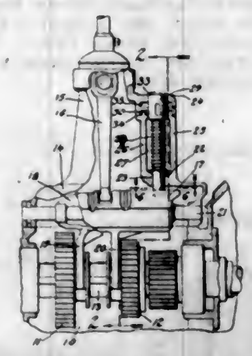
1,619,969. SPARK PLUG. ALBERT CHAMPION, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Mar. 30, 1925. Serial No. 19,345. 3 Claims. (Cl. 123—169.)

1. A spark plug comprising an insulator and a shell, a one-piece gasket of deformable material interposed



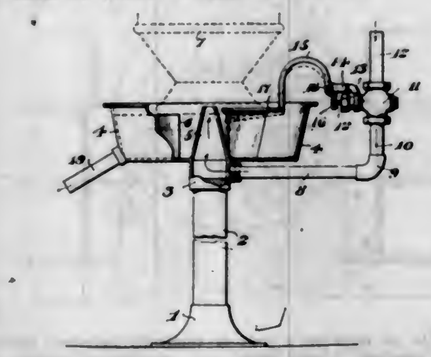
between the insulator and the shell comprising a portion of normal thickness adjacent the working end of the plug, and a portion of reduced thickness more remote from the working end of the plug and having contact with the interior of the shell but spaced from the insulator, means for clamping the insulator in the shell, the cross section of said gasket being substantially unaffected by the said clamping operation.

1,619,970. VEHICLE BRAKE MECHANISM. NIELS A. CHRISTENSEN, Milwaukee, Wis. Filed Nov. 28, 1924. Serial No. 752,681. 5 Claims. (Cl. 188—152.)



1. In brake mechanism of the character described, the combination with the rotatable brake drum, of an internal expanding brake band engageable with said drum, supporting means for said band including an anchor pin link and an anchor pin offset by said link from the center line of the band toward the advancing side of the drum for the purpose described, fluid-pressure-operated means to move said band into braking engagement with said drum, means to release said drum, and adjustable means on said link engageable with said band determining the release position of the medial portion of the band.

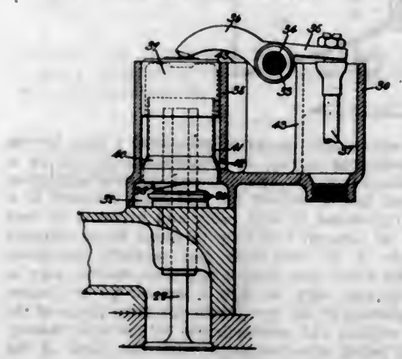
1,619,971. FEEDING MECHANISM FOR SWAGING MACHINES. EDSON A. DEAN, Edgewood, R. I. Filed Feb. 9, 1923. Serial No. 618,144. 7 Claims. (Cl. 78—99.)



1. An improved feeding mechanism for swaging machines comprising a feeding mandrel, means for supporting the work in the path of the mandrel, means for advancing the mandrel to engage and move the blank into position to be operated upon, and means for gripping and retaining the work during the pointing operation.

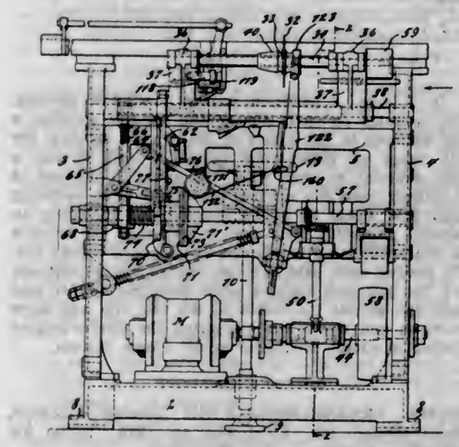
1,619,972. TRANSMISSION LOCK FOR MOTOR VEHICLES. ENOS A. DE WATERS, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 13, 1922. Serial No. 606,711. 1 Claim. (Cl. 70—126.)

In locking mechanism of the class described and in combination with transmission mechanism comprising a casing, and two reciprocating gear shifting members; a cover for said casing; said cover having a lower guide located adjacent said gear shifting members, an upper guide spaced apart and arranged in alignment with said lower guide, and a partition extending between said guides and providing a closed chamber between them; a locking member movable vertically in said chamber and guides and the lower end of which is adapted to enter recesses provided in said gear shifting members; a single rod carried by said cover and along which both of said gear shifting members are movable; a transversely movable bolt slidable in a passage provided in the upper end of said locking member, and the end of which is arranged so as to enter one or the other of two recesses formed in the upper of said guides, to thereby lock said locking member in both its upper and in its lower positions; and bolt operating means housed within the upper end of said locking member and adapted to operate said bolt.



1,619,973. CREAM-REMOVING APPARATUS. GEORGE HARRIMAN, Fort Atkinson, Iowa. Filed Feb. 24, 1926. Serial No. 90,400. 1 Claim. (Cl. 141—7.)

An apparatus for removing cream from the inner face of a receptacle comprising a bowl having an outlet, a vertically disposed nozzle within and having its lower end opening through the bottom of said bowl, a steam conducting line communicating with the lower end of said nozzle, a controlling valve in said steam conducting line

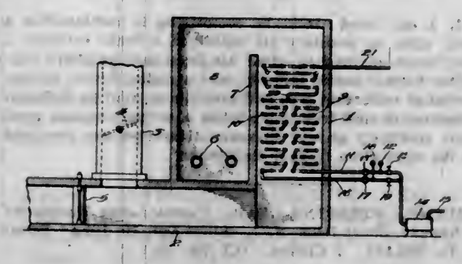


spaced from and opposing the side of said bowl and a receptacle operated lever pivotally connected at one end to said mechanism for shifting the valve to open position when the lever is operated by the receptacle, said lever overlapping the top side edge of and extending into the bowl and having its inner end positioned in the path of an inverted open top receptacle mounted in the bowl to provide for the shifting of the lever by the weight of the receptacle to cause a supply of steam to clean the interior of the receptacle.

1,619,974. VALVE-OPERATING MECHANISM. GEORGE E. A. HALLETT, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 24, 1924. Serial No. 751,778. 9 Claims. (Cl. 123—90.)

1. A valve mechanism for an internal-combustion engine comprising, in combination, a housing formed with a bore, a poppet valve having one end adapted to enter the said bore; a rocker arm for operating the poppet valve; means capable of movement only axially of the valve interposed between the valve and rocker arm whereby lateral thrust on the valve stem is eliminated and stationary means associated with the first named means adapted to co-operate with the wall of the said bore to form an outer annular chamber for receiving excessive lubricant from the said first named means.

1,619,975. TUBE-CUTTING MACHINE. EDGAR M. HAWKINS, Rochester, N. Y., assignor to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Filed July 14, 1923. Serial No. 651,524. 13 Claims. (Cl. 164—60.)

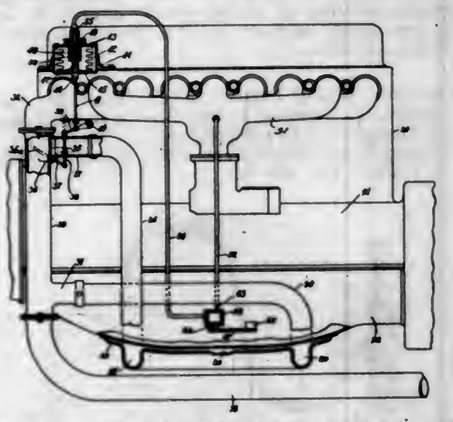


1. In a tube cutting machine, the combination with means for guiding a travelling tubing into the machine, a saw mounted for transverse and parallel movements relative to the travel of the tubing, means operative to project the saw into the path of travel of the tubing and latching means holding the saw to such position during a cutting operation, of yielding means operative to move the saw parallel with the travel of the tubing during a cutting operation.

1,619,976. FLOOR LAMP. HERMAN HORN, Jr., Philadelphia, Pa., assignor to The Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1924. Serial No. 748,846. 2 Claims. (Cl. 248—8.)

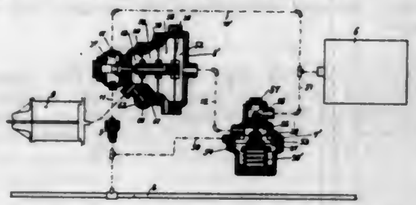
2. A device of the character described, comprising a supporting standard, a bushing on said standard, a member secured to said bushing, said member being loosely secured to said bushing whereby it is free to rotate on the standard without moving said bushing, elastic and compressible material intermediate the standard and the bushing.

1,619,977. PROCESS AND APPARATUS FOR TREATING OILS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed July 8, 1924. Serial No. 724,077. 5 Claims. (Cl. 196—110.)



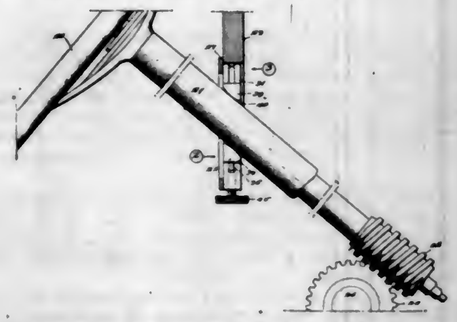
5. A process for treating hydrocarbon oil consisting in passing the oil in a plurality of streams during its initial flow through a heating zone and while being subjected to preliminary heating therein, in thereafter increasing the velocity of the oil during a substantial portion of its flow through the heating zone by uniting said streams prior to the final heating of the oil in the heating zone.

1,619,978. CONTROL OF ENGINE-OIL HEATERS. JOHN H. HUNT, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 8, 1925. Serial No. 35,611. 5 Claims. (Cl. 123—196.)



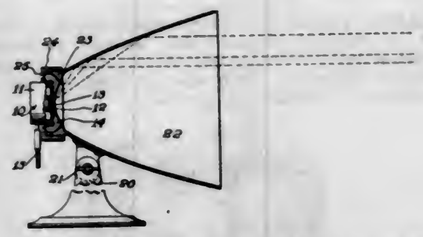
1. Oil heating apparatus and control therefor for internal-combustion engines comprising, in combination, a duct for receiving a fluid heated by the operation of the engine and having a wall in contact with a body of oil to be heated, a valve for controlling the flow of fluid

through said duct, a device responsive to engine suction for moving said valve into position for causing said fluid to flow through said duct, a pipe having a restric-



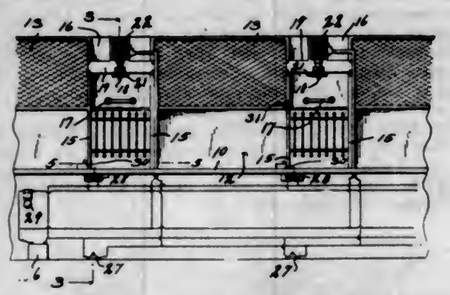
tion for connecting the engine intake and device, and means responsive to oil temperature for venting the device through an opening larger than the restriction.

1,619,979. ONE-LINED AIR BRAKE. FLORENTIN KASANTZEFF, Berlin, Germany. Filed July 21, 1926. Serial No. 124,031. 5 Claims. (Cl. 303—35.)



1. A one lined air brake comprising in combination a train pipe, an auxiliary air container, a brake cylinder, a distributor adapted to admit air from said auxiliary container to said brake cylinder, and a ruling device so connected to said train pipe and distributor, that by different pressures in said train pipe, below a normal running pressure, relatively greater pressure differences are produced in the connection to said distributor.

1,619,980. STEERING GEAR. CADWALLADER WASHBURN KELSEY, Short Hills, N. J. Filed Apr. 19, 1923. Serial No. 633,144. 7 Claims. (Cl. 74—39.)

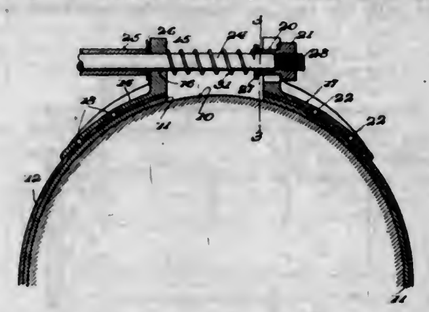


1. In combination, a steering column, a fixed member having a vertically elongated slot through which the steering column passes, guideways on opposite sides of the slot, devices slidably mounted in the guideways and embracing the steering column, and means for clamping the devices about the column and in the guideways.

1,619,981. SOUND MAGNIFIER. SERGEANT P. KNUT, Washington, D. C. Filed Mar. 14, 1923. Serial No. 625,006. 2 Claims. (Cl. 179—146.)

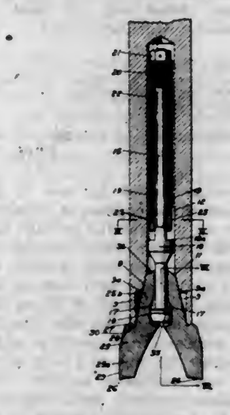
1. A sound magnifying device comprising a body having a sound reflecting surface of revolution generated by a conic section having its axis disposed substantially along a horizontal line, a support for said body, disposed in a direction transverse to said body, and attached to said body, and an integral interiorly threaded flange disposed in the rear of the said body and coaxially therewith, whereby the watch case type of telephone receiver may be attached to said body in such a manner as to dispose the disc vibrator of the receiver in the focal plane of the reflecting surface and perpendicular to the axis thereof, the device being interchangeable with the cover of the telephone receiver.

1,619,982. BANK PROTECTOR. JOSEPH CLAUD LUCAS, Blandinsville, Ill. Filed Nov. 26, 1924. Serial No. 752,493. 2 Claims. (Cl. 268—2.)



1. In a bank, a partition having a window opening, guides mounted on each side of the window opening, a shield mounted in the guides of the window opening, the shield being of bullet-proof substance and having a length sufficient so that when the shield is dropped it will entirely close the window opening, a latch normally holding said shield in raised position and including an outwardly projecting lever arm, a keeper on the window with which the latch is adapted to engage, a weight normally resting upon said arm, an electro-magnet disposed above the arm and adapted when energized to lift said weight and permit the shield to lift the arm and move downward, and means for energizing the electro-magnet including a circuit having a circuit closer therein.

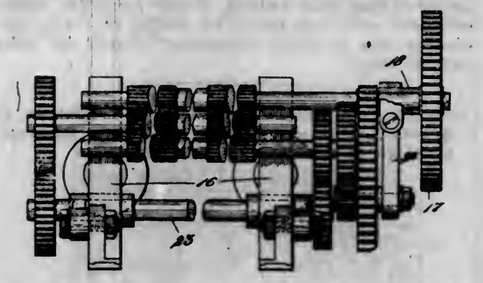
1,619,983. TRANSMISSION BAND. JOSEPH MALLIGAN, Point Marion, Pa. Filed Apr. 15, 1926. Serial No. 102,336. 4 Claims. (Cl. 188—196.)



1. A brake band comprising a split annular metal member, a lug secured to each end of the member, one

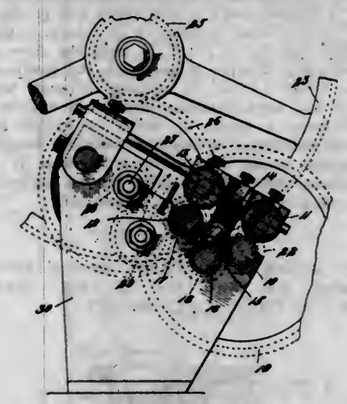
of the lugs being provided with a perforation, an adjusting rod slidable in said perforation, the lug on

the other end of the band being slotted, a nut having a sleeve received by the rod, the nut being threaded onto the adjusting rod.



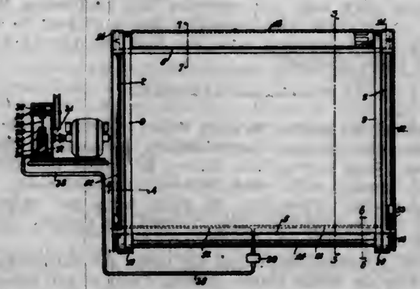
1,619,984. UNDERREAMER. CLARENCE T. MAPES, Pittsburgh, Pa. Filed Nov. 8, 1922. Serial No. 599,652. 5 Claims. (Cl. 255—75.)

1. An underreamer comprising a one-piece body having a longitudinally extending bore formed in the lower part thereof and a bit receiving chamber at the extreme lower part of the body into which the bore opens, a mandrel in said bore having a bit engaging head thereon which extends into the chamber, bits having shanks thereon, which shanks extend into the chamber, said bits having recesses therein in which said head engages for supporting the bits, a circular enlargement on said mandrel having a sliding fit in the bore, said mandrel having flat faces formed thereon above the enlargement, keys passing through the body engaging the flat sides of the mandrel, and a spring surrounding the mandrel confined between the keys and means at the upper end of the mandrel, the wall of said bit-receiving chamber having pockets therein for engagement by the bits in their collapsed condition, and interengaging means between the mandrel and bits to prevent turning of the latter independently of the mandrel so that they may operate and may be maintained in proper lines with the pockets.



1,619,985. SPINNING FRAME. CHARLES MORTON, Pawtucket, R. I. Filed May 11, 1926. Serial No. 108,262. 7 Claims. (Cl. 19—132.)

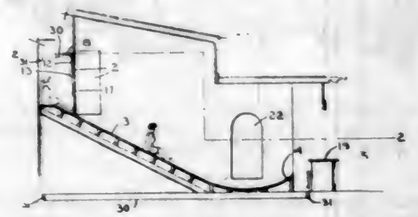
1. In a spinning frame front and back sets of draft rolls, means for driving said sets at different relative speeds, a set of intermediate rolls between said sets of back and front rolls and positioned with their working surfaces to run just clear of those of said back and front sets of rolls, the distance between the centers of said adjacent sets of rolls being insufficient to permit



of two adjacent sets of rolls being driven directly one from the other, and means for driving said intermediate set indirectly from those of another set.

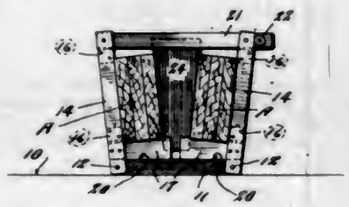
1,619,986. SPINNING FRAME. CHARLES MORTON, Pawtucket, R. I. Filed June 15, 1926. Serial No. 116,116. 9 Claims. (Cl. 19—130.)

1. In a spinning frame, front and back sets of draft rolls, gears for driving said sets of rolls at different predetermined speeds, a set of rolls intermediate said back and front rolls, and means set to frictionally engage and drive only said intermediate rolls.



1,619,987. ADVERTISING APPARATUS. KARL GUSTAF ÖSTBERG, Stocksund, Sweden. Filed Feb. 21, 1923, Serial No. 620,491, and in Sweden Feb. 18, 1922. 22 Claims. (Cl. 40—37.)

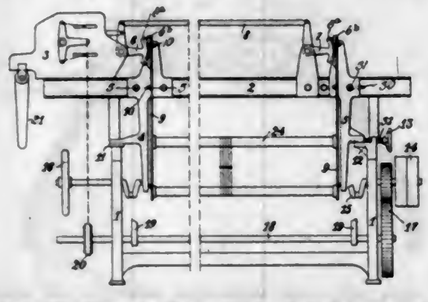
1. An advertising apparatus comprising in combination a packet of advertising leaves, a rotatable friction shifting roller disposed along one end of the packet and



adapted to shift the leaves from one side of the packet to the other, means for guiding the leaves round the edge of the packet while moving over the roller, a number of endless belts adapted to run round the packet over said roller, and means for feeding the leaves successively into frictional engagement between the roller and the belts.

1,619,988. AMUSEMENT APPARATUS. HERBERT N. RIDGWAY, Winthrop, Mass. Filed July 15, 1925. Serial No. 43,867. 3 Claims. (Cl. 273—102.)

1. In an amusement device the combination with a chute, of a compartment at the upper end of the chute having a door opening leading to the chute, a door for closing said opening, a latch to hold the door closed, a latch-releasing member situated on the inside of the door, the latter having an opening through which a portion of the latch-releasing member is exposed, said portion forming a target at which an article may be thrown, the movement of the latch-releasing member due to the impact of an article thrown against it operating to release the latch, and means to automatically open the door when the latch is released.

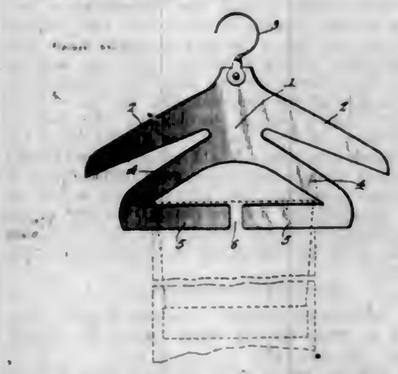


1,619,989. KNIFE GLUE CLAMP. BYRD C. ROCKWELL, St. Joseph, Mo. Filed Oct. 17, 1923. Serial No. 669,005. 10 Claims. (Cl. 144—279.)

1. A glue clamp comprising a pair of opposed pivotal arms adapted to be moved inwardly toward each other into cooperative interengaged relation, said arms being provided with seats for receiving and positioning the work to be glued, and removable blocks adapted to be driven into engagement with the work for placing the latter under pressure.

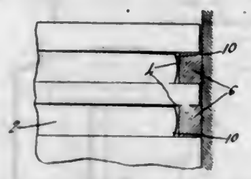
1,619,990. HARNESS MOTION FOR LOOMS. WILHELM SIMMCHEN, Aussig, Czechoslovakia, assignor to The Firm: Ipag International Patent Exploiting Company, Ltd., Aussig, A/E. (Usti N/Lab.), Czechoslovakia, a Corporation. Filed Feb. 28, 1925. Serial No. 12,363, and in Czechoslovakia Mar. 1, 1924. 3 Claims. (Cl. 139—57.)

1. In a harness movement for looms for individually operating the heddle frames, having a pair of bell cranks for each frame one crank on each side of the frame and a push pull rod connection between each pair of bell cranks, a pair of vertically guided suspension bars for each frame connected to the ends of the frame, each bar having a rack at its upper end and a toothed segment at one arm of each bell crank engaging respectively with the rack of its pertaining suspension bar,



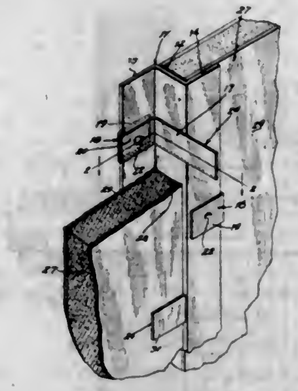
each heddle frame having suitably shaped bosses at its ends and sockets in said suspension bars adapted to removably engage said bosses.

1,619,991. HEADER BRACKET FOR IGNITION CABLES. BENJAMIN M. SMARR, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 15, 1924. Serial No. 732,264. 5 Claims. (Cl. 123—143.)



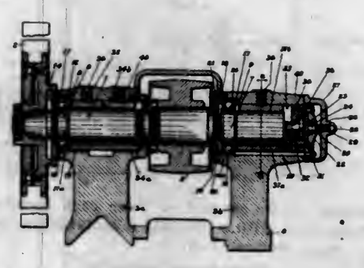
1. In a wire supporting device for use in ignition systems of internal combustion engines, a tubular member having openings in its wall for the passage into and out therefrom of wires through which current is supplied to the spark plugs of a multiple cylinder engine; a combined supporting device for said tubular member and bracket for holding a plurality of wires whereby current is supplied to said spark plugs, said bracket comprising a lower shelf member for supporting said wires, an upper clamping member for engaging said wires, and means for fastening said clamping member and said shelf together; and means whereby said supporting device may be fastened to a structure adapted to support the same.

1,619,992. GARMENT HANGER. HENRY SMITH, Richmond, Va. Filed Apr. 10, 1925. Serial No. 22,155. 1 Claim. (Cl. 223—62.)



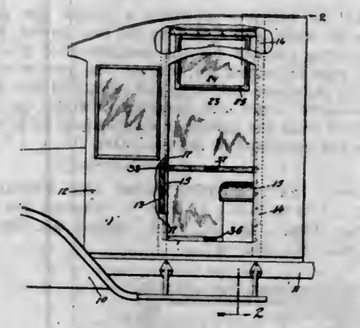
A garment hanger including a flat body having a pair of flat downwardly diverging garment supporting arms, there being flat strips extending toward each other from the arms and spaced apart to provide a throat, said strips being in alinement and constituting supports for a garment inserted upwardly through the throat and spread upon the strips, the body, arms and strips all being formed in a single piece of flat material, and a support engaging member connected to the upper end of the body.

1,619,993. PISTON-RING GROOVE. HERMAN STOLL, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 31, 1925. Serial No. 53,601. 3 Claims. (Cl. 74—109.)



1. A combination of a piston having a groove therein having parallel sides to permit ready removal of the cutting tool, a ring in the groove, the bottom of the ring and the bottom of the groove being so formed as to contact only at substantially the center of the groove, there being clearance between the back of the ring and the bottom of the groove at the sides of the latter.

1,619,994. WALL-BOARD-RETAINING MEMBER. JOSEPH STRAND, Los Angeles, Calif., assignor to Klinch Lath Corporation, Los Angeles, Calif., a Corporation of California. Filed June 1, 1925. Serial No. 34,096. 10 Claims. (Cl. 72—118.)

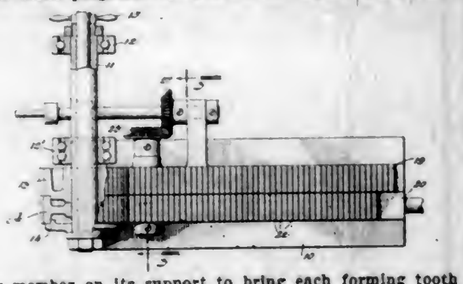


1. A wall board retaining member comprising: an imperforate and non-flexible member arranged for installation between adjacent ends of wall boards; and separate means securely attached to said member before said wall boards are installed in place, adapted to hold said wall boards and said member in proper relationship.

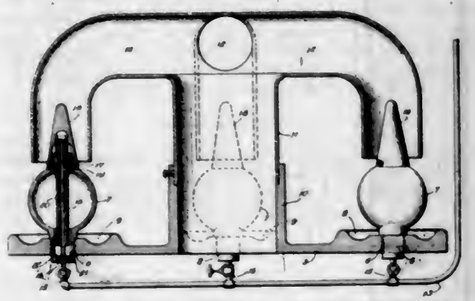
1,619,995. SPINDLE MOUNTING. ALBERT TURNER and ALFRED P. BURNS, Worcester, Mass., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 9, 1923. Serial No. 656,480. 10 Claims. (Cl. 308—35.)

1. In a device of the class described, a spindle, a ball bearing associated therewith, a sleeve bearing, independent of said ball bearing or the races thereof, also associated with said spindle, and means for interchangeably rendering one or the other of said bearings operative, while maintaining the same assembly of parts.

1,619,996. CLOSURE. CLARENCE J. WHITACRE, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 4, 1922. Serial No. 604,775. 8 Claims. (Cl. 296—140.)



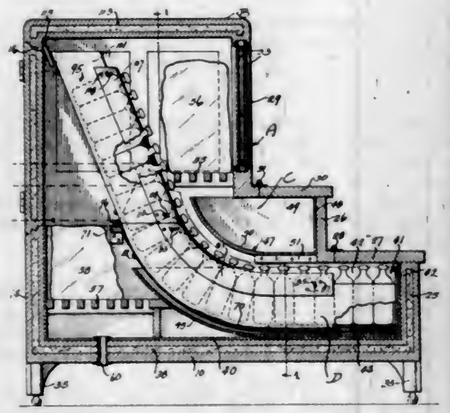
1. In a device of the class described, an automobile body including supports spaced apart for forming an opening in said body, said supports being provided with guides, a sheet metal closure slidably mounted in said guides, said closure being provided with an opening therein and a transparent flexible window removably mounted in said opening.



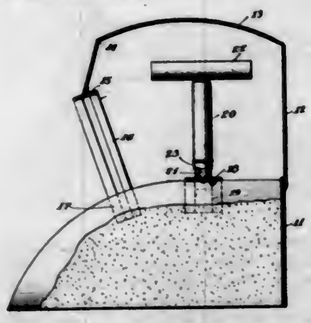
1,619,997. MANUFACTURE OF GEARS. JOHN W. WHITE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 4, 1920. Serial No. 428,292. 7 Claims. (Cl. 80—16.)

1. In means for forming gears, the combination of a toothed forming element and a blank-supporting means, one mounted to rotate and the other to reciprocate, gearing for connecting said element to said means

to cause their operation in synchronism, and means for causing the forming element and the blank to approach each other progressively and for shifting the reciprocating member on its support to bring each forming tooth into engagement with a different indentation in the blank on the next reciprocation.

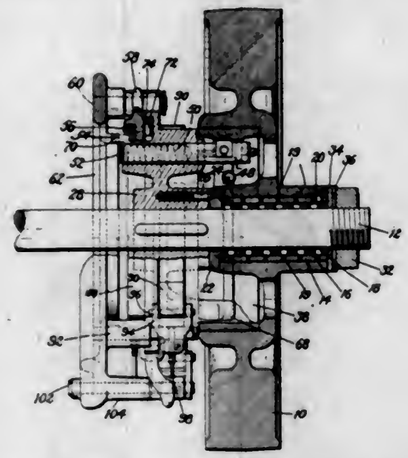


1,619,998. FUEL-OIL BURNER. ANDREW J. WOODCOCK, Wilmette, Ill. Filed Nov. 17, 1923. Serial No. 675,310. 15 Claims. (Cl. 158—66.)



1. An oil burner comprising a hollow gas generator having an outlet and a seat at the top thereof, said generator being adapted for the generation of gas therein, an oil pipe projecting up through the generator, and a cap over the upper discharge end of the oil pipe and over the generator outlet and engaging said seat to close the gas outlet from the generator and adapted to be unseated by the gas generated in the generator.

1,619,999. BOTTLE-DISPENSING AND REFRIGERATING APPARATUS. DALLAS V. WRIGHT, Fort Dodge, Iowa. Filed Jan. 28, 1924. Serial No. 689,097. 6 Claims. (Cl. 211—8.)

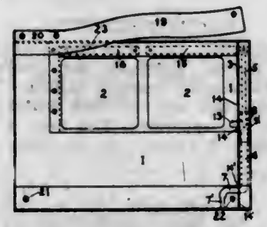


1. In a dispensing device of the class described the combination of a cabinet having an opening therein, and a closure for said opening, a chute construction in said cabinet including a lower fixed portion which adjacent the opening of the cabinet is arcuated upwardly, and a hinged upper portion connected adjacent the arcuated end of the fixed chute portion and adapted to be hingedly moved for horizontal positioning thru the opening of the cabinet when the closure is opening from the cabinet for the purpose of refilling the chute, and means for supporting the hinged chute portion at an inclined position in the cabinet in aligning relation with the arcuated end of the fixed chute portion for dispensing bottles from the hinged chute portion into the fixed chute portion.

1,620,000. SCOOP SCALE. EVERETT R. BALL, Quincy, Ill., assignor of one-half to Charles E. Monckton, Quincy, Ill. Filed July 3, 1926. Serial No. 120,288 3 Claims. (Cl. 265—66.)

1. A weighing scoop having a handle rigidly fixed to the scoop, and a scale having a supporting portion also rigidly fixed to the scoop and projecting upwardly therefrom, said scale having a handle carried thereby adjacent to and below the fixed handle on said scoop.

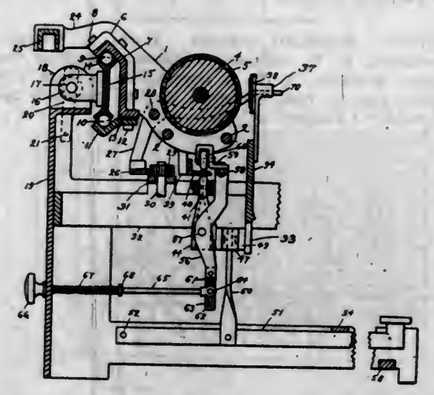
1,620,001. CONTROLLING MEANS FOR MACHINES. MILTON H. BALLARD, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 15, 1920. Serial No. 424,223. 44 Claims. (Cl. 192—145.)



2. In a mechanism of the class described, a shaft, a power pulley, a clutch for operatively connecting the pulley to the shaft comprising a member keyed to the shaft, a starting lever for controlling the clutch, a brake operative normally to prevent further rotation of the shaft after the disconnection of the pulley from the shaft, and a locking member arranged to co-operate with the member keyed to the shaft to prevent rotation of the shaft in case the brake should become inoperative, said locking member normally moving to inoperative position when the clutch is rendered operative, and interconnected means normally operative for returning the starting lever and locking member to operative position.

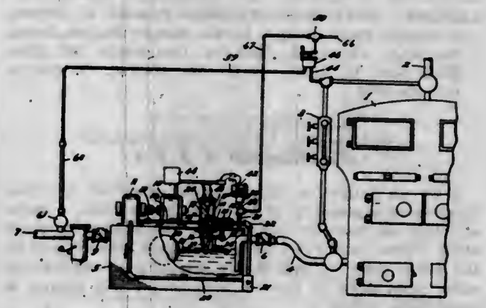
1,620,002. VANITY CASE. EDMUND R. BARANY, Brooklyn, N. Y. Filed Jan. 31, 1925. Serial No. 5,941. 5 Claims. (Cl. 132—82.)

1. In a powder container, a perforated closure plate, a resilient mounting for the plate, and means responsive to movement of the plate for opening or closing the perforations therein.



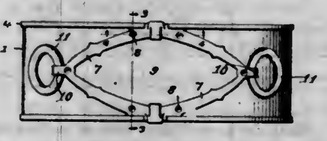
1,620,003. AUTOMOBILE INCLOSURE. GEORGE E. BISHOP, Cleveland, Ohio. Filed Mar. 2, 1923. Serial No. 622,337. 3 Claims. (Cl. 296—139.)

1. An automobile inclosure comprising, suitable curtain fabric provided with spaced transparencies; a multiple-section rod adapted removably to support the fabric upon the automobile body; means for holding the fabric longitudinally taut; a vertical pocket formed in the fabric and within which the supporting rod is disposed; at least one of said rod sections being longitudinally adjustable in said pocket in the inoperative position of the supporting rod, and a sleeve surrounding the adjacent rod section ends and normally holding the rod sections relatively rigid transversely of their length, one of the abutting rod sections being formed with means adapted to hold the sleeve in its operative position, said fabric being formed with a vertical slit, and said sleeve being formed with a fingerpiece extending through said slit, whereby the sleeve may be vertically, manually adjusted to release the abutting rod section ends one from the other, none of said transparencies including the longitudinal planes in which the adjacent rod section ends lie when they are released, whereby the inclosure may be folded along longitudinal lines without removing the respective rod sections from the fabric.



1,620,004. TYPEWRITING MACHINE. GREGORY K. BLOCK, New York, N. Y. Filed July 26, 1926. Serial No. 124,972. 6 Claims. (Cl. 197—60.)

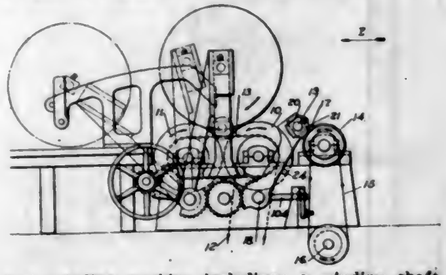
1. In a typewriting machine, the combination with carriage brackets of longitudinally extended front and rear frame members connected at their ends with said brackets, a supporting member rotatively mounted on the frame of said typewriting machine, ball bearings on the upper and lower surfaces of said supporting member, said rear longitudinal member being slidably supported on said ball bearings, a drum rotatively mounted on said brackets, a plurality of rollers slidably supporting said front longitudinal member, means to support said rollers, an upper roller adapted to retain said front longitudinal member in an operating engagement with said supporting rollers,



means to raise said supporting rollers with said upper roller, and means to release said upper roller from the engagement with said front longitudinal member.

1,620,005. CONTROL FOR SUBVACUOUS CONDITION OF PERIODICALLY-FIRED BOILERS. VERNON T. BRIGHAM, Des Moines, Iowa. Filed Aug. 9, 1926. Serial No. 128,293. 12 Claims. (Cl. 103—26.)

1. In a vacuum heating system, the combination with a boiler, return line, and a pump, of a connection between said boiler and return line, and pressure actuated means in said connection for effecting operation of said pump.

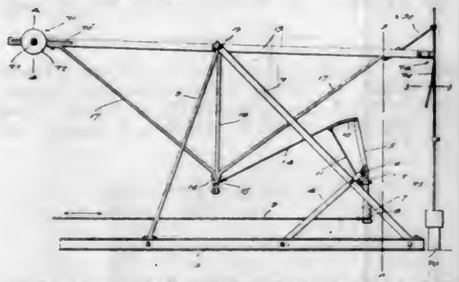


1,620,006. AQUARIUM. LESLIE H. BURLIN, Chicago, Ill., assignor to Chicago Hardware Foundry Company, North Chicago, Ill., a Corporation of Illinois. Filed June 26, 1926. Serial No. 118,755. 3 Claims. (Cl. 119—5.)

1. An aquarium comprising in combination, an annular split shell of plate metal formed with receiving channels at its respective ends, end walls of transparent material having marginal engagement in said channels, and means for securing the split shell in a contracted condition on said end walls, the same comprising a coupling

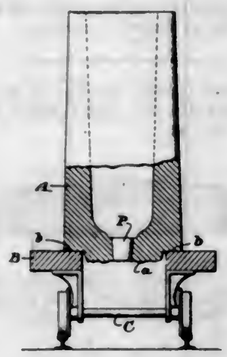
plate spanning the split of the split shell and secured to the adjacent ends thereof by screw bolts, said coupling plate having an orifice constituting the entry passage to the aquarium chamber.

1,620,007. WINDING MEANS. JAMES A. CAMERON, Brooklyn, N. Y., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 13, 1925, Serial No. 49,949. Renewed June 4, 1926. 4 Claims. (Cl. 242—66.)



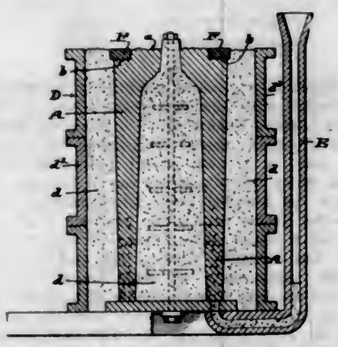
1. A winding machine including: a winding shaft, a surface winding drum to wind material on the shaft, means for initially supporting said winding shaft out of contact with the drum, driving means, to rotate said shaft at an overspeed while out of contact with the drum to initiate the winding operation for engagement with the drum, including speed-change means actuated by the accumulation of material on the shaft to decrease the speed thereof.

1,620,008. WIRE BASE BRUSH. EDWARD E. CURTIS, Cleveland, Ohio, assignor to The Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 12, 1923. Serial No. 674,148. 5 Claims. (Cl. 15—206.)



3. In an article of the character described, the combination of a plurality of layers of brush stock, a series of wires one more in number than the number of brush stock layers, said wires being positioned between and on the outer sides of said layers respectively and twisted upon each other to form a wire base brush having at least three spires.

1,620,009. PUMP JACK. MARION LEE DOBSON, Kevin, Mont. Filed Dec. 7, 1926. Serial No. 153,115. 6 Claims. (Cl. 74—5.)

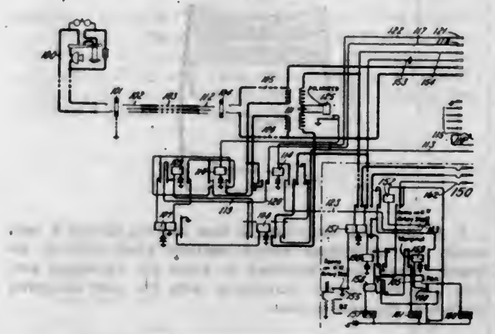


1. In a pump jack, a supporting structure including spaced rails, uprights rising therefrom and connected thereto, a beam pivotally mounted on the upper ends of the uprights and provided at one end with means for connecting with a reciprocatory polish rod, and power multiplying means mounted upon said upright and connected with said beam adjacent its point of pivotal connection with said uprights.

1,620,010. INGOT MOLD. GEORGE A. DORNIN, Baltimore, Md., assignor to The Gathmann Engineering Company, Baltimore, Md., a Corporation of Maryland. Filed Apr. 16, 1925. Serial No. 23,586. 5 Claims. (Cl. 22—139.)

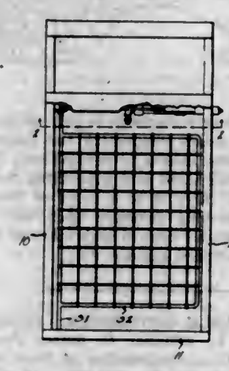
1. An ingot mold having a marginal portion on the under side of its lower end which is smoother and harder than the middle or central portion of the lower end of the mold, thus adapting the mold to rest truly on a support.

1,620,011. METHOD OF MAKING INGOT MOLDS. GEORGE A. DORNIN, Baltimore, Md., assignor to The Gathmann Engineering Company, Baltimore, Md. Original application filed Apr. 16, 1925, Serial No. 23,586. Divided and this application filed Sept. 4, 1925. Serial No. 54,519. 1 Claim. (Cl. 22—200.)



The method hereinbefore described of casting an ingot mold, which consists in bottom pouring a sand mold to cast the ingot mold bottom-side up, forming smooth, hard ledges on the top of the casting when the molten metal has risen to the upper portion of the said mold and allowing a middle or central portion of the molten metal to rise above said smooth ledges to thus separate impurities from that part of the casting where the ledges are formed.

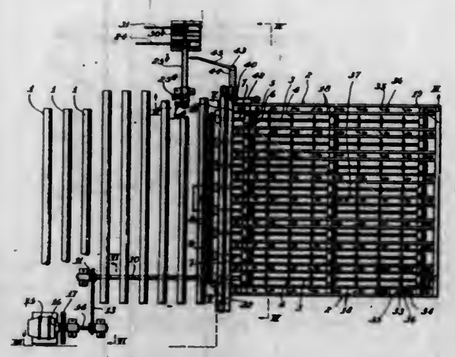
1,620,012. TELEPHONE-EXCHANGE SYSTEM. BERT G. DUNHAM, Hawthorne, and WILLIAM T. HAINES, Mountain Lakes, N. J.; said Haines assignor to American Telephone and Telegraph Company, a Corporation of New York, and said Dunham assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1926. Serial No. 136,033. 5 Claims. (Cl. 179—27.)



1. In a telephone exchange trunking system whereby an incoming line is interconnected to one of a group of

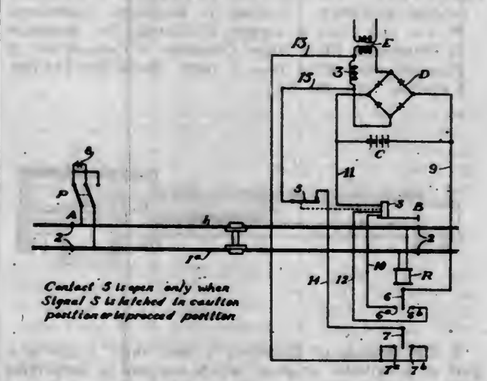
selectable outgoing trunks by a cord circuit for extending said incoming line to a distant office, operator's positions at said distant office, means operated by said interconnection to cause the selection of an idle operators' position and to associate said trunk therewith, automatic

switches, means under the control of said idle operator's position to set a train of said automatic switches to select a wanted line, means to discharge said position, and automatic means to associate said trunk directly with the first switch of said train.



1,620,013. HOG SPRAY. ALLEN H. ECKERMAN, Sioux City, Iowa. Filed Nov. 10, 1926. Serial No. 147,518. 6 Claims. (Cl. 119—159.)

1. In a spray of the class described, a gateway, a tank supported by the upper portion of the gateway, a depending spout provided with a check valve at either extremity for permitting only downward flow of fluid from the tank, a gate mounted on a vertical axis in the gateway for swinging movement, a pump actuated by the swing of the gate in either direction away from the gateway to eject oil from the spout and by the swing of the gate toward the gateway, to draw oil into the spout, and means connecting the pump to the gate, including a spring adapted to urge the gate toward closing position.

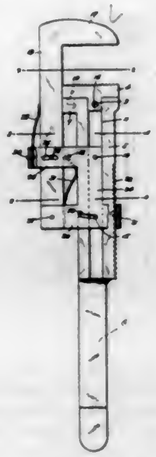


1,620,014. APPARATUS FOR CRACKING OFF AND HANDLING CONTINUOUSLY-FORMED SHEET GLASS. ALBERT E. EVANS, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed July 20, 1926. Serial No. 123,639. 4 Claims. (Cl. 49—1.)

1. The combination with a glass handling table, of a plurality of roller units distributed over the area of the table and each comprising a member carrying two rollers with their axes of rotation at an angle to each other, and mounted to tilt so that in one position of movement of the member, one roller lies uppermost, and in another

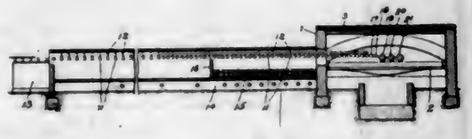
position of movement, the other roller lies uppermost, one set of said rollers having their axes in parallel with one side of the table, and the other set having their axes arranged radially with respect to a common center located within the confines of the table.

1,620,015. RAILWAY-SIGNALING APPARATUS. PAUL H. GRIGGS, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1926. Serial No. 135,482. 8 Claims. (Cl. 246—41.)



1. In a railway signaling system of the type comprising a source of alternating current, a storage battery, a trickle charge rectifier constantly charging said battery from said source at a relatively low rate, and a signal operated by said battery; the combination with the aforementioned instrumentalities of means controlled by said signal for at times increasing the output of said rectifier.

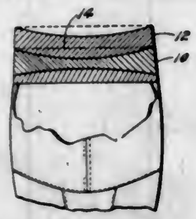
1,620,016. PIPE WRENCH. HENRY GOULAS, Quantico, Va., assignor of one-third to Ormonde O. Mobley, Quantico, Va. Filed June 29, 1926. Serial No. 119,342. 5 Claims. (Cl. 81—106.)



1. A wrench of the class described including, in combination, a shank, a fixed jaw on the shank, one edge of the shank being provided with teeth, a U-shaped frame having its bight portion provided with teeth for cooperation with the aforementioned teeth, said shank being pro-

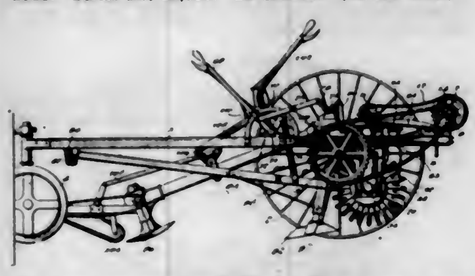
vided with dovetailed mortises, dove-tailed tenons slidable in said mortises, means for pivoting the frame to the tenons, a movable jaw having a shank pivoted to the

frame, and spring associated with the last mentioned shank for normally holding the movable jaw over the fixed jaw.



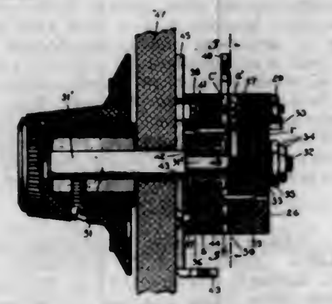
1,620,017. PROCESS OF FLATTENING WINDOW GLASS SHAWLS. HOWARD L. HALBACH, Clarksburg, W. Va., and JOHN A. SWEET, Pittsburgh, Pa., assignors to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed June 9, 1926. Serial No. 114,759. 5 Claims. (Cl. 49—84.)

2. The process of flattening a bent sheet which is a part of a cylinder of glass, which consists in supporting it upon a flattening stone exposed to a degree of heat such as to bring it to flattening condition, applying pressure to the upper face of the sheet to partially flatten it, giving it a motion of translation between a series of opposing parallel members to flatten it while still maintaining it at a temperature at which it may be permanently flattened without marring its surface, and continuing such movement of translation between said members and thus holding it flat while the sheet is cooling until it sets permanently in flat form.



4. The process of completing the flattening of a partially flattened sheet of glass heated to flattening temperature which consists in giving the sheet a motion of translation and during such movement applying rolling pressure to the sheet on opposite sides to completely flatten it while still maintaining it at a temperature such that it may be permanently flattened without marring its surface, and continuing such movement of translation of the sheet while exposed to said rolling pressure while the sheet is cooled until it sets permanently in flat form.

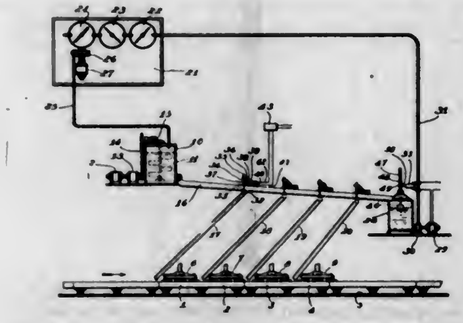
1,620,018. MANUFACTURE OF SHOES. HARRY D. HAMILTON, Winthrop, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 4, 1920. Serial No. 408,267. 14 Claims. (Cl. 36—35.)



1. A shoe heel comprising a base section having a concavely curved surface and a resilient tread member secured thereto and deformed to bring its attaching surface into substantial conformity with the said concaved surface of the base section.

1,620,019. BEET HARVESTER. ERVIN J. HAMMER and ORRIN H. HAMMER, Miller City, Ohio. Filed Mar. 11, 1925. Serial No. 14,737. 18 Claims. (Cl. 55—108.)

1. A beet harvester comprising a pair of finger wheels, movably mounted means supporting the finger wheels in confronting positions, means to continuously rotate them in the same direction upon said supporting means to take hold of a beet and carry it to a point of discharge, and resilient means exerting pressure upon said supporting means urging the wheels toward each other so that various sizes of beets are gripped equally well.

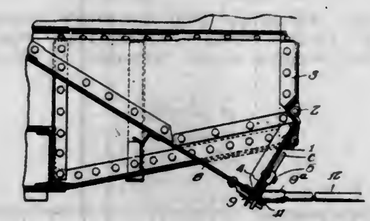


1,620,020. VARIABLE CONDENSER. CHARLES HARDY, New York, N. Y., assignor to Amsco Products Inc., New York, N. Y., a Corporation of New York. Filed Dec. 10, 1923. Serial No. 679,727. 19 Claims. (Cl. 175—41.5.)

1. A variable condenser comprising relatively movable elements providing a plurality of condenser plate sets, relative movement of the said elements being effective

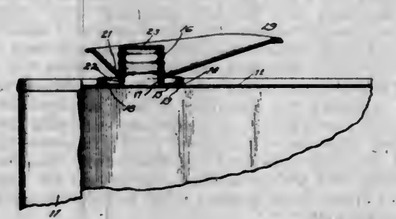
for varying the capacity of one set inversely with respect to the other set, and resilient means carried by one of the elements and bearing on the other of the elements for holding the plate sets in properly spaced relation.

1,620,021. APPARATUS FOR SUPPLYING POLISHING MATERIAL TO A SERIES OF POLISHING MACHINES. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Nov. 25, 1925. Serial No. 71,374. 4 Claims. (Cl. 51—264.)



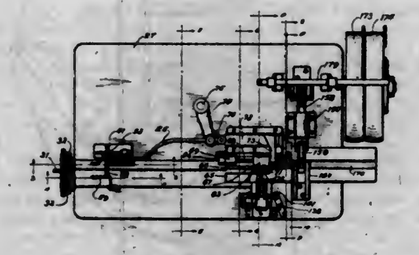
2. The combination with a plurality of polishing machines arranged in series, and means for carrying a series of plates of material to be polished therebeneath, of a distributing tank for the mixture of liquid and polishing material to be used, means for agitating the contents of such tank, a main conduit extending along the series of machines, a branch conduit extending from said main conduit to each machine, a collecting tank at the end of said main conduit for receiving the excess of mixture flowing through said main conduit and not diverted through the branch conduits, and means for returning the mixture from the collecting tank to the distributing tank, the said collecting tank being located at a level below that of the distributing tank so that a gravity flow is provided between the two tanks through said main conduit.

1,620,022. ART OF FIRING CERAMIC AND OTHER PRODUCTS. CHARLES T. HOLCROFT, Detroit, and CHARLES E. DOLL, Mount Clemens, Mich. Filed May 12, 1924. Serial No. 712,561. 29 Claims. (Cl. 25—157.)



1. The art of firing articles in a kiln which consists in subjecting the articles to a firing heat free from products of combustion and concurrently therewith to a flow of air in direct contact with the articles or containers therefor.

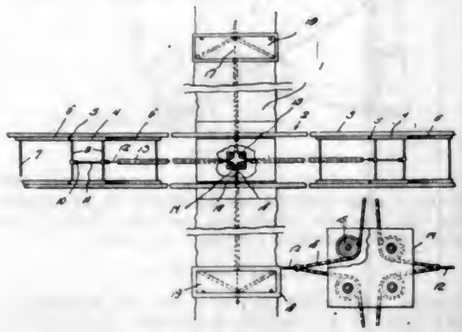
1,620,023. DUMP-CAR-DOOR CONTROL. WILLIAM J. HOSCEIT, Chicago, Ill., assignor to Harry S. Hart, Chicago, Ill. Filed Aug. 26, 1926. Serial No. 131,622. 9 Claims. (Cl. 105—286.)



1. A door controlling attachment for dump cars, comprising a lever applying means adapted to be mounted upon the door and constructed to hold a lever in angularly rigid controlling relation to the door.

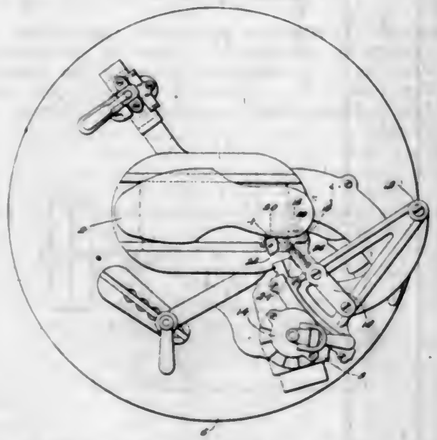
1,620,024. POURING SPOUT. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed June 6, 1921. Serial No. 475,329. 4 Claims. (Cl. 221—23.)

1. In a can, the combination of a sheet metal nozzle having a screw-threaded portion and below the same a tapered spout-supporting portion, a spout adjustable and having an aperture of a size to wedge thereon, and a cap screwed on said nozzle and constructed to engage said spout and force it on said tapered portion.



1,620,025. AUTOMATIC BOX-BODY AND COVER ASSEMBLING APPARATUS. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 6, 1923. Serial No. 610,960. 17 Claims. (Cl. 29—11.)

1. A machine for automatically assembling hinged covers upon metal box bodies, comprising means for advancing the covers and bodies in separated relationship,

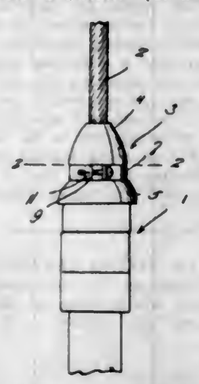


means for arranging said parts in adjacent relationship, and successively operating devices including hingedly connected fingers for bending and clinching together cooperating hinge forming lugs on the covers and bodies.

1,620,026. RAILROAD AND HIGHWAY CROSSING GATE. JAMES M. JONES, Lewisburg, Tenn. Filed Aug. 19, 1926. Serial No. 130,281. 3 Claims. (Cl. 246—293.)

2. In a structure of the class described, a wheel actuated device comprising a pair of sections, one section for each track rail, each section comprising a depressible supplemental rail disposed alongside of a track rail, shafts located beneath the end portions of said supplemental rails, operating connections between said supplemental rails, operating connections between the shafts and end portions, means associated with said end portions for rendering the operation of said supplemental rails gradual and true, means comprising equalizing bars connected with the end portions of the supplemental rails and extending outwardly and downwardly, together with stirrups with which the outer ends of bars are connected, said stirrups being adapted to be rockably mounted upon the track rails.

1,620,027. SOLE-ROUNDING MACHINE. GIDEON JULIAN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 10, 1921, Serial No. 436,050. Renewed Jan. 22, 1923. 9 Claims. (Cl. 12—25.)

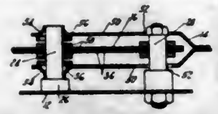


1. A sole rounding machine having, in combination, a pattern and a knife carrier relatively movable to cause the knife to travel around the pattern, a spring operated knife arm on the carrier, a knife holder, and an auxiliary support for the knife holder mounted for independent movement toward the pattern and normally held rigid with the knife arm by the pressure of the knife against the pattern.

1,620,028. COMBINED MOP AND WRINGER. EDWARD JUMONVILLE, New Orleans, La. Filed July 8, 1926. Serial No. 121,147. 2 Claims. (Cl. 15—120.)

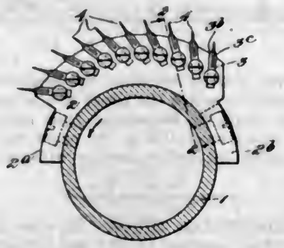
1. A combined mop and wringer including a handle, a tube revolubly mounted thereon with one of its ends disposed adjacently to the end of said handle, a hand-grip surrounding said handle and revolubly and slidably movable over said tube, means securing one end of a mop fabric to said hand-grip and means securing the other end of said fabric to the end of said handle.

1,620,029. SWIVEL-SOCKET CLOSURE. JOSEPH J. KEARNEY, Henryetta, Okla. Filed Aug. 23, 1926. Serial No. 130,949. 2 Claims. (Cl. 24—114.5.)



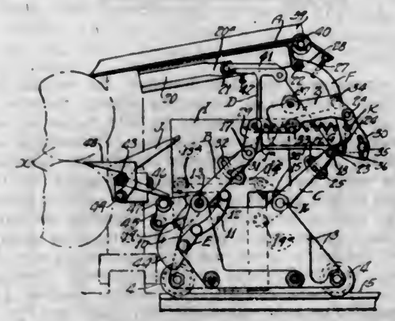
1. As a new product of manufacture, a swivel socket closure comprising a body of resilient material comprising a central longitudinal bore for reception of a cable line, the wall of the bore being corrugated to correspond to the corrugations of the cable, said body being longitudinally split, and a resilient clamping device for holding the split portions firmly about the cable.

1,620,030. BRAKE SHOE. WALTER L. KRIEG, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 13, 1926. Serial No. 122,255. 6 Claims. (Cl. 188—250.)



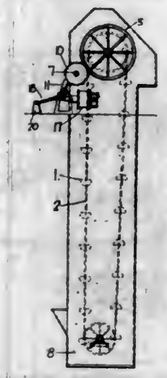
2. A brake shoe having a body formed of two stiffening flanges integrally united along their inner edges and

continued in opposite directions at their outer edges as cylindrical flanges, the stiffening flanges being separated at their inner edges for some distance from one end of the shoe and spread apart to form spaced anchoring arms,



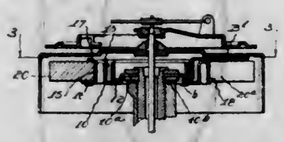
in combination with a band secured across the outer faces of said oppositely-extending cylindrical flanges and continued beyond the point where the stiffening flanges are spread apart, to bridge across said arms.

1,620,031. HALF LAP FOR COMBING TEXTILE FIBERS. JAMES K. LANNING, Fall River, Mass. Filed Mar. 17, 1926. Serial No. 95,259. 3 Claims. (Cl. 19—116.)



1. In a half-lap for combing fibers, the combination with an arcuate bed having a cylindrical peripheral surface with a series of longitudinal inwardly extending slots formed therein, a series of comb-bars fitted snugly into said slots each with its outer edge portion projecting somewhat beyond said peripheral surface, such projecting portion being beveled at front and rear to leave opposite inclined faces outside the peripheral face, and a row of needles imbedded in said bar between the beveled faces with their points projecting outward.

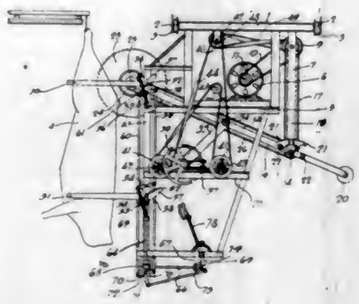
1,620,032. PLATE-LIFTING MECHANISM FOR ROLLING MILLS. THOMAS MCCABE, Arnold Borough, Pa. Filed Aug. 14, 1925. Serial No. 50,277. 27 Claims. (Cl. 80—47.)



1. A plate lifting mechanism for rolling mills, comprising a work supporting means arranged at the rear of the rolls of the mill for receiving the work discharged from the rolls, a carrier for moving the work upwardly into a position to be discharged forwardly over the top roll of the mill, and an actuating mechanism for said carrier constructed so as to bodily raise and lower the carrier and cause it to assume a discharge position with its front end tilted downwardly towards the top roll, and thereafter move rearwardly far enough to clear said work supporting means during the downward stroke of said carrier.

1,620,033. NOISELESS ELEVATOR SAFETY STOP. WILLIAM FREDERICK MCMAHON, Riverside, Calif. Filed Dec. 9, 1924. Serial No. 754,744. 1 Claim. (Cl. 188—172.)

In an elevating mechanism, a driven element, an electric motor including a drive shaft, positively acting power transmitting mechanism between said shaft and the driven element whereby the latter is driven from the motor, a ratchet wheel keyed to the motor shaft between the motor and said power transmitting mechanism, a pawl cooperating with the ratchet wheel, a solenoid in circuit with the motor, a core for said solenoid connected with the pawl whereby the latter is held out of engagement with the ratchet while the motor is operating, and means moving the pawl into engagement with the ratchet upon the power to the motor being shut off and the solenoid being deenergized, whereby the elevating mechanism is positively held against backward movement.

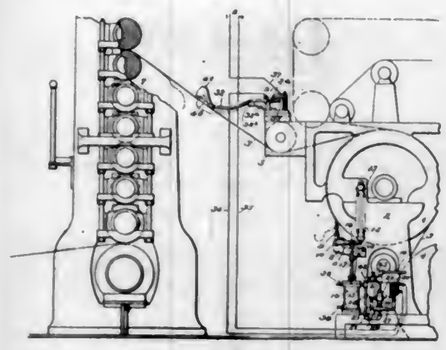


1,620,034. MAGNETIC SPEEDOMETER. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 24, 1925. Serial No. 51,892. 6 Claims. (Cl. 264—13.)

2. In a magnetic speedometer and the like in combination with the magnet rotor shaft and metal stamping mount for the magnet having a central area in a plane transverse to the rotor shaft and centrally secured to the latter and having annular corrugations concentric with the rotor shaft protruding in opposite directions from the plane of said central transaxial area; a ring magnet having a gap and mounted on and encompassing said mount; a thermostatic temperature compensator consisting of an integral bilaminate bar coiled with a radius approximating the mean radius of one of said corrugations of the mount and lodged therein and having at one end of the coil a limb extending transversely of the axis of the magnet and comprising a magnetically conducting part overhanging the magnet gap, said compensator being secured rigidly by the other end of the coil to the bottom of the corrugation in the mount, whereby the coil is free to expand and contract radially within the limits of the width

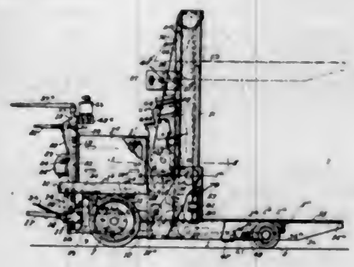
of the corrugations and adapted to move as a unit by flexure from its said point of securement throughout its length to and including said gap-over-hanging limb, for swinging the gap-over-hanging limb more or less over the magnet gap.

1,620,035. CARCASS-SPLITTING MACHINE. ARTHUR H. PAXTON, Omaha, Nebr. Filed Aug. 21, 1926. Serial No. 130,691. 9 Claims. (Cl. 17—23.)



1. A carcass splitting machine comprising a frame, means for gripping and holding a carcass adjacent said frame, a saw frame pivotally mounted, a saw carried by said frame at its free end, driving means for said saw, constantly rotated drive gears, shiftable gears between the constantly rotated gears, arms carried by said shiftable gears, the ends of said arms being pivotally connected to the saw frame and means for shifting said shiftable gears.

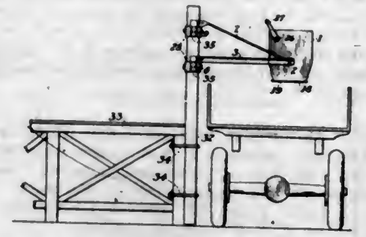
1,620,036. TOY BALLOON. HAROLD PEMBERTON, Seattle, Wash., assignor, by direct and mesne assignments, to National Manufacturing Company, Seattle, Wash., a Corporation of Washington. Filed Dec. 29, 1923. Serial No. 683,288. 7 Claims. (Cl. 46—37.)



1. In a toy balloon, in combination, an inflating and deflating handle, an inflatable and deflatable bag of elastic material having a constricted neck portion secured to the inner end of said handle, and a protective casing of inelastic material enclosing said bag and having a constricted neck portion secured to said inner end of said handle.

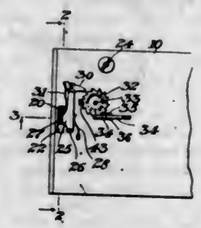
1,620,037. PAPER-MAKING MACHINE. FRANK A. PESCHL, Jackson Heights, N. Y. Filed June 29, 1926. Serial No. 119,354. 20 Claims. (Cl. 92—38.)

1. In a paper making machine, the combination of a traveling member on which the paper web is supported, a doctor member normally disengaged from said traveling member, and means controlled by the paper web for automatically engaging the doctor member with the traveling member.



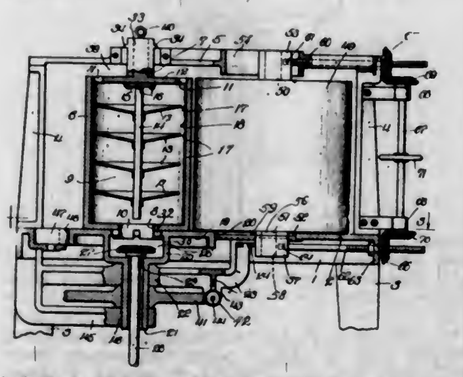
1,620,038. INDUSTRIAL TRUCK. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 19, 1924. Serial No. 732,979. 9 Claims. (Cl. 187—11.)

5. In apparatus of the class described, the combination of a frame, traction and supporting wheels therefor, a pair of guides disposed vertically on said frame, an elevating member having a load supporting section and a vertical section, said vertical section comprising inwardly extending arms and upright members disposed on the outer sides of said guides, upper and lower pairs of rollers carried by said upright members and engaging the outer sides of said guides and a plate connecting said upright members together, a power unit, and means operated by said power unit for raising and lowering said elevating member, said means comprising a flexible member and sheaves carried by said guides and said plate.



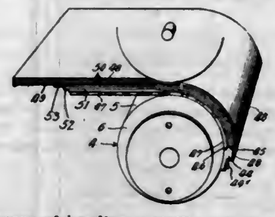
1,620,039. LOADING DEVICE. ROBERT D. ROBERTSON, Windsor, Ontario, Canada. Filed July 19, 1926. Serial No. 123,311. 8 Claims. (Cl. 214—38.)

1. A loading device comprising detachable clamps adapted to be secured to a vertical member, a supporting member pivotally mounted on one of said clamps, laterally disposed arms extending from said supporting member, a second supporting member pivotally mounted on the other of said clamps, braces secured to said second supporting



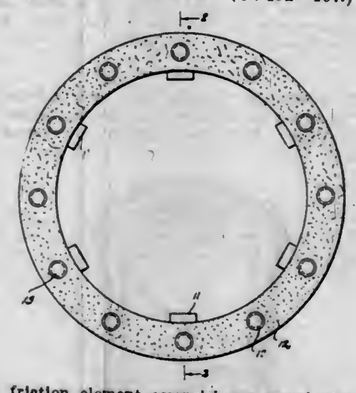
member and also to said lateral arms, a bucket mounted between said arms, and means for emptying the contents of said bucket.

1,620,040. VISIBLE REGISTERING DEVICE FOR CAMERAS. BLANCHE SCHADE, Gloucester, Mass. Filed Jan. 21, 1921. Serial No. 438,955. 3 Claims. (Cl. 235—91.)



1. In a camera having a shutter and means for operating the shutter, a cover member having a side opening, a device provided with indicia and means selectively operable upon the operation of the shutter for moving said device either one or more steps according to the character of exposure being made, said device being arranged to bring successive indicia into register with said side opening upon the movement of the device through two steps.

1,620,041. MACHINE FOR BENDING METALLIC PRINTING PLATES SUCH AS STEREOTYPE AND ELECTROTYPE PLATES. CHRISTIAN N. SMITH, Elgin, Ill., assignor of one-half to William P. Topping, Elgin, Ill.; Alice Minnie Smith and Lily Irene Smith executrices of said Christian N. Smith, deceased. Filed Apr. 24, 1922. Serial No. 556,310. 25 Claims. (Cl. 153—40.)

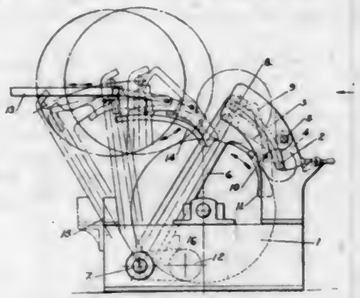


1. In a machine of the class described, the combination of a heating and bending roll rotatively mounted, means for heating said roll, a second roll rotatively mounted adjacent to the first-mentioned heating and bending roll and adapted to admit a metallic printing plate between said rolls, to be heated and bent, a moisture-containing element adapted to pass between the rolls in engagement with the face of the printing plate and means for rotating said first-mentioned heating and bending roll.

1,620,042. PROCESS FOR HEATING AND BENDING METALLIC PLATES SUCH AS STEREOTYPE AND ELECTROTYPE PLATES. CHRISTIAN N. SMITH, Elgin, Ill., assignor of one-half to William P. Topping, Elgin, Ill.; Alice Minnie Smith and Lily Irene Smith executrices of said Christian N. Smith, deceased. Original application filed Apr. 24, 1922, Serial No. 556,310. Divided and this application filed Oct. 17, 1925. Serial No. 63,114. 9 Claims. (Cl. 101—401.2.)

1. A process of bending metallic printing plates, which comprises placing in contact with the printing side of a printing plate a layer or sheet of moisture-containing compressible material adapted to be compressed into engagement with the interstices and depressions in and to moisten the printing side of such plate, and then compressing the moisture-containing material into said depressions, hereby filling the depressions in and moistening the printing side of the printing plate, and simultaneously bending the engaged moisture-containing compressible material and moistened metallic printing plate together.

1,620,043. MEANS AND METHOD FOR ATTACHING NONMETALLIC FACINGS TO WORKING-CLUTCH MEMBERS. FREDERICK C. STANLEY, Fairfield, Conn., assignor to The Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 10, 1924. Serial No. 755,097. 14 Claims. (Cl. 192—107.)



1. A friction element comprising a metal plate and a fibre facing secured to said plate by elements composed of approximately nine parts asbestos fibre and one part of a hardening binder.

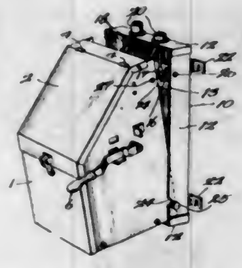
1,620,044. WINDING MACHINE. WILLIAM M. STOCKER, Woodhaven, N. Y., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 13, 1925, Serial No. 49,881. Renewed June 4, 1926. 11 Claims. (Cl. 242—65.)

1. A winding machine including: surface winding means, a winding shaft to be placed in winding relation

therewith, means to cause the winding shaft to progress over the surface of the winding means, a receiving support for the winding shaft to sustain it with the material accumulated thereon out of engagement with the

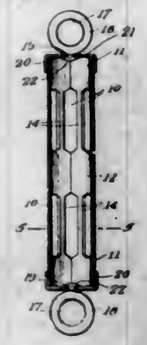
winding means, and a travelling transfer device, moved by the accumulation of material on the winding shaft after it has received the same, to receive the winding shaft as it progresses over the winding means and to eject it to the receiving support.

1,620,045. AWNING. WILLIAM R. TORRENT, Kansas City, Mo. Filed July 19, 1926. Serial No. 123,331. 7 Claims. (Cl. 156—15.)



1. In an awning, a support having means for engaging and being supported by the jambs of a door or window, two devices circumferentially adjustable on said support, an awning frame adjustable bodily as a whole on said devices transversely to the axis of the latter, and an awning sheet mounted on said frame.

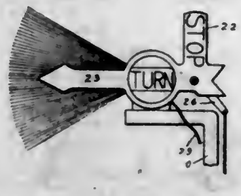
1,620,046. DISPLAY PLAQUE AND METHOD OF MAKING. WILLIAM VAN DIEST, Minneapolis, Minn. Filed June 4, 1926. Serial No. 113,728. 3 Claims. (Cl. 41—24.)



1. A method of making a card holder, consisting of applying to a base board, a member to define a central card receiving section, covering the surface of said board and member with a thin layer of a plastic composition, stippling the surface of said plastic layer, permitting said stippled surface to partially dry, applying a second coating of plastic material over predetermined portions of the stippled coating to form embossed designs and characters of predetermined form, permitting said plastic material to dry and applying finishing coatings to the surface of said plastic material to provide a finished display plaque.

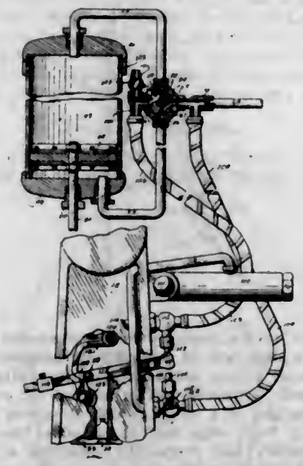
1,620,047. SECTIONAL CABINET FOR ELECTRICAL APPARATUS. HERMON L. VAN VALKENBURG, Milwaukee, Wis., assignor to Industrial Controller Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 3, 1921. Serial No. 498,341. 4 Claims. (Cl. 247—9.)

1. A sectional cabinet for electrical apparatus comprising a stationary rectangular wall section closed at the back and open at the front and having side, top and bottom walls, electric terminals mounted within said wall section, a main section of the same rectangular size and outline and being of greater depth than the wall section to enable it to contain the electric apparatus proper, the main section being open at the back and having side, top and bottom walls, electric terminals mounted within the main section and adapted to be detachably connected to the terminals in the wall section, the main section having an opening in the front and a cover for closing said opening whereby when the main section is detached from the wall section the contents will be exposed from the back, and when the cover is open the contents will be exposed from the front, and means for detachably connecting the main section to the wall section to be supported and completely closed at the back by it.



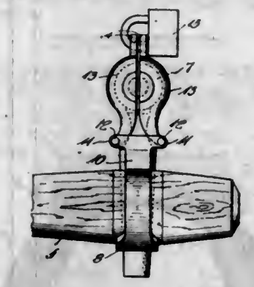
1,620,048. CHAIN LINK. LOUIS A. VEIGEL, Jr., Newark, N. J. Filed Dec. 17, 1923. Serial No. 681,140. 1 Claim. (Cl. 59—82.)

An ornamental chain link comprising a cylinder having a series of equally spaced, longitudinally disposed elongated openings in its wall, forming a series of longitudinal bars, said bars being arranged in circumferential rows, each of said series divided by a blank central portion, said bars being twisted axially to pro-



duce distortion, caps fixed on the ends of said cylinder, connecting elements having swivel stems secured in said caps and a lining of contrasting color disposed within the said cylinder and being visible to said openings.

1,620,049. SIGNALING APPARATUS FOR AUTOMOBILES. JOSEPH WEECH, Galesburg, Ill. Filed Aug. 18, 1923. Serial No. 657,115. 1 Claim. (Cl. 177—329.)

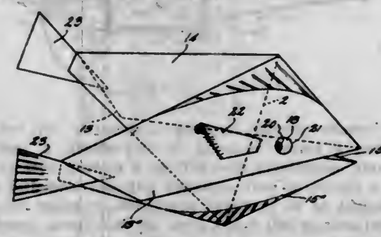


In a signaling device a lamp portion including a normally decnergized source of light, a housing therefor, and an opening at the rear of said housing through which light may pass, an indicating member comprising two sets of indicia, one indicating "stop" and the other "turn", means for mounting said indicating member on said lamp for movement from a normal position with the "stop" indicia in front of said opening, to a position wtih said "turn" indicia in front of said opening, and means for controlling said signal comprising means for illuminating said light to give a "stop" signal and for moving said indicating members from one position to the other and simultaneously energizing the light to give a "turn" signal.

1,620,050. MECHANISM FOR CONTROLLING AND OPERATING MOLDING MACHINES. FRANZ J. WOOD, Des Moines, Iowa. Filed Dec. 26, 1923. Serial No. 682,738. 7 Claims. (Cl. 22—56.)

1. In a molding machine, a main frame, a pattern frame mounted on said main frame, a mold table, pneumatic means for raising and lowering said mold table, said means including automatic means whereby the mold table will be moved upwardly at an accelerated speed and automatic means for moving the mold table downwardly at an accelerated speed different from that produced by its upward movement, the first part of the downward movement being comparatively slow, and the remainder of the downward movement quite rapid.

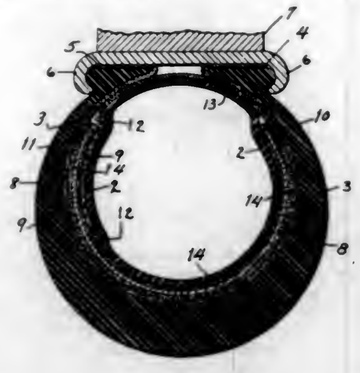
1,620,051. LOCKING DEVICE. JOSEPH ZITO, Utica, N. Y. Filed Mar. 19, 1926. Serial No. 96,003. 3 Claims. (Cl. 70—123.)



1. A locking device for a faucet having a body and a valve member passing through and projecting both upwardly and downwardly from such body; said locking device comprising a collar to snugly surround the body of the faucet, the lower portion of this collar having an opening to receive the projecting lower end of the valve, the upper portion of said collar being shaped to surround the projecting upper portion of the valve, and a pair of guard members pivoted to said upper portion of said collar and snugly engaging opposite sides of the valve and its handle to prevent rotation thereof, said guard members having their upper portions conforming to the shape of the handle and having means whereby they may be secured together.

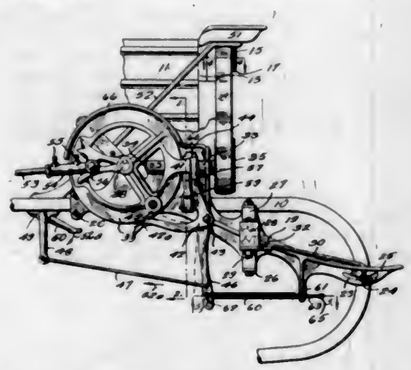
1,620,052. ELECTROLYTIC APPARATUS AND ELECTRODE THEREFOR. WILLIAM G. ALLAN, Toronto, Ontario, Canada, assignor, by mesne assignments, to Farley G. Clark. Filed Sept. 13, 1924. Serial No. 737,518. 25 Claims. (Cl. 204—5.)

1. Electrolytic apparatus, comprising an anode and a cathode immersed in an aqueous electrolyte and spaced apart, a diaphragm pervious to the electrolyte and disposed between the electrodes, the said electrodes and diaphragm being so constructed and arranged that the area of the current path through the diaphragm will be greater than the greatest projected area of the diaphragm.



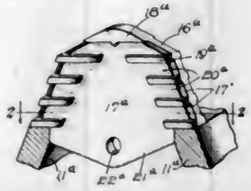
1,620,053. SHEET-MATERIAL TOY. CLARENCE E. ARUNDEL, Birmingham, Ala., assignor of one-half to F. F. Postell, Birmingham, Ala. Filed Aug. 9, 1924. Serial No. 731,073. 7 Claims. (Cl. 46—37.)

1. A toy of the character described, comprising folded members forming upper and lower jaws, the folds of one



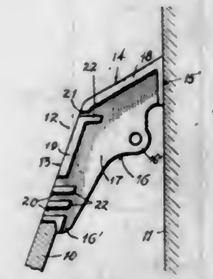
jaw overlapping the folds of the other, and rear body extensions each comprising relatively foldable members and each connected to the adjacent side folds of the upper and lower jaws.

1,620,054. INTERLINER. DAVID BAKER, Los Angeles, Calif. Filed Dec. 10, 1924. Serial No. 754,993. 1 Claim. (Cl. 152—18.)



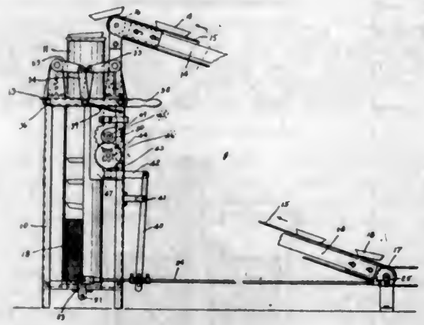
A guard for inner tubes of pneumatic tires, comprising an outer annular tube enveloping casing; annular flanges formed on said casing and adapted to be secured between the tire and a rim; an annular canvas inner casing secured to the inner wall of said outer casing, said inner casing having a folded annular portion forming a pocket adapted to lie between the inner tube and tire adjacent the tread portion thereof; a loose annular flap formed integral with said inner casing and adapted to be fitted over the inner periphery of the said inner tube; and the said pocket being adapted for the reception of a resilient armor.

1,620,055. TRIPPING MECHANISM FOR BINDERS. LAURITS KRISTIAN OLESEN BAKKE, Emmetsburg, Iowa. Filed Sept. 24, 1924. Serial No. 739,742. 4 Claims. (Cl. 56—475.)



1. A bundle carrier tripping mechanism for binders comprising a frame mounted on the binder, a gear on said frame operatively driven from a moving part of the binder, a mutilated gear arranged adjacent said first gear and adapted to be operated therefrom, a roller on said mutilated gear, a bell crank lever on said frame having a hook member on one end for engaging said mutilated gear and retaining it in inoperative position, the other end of said bell crank lever terminating adjacent said roller whereby disengagement of the hook end thereof from the mutilated gear will cause the other end of said lever to strike against said roller, thereby causing said gear to start to rotate and a pitman connected to said mutilated gear for tripping the bundle carrier.

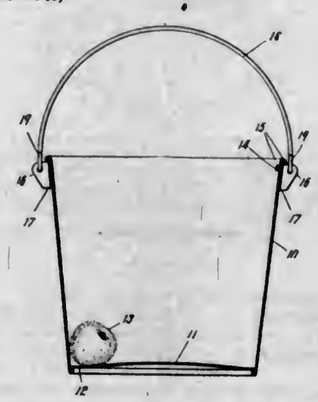
1,620,056. TUYÈRE STRUCTURE. ROYCE L. BEERS, Detroit, Mich., assignor, by mesne assignments, to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 14, 1921. Serial No. 437,238. 3 Claims. (Cl. 110—44.)



1. A plate-tuyère element comprising a body web of substantially uniform thickness, and a shallow marginal flange extending laterally from the body web along those sides that are to be exposed as part of the fire box floor, one of said flange portions being interrupted to provide tuyère openings, and said web being angularly deflected from its normal plane in said openings.

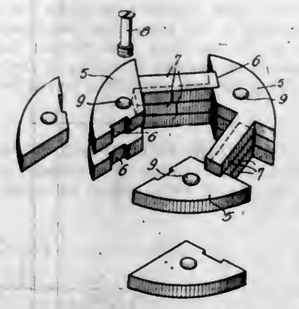
1,620,057. SIDE TUYÈRE STRUCTURE. ROYCE L. BEERS, Detroit, Mich., assignor, by mesne assignments, to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Original application filed Jan. 14, 1921, Serial No. 437,238. Divided and this application filed Aug. 11, 1923, Serial No. 656,977. Renewed Dec. 3, 1926. 2 Claims. (Cl. 110—44.)

1. A plate tuyère structure of the character described comprising a body web of substantially uniform thinness, having a rear vertical portion for contact with the furnace side wall, a bottom portion notched for engagement with the margin of a retort which is spaced from the side wall, a front edge and a top edge that together extend upwardly and rearwardly affording a relatively long span between the bottom of the structure and the top of its rear edge, and a shallow marginal flange integral with said body web extending along the wall-contacting portion of the rear edge and along the top and front edges, said flange extending from one side only of the plate and being laterally interrupted, near its bottom to afford tuyère-openings, the portions 22 between said openings extending further back from the front edge of the plate than the general depth of the remainder of the bordering flange, substantially as and for the purposes described.



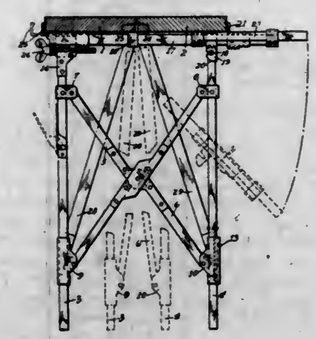
1,620,058. STACKING DEVICE. GEORGE A. BELL and JOHN H. CARSON, Marion, Ind., assignors to Indiana Fibre Products Company, Marion, Ind., a Corporation. Filed Mar. 8, 1926. Serial No. 93,351. 15 Claims. (Cl. 226—14.)

1. A stacking device of the character described, including an upright receptacle, means for discharging articles to be stacked into the top thereof so as to settle towards the bottom, and an agitating member mounted at the bottom of said receptacle for agitating the articles while stacking so as to cause them to nest or adjust their position therein.



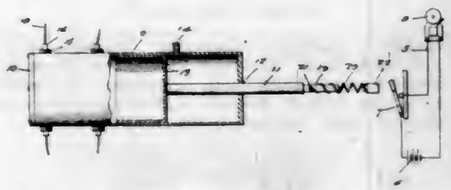
15. A stacking device of the character described, including an upright receptacle having an opening in one face thereof through which the articles stacked therein may be removed, means for guarding said opening so as to permit air to be discharged therefrom during the falling movement of the articles and prevent said articles from escaping, an endless belt for discharging articles to be stacked into the top thereof, an agitating member at the bottom of said receptacle for agitating the articles and causing them to nestle and position themselves with respect to each other, a gate intermediate the ends of said receptacle adapted to be closed upon a given number of articles having been stacked therein and arresting and supporting the additional articles discharged into the top thereof, means associated with said conveyor belt for actuating said agitating member, and means associated with said belt for causing said gate to close upon a given number of articles having been discharged into said receptacle.

1,620,059. FRUIT PAIL. JOHN L. BETTS, Woodbury, Ga. Filed Oct. 1, 1925. Serial No. 59,864. 2 Claims. (Cl. 220—97.)



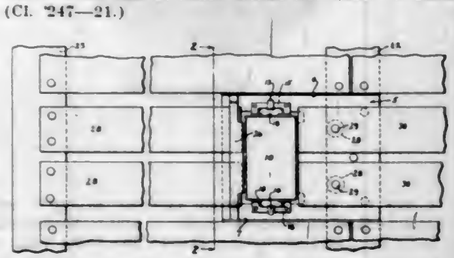
2. A plurality of nested containers, each of which has attached to its upper portion a pair of ears having attached thereto a bail, each ear having an outwardly extending bottom edge portion resting upon the top of the container next below, and an upwardly extending oblique edge portion resting against the bail of the container next below.

1,620,060. IGNITION MACHINE. FREDERIC BILLON and JAKOB BOHLI, Solothurn, Switzerland, assignors to Scintilla Aktiengesellschaft, Solothurn, Switzerland. Filed Aug. 16, 1926, Serial No. 129,628, and in Germany July 23, 1925. 6 Claims. (Cl. 171—252.)



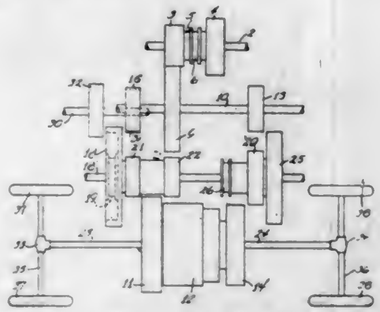
1. For use with an ignition machine having a rotor in the form of a fly-wheel magnet a stator having three poles, two cores connecting one of the poles with the other two poles and lying at an angle of approximately 60° with respect to one another, each of the said cores being adapted to support a coil.

1,620,061. FOLDING TABLE. FRANK N. BLAIR, Boise, Idaho. Filed May 7, 1926. Serial No. 107,428. 2 Claims. (Cl. 304—5.)



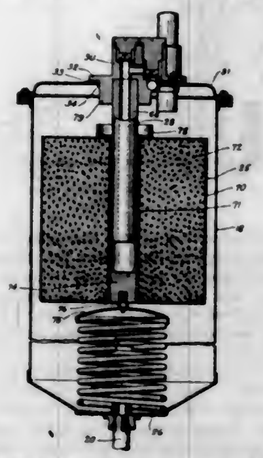
1. In a device of the type described, a folding trestle comprising a pair of legs, a crossbar pivotally carried by one of said legs, a brace pivotally secured at one end to said legs, means carried by said crossbar for gripping and for rigidly holding a plurality of boards, and means for rigidly securing said brace between said boards.

1,620,062. THERMAL CIRCUIT CLOSER. FREDRICH BOSSHART, Osnabrock, N. Dak. Filed Jan. 4, 1926. Serial No. 79,123. 2 Claims. (Cl. 200—142.)



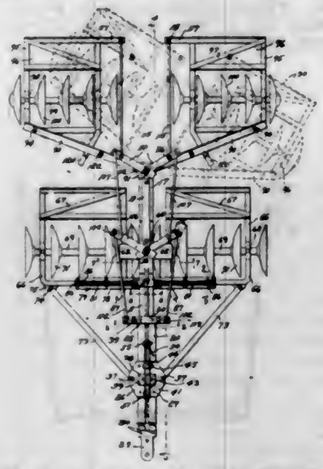
1. A circuit closer actuator including an explosively operated member, a coil spring partially disposed about one end of the member and fixed thereto, and a buffer element mounted on the free extremity of the coil spring, said spring being the sole supporting means for the buffer element.

1,620,063. COMBINED SWITCH-BOX SUPPORT AND LATH HOLDER. CLAUDE E. BOWERS, Los Angeles, Calif. Filed Jan. 9, 1925. Serial No. 1,420. 1 Claim. (Cl. 247—21.)



A support for loom boxes comprising a rectangular sheet metal plate provided adjacent one of its ends with a polygonal opening for the reception of a loom box, two of the oppositely disposed edges of the opening being provided with bendable attaching prongs adapted to engage and support a loom box within the polygonal opening, said plate being provided with a vertical slit adjacent one of the vertical edges of the loom box opening, the metal at one side of the slit being bent outwardly from the outer face of the plate to form a support for the unsecured ends of lathing.

1,620,064. TRANSMISSION. ALBERT BOWER BOWMAN, Grand Rapids, Mich. Filed July 20, 1925. Serial No. 44,844. 3 Claims. (Cl. 74—58.)

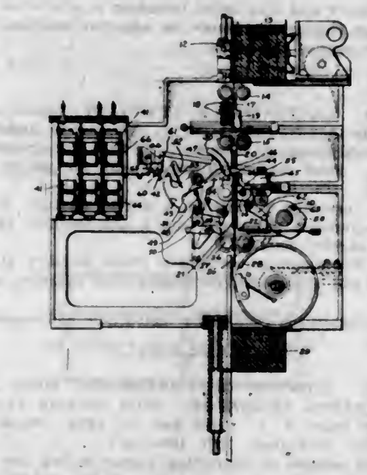


1. A transmission comprising a driving shaft, two gears mounted upon said driving shaft, a driven shaft, two gears operatively connected to said driven shaft, an intermediate chain of gears for each of said first named gears for connecting said first named gears with said second named gears, and means for directly connecting said first named gears with said second named gears and for disconnecting said chains of gears from said first and said second named gears.

1,620,065. PUMPING MECHANISM. CHESTER H BRASELTON, New York, N. Y., and CARL P. BROCKWAY Toledo, Ohio; said Brockway assignor to said Braselton. Filed July 28, 1922, Serial No. 578,064. Renewed May 10, 1926. 5 Claims. (Cl. 103—158.)

1. In a system of the character indicated, a combination of an auxiliary tank, an inertia member located in said tank, a spring cooperating with said inertia member and resting upon the bottom of said tank and a unitary die-cast pump valve assembly provided with inlet and discharge passages, inlet and outlet valves and a hollow stationary piston extending between said die-cast unit and said inertia mass, said hollow member being located between the inlet and outlet valves in said unit.

1,620,066. DISK HARROW. LOUIS BRENNEIS, Oxnard, Calif., assignor to Brenneis Manufacturing Company, Oxnard, Calif., a Corporation of California. Filed Jan. 5, 1925. Serial No. 542. 12 Claims. (Cl. 55—83.)

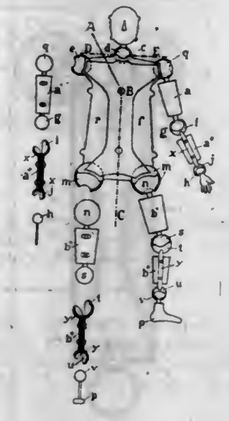


1. In a disk harrow, the combination of: a main frame; front gang structures each having a rigid arm, said arms being pivoted to said main frame at a common point; a

draft frame movable relative to said main frame; latch mechanism for locking said main frame and said draft frame against relative movement, said latch mechanism being operable in a manner to allow relative movement between said main frame and said draft frame; and front links extending between said front gang structures and said draft frame, said front links being adapted to normally retain said front gangs in non-working position and being adapted to move said front gang structures into working position when a relative movement occurs between said main frame and said draft frame.

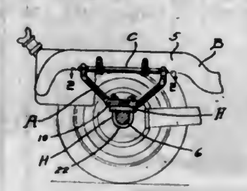
1,620,067. CELLULAR PLASTER. HARRY E. BROOKBY, Chicago, Ill., and GEORGE D. KING, Fort Dodge, Iowa, assignors to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 9, 1926. Serial No. 80,342. 13 Claims. (Cl. 106—34.)

13. A heat and sound insulation material which is substantially non-efflorescent and of a homogeneous cellular texture and weighing not over 30 pounds per cubic foot, which results from the gauging with water of a mixture comprising gypsum, a relatively small percentage of alum and granular sodium bicarbonate, dextrinized starch, and soap bark.



1,620,068. TABULATING CARD-PRINTER DEVICE. JAMES W. BRYCE, Bloomfield, N. J., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Mar. 19, 1925. Serial No. 16,624. 5 Claims. (Cl. 101—96.)

1. An apparatus for printing record cards, comprising means for feeding cards through the machine, means for reading the combinational perforations in each card, means for translating the readings, and means for printing the translation on the card itself.



1,620,069. FRAME OR BODY OF JOINTED DOLLS AND OTHER ARTICULATED OR JOINTED TOYS. AUGUST BUCHMANN, Amriswil, Switzerland. Filed June 27, 1921, Serial No. 480,825, and in Switzerland Jan. 27, 1921. 7 Claims. (Cl. 46—46.)

2. A frame or skeleton for jointed dolls and other jointed toys having ball and socket joints comprising a body portion, two laterally movable ball cup sectors on said body portion to form a socket, a pair of springs secured at one end to the body portion at opposite sides of the said joint and having free spaced terminals pressing against the exterior of the cup sectors at opposite sides of the joint, a member to be jointed to the body portion,

and a ball on the said member arranged in the ball cup sectors and confined therein by the clamping action of the said springs.

1,620,070. SPRING SUSPENSION. CHARLES H. BUCKLEE, Camden, N. J. Original application filed Feb. 4, 1922, Serial No. 534,191. Divided and this application filed Oct. 28, 1925. Serial No. 65,431. 1 Claim. (Cl. 267—20.)

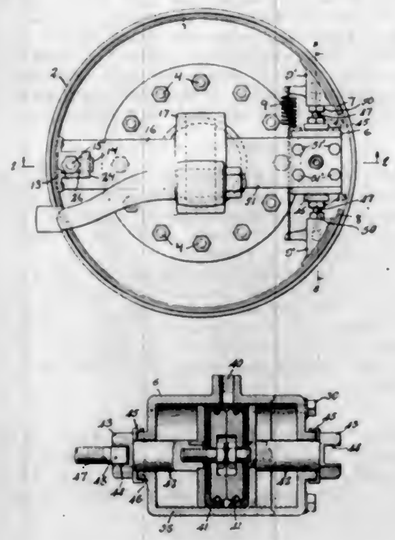
In a motor vehicle, the combination with the chassis thereof including a frame and axle, of resilient suspension means for connecting the frame and axle, said suspension means comprising, a cylinder, pistons in said cylinder and rods for said pistons extending in opposite directions out of the cylinder, end bearings in the cylinder, guiding said piston rods, a coil spring between said pistons, a coil spring for each piston disposed between it and its respective end bearing, sleeves secured to the chassis frame and embracing said cylinder adjacent said bearings for securing the cylinder in spaced relation longitudinally of the frame, and links in converging relation from the outer ends of said piston rods and connecting the same to the axle.

1,620,071. GAS BURNER. CHARLES C. CHAPPELLE, New York, N. Y. Filed May 21, 1924. Serial No. 716,874. 9 Claims. (Cl. 158—112.)

1. In a gas burner, the combination of a tubular body portion, a Venturi mixing tube extending part way into said body portion, a flame check screen having an un-

obstructed portion extending below the upper end of the mixing tube, an extension projecting upwardly from the mixing tube, and a burner head removably anchored to said extension in position on the outlet end of said body portion and adapted to enclose the upper end of

said flame check screen and removably hold the same in position, said burner head being provided with an annular skirt extending into said body portion and spaced apart therefrom to provide arcuate ports for the issuance of combustible mixture from said body portion.



1,620,072. CASE FOR TENNIS RACKETS. HERBERT CHASE, Forest Hills, N. Y. Filed Sept. 19, 1921. Serial No. 501,675. 2 Claims. (Cl. 150—52.)

1. A tennis racket case comprising a body shaped to conform to and enclose a racket consisting of two sheet portions connected at their outer edges and forming a seal impervious to moisture, two jaws hingedly connected to the body at opposed points of the greatest width thereof, metal bows for stiffening the edges of the said jaws, a gasket in the outer edges of the said jaws and clamping elements hingedly connected on said bows for locking the jaws, said gasket constituting a continuation of the edge seam of the body whereby the open end of the case is rendered moisture proof.

1,620,073. VEHICLE BRAKE. NIELS A. CHRISTENSEN, Milwaukee, Wis. Filed Mar. 22, 1924. Serial No. 701,062. 6 Claims. (Cl. 188—152.)

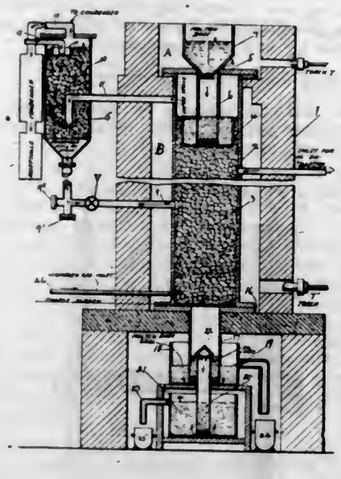
1. In brake mechanism of the class described, the combination with a brake-drum, of a brake, a fluid-pressure motor having a fluid-pressure-operated thrust rod, an adjustable direct end thrust connection between said rod

of said motor and said brake including a jack-screw and means for locking said screw in adjusted position, and means to release the brake.

1,620,074. LACTONITRILE FUMIGANT. LUDWIG J. CHRISTMANN, New York, N. Y., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Aug. 3, 1925. Serial No. 48,005. 9 Claims. (Cl. 167—6.)

1. An insectide comprising a stable mixture of an organic cyanogen compound and a non-alkaline, saponaceous adhesive material.

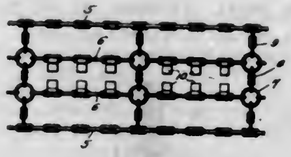
5. An insecticide comprising a stable mixture of lactonitrile and a non-alkaline saponaceous adhesive material.



7. An insecticide comprising lactonitrile and saponin.

1,620,075. PROCESS OF CONVERTING OILS AND APPARATUS THEREFOR. JOHN COLLINS CLANCY, Asbury Park, N. J. Filed Apr. 16, 1924. Serial No. 706,854. 15 Claims. (Cl. 196—54.)

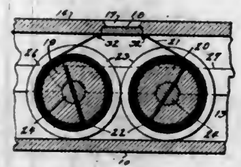
1. In a process of converting higher boiling oils into lower boiling oils, the combination of steps which comprise introducing a stream of a mixture of such higher boiling oils and aluminum chlorid into the upper end of a sealed retort having a portion thereof maintained at a temperature to effect an oil cracking reaction therein, delivering into contact with the said oil mixture a stream of a metal chlorid which is capable of holding in suspension a portion at least of the carbon separated out in said reaction, the said metal chlorid being in molten condition, preventing the accumulation of carbon deposits in the retort by allowing said molten chlorid containing such suspended carbon and the unvaporized oil, carrying its quota of separated carbon in suspension, to discharge from the retort, and collecting the evolved vapors of lower boiling oils and aluminum chlorid from the retort.



8. In a process of producing low boiling oils from chlorid sludges resulting from the distillation of high boiling oils with aluminum chlorid the step comprising,

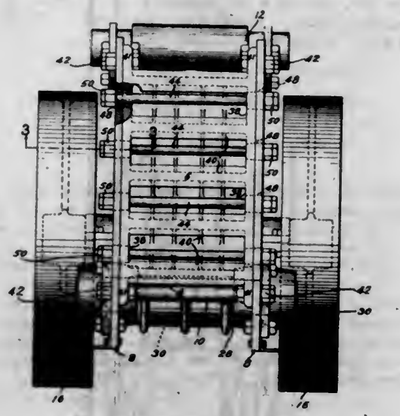
contacting and commingling said chlorid sludges with a molten mixture of sodium chlorid and zinc chlorid in the presence of hydrogen while said molten mixture is

circulating through and into contact with an intersticed mass of nickel packing units a portion at least of the latter being maintained at cracking temperature.



1,620,076. ANTISKID CHAIN FOR TIRES. WILLIAM H. COAD, Nowata, Okla. Filed Mar. 5, 1926. Serial No. 92,553. 2 Claims. (Cl. 152—14.)

1. In an anti-skid device for tires, a pair of chains extending circumferentially around the tire and arranged on opposite sides of the tread portion thereof, and metallic plates pivotally connected to the links of each chain at predetermined points, said plates adapted to swing inwardly and engage beneath the tread of the tire and the ground to prevent lateral skidding.



1,620,077. BRIDGE-SCORE RECORDER. CHARLES A. COOKE, Sioux City, Iowa. Filed June 18, 1926. Serial No. 116,838. 2 Claims. (Cl. 40—86.)

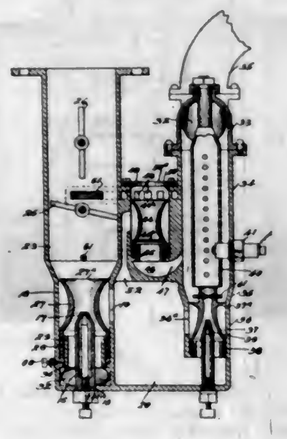
1. In a device of the class described, a casing having a compartment formed between two walls, a pair of spools mounted between said walls and movable a limited distance toward and from the top of the casing, said spools having flanges in frictional engagement with each other and being connected by a web, one of the spools being provided with means for imparting rotation thereto and the other spool being driven by the connect-

ing web in such a direction that the frictional engagement of said flanges will retard the rotation of said other spool to maintain the web taut.

1,620,078. STONE CRUSHER. EDWARD F. COOKINHAM, Frankfort, N. Y., assignor to Acme Road Machinery Company, Frankfort, N. Y., a Corporation of New York. Filed Jan. 8, 1923. Serial No. 611,276. 5 Claims. (Cl. 83—53.)

1. A stone crusher having, in combination, a stationary crushing member, a support therefor having its longitudinal edges provided with rearwardly projecting flanges, a cooperating crushing member movable with relation thereto, and means for holding the stationary crushing member in position comprising side plates arranged adjacent to the outer sides of the flanges, respectively, said side plates and flanges having registering apertures that taper inwardly, with the apertures at opposite sides of said member in axial alinement, tapering bushings fitting said registering apertures and provided with axial apertures, and clamping bolts extending through the axial apertures in said bushings and across the back of said stationary member to secure the plates together and to hold said bushings in position.

1,620,079. BOTTLE RECEPTACLE. HERBERT CULP, Willoughby, Ohio. Filed Sept. 21, 1925. Serial No. 57,692. 4 Claims. (Cl. 232—41.)



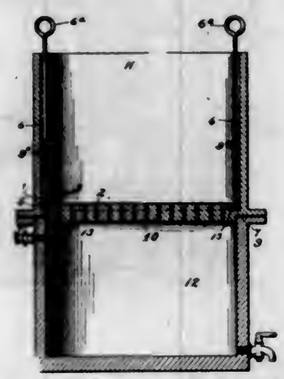
1. A bottle receptacle comprising a box having a door at the front and a hanger in the top of the box, the door being hinged at its upper end to the top of the box and

provided with a latch engageable when the bottle stands on the bottom of the box, the hanger being adapted to hold the bottle at such an elevation above the bottom of

the box that the door will contact with the side of the bottle when in open position to prevent closure of the door.

1,620,080. CARBURETOR. ROY S. CUNNINGHAM, Los Angeles, Calif., assignor of one-third to Frank J. Hassell and one-third to James R. Kell, both of Los Angeles, Calif. Filed Mar. 10, 1925. Serial No. 14,440. 11 Claims. (Cl. 123—122.)

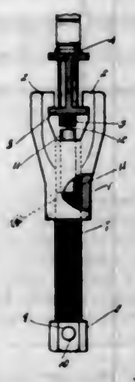
1. Carbureting apparatus including, in combination with a motor, a main jet and mixing means, and a fuel burning stove having an air passageway leading to the jet and mixing means, and exhaust heated air supply means for cutting out the stove after the associated motor is heated.



1,620,081. ALLOY OF LITHIUM AND ALUMINUM. JOHANN CZOCHRALSKI and GEORG WELTER, Frankfort-on-the-Main, Germany, assignors, by mesne assignments, to Allied Process Corporation, New York, N. Y., a Corporation of New York. Filed June 28, 1920, Serial No. 392,494, and in Germany Feb. 15, 1919. 10 Claims. (Cl. 75—1.)

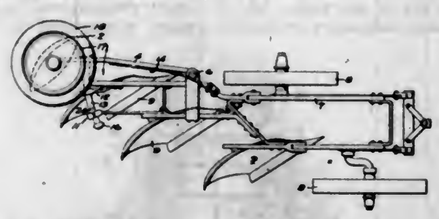
1. As a new article of manufacture, a structural element formed of an aluminum base alloy substantially free from silicon and containing an appreciable amount of lithium up to 40 percent thereof.

1,620,082. ALUMINUM ALLOY CONTAINING LITHIUM. JOHANN CZOCHRALSKI, Frankfort-on-the-Main, Germany, assignor, by mesne assignments, to Allied Process Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 7, 1923. Serial No. 679,262. 8 Claims. (Cl. 75—1.)



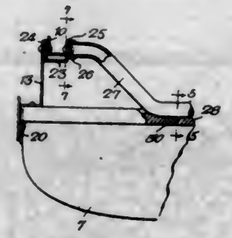
1. The hereindescribed alloy consisting predominantly of aluminum and substantially free from silicon, and containing an appreciable amount of lithium in less proportion than one-half of one per centum.

1,620,083. FILTER. EMILE DE STUBNER, New York, N. Y. Filed Aug. 18, 1923. Serial No. 658,024. 3 Claims. (Cl. 210—149.)



1. In combination with a vessel provided with a permeable bed extending entirely across the interior thereof and having an annular cavity, an annular frame seated removably in the cavity and a filtering fabric fastened to the frame and extending over and resting on the permeable bed.

1,620,084. PERCH PULLER. JESSE E. DOWLEY, Jackson, Mich., assignor to Jackson Machine & Tool Company, a Corporation of Michigan. Filed Apr. 27, 1925. Serial No. 26,117. 2 Claims. (Cl. 29—85.)

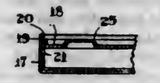


1. A perch remover adapted to be attached to opposite sides of the lower flange of an automobile axle of I-beam cross-section, and comprising an elongated cylindrical body having spaced-apart arms terminating in jaws, a threaded opening through said body, a thrust rod therein, one end of which is turned to a smaller diameter for a length equal to the depth of the axle, and a transversely disposed handle extending through said thrust rod.

1,620,085. PLOW. BARTHOLOMEW L. DRISCOLL, Watsonville, Calif. Filed Apr. 17, 1923. Serial No. 632,645. 3 Claims. (Cl. 97—137.)

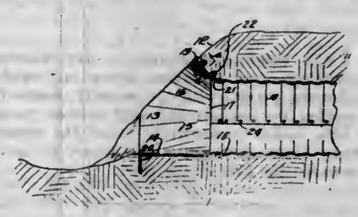
1. An apparatus for cultivating the soil between trees comprising a main frame adapted to be propelled in a substantially straight line past one side of the trees, a frame mounted on said main frame for pivotal movement about a vertical axis and normally extending to one side of the main frame, a spring interposed between said main and pivoted frames for resiliently pressing said pivoted frame to its normally extended position, a cultivating implement on the extended end on said pivoted frame, a fending wheel journaled about a substantially vertical axis on said pivoted frame, an arcuate arm on said pivoted frame concentric with the pivotal axis thereof, and guides on said main frame in which said arm is slidably arranged.

1,620,086. BED DAVENPORT. DARRELL F. DYER, Chicago, Ill., assignor to The Seng Company, Chicago, Ill., a Corporation of Illinois. Filed May 1, 1922. Serial No. 557,715. 3 Claims. (Cl. 5—34.)



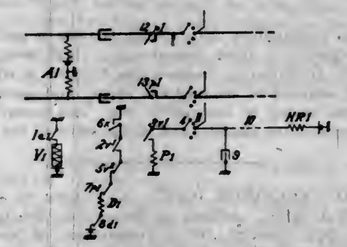
3. In a bed davenport, an invertible seat having an underframe, supporting brackets at the ends of the frame, a sectional bed bottom pivoted in the brackets, a truss bar having an intermediate offset, and a fitting at each end of the truss bar extending partially around the bed bottom frame and connected with the supporting bracket so that it will be pivoted concentric with the bed bottom.

1,620,087. STOP SIGNAL FOR CROSSINGS. GEORGE LINCOLN ESTES, Oklahoma City, Okla. Filed Feb. 21, 1925. Serial No. 10,843. 1 Claim. (Cl. 94—1.5.)



As an improved article of manufacture, the herein described stop signal embodying in a single element a hemispherical shaped hollow body with interior reinforcements at the base with their bases apertured for the reception of securing means, and provided with a plane sloping surface for indicia having a side recess at the top thereof to receive a jewel, and a radial reinforcing rib extended from the inner rim of the base to said jewel-receiving recess.

1,620,088. VANITY CASE. FRANCIS A. FAIRBAIRN, Montreal, Quebec, Canada, assignor to Palmers Limited, Montreal, Canada. Filed May 5, 1925. Serial No. 28,203. 5 Claims. (Cl. 132—83.)

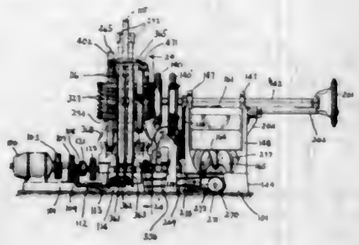


1. An independently removable and replaceable powder holder shaped and sized to completely fill one of the container sections of a vanity case when inserted therein, said holder comprising a bottom wall, a marginal wall extending upwardly from the edge of the bottom wall and a perforated closure plate having its edge portion turned upwardly and outwardly to provide, respectively, a marginal flange adapted to fit snugly within said marginal wall and a continuous supporting ledge terminating said flange and disposed at right angles thereto so as to engage the upper edge of said marginal wall to thereby support the cover plate in spaced relation to the bottom wall of the holder and below the upper edge of said marginal wall.

1,620,089. HEAD-WALL STRUCTURE FOR CULVERTS. ALBERT F. FISCHER, Mason City, Iowa. Filed Dec. 23, 1924. Serial No. 757,584. 1 Claim. (Cl. 61—16.)

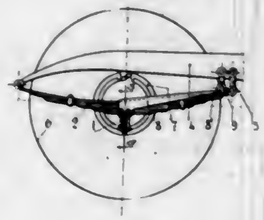
A head wall for culvert ends adapted to be mounted upon the end of a culvert comprising a member bent to form a bottom, side and top walls, the inner ends of said bottom, side and top walls being curved to form a circular opening for receiving the culvert, said top wall being bent upwardly from its inner edge for preventing dirt adjacent the head wall from passing into the culvert, a marginal corrugated flange on the inner edge of said member for coacting with and engaging the end of the culvert, a peripheral flange around the outer end of said member, said flange being wider along the bottom of said member whereby an apron is formed.

1,620,090. TELEPHONE SYSTEM. ARTHUR FLAD, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Apr. 23, 1926, Serial No. 104,022, and in Germany June 27, 1925. 6 Claims. (Cl. 179—18.)



1. In a telephone system, a trunk line, a condenser connected to the test conductor of said trunk line, a circuit for charging said condenser, and a test relay initially energized in series with said condenser and maintained energized thereafter over a section of said charging circuit.

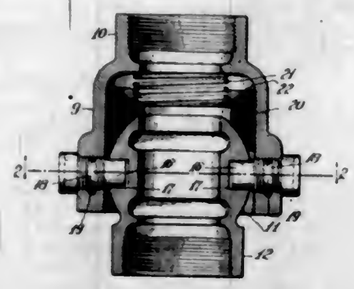
1,620,091. INSULATION COMPOSITION. FRANK H. FORD, Hattiesburg, Miss. Filed Jan. 23, 1926. Serial No. 83,399. 5 Claims. (Cl. 106—18.)



5. An insulation composition of the character set forth comprising, from 10 to 20 parts of a body composed of particles of ligneous material and one part of a binder composed of the following ingredients in approximately the following proportions, lime 20%, cement 75% and iron oxide 5%.

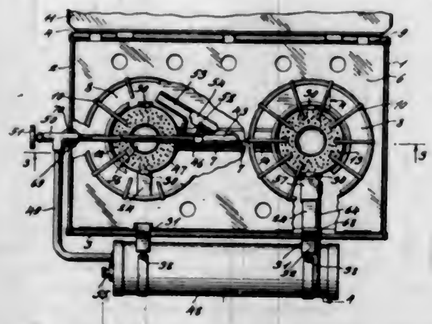
1,620,092. CORD-TIRE MACHINE. WILLIAM G. FORDING, Cleveland, Ohio. Filed Jan. 12, 1923. Serial No. 612,175. 34 Claims. (Cl. 154—11.)

5. In a tire building apparatus, a tire building support, a plurality of cord guiding devices arranged about a circumference coaxial with the support, means for relatively moving the support and said devices along their common axis, means to relatively rotate the support and said devices about such axis, and means to move said devices towards the axis of the core.



1,620,093. DEVICE FOR PREVENTING ABNORMAL FLEXURE OF THE SPRINGS OF MOTOR VEHICLES. GUIDO FORNACA, Turin, Italy. Filed Dec. 5, 1924, Serial No. 754,189, and in Italy Dec. 6, 1923. 4 Claims. (Cl. 267—66.)

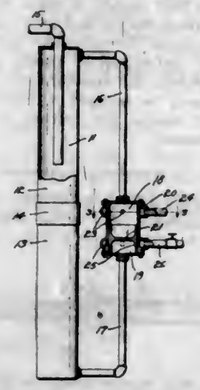
3. The combination of a vehicle chassis, a spring connected thereto, a strut comprising a rigid member substantially U-shaped in cross-section forming a stirrup at one end adapted to embrace the spring and operating to clamp the spring to the vehicle axle, and means to pivotally connect the opposite end of the strut to the chassis.



1,620,094. FLEXIBLE JOINT. LAWRENCE H. GILLICK, St. Paul, Minn., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Original application filed July 26, 1920, Serial No. 398,882. Divided and this application filed July 2, 1925. Serial No. 41,054. 9 Claims. (Cl. 285—93.)

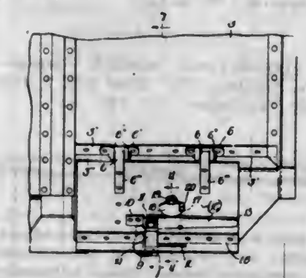
1. A flexible joint comprising a socket member, a ball member extending into said socket but out of contact therewith, studs fixed to one of the members and projecting radially of the ball, the other member being provided with spaced opposing surfaces between which the studs are confined to prevent bodily movement of the ball into or out of the socket, but to permit swinging and rotational movements of the ball member with respect to the

socket, a gasket slidably mounted in said socket and having a concaved bearing portion shaped to fit snugly the inner end of the ball member, and a spring interposed between the gasket and a portion of the socket for maintaining the gasket in operative contact with the ball member.



1,620,095. GASOLINE CAMP STOVE. LOUIS B. GOLDBERG, NATHAN GOLDBERG, WILLIAM GOLDBERG, and JACOB M. GOLDBERG, Denver, Colo. Filed May 3, 1926. Serial No. 106,389. 6 Claims. (Cl. 158—83.)

1. A gasoline vapor stove comprising in combination, a tubular manifold closed at both ends, a burner connected to the manifold, a tubular mixing chamber pivotally attached to the manifold so as to be in communication with the interior thereof, and movable with respect thereto, a priming cup associated with said burner and manifold, a trough secured to one side of the mixing chamber and a generator tube extending over the priming cup said tube being adapted to communicate with the trough or the mixing chamber.

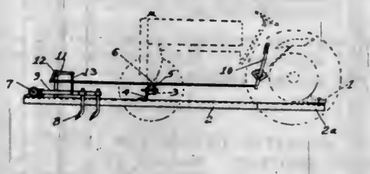


1,620,096. GAS AND OIL SEPARATOR. FORD W. HARRIS, Los Angeles, Calif. Filed Apr. 23, 1925. Serial No. 25,454. 11 Claims. (Cl. 183—2.7.)

1. In an oil and gas separator, the combination of: walls forming a separating chamber; means for introducing an oil and gas mixture into said separating chamber; walls forming a control piston chamber; a gas conduit connecting the upper portion of said separating chamber with the upper end of said piston chamber; an oil conduit connecting the lower portion of said separating chamber with the lower end of said piston chamber, a gas delivery port opening from the upper end of the bearing surface of said piston chamber, and an oil delivery port opening from the lower end of the bearing surface of said piston chamber; and a piston slidably disposed

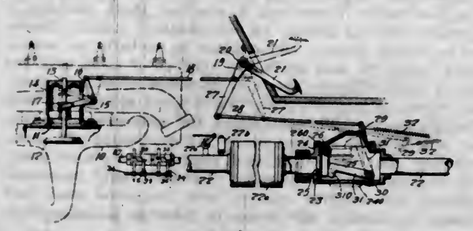
in said piston chamber and adapted in its up position to close said gas delivery port and in its down position to close said oil delivery port.

1,620,097. DUMP-DOOR MECHANISM. DAVID HINDAHL, Chicago, Ill., assignor to Harry S. Hart, Chicago, Ill. Filed Nov. 3, 1924. Serial No. 747,404. 3 Claims. (Cl. 105—308.)



1. In a railway dump car, a floor member, a swinging door, said floor member and door having abutting relationship to form a closure, a reinforcing angle on said door along the line of said closure, a hook member secured to said floor member on the under side of said floor member, and a lever member mounted upon said swinging door and having a portion adapted to have hooking relationship with said hook member, the angle on said swinging door being provided with a slot for reception of said lever member.

1,620,098. PARKING METER. WALTER A. HOMAN and CHARLES T. AUSTIN, Denver, Colo. Filed June 27, 1925. Serial No. 39,950. 7 Claims. (Cl. 161—15.)

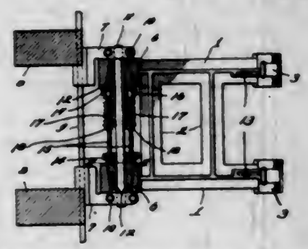


1. In a machine having a member that moves when the machine is in operation, means for causing said member to move and means for causing said movable member to come to rest, the combination with said movable member of a clock mechanism having means for indicating the elapse of time, means for causing said indicating means to become operative when the movable member is stopped and means for causing the indicating means to become inoperative and to return to zero position after the movable member has made a predetermined number of movements.

1,620,099. CULTIVATOR ATTACHMENT FOR TRACTORS. LOREN HOVER, Saginaw, Mich., assignor of one-half to Elmer Hopkins, Saginaw, Mich. Filed Aug. 5, 1924. Serial No. 730,140. 1 Claim. (Cl. 97—47.)

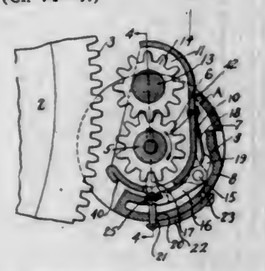
The combination with a tractor having a draw bar and a front axle, of a cultivator frame comprising a pair of side members spaced apart, located close to the draw bar and extending lengthwise from the rear end of said bar beneath the front axle and in advance of the tractor, the rear end of said frame secured direct to the rear end of the draw bar, a cross brace on said frame, a pin projecting horizontally from said axle and slidingly engaging said brace, and tools carried by the projecting end of said frame.

1,620,100. MEANS FOR BRAKING ENGINE-DRIVEN VEHICLES. LLEWELLYN G. HOXTON, University, Va. Filed June 20, 1923. Serial No. 646,723. 4 Claims. (Cl. 188—91.)



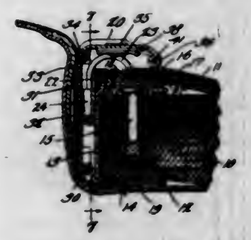
1. The combination of the manifold of an internal combustion engine having beyond the carburetor a passage for air received from a point outside the manifold, a valve for opening and closing such passage, an exhaust pipe for the engine, a valve for opening and closing such pipe, and means for simultaneously opening one valve and closing the other.

1,620,101. PACIFIC COAST TYPE TRIMMER WITH TIGHTENER TAKE UP. CHARLES A. HUFFMAN, Longview, Wash., assignor to The Long-Bell Lumber Company, Longview, Wash., a Corporation of Missouri. Filed July 13, 1925. Serial No. 43,243. 2 Claims. (Cl. 308—71.)



2. A saw ladder having opposed conical bearing-receiving openings at one end, a suitably-supported guide rod extending through said openings, a pair of slit conical bearings at each end of said rod within said bearing openings, a follower on said rod in contact with

one pair of said conical bearings, a pair of bolts carried by said follower, a second follower in contact with the other pair of bearings and having sliding engagement



with said bolts, and expansion springs exerting pressure in opposite directions on said followers to force the conical bearings into position.

1,620,102. STARTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. STEPHEN JENCICK, Cleveland, Ohio. Filed June 11, 1920. Serial No. 388,195. 11 Claims. (Cl. 74—7.)

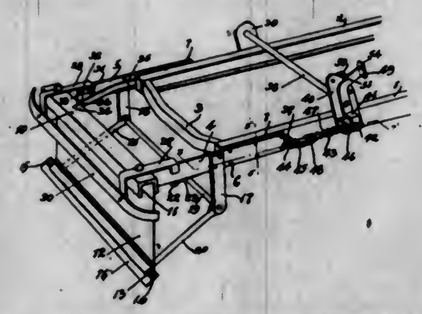
1. Starting mechanism for operative connection with a gear that is adapted to be driven by an internal combustion motor, comprising a starting shaft carrying a primary driving pinion, an intermediate pinion adapted to be driven thereby and adapted to move in an orbital path about the said shaft into and out of mesh with the motor gear, a frame rotatably mounted upon said starting shaft, said intermediate pinion being mounted in said frame, means upon said frame for preventing rotation of said primary pinion, means for controlling the same, whereby the rotation of said intermediate pinion about its own axis will be retarded to cause orbital movement thereof into meshing relation with the motor gear, and means for locking said frame in different positions with respect to the said starting shaft.

1,620,103. LOOSE-LEAF BINDER. HENRY B. JENNINGS, Jr., Long Island, Va. Filed June 18, 1924. Serial No. 720,822. 8 Claims. (Cl. 129—23.)

1. In a loose leaf binder, a sectional transversely channel-shaped clamp, means extending transversely of the clamp for removably securing the sections together, and means for engagement with leaves, a cover, means connecting the back of the cover with the clamp including means whereby one edge of the back may be released.

4. In a loose leaf binder, a main binder including a transversely channel-shaped leaf-receiving clamp, an auxiliary binder mounted thereon, said binder including vertically movable leaf-engaging hooks, means connecting the hooks to provide for simultaneous movement whereby said hooks may be engaged with or disengaged from the leaves and means for locking the hooks against accidental movement.

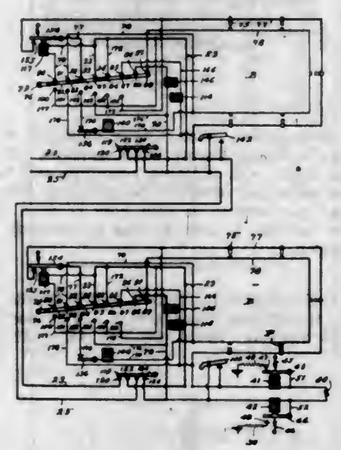
1,620,104. LOOSE-LEAF BINDER. HENRY B. JENNINGS, Jr., Leesburg, Va. Filed July 6, 1925. Serial No. 41,784. 11 Claims. (Cl. 129—1.)



1. In a loose leaf binder, binder sections each comprising a relatively fixed member having angularly disposed portions to accommodate the margins of an assemblage of leaves, means hingedly connecting the members of the two sections, each section further comprising a swingingly adjustable binder member to likewise engage the margins of the leaves, retaining means for the leaves associated with the members of each section, and means supported between the said binder sections and adjustable independently of the second-mentioned members of said sections, to accommodate and retain in place a plurality of temporary leaves.

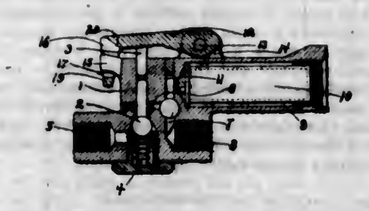
1,620,105. LOOSE-LEAF BINDER. HENRY B. JENNINGS, Jr., Leesburg, Va. Filed Jan. 7, 1926. Serial No. 79,869. 12 Claims. (Cl. 129—1.)

1. In a loose leaf binder, spaced main binder units for accommodating and retaining in place banks of substantially permanent leaves, means adjustably connecting the units and for holding the said units in different positions of adjustment, and means located between said units for retaining temporary leaves.



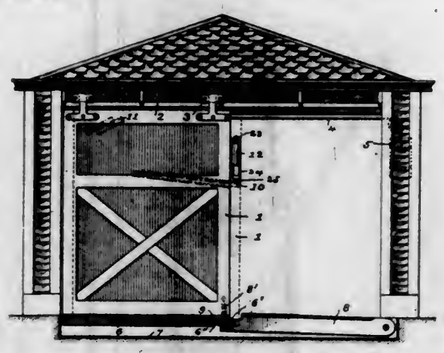
1,620,106. SAFETY BUMPER. ALRIK JOHNSON, Kelliher, Saskatchewan, Canada. Filed Mar. 27, 1926. Serial No. 97,017. 7 Claims. (Cl. 293—41.)

1. A safety device for automobiles comprising a shield normally retained in an inoperative position above the front wheels of the automobile, means including a bumper



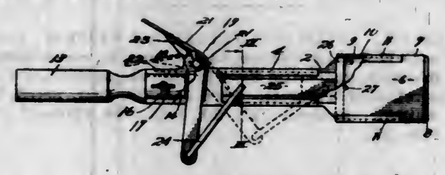
for automatically releasing said shield to an operative position in front of said wheels when said bumper is moved by contact with an obstacle, manually controlled means for releasing said shield to operative position independently of the bumper including a control member within convenient reach of the operator of the automobile, and a latch device operable to prevent manual releasement of the shield without interfering with the automatic releasement thereof.

1,620,107. FIRE-ALARM SYSTEM. JOHN M. JOHNSON, Kansas City, Mo., assignor to The United States Automatic Fire Alarm Company, a Corporation of Missouri. Filed Mar. 22, 1922. Serial No. 545,783. 9 Claims. (Cl. 177—358.)



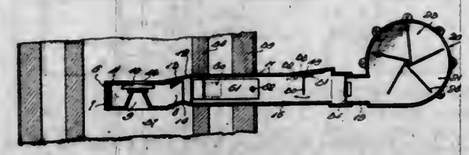
1. In a fire alarm system, a normally closed signal circuit, two normally closed house loops connected to said signal circuit, a resistance in one house loop to normally reduce the flow of current therethrough below that in the other house loop, thermal means for electrically connecting said house loops on an abnormal rise in temperature and thereby increasing the current in the high resistance loop, a transmitter for transmitting signals over said signal circuit, and means actuated by the increase in current for releasing the transmitter for signaling operation.

1,620,108. VALVE. JAMES FRANCIS KEY, Sierra Madre, Calif., assignor to First Trust and Savings Bank of Pasadena, trustee. Original application filed Oct. 2, 1922, Serial No. 591,778. Divided and this application filed Oct. 17, 1924. Serial No. 744,149. 4 Claims. (Cl. 251—134.)



1. In a valve to be attached to the end of a hose, the combination of a body with means for attaching the same to a hose and to the inflating nipple of a tire, a lever having a pivot attaching the same to the body for opening the valve, said body having a projection for engaging and positively guiding the lever at a point removed from the pivot, operating to prevent lateral movement of the lever, and relieve the pivot and lateral strain, said lever having means for engaging the projection to limit the swinging movement of the lever on its pivot.

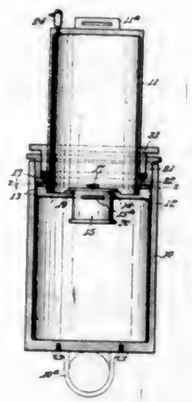
1,620,109. CHECK FOR GARAGE-DOOR-CLOSING MEANS. MICHAEL KIRNBAUER, Forest Park, Ill. Filed Jan. 25, 1926. Serial No. 83,519. 4 Claims. (Cl. 16—84.)



1. In an automatic sliding door closing means of the type described and in which automatic latching means is provided for holding the door in its open position in connection with means of the stored energy type tending to move the door to its closed position, the combination of a pair of inclined track rails secured in both vertical and horizontal spaced relation on the door, and a retarding means carried on the door frame intermediate of said rails and having successive operating engagement therewith.

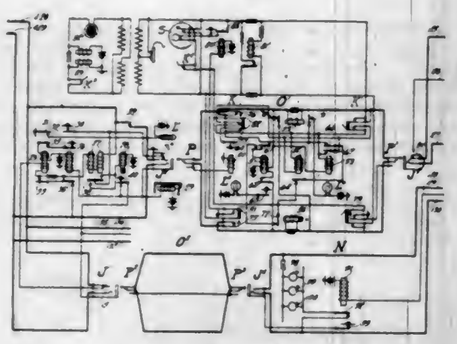
1,620,110. ICE-CREAM-DIPPER MOLD. HERMAN LANDMAN, Kansas City, Mo. Filed Mar. 8, 1926. Serial No. 93,121. 3 Claims. (Cl. 107—48.)

2. An ice cream mold consisting of a handle, a pair of dipper mold members, one of said members being secured to said handle and having side portions with inturned flanges on said side portions and the other of said members being removably held by said flanges and removably attached to the handle, and means operable from the handle to eject the contents of the mold.



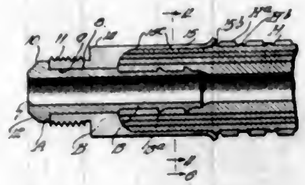
1,620,111. OIL-BURNING APPARATUS. EDWARD D. LEWIS, Elmira, N. Y. Filed Apr. 1, 1926. Serial No. 99,114. 7 Claims. (Cl. 158—28.)

1. An oil burning apparatus comprising a burner head having an oil inlet and an inlet passage for air under pressure, oil supply means for said inlet having a control



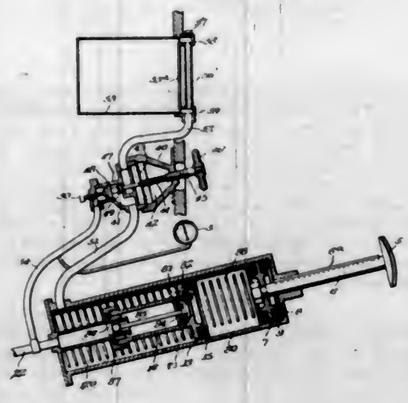
valve, angularly disposed pivotally mounted vanes in said air passage adapted to be successively engaged and operated by a blast of air therethrough, and operating connections between said vanes and said control valve.

1,620,112. SHOCK ABSORBER FOR VEHICLES. STEPHEN LEWIS, Martins Ferry, Ohio. Filed Jan. 12, 1926. Serial No. 80,799. 6 Claims. (Cl. 188—88.)



1. A shock absorbing device comprising two relatively movable fluid-containing members having their outer ends closed, and a valve intermediate said members for permitting the automatic transfer of fluid from one member to the other according to the direction of relative movement, said valve controlling a sole means of communication between said members being adapted to permit a more rapid transfer in one direction than the other.

1,620,113. AUTOMATIC TELEPHONE SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 16, 1921, Serial No. 452,840. Renewed July 20, 1925. 58 Claims. (Cl. 179—27.)

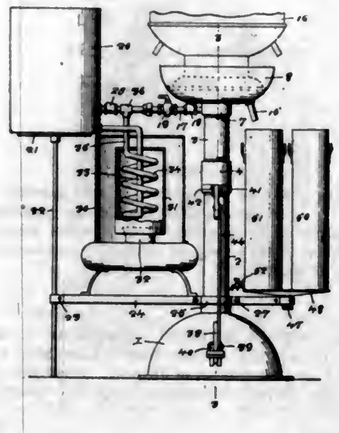


1. In a telephone system, a trunk line extending to an operator's position and provided with two branches, one of said branches normally disconnected, a visual signal for one branch and an audible signal for the other branch, means for seizing said trunk line and for operating said visual signal, and operator controlled means for connecting said other branch, said last means also effective to permit the next call over said trunk line to operate said audible signal without operating said visual signal.

1,620,114. HOSE FITTING. MALCOLM LOUGHEAD, Detroit, Mich., assignor, by mesne assignments, to Hydraulic Brake Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 23, 1922. Serial No. 531,141. 5 Claims. (Cl. 137—90.)

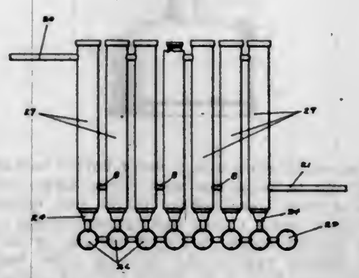
1. In combination a hose, and a plurality of spaced apart metallic rings having inner surfaces of greater width than their outer surfaces, encircling said hose and compressed thereupon, whereby the diverging sides of the rings cause the surface of said hose between adjacent rings to be distorted to hold the ring permanently in position thereupon.

1,620,115. HYDRAULIC BRAKE MECHANISM. FREDERICK J. MACKENZIE, Trenton, N. J. Filed Dec. 6, 1924. Serial No. 754,330. 16 Claims. (Cl. 188—152.)



8. In a hydraulic vehicle brake, a distributing cylinder having two liquid chambers therein, a piston displaceable in said cylinder, a brake device operatively connected to one of said chambers, a liquid reservoir, a connection between said reservoir and the other chamber, a normally open throttle valve included in said connection, and hydraulic means connected to the first chamber to actuate said valve to restrict the flow to said reservoir in accordance with the braking pressure in said first chamber and thereby retard the operation of said piston.

1,620,116. CANWASHER. DEDRICK A. MAANUM, Hancock, Minn. Filed Oct. 15, 1923. Serial No. 668,789. 12 Claims. (Cl. 141—7.)

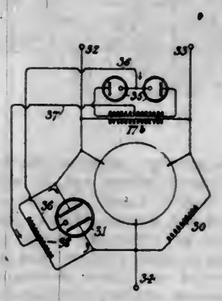


1. An apparatus for washing and sterilizing milk cans comprising a standard, a basin at the top thereof adapted

to support an inverted milk can, a spraying nozzle upstanding centrally in said basin and communicating with said standard, the interior of said standard being provided with a pump cylinder, a piston reciprocable therein,

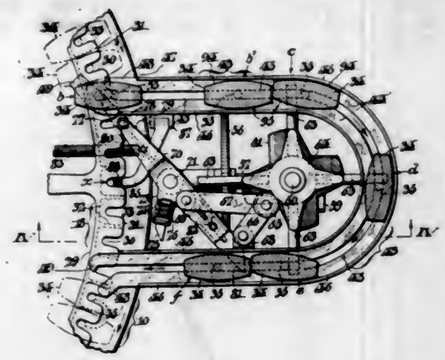
a hot water supply means connected to the upper end of said cylinder, means for reciprocating said piston, including a treadle carried by said standard and connected to said piston for projecting a spray of hot water through said nozzle into said can.

1,620,117. ELECTRIC WATER HEATER. GUSTAV N. MADSEN, Minneapolis, Minn., assignor of one-third to Carl R. Lindh and one-third to Eric B. Gustafson, both of Minneapolis, Minn. Filed Sept. 30, 1925. Serial No. 59,631. 1 Claim. (Cl. 219—39.)



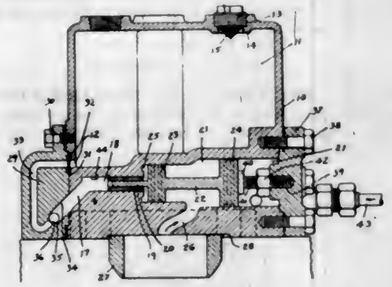
In an electrical water heater, the combination of a plurality of heating units, each comprising an electrical heating element, a pipe surrounding said element and insulated therefrom, a second pipe concentric with said first named pipe but spaced therefrom, a head carrying both of said pipes, a closure for the free end of the outer of said pipes, means for bringing electrical connections from said element to the exterior of said head, individual outlet boxes for each of said units with conduits therebetween to facilitate the inter-connection of said elements, pipe connections between the outer pipes of adjacent units, an inlet for the first of said units leading to the interior of the outer pipe and of an outlet for the last of said units leading to the interior of the outer pipe thereof, so water may be passed thru all of said outer pipes in series and heated by the elements in said individual pipes.

1,620,118. GOLF CLUB. GEORGE W. MATTERN, Dayton, Ohio, assignor to The Crawford, McGregor and Canby Company, Dayton, Ohio, a Corporation of Ohio. Filed May 15, 1922. Serial No. 560,931. 12 Claims. (Cl. 273—80.)



1. A golf club including a head portion, a tubular flexible non fibrous shaft and a fibrous handle section forming a continuation of said shaft formed independent of and subsequently attached to said head portion and capable of limited twisting action.

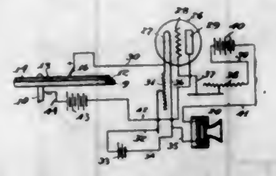
1,620,119. EXCITATION OF ELECTROLYTIC CONDENSERS. RALPH D. MERSHON, New York, N. Y. Filed July 3, 1920. Serial No. 393,914. 2 Claims. (Cl. 172—233.)



1. In an alternating current system, the combination with a motor having a plurality of energizing circuits, a source of substantially constant voltage connected with one of said circuits, an electrolytic condenser associated with another of said circuits and thereby subjected to varying voltage, of means dependent upon the substantially constant voltage of the first-mentioned circuit for exciting the condenser.

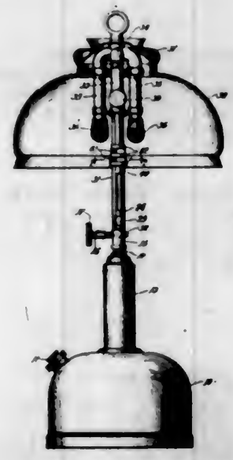
1,620,120. DRYING MACHINE. HOWARD MORSHEAD and HARRY H. WIGGLESWORTH, Philadelphia, Pa., assignors to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1924. Serial No. 709,606. 21 Claims. (Cl. 198—19.)

1. In a drying machine including an enclosure and means conveying forms therethrough in massed relation, coordinated means functional to withdraw and exteriorly separate consecutive forms, spacedly progress said forms, and return the same into the enclosure.



1,620,121. FLUID-OPERABLE LUBRICATOR FOR ENGINES. FRED K. MURPHY and RAYMOND W. RETTERER, Indianapolis, Ind. Filed Oct. 30, 1923. Serial No. 671,689. 3 Claims. (Cl. 184—55.)

1. In a fluid pressure operable lubricator, the combination of a common piston rod, a lubricant impelling piston secured thereto, a pair of power pistons also secured to said rod and having different pressure exposable areas, a chamber in which the power pistons are constantly subjected to fluid pressure, and another chamber in which but one of said power pistons is intermittently subjected to pressure whereby reciprocation of the pump piston is secured.

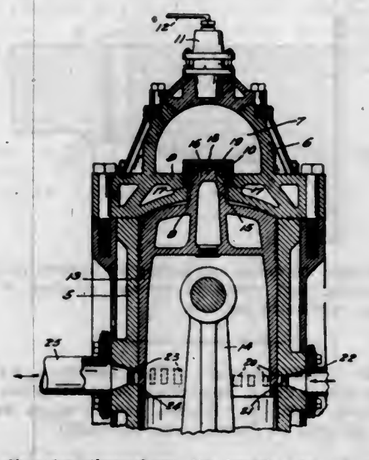


1,620,122. ELECTRIC PHONOGRAPH RECORD AND METHOD OF MAKING THE SAME. ARTHUR MUTSCHELLER, New York, N. Y. Filed May 1, 1923. Serial No. 635,868. 8 Claims. (Cl. 179—100.1.)

1. The method, herein described, of producing phonograph records to be used for varying the intensity of electric currents, which consists in producing a record member having a porous texture and having an ohmic resistance considerably greater than that of silver, causing said record member to absorb and hold within its pores an electrolyte containing a metal, subjecting said record member, thus carrying said electrolyte in its pores, to the action of an electric current and continuously

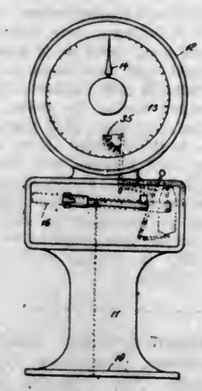
shifting the point of application of said electric current relatively to said record member, for the purpose of depositing metal into the pores of said record member, and finally removing the excess of electrolyte contained within the pores of the facing.

1,620,123. VAPOR BURNER. THEODORE NAGEL, Chicago, Ill., assignor to The Nagel-Chase Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 7, 1925. Serial No. 73,756. 5 Claims. (Cl. 67—50.)



1. The combination with a vapor burner having a generating tube in connection with a fuel supply source, of heat conducting means affixed to the tube comprising a flue of sheet metal having superimposed straps arranged edge to edge in double rows upon one side of the tube in spaced relation thereto and to each other, the straps being extended from walls which are bent around to embrace the tube upon the opposite and rear sides thereof whereby to deliver thereto heat resulting from impingement of a flame upon the strap edges, the disposition of the straps relative to the front side of the tube being such that a portion of the flame may also contact therewith when impinging upon the flue straps, substantially as described.

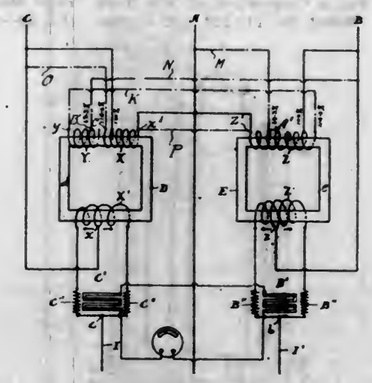
1,620,124. INTERNAL-COMBUSTION ENGINE. GEORGE P. NIELSEN, Seattle, Wash. Filed May 17, 1923. Serial No. 639,562. 6 Claims. (Cl. 123—32.)



1. An internal combustion engine cylinder having a combustion chamber and piston bore formed therein in spaced relation, a spacing member interposed between the combustion chamber and the cylinder bore, said spacing

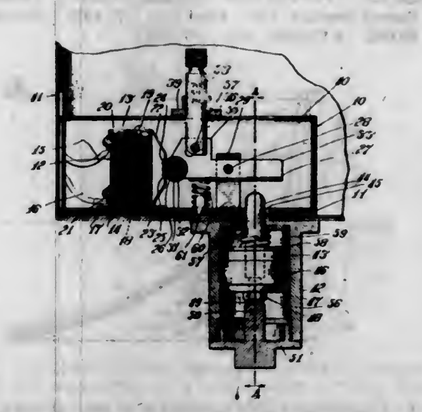
member having a tapered duct therethrough and in communication with the combustion chamber and the piston bore and a piston having a projection thereon of a uni-

form diameter throughout its length and of approximately the same diameter as the smallest diameter of the duct.



1,620,125. WEIGHING SCALE. LOUIS ASHLEY OSGOOD, Dayton, and ELMER E. WOLF, Springfield, Ohio, assignors, by mesne assignments, to International Scale Company, a Corporation of Illinois. Filed Apr. 17, 1920. Serial No. 374,774. 11 Claims. (Cl. 265—48.)

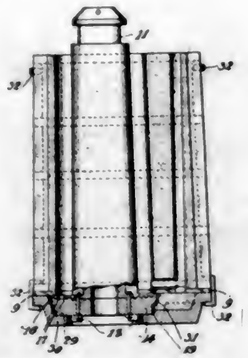
1. In a scale in combination a main scale beam, a dial housing, a dial therein and a pivotal indicator for the applied load, said dial having an aperture, a plurality of capacity weights, means for applying said weights to said beam, said means being adapted to permit one or more weights to be applied in any desired order and an indicating device within the dial housing and adapted to indicate through an aperture in the dial in a unit amount the aggregate weight value of the applied capacity weights.



1,620,126. ELECTRIC MEASURING INSTRUMENT. LOUIS A. PAINE, Toronto, Ontario, Canada, assignor to The Lincoln Meter Company, Limited, Toronto, Ontario, Canada. Filed Feb. 20, 1922. Serial No. 538,115. 5 Claims. (Cl. 171—309.)

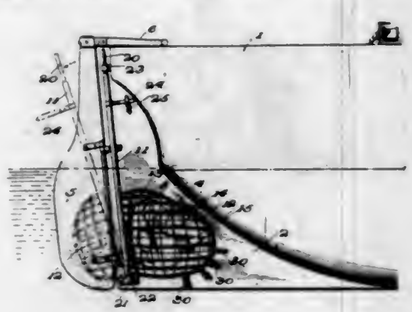
1. In an electric measuring instrument, the combination with a polyphase line circuit, of potential windings having taps arranged therein to be selectively connected with both phases of the line circuit to effect various degrees

of angular phase shift, and means affected by the fluxes induced by the voltages impressed on said potential windings for indicating volt amperes.



1,620,127. PRESSURE-ACTUATED CIRCUIT BREAKER. PAUL B. PARKS, Oak Park, and JOHN VAN VULPEN, Chicago, Ill., assignors to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed Mar. 8, 1923. Serial No. 623,608. 28 Claims. (Cl. 200—82.)

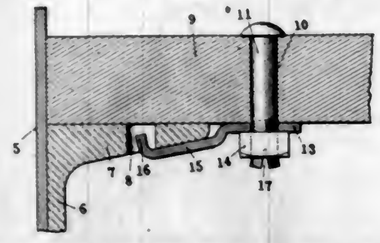
1. A circuit breaker comprising, in combination, a pair of spaced contact springs, a bridging member adapted to be interposed in the gap between said springs, a fluid pressure actuated device for moving said bridging member in one direction out of said gap, and manually operated means for moving the bridging member out of said gap in the other direction.



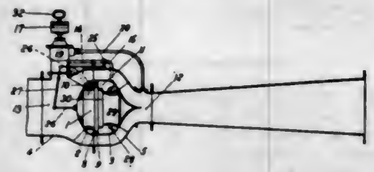
7. A circuit breaker comprising, in combination, a pair of angularly disposed spaced contact springs, having their adjacent extremities curved backwardly into the gap between such springs, and a rocking member provided at one end with a roller adapted to fit into the gap between said springs to complete the circuit, and movable in either direction from the gap by a rolling motion along one or the other of the curved spring ends; the spring end being flexed back to permit the roller to pass from the gap and subsequently engaging the roller and tending to hold the roller in this circuit breaking position.

1,620,128. ART OF CASTING INGOT MOLDS AND APPARATUS FOR SAME. JOHN E. PERRY, Sharon, Pa., assignor to Valley Mould & Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed May 14, 1924. Serial No. 713,123. 30 Claims. (Cl. 22—133.)

5. In a mold for casting ingot molds, the combination of a flask having a sand matrix therein, a core bar having a sand facing, a core bar base having a sand faced top and being rigidly secured to the core bar and having portions engaged by said flask to maintain said core bar in proper vertical alignment, and means engaging said flask and said core bar base to correctly position said core bar within said flask.



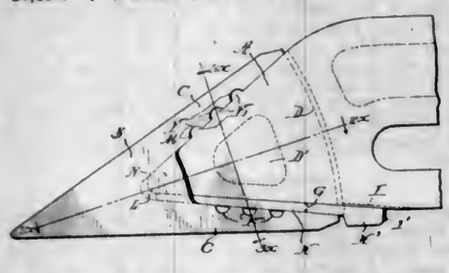
1,620,129. PROPELLER GUARD. GABULL PETERSON, Tarpon Springs, Fla. Filed Nov. 17, 1925. Serial No. 69,686. 4 Claims. (Cl. 115—42.)



1. A propeller guard comprising a pair of open-work guard members, separate means for removably and adjustably mounting each guard member on the hull of the boat in co-operative relation with the propeller thereof, each of said means comprising a shaft having a universal mounting on the boat, releasable means for holding the shaft in operative position, a sleeve rotatably and slidably fitted on the shaft and adapted to be pulled off of the shaft, each sleeve carrying a guard member, and releasable means for holding the sleeve in position on the shaft.

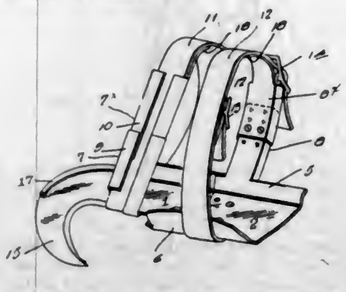
1,620,130. FLOOR CONSTRUCTION. FRANK H. PIETZSCH, St. Louis, Mo., assignor to Western Railway Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed July 5, 1924. Serial No. 724,282. 3 Claims. (Cl. 189—35.)

1. In a device of the class described, the combination with a support comprising a flange having a recess, of a floor board resting on said support, a bolt extending through said floor board and provided with a nut, and a lateral extension carried by said bolt, said extension projecting under the flange and having an integral upturned end entering said recess to prevent rotation of said extension relative to the bolt.



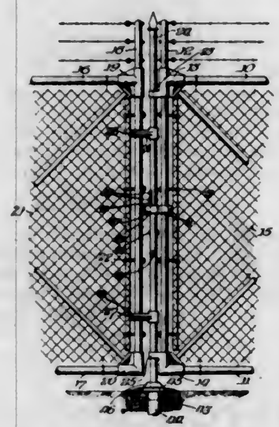
1,620,131. AUTOMATIC SELF-CLOSING VALVE. OWEN ALFRED PRICE, Kilmarnock, Scotland. Filed June 26, 1926, Serial No. 118,851, and in Great Britain June 27, 1925. 4 Claims. (Cl. 137—139.)

1. In an automatic self-closing valve, in combination with a fluid conduit including a main channel and a zone of less cross-sectional area, there being unequal pressures in said main channel and said zone, a valve-forming plunger movable axially in said channel in the vicinity of said zone, said plunger having its closing movement in the direction towards said zone, said plunger being subject on its rear face to the reaction of the flowing stream, a shell surrounding said plunger and spaced from the inner wall of said channel, a piston movable with said plunger and separating front and rear chambers subject in the open position of the valve to said unequal pressures, and means automatically operative on change of the conditions of flow to change the relative pressure conditions in said chambers.



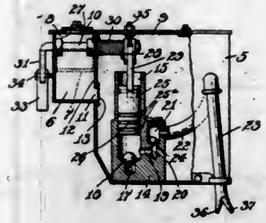
1,620,132. REVERSIBLE-POINT DIPPER TOOTH. CHARLES A. PSILANDER, Youngstown, Ohio, assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Jan. 25, 1926. Serial No. 83,484. 7 Claims. (Cl. 37—142.)

1. A tooth for excavating implements, comprising a base member and a tooth member assembled by relative longitudinal movement, and means resisting longitudinal



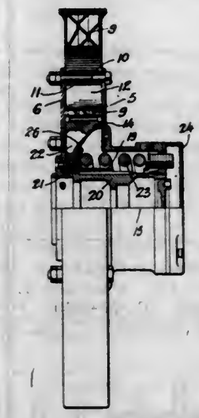
separation of said members, consisting of an offset formed on one member and a recess formed on the other member and entered by said offset; said members being constructed for relative movement transversely to the direction of assembly in order to enter the offset into the recess, and a key substantially filling the space left between the members by the transverse movement which brings the offset into the recess and resisting transverse movement in the opposite direction.

1,620,133. TOPPING AND PRUNING KNIFE. OTIS M. RANDOLPH, Kinsley, Kans. Filed Apr. 13, 1926. Serial No. 101,732. 3 Claims. (Cl. 30—9.)



1. A topping and pruning knife comprising a body having side flanges and also having at opposite sides a forward brace and a rear brace, each brace being flanged, a hook-shaped blade at the forward end of the body, and straps equipped with buckles and passed about the body and the major portions of the braces and disposed between the said major portions of the braces and the flanges thereof, whereby the straps are held to the braces.

1,620,134. LATCHING MEANS FOR GATES. FRED SCHLEY, Waukegan, Ill. Filed Mar. 18, 1926. Serial No. 95,719. 3 Claims. (Cl. 292—216.)

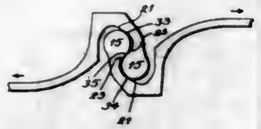


3. Fastening means for double gates comprising in combination a vertically movable rotatably mounted latch member, mountings for said latch member on one of the gates adjacent the upper and lower frame members of the gate, a plurality of forks fixed upon said latch member adapted to engage the cooperating gate, the said forks being spaced from each other, a catch member adapted to receive the lower end of the latch member when the gates are in closed position, and means whereby the said latch member is held out of engagement with the ground when the gates are in open position.

1,620,135. MINING-MACHINE-CHAIN LUBRICATOR. HERMAN L. SEEKAMP, Gillespie, Ill. Filed Apr. 20, 1925. Serial No. 24,369. 3 Claims. (Cl. 184—15.)

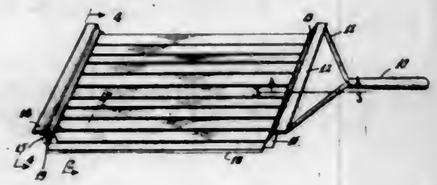
1. A chain oiler for mining machine cutters comprising an oil receptacle having an oil sump, an oil pump mounted in said sump and including a reciprocating piston, an oscillating shaft having a crank arm connected to said reciprocating piston, a spring for retracting said crank arm to move the piston on its suction stroke and means exterior of the receptacle connected to said shaft, engaged by a moving part of the machine for operating the piston on its forcing stroke.

1,620,136. COMBINED RESILIENT TRANSMISSION AND BEARING. BENJAMIN F. SEYMOUR, Washington, D. C. Filed Feb. 17, 1922. Serial No. 537,251. 6 Claims. (Cl. 152—45.)



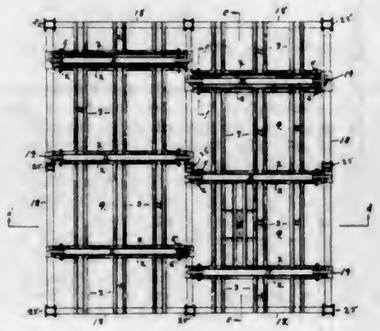
1. In a combined resilient bearing and drive for vehicle wheels, the combination of a hub member, a wheel rim member mounted to have limited radial movement on the hub member, said rim member having on one side an annularly arranged series of cam elements substantially triangular in outline situated in radial planes through the hub axis and with their apices pointing center-wards, a sleeve mounted to have axial movement on said hub member, and having cam elements co-operable with said rim cam elements, and a spring mounted on the hub member holding said cam elements in engagement permitting limited radial and circumferential movement between the respective elements and providing the bearing and drive, substantially as set forth.

1,620,137. SHEET PILING. FRED L. SIMON, Baltimore, Md. Filed Sept. 15, 1924. Serial No. 737,696. 4 Claims. (Cl. 61—62.)



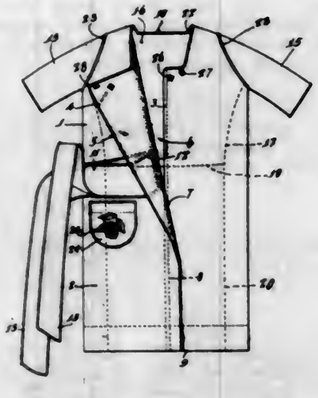
2. A wall of sheet piling composed of interlocking units of said piling, the interlock consisting of a recess and a

rounded edge for each piling with the edge of one piling coacting with the recess of an adjoining piling, and said



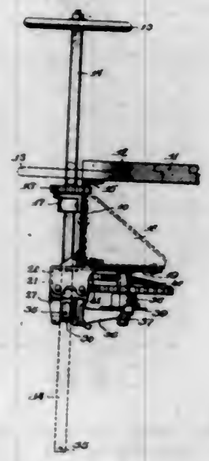
recess and edges being shaped to effect two lines of and one surface contact in each of said interlocks when said wall is under tension.

1,620,138. VEGETABLE AND FRUIT SLICER. PETER SOKOLOWSKI, Girardville, Pa., assignor of one-half to Mat Strack, Girardville, Pa. Filed Oct. 26, 1925. Serial No. 64,793. 3 Claims. (Cl. 146—210.)



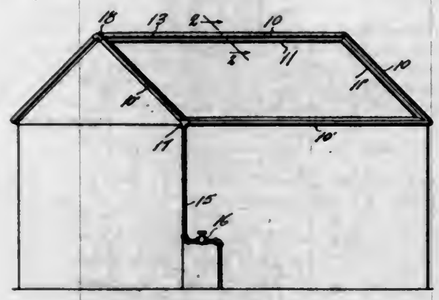
1. In an apparatus of the class described, spaced apart end members having openings therein, a plurality of shafts journalled near their extremities in said end members, said end members being held in spaced relation by said shafts, blade cutters rigidly attached to said shafts, connecting links rigidly fixed to said shafts, and control mechanism comprising a lever for simultaneously adjusting said blades, the free ends of said connecting links being operatively connected with said control lever.

1,620,139. FIREPROOF BUILDING. HENRY SORENSEN, San Francisco, Calif. Filed Dec. 7, 1925. Serial No. 73,717. 5 Claims. (Cl. 72—66.)



1. In the wedgeshaped band reinforcements of an infilled floor structure means connecting said band reinforcements with the supports of said structure, said means adapted to stretch said bands, whereby said band reinforcements are put into tension and interlocked with said supports before the infilling takes place.

1,620,140. MORNING GOWN. ANNIE W. STIMSON, Los Angeles, Calif. Filed Feb. 15, 1923. Serial No. 619,308. 2 Claims. (Cl. 2—74.)

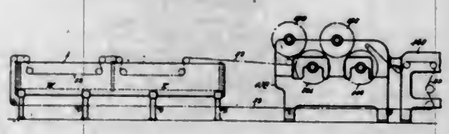


1. A morning gown having an opening extending down the front with an inner flap at the front and an outer flap extending across the front to a point at the side and overlapping the inner flap, with means for detachably connecting said flaps together at the neck of the gown, and a sash in the form of a band attached at about its middle point to the front of the garment substantially at the waist line and passing substantially straight across the front and around to the back of the gown, and means permanently attaching the flaps together below the said sash.

1,620,141. DROP SHAFT FOR HAND BRAKES. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed May 2, 1925. Serial No. 27,587. 3 Claims. (Cl. 74—113.)

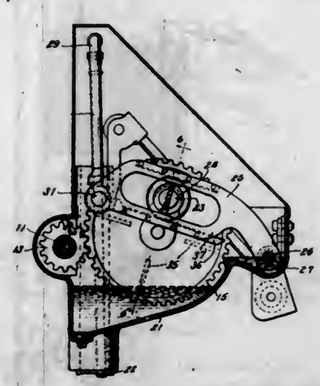
1. In a railway car brake a drop shaft mechanism consisting of a vertically movable shaft, upper and lower gear housing members, a stirrup on the lower member in which said shaft is guided, and a gate hinged to said stirrup and normally transverse in the axis of said shaft to support the latter upon its lower end, said gate adapted to be raised to permit the shaft to be moved past the same.

1,620,142. FIRE EXTINGUISHER. ALBERT F. THOMPSON, Dallas, Tex., assignor of one-half to Albert T. Walraven, Dallas, Tex. Filed Apr. 24, 1925. Serial No. 25,501. 2 Claims. (Cl. 299—58.)



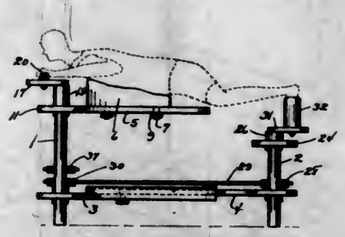
1. A roof water conductor comprising a sheet having a portion rolled and joined to form an elongated liquid conduit and having a portion projecting from said joint to provide a continuous longitudinal attaching flange, said conduit being provided with perforations in the lower sector of its rolled portion.

1,620,143. COLLAPSIBLE CHICKEN COOP. EDWIN S. TRIMBLE, Atchison, Kans. Filed Nov. 6, 1925. Serial No. 67,402. 4 Claims. (Cl. 220—19.)



1. A collapsible coop comprising a base, end and side members hingedly secured at their lower portions to the base, and a top, said top being operatively connected with the upper free portions of the end members whereby the same are adapted for simultaneous operation, a central partition hingedly secured at its lower portion on the base, and means for holding the side end members and the partition in their upright position.

1,620,144. LAUNDERING MACHINE. WILLIAM W. TRINKS, Bridgeport, Conn., assignor to Puliclean Manufacturing Corporation, Bridgeport, Conn., a Corporation of Delaware. Filed Apr. 18, 1923. Serial No. 632,854. 25 Claims. (Cl. 68—37.)

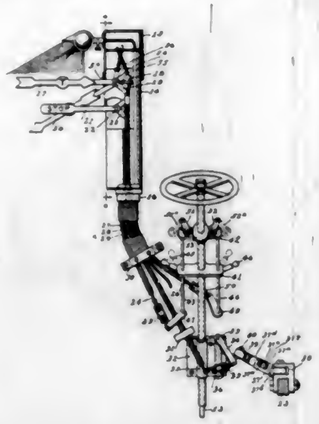


1. In a machine of the class described, the combination with laundering means, of a carrier operative to draw a connected towel through said laundering means and having a latch device movable therewith, a towel attachment, and means, mounted independently of the carrier, operative to actuate said latch device for effecting its connection with the towel attachment.

1,620,145. WINDMILL. CHANNING TURNER, Geneva, Ill., assignor to United States Wind Engine & Pump Company, Batavia, Ill., a Corporation of Illinois. Filed Aug. 4, 1924. Serial No. 730,036. 22 Claims. (Cl. 170—37.)

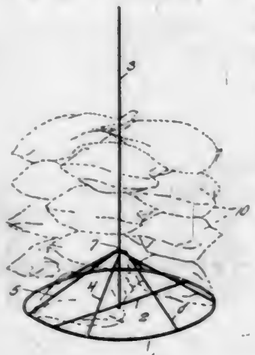
1. In a windmill, the combination with a wind wheel having a substantially horizontal shaft, of a pinion upon said shaft, a gear wheel in mesh with said pinion, a crank carried by said gear wheel, a rocker arm actuated by said crank, a roller or ring which is free to rotate on the crank and is in rolling contact with rocker arm, and a yoke which connects the free end of rocker arm to the plunger rod or pump rod.

1,620,146. SWIMMING-INSTRUCTING MACHINE. THOMAS A. WALTON, Scranton, Pa. Filed Dec. 6, 1923. Serial No. 679,042. 7 Claims. (Cl. 272—71.)



6. An apparatus of the character described including a pair of supporting members connected for longitudinal adjustment, arm exercising cranks mounted in the forward supporting member, leg exercising cranks mounted on the rear supporting member, means for laterally adjusting the said arm and leg exercising cranks including crank supporting brackets arranged for lateral movement on the supporting members, and means for operating the cranks at a uniform rate of speed.

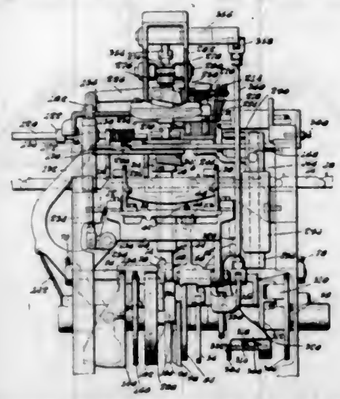
1,620,147. SIGNALING DEVICE. JOSEPH WEECH, Galesburg, Ill. Filed Aug. 4, 1924. Serial No. 729,895. 2 Claims. (Cl. 116—36.)



1. A signaling device for vehicles having in combination vertically movable turn arrow members adapted to indicate a change in the direction of the vehicle, a vertically movable stop signal member, a housing for normally enclosing said members when in a lower position and concealing the same from view, means for moving said members into an operative and indicating position, the same means including lever mechanism adjacent the steering post of the vehicle adapted to be manually op-

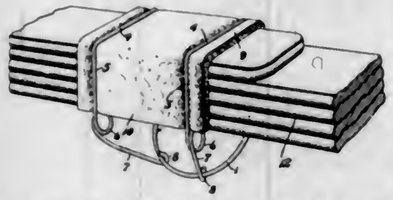
erated for moving the turn arrow members, mechanism operable through the brake for raising the stop member, and mechanism adapted to return the turn arrow members

to concealing position within the housing automatically by movement of the steering wheel in the direction indicated by the arrow.



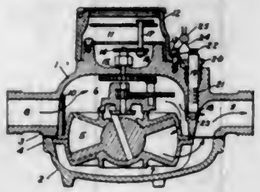
1,620,148. DISPLAY STAND. LEO LEON WILLIAMS, Portland, Oreg. Filed Nov. 24, 1925. Serial No. 71,126. 1 Claim. (Cl. 211—24.)

A display stand comprising a ring-like base, a brace rod extending diametrically across the ring-like base, an article receiving spindle having its lower end secured to the intermediate portion of the brace rod and extending upwardly therefrom, and a series of additional brace rods extending diametrically across the ring-like base, the free ends of the additional brace rods being secured to the ring-like base at diametrically opposite points, the intermediate portions of the additional brace rods being bent and intersecting one another, the intersecting portions of the additional brace rods being secured to the spindle at a point above the lower end thereof.



1,620,149. MACHINE FOR USE IN THE MANUFACTURE OF HEELS FOR BOOTS AND SHOES. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 19, 1920, Serial No. 359,798. Renewed June 21, 1924. 99 Claims. (Cl. 1—33.)

15. A slugging machine adapted to constitute one of a series of automatic machines for operating on heels, comprising means for slugging heels, means for automatically presenting heels to the slugging means, and

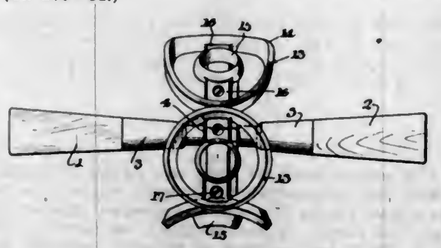


feeding means for automatically carrying the heels from the slugging machine in an orderly series to facilitate their delivery to another machine of the system.

1,620,150. SPRING OILER. FLOYD G. WITHROW, Grand Rapids, Mich. Filed Apr. 26, 1926. Serial No. 104,611. 3 Claims. (Cl. 184—1.)

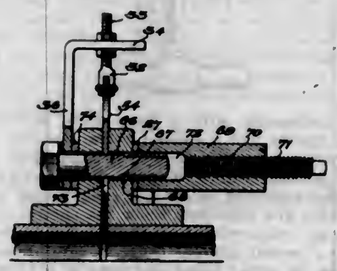
1. In combination with a leaf spring, a member of fabric located over the top and against the sides of the leaf spring, and a clamping member formed from a single piece of wire located over the fabric and having two sections spaced apart to clamp against said fabric, combined with means for connecting the lower ends of said clamping member together, said means extending underneath the leaf spring.

1,620,151. LIQUID METER. ROBERT S. BASSETT, Buffalo, N. Y. Filed Aug. 28, 1925. Serial No. 53,194 1 Claim. (Cl. 73—98.)



A liquid meter comprising a liquid operated device, an indicating register operated by said device, a casing for said device including a bottom section and a top section separable from the bottom section, said top section having inlet and outlet openings, a compensating by-pass adapted to pass a portion of the liquid to be measured around said device and means to regulate the flow through said by-pass; substantially as and for the purpose described.

1,620,152. METHOD OF PRESERVING WOOD AND SOLUTIONS THEREFOR. LEO P. CURTIN, Freehold, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed June 24, 1925. Serial No. 39,391. 13 Claims. (Cl. 134—78.6.)



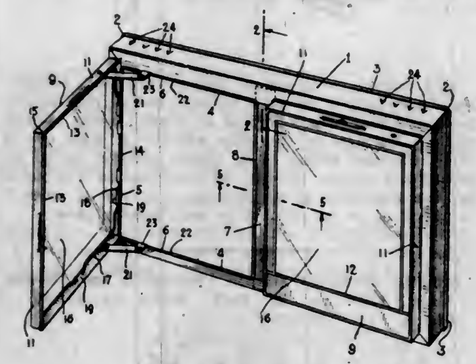
1. Method of preserving wood comprising impregnating it with an aqueous solution containing water-soluble components capable of reacting, on exposure to the atmosphere, with progressive increase in basicity, to deposit within the body of the wood a compound of low solubility and high toxicity.

1,620,153. CUTTER. ROLLAND CURTNER, Marion, Ind. Filed Aug. 26, 1925. Serial No. 52,641. 1 Claim. (Cl. 107—51.)

In a device of the character described, a supporting shaft, a wheel mounted for rotation on the shaft, a band adapted to be positioned on the wheel, means for removably securing the band to the wheel, a plurality of cutting members, each of said cutting members having a bar formed with an opening, the openings in the bars adapted to receive securing screws to removably secure the cutters to the bars, and handles for operating the device.

1,620,154. METHOD AND APPARATUS FOR REPAIRING FLUID CONTAINERS. EUGENE C. FURMAN, Newport News, Va., assignor of forty-nine per cent to Edmund F. Heard, Hampton, Va. Original application filed Mar. 30, 1925, Serial No. 19,452. Divided and this application filed Aug. 6, 1925. Serial No. 48,657. 54 Claims. (Cl. 137—99.)

1. The method of repairing leaks applicable to conventional containers without the necessity of relieving the container of its interior pressure which includes injecting a sealing medium into the leak at a pressure greater than that within the container, and preventing escape of the sealing medium exteriorly of the container.



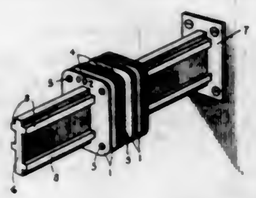
1,620,155. ATTACHMENT FOR OIL SWITCHES. JOHN DE HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,880. 3 Claims. (Cl. 183—45.)

1. A device of the character described comprising a container having two openings therein, and baffles in said container extending from opposite sides thereof and forming a tortuous passage between said openings, said baffles having apertures therein arranged to permit liquid in the

container to drain to one of said openings when the container is in one position and to drain to the other of said openings when the container is in an inverted position.

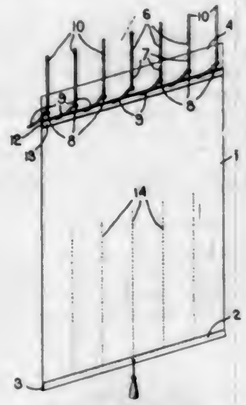
1,620,156. DUPLEX CLOSURE FOR DISPLAY CONTAINERS. HENRY HERMANI, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed June 10, 1925. Serial No. 36,200. 5 Claims. (Cl. 220—82.)

1. A closure for display containers, including an open frame having a cross bar consisting of a separate strip of material arranged intermediate the ends of the frame to divide the opening into two portions, a cover hinged to each end of the frame, the cross bar and covers cooperating to close the frame, the outer and inner edges of the frame and the side edges of the cross bar having beads or tubular bearings, and reinforcing wires held in the bearings for supporting the cross-bar and connecting it to the frame.



1,620,157. BELT BUCKLE. JOSEPH KNISTROM, Attleboro, Mass., assignor of one-half to Emil L. Johnson and one-half to Olof Lundsten, both of Attleboro, Mass. Filed July 22, 1925. Serial No. 45,246. 2 Claims. (Cl. 24—191.)

1. A buckle comprising a body portion having a front plate with side belt guiding flanges, a bail member to which the end of the belt may be secured pivotally

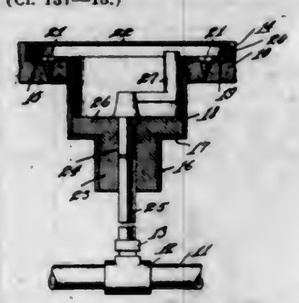


mounted between said flanges, said bail having a portion between the pivotal mounting extending at right angles to the plane of the bail, said portion having a slot formed therein and a sheet metal gripper member folded into tubular cam shape with its ends disposed at each side of said right angularly extending portion and a tongue on said gripper loosely looped through said slot to permit a relative motion of said bail and gripper for the latter to bind the belt against the body, the ends of said gripper member on each side of he slotted portion acting to limit the relative movement of the bail and gripper members.

1,620,158. LAUNDRY CHECK. EDWIN LANE, New York, N. Y., assignor to Carolyn Laundry, New York, N. Y., a Corporation of New York. Original application filed Apr. 24, 1925, Serial No. 25,593. Divided and this application filed Nov. 16, 1925. Serial No. 69,555. 3 Claims. (Cl. 40—20.)

1. A marker check for the purpose described, comprising a substantially flat-plate having a plurality of laundry piece attaching means located at spaced points entirely around the edges of the plate whereby at least one of said attaching means is in proper position to be attached to a laundry piece in the same position it is picked up, and regardless of the position it is held in when it is picked up to be attached to said laundry piece.

1,620,159. WINDOW SHADE. SAMUEL S. LEVY, Boston, Mass. Filed Apr. 23, 1925. Serial No. 25,234. 4 Claims. (Cl. 156—25.)



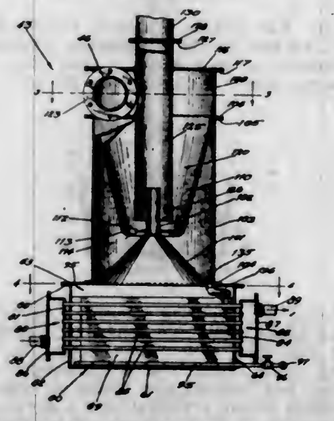
1. A window shade comprising a body member having a plurality of apertures adjacent its upper end, the portion of the shade beyond the apertures being adapted to be wound about a shade roller and a plurality of tape members, one for each aperture secured to the shade between the apertures and the end of the shade, said tape members being adapted to be wrapped around the shade roller and passed through said apertures thereby to detachably secure the shade to the roller.

1,620,160. HOSE OR SOCK. ALEXANDER JAMES MCCALLUM, Little Falls, N. Y. Filed Aug. 5, 1925. Serial No. 48,319. 3 Claims. (Cl. 2—240.)

1. A sock or hose, the upper end portion of which is knitted and composed wholly of elastic woolen yarn and has a seam joining downwardly converging edges of said upper end portion so that the upper end portion of the leg is elastic and decreases in diameter upwardly, said sock being of a length adapting said decreasing upper end portion to snugly fit the lower leg of the wearer above the largest part of the calf and hold the sock or hose up in position on the leg.

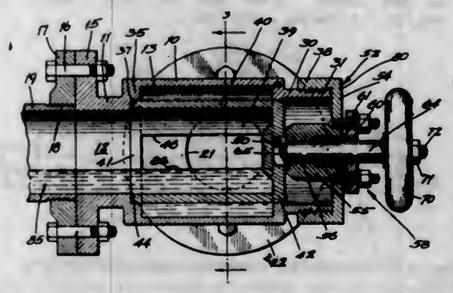
1,620,161. WATER KEY. SAMUEL MCDANIEL, Knoxville, Tenn. Filed Apr. 13, 1925. Serial No. 22,890. 1 Claim. (Cl. 137—13.)

The combination with a floor having a counter-sunk opening therein and a conduit below the floor having a valve with an upwardly directed socketed stem, a tubular member disposed within the floor opening and having an upper flange secured within the counter-sunk portion of the opening and depending below the opening, said tubular member being reduced in diameter below the opening to form a second internal flange, a cover removably attached to the upper flange and lying in the plane of the upper face of the floor, a rotatable centrally apertured plug disposed within the reduced portion of the tubular member and having a supporting flange resting on the internal flange, a rod having its lower end disposed in the socketed valve stem and its upper end disposed in the lower portion of the aperture of the plug, and a key in the upper portion of the aperture.



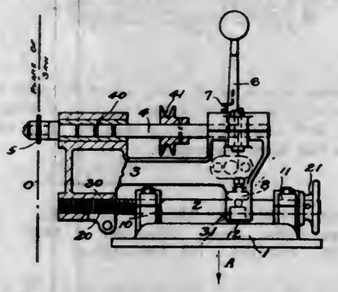
1,620,162. ELASTIC STRAPPING. HORACE J. MARTIN, Brookline, Mass., assignor, by mesne assignments, to Live Leather Products, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 30, 1925. Serial No. 19,303. 1 Claim. (Cl. 154—48.)

An elastic strapping for embodiment in articles of personal wear comprising a body portion of elastic webbing, front and back coverings of fabric and leather secured to opposite sides of the elastic webbing by adhesive and to one another at opposite margins of the elastic webbing by adhesive, the front and back coverings in contact with



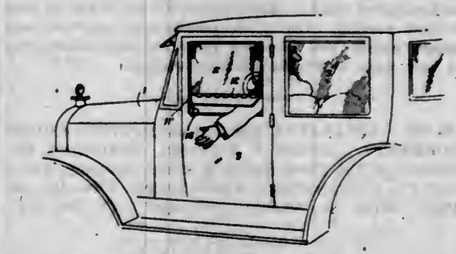
the elastic webbing having relatively fine corrugations or wrinkles due to contraction of the webbing and having relatively deeper and coarser ruffles throughout a substantial width beyond the elastic webbing due to contraction thereof.

1,620,163. PROCESS OF AND APPARATUS FOR REFINING PETROLEUM. FRANK A. MILLIFF and JOHN A. MILLIFF, Los Angeles, Calif. Filed Jan. 11, 1926. Serial No. 80,502. 4 Claims. (Cl. 196—139.)



1. A process of refining petroleum comprising: applying heat to the petroleum to drive off hydrocarbon vapors therefrom; cooling the mixture of vapors thus formed to a predetermined temperature; causing said vapor mixture to suddenly expand and rotate at an accelerating speed over a given distance to separate out condensate formed by cooling the vapor mixture; collecting said condensate; and causing said vapor mixture to impose a partial vacuum upon said condensate which communicates with said vapor mixture.

1,620,164. ADJUSTABLE WEIR. FRANK A. MILLIFF and JOHN A. MILLIFF, Los Angeles, Calif. Filed Jan. 11, 1926. Serial No. 80,582. 6 Claims. (Cl. 137—21.)

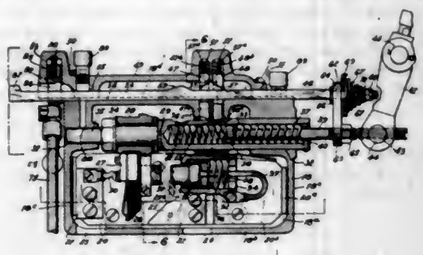


3. In an adjustable weir, the combination of: a body which has a central chamber, intake and outlet openings therefrom, an annular rotor seat formed about said inlet opening, an assembling opening opposite said inlet opening, and an annular rotor guiding seating said assembling opening; a cylindrical rotor adapted to rotatably seat in said rotor seat and be guided by said guiding seat and having a chamber which communicates with said inlet opening and a weir opening which communicates between said rotor chamber and said body chamber; closure means for said assembling opening; and means mounted upon said closure means for manually rotating said rotor, to dispose said weir opening at different levels.

1,620,165. SAW-TOOTH GRINDER. ELIJAH C. OBR, Seattle, Wash. Filed Jan. 13, 1926. Serial No. 80,900. 5 Claims. (Cl. 76—40.)

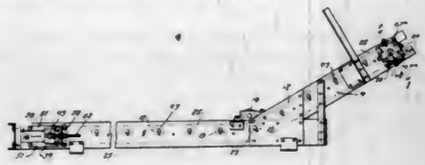
1. A saw grinding machine comprising a base, an adjusting pivot bar journaled in said base to turn and to permit lengthwise movement thereon, a frame having journaled therein a shaft carrying a grinding disk, said frame being mounted upon the said pivot bar and having threaded engagement therewith whereby the said frame may be adjusted lengthwise of the bar.

1,620,166. VEHICLE SIGNALING WINDOW. RALPH D. PARKER, San Francisco, Calif. Filed Apr. 14, 1925. Serial No. 22,997. 3 Claims. (Cl. 296—44.)



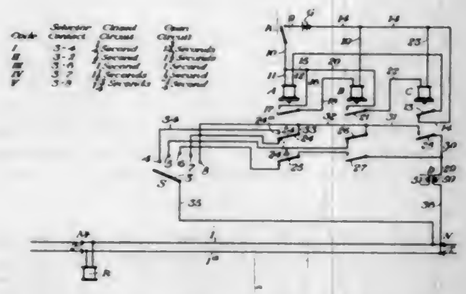
2. In an enclosed road vehicle, a window provided with a vertical sheet of glass, a panel hinged at the lower edge of the glass to open outwardly, and a pivoted plate arranged for sustaining the panel in open position at one end only of the panel and forming a shield against a draught blowing from the direction of said end toward the opposite end, said plate being collapsible under said panel to a position substantially in the plane of the glass.

1,620,167. SWITCH MECHANISM. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Feb. 13, 1922, Serial No. 536,296. Divided and this application filed May 25, 1925. Serial No. 32,736. 10 Claims. (Cl. 200—78.)



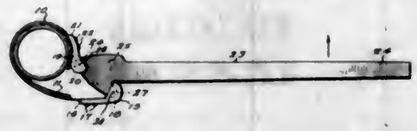
1. A snap switch comprising a pair of contacts, a reciprocable member which carries one of said contacts, means for locking said member against movement in

either direction, a pair of compression springs carried by said member, a thrust element interposed between and engaging one of said springs to compress it when moved in either direction, means for moving said thrust element,



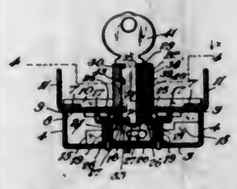
and means connected to and moved by said thrust element moving means for operating said locking means to release said contact carrying member after one of said springs has been compressed.

1,620,168. ENDLESS-BELT CONVEYER. JAMES W. SILVER, Ogden, Utah. Filed Oct. 6, 1925. Serial No. 60,823. 3 Claims. (Cl. 198—195.)



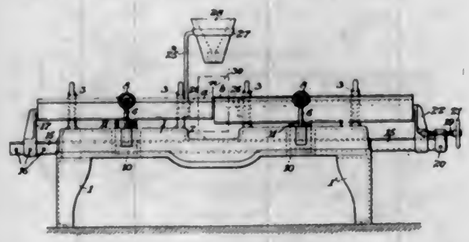
1. In endless conveyers, the combination of paired transversely spaced head and tail sprocket wheels, a head and a tail pulley roller respectively associated with and mounted for slight differential rotation relatively to the same, an endless conveyer belt reeving over said rollers, paired sprocket chains extending along the sides of said belt and reeving over a complementary pair of said sprocket wheels, and laterally projected bars connecting said belt with said side sprocket chains.

1,620,169. APPARATUS FOR TRANSMITTING CODED CURRENTS. ANDREW J. SORENSEN, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1926. Serial No. 84,592. 7 Claims. (Cl. 246—34.)



1. In combination with a stretch of railway track, a series of relays operating in cascade, a source of current, and means for connecting said source with at least one rail of said section in series with a contact on at least one of said relays.

1,620,170. PIPE WRENCH. THOMAS E. STEPHENSON, Harrisburg, Pa., assignor of forty one-hundredths to Herman Stephenson, Wyomissing, Pa. Filed Dec. 23, 1925. Serial No. 77,331. 4 Claims. (Cl. 81—64.)

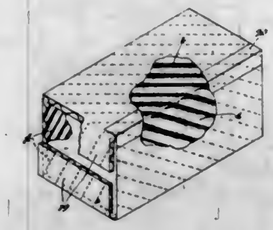


1. A device of the character described comprising a resilient clamping band having an inner end portion formed substantially circular and an outer end portion extending outwardly a substantial distance from the main body of the band, a socket secured to each end of said band, and an integral handle having a transversely enlarged head provided at opposite edges with outwardly extending integral lugs corresponding generally in arrangement to and adapted to be received in said sockets.

1,620,171. BAG LOCK. FRANK T. STUART, Maplewood, N. J., assignor to The R. Neumann Hardware Co., a Corporation of New Jersey. Filed Mar. 24, 1925. Serial No. 17,878. 2 Claims. (Cl. 70—2.)

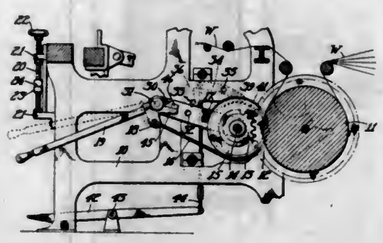
1. A bag-lock comprising a casing, a depressible hasp-engaging means within said casing, an upwardly and exteriorly projecting push-member secured to said hasp-engaging means, key-actuated means movable to obstruct or release said hasp-engaging means for operation, said push-member having a vertical bore, a key-receiving barrel rotatable in said bore having a longitudinal key-slot open along one side thereof, said barrel having at its lower extremity a reduced axial extension journaled in said hasp-engaging means, said barrel having intermediate its ends a reduced portion providing an annular space between the same and the walls of said bore and a stop-pin fixed in said push-member to project into said annular space in predetermined position to match with a selectively located clearance notch of a proper key inserted in said barrel.

1,620,172. RAIL-CLAMPING APPARATUS. ALPHONSO TAUBMAN, Birmingham, Ala., assignor to Metal & Thermit Corporation, Carteret, N. J., a Corporation of New Jersey. Filed Apr. 28, 1926. Serial No. 105,122. 8 Claims. (Cl. 22—1.)



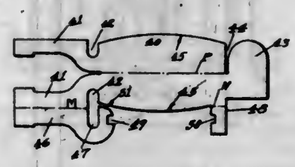
1. Apparatus for clamping rails of various types for welding operations, comprising a supporting frame, spaced standards on said frame having substantially vertical and horizontal aligning faces to engage and align the tread and gauge faces of the rails, means carried by the frame to lift the rails into engagement with the standards, means for forcing the rails laterally against the standards, and means for exerting pressure longitudinally of the rails.

1,620,173. OIL-WELL-TUBING DRAINER. JEROME C. TAYLOR, Huntington Beach, Calif. Filed Apr. 22, 1926. Serial No. 103,813. 2 Claims. (Cl. 103—221.)



1. The combination with a pump tube, of a normally closed drainage valve mounted in the pump tube, a friction device slidably mounted upon the pump tube and adapted to engage a well casing in which the tube is inserted, means limiting the sliding movement of said friction device relatively upward on the pump tube, a member engaged by said friction device upon a relatively upward movement of the pump tube causing the opening of said valve, and a spring normally engaging said member to resist the movement thereof.

1,620,174. CARTON. JOSHUA WAGNER, Brooklyn, N. Y. Filed May 20, 1920, Serial No. 382,724. Renewed July 31, 1926. 5 Claims. (Cl. 229—3.5.)

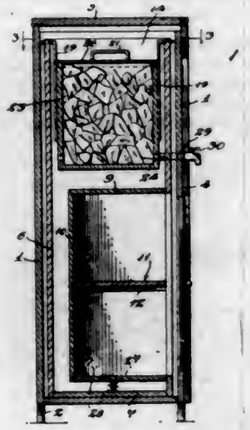


5. A box-like paper container formed of a corrugated filler having a covering or binder, all the corrugations of the filler being parallel, the lines marking the juncture of the walls being scored and the corrugations extending diagonally so that when the box is assembled the corrugations will afford support in a vertical as well as a horizontal direction and the scored lines will not be at right angles to or parallel with the corrugations.

1,620,175. REVERSING MOTION FOR LOOM LET-OFFS. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 27, 1925. Serial No. 46,282. 10 Claims. (Cl. 139—113.)

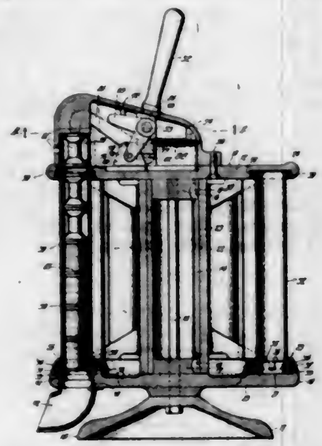
1. In a let-off mechanism for a loom having a warp delivery means and a friction surface operatively connected therewith, a friction band cooperating with the friction surface to retard movement of the warp delivery means, normally stationary means to support said band and hold the same in close contact with the friction surface, and means to move said band as a whole in one direction about the axis of the friction surface to an abnormal position to slacken said band and in the opposite direction to tighten said band while in the abnormal position and to thereafter restore said band to normal position.

1,620,176. DOBBY FINGER FOR LOOMS. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1926. Serial No. 89,461. 11 Claims. (Cl. 139—74.)



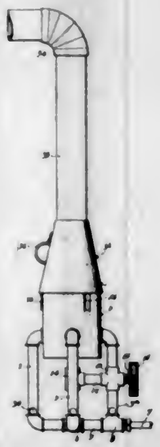
1. A loom dobby finger having a main portion folded on itself and having integral portions projecting therefrom provided with slots, and a peg run section having lugs to lie in the slots to be restrained against vertical movements, said peg run section being engaged on the sides thereof by the folded portions of the finger.

1,620,177. REFRIGERATOR. MARKUS WALINT, Endicott, N. Y. Filed Mar. 18, 1924. Serial No. 699,086. 3 Claims. (Cl. 62—57.)



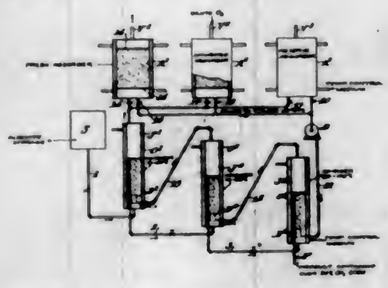
3. A refrigerator comprising outer and inner casings, a receptacle suspended in said inner casing and provided with ice compartments, the walls of said receptacle being

spaced from said inner casing, storage compartments below said receptacle and spaced therefrom, and drain



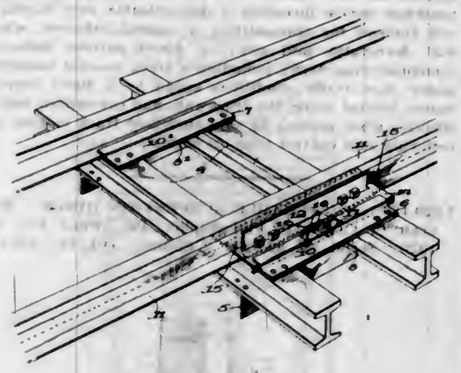
openings in said ice compartments whereby the drip water therefrom flows down over said storage compartments.

1,620,178. DISPENSING DEVICE. ELEANOR O'B. WARWICK and ROGERS M. WARWICK, Eastlake, Fla. Filed July 14, 1921. Serial No. 484,602. 4 Claims. (Cl. 211—8.)



1. A dispensing device comprising a frame, a drum rotatably journaled in the frame, a plurality of containers for spools wound with thread carried by the drum, the containers being disposed parallel with and equidistant from the rotary axis of the drum, each container having discharge and refilling openings, means adjacent each discharge opening for yieldingly preventing the spools from passing out through the discharge opening, the frame having an aperture with which any of the refilling openings may be registered, and means for successively discharging the spools of any one of the containers comprising a housing secured to the frame having an opening through which an empty spool of substantially the same size as those in the container may be passed into the housing, but which will reject a larger spool, a slide mounted in the housing for aligning the spool with the aperture in the frame, a plate slidably mounted in the frame for closing the aperture in the frame, the plate supporting the empty spool when the spool is aligned with that aperture, a latch member for locking the plate against displacement, an arm pivotally journaled in the slide, the arm cooperating with an empty spool positioned by the slide, if the spool is of substantially the same size as the spool in the container, to unlock the latch member from the plate, means for withdrawing the plate from beneath the empty spool, and means for forcing the spool into the container positioned below the aperture in the frame.

1,620,179. DENTIST'S FURNACE. ROY M. WHITE, Riverside, Calif. Filed Aug. 2, 1926. Serial No. 126,461. 13 Claims. (Cl. 263—2.)

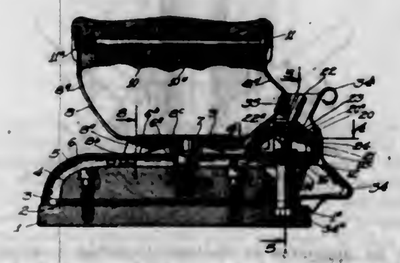


1. In a dentist's furnace, the combination of a shell, a plurality of burners mounted in the shell in a position such that the flames from the burners converge upon a point within the shell, and a platen for supporting a molding flask with means for supporting the platen within the shell.

1,620,180. PROCESS AND APPARATUS FOR CONDUCTING CHEMICAL REACTIONS. CHARLES O. YOUNG, Elmhurst, N. Y., and CLARENCE J. HERRLY, Pittsburgh, Pa., assignors to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed June 20, 1923. Serial No. 646,593. 10 Claims. (Cl. 260—116.)

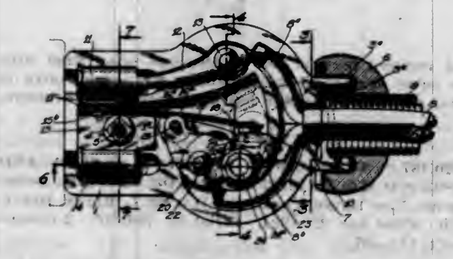
1. Process of conducting chemical reactions, comprising the carrying on of chemical reactions in a reaction zone, alternately passing effluent gases from said reaction zone through activated carbon to absorb materials contained in said gases and removing such materials from said activated carbon by a current of reagent gas passing to said reaction zone.

1,620,181. TWIN STEEL CROSSTIE. JAMES ASHMAN, Central City, Pa. Filed Nov. 16, 1926. Serial No. 148,662. 5 Claims. (Cl. 238—57.)



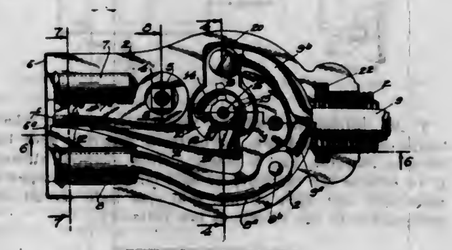
1. A device as set forth, including a rail chair composed of a base plate with superimposed clips, fish plates slidable beneath said clips and engageable with the base plate, and filler plates slidable beneath certain of said clips in overlapping engagement with the fish plates, a portion of one terminal of each plate being extended to limit inward movement of the plate.

1,620,182. GAME TRAP. GEORGE A. BARNARD, near Princeton, Nebr. Filed Nov. 4, 1926. Serial No. 146,098. 4 Claims. (Cl. 43—88.)



1. In an animal trap, a frame having sides of relatively wide strap iron, a pair of jaws within said frame and positioned immediately beneath the upper edges of said frame, said jaws being spring pressed toward each other, a trigger pivotally secured to said frame in the bottom portion thereof, and an anti-friction device on said trigger.

1,620,183. FLATIRON. MARTIN C. BERSTED, San Diego, Calif. Filed Sept. 28, 1922. Serial No. 591,094. 7 Claims. (Cl. 236—7.)

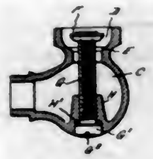


1. In a flat iron, a support, a stationary thermostat member positioned relative to said support, a yieldable thermostat member mounted on said stationary thermostat member, a fluid heat expansible material positioned in said stationary thermostat member adapted to engage and exert a force on said yieldable thermostat member, and a circuit breaking means positioned contiguous to and adapted to be actuated by said yieldable thermostat member.

1,620,184. AUTOMATIC ELECTRIC CONNECTION PLUG FOR ELECTRIC HEATING APPARATUS. MARTIN C. BERSTED, San Diego, Calif. Filed Apr. 18, 1923. Serial No. 632,865. 9 Claims. (Cl. 200—138.)

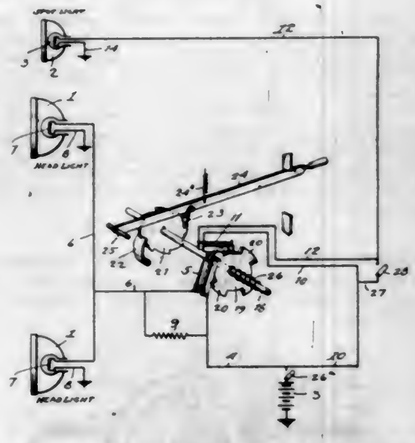
1. In an automatic electric plug, a casing, a thermostat member adapted to be warped by heat, positioned in said casing and provided with a contact member near one end thereof, a contact member support pivotally mounted in said casing and provided with a contact member adapted to engage the contact member of said thermostat member, an adjusting lever secured to said contact member support and extending through said casing, and a relative-temperature indicating finger positioned on the outside of said casing and shiftable with the end of said adjusting lever.

1,620,185. AUTOMATIC ELECTRIC CONNECTION PLUG. MARTIN C. BERSTED, San Diego, Calif. Filed Aug. 30, 1923. Serial No. 660,151. 4 Claims. (Cl. 200—138.)



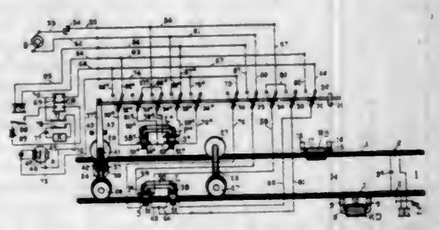
1. In a thermostatically controlled electric connection plug, a casing, a plate thermostat member secured at its one end within and at the one end of said casing and provided at its opposite free end with a contact, and a spirally constructed contact member rotatably mounted within said casing adjacent the free end of said contact and adapted to be engaged thereby, the plane of movement of said plate thermostat member and the plane of the spiral of said spirally shaped contact member being parallel with each other permitting a maximum contact between the contact of said thermostat member and the contact portion of said spirally shaped contact member at all times.

1,620,186. SHUT-OFF VALVE WITHIN BODY OF FIXTURE. LEON BLOCH, Cleveland, Ohio, assignor to The Republic Brass Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 12, 1924. Serial No. 706,136. 1 Claim. (Cl. 277—62.)



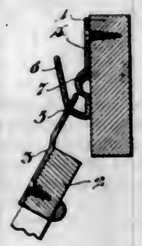
A faucet comprising two valve chambers, one of said chambers having an internally threaded boss formed in-

tegral therewith and a recessed portion adjacent said boss, a threaded stem carrying a valve at its inner end, its outer end being slotted and adapted to fit into



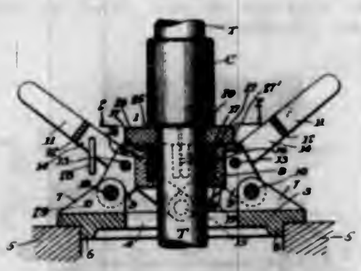
said recessed portion, said slotted end being flush with the outer surface of said chamber when said valve is open, said other chamber having a service valve therein.

1,620,187. AUTOMOBILE LIGHTING SYSTEM AND SWITCH MECHANISM THEREFOR. PAUL H. BURKHART, New Haven, Conn., and WALTER L. BAYNE, Henry, Ill. Filed Apr. 22, 1924. Serial No. 708,276. 2 Claims. (Cl. 171—97.)



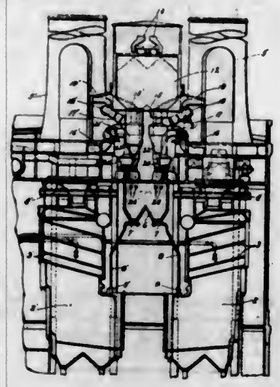
1. An automobile lighting system, embodying electric lamps of high and low intensity, a separate spot light, circuits therefor, and a single switch adapted alternately to reverse the intensity of said lamps and to open and close said spot light circuit, said spot light circuit being energized with the circuit of low intensity.

1,620,188. TRAIN CONTROL. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Oct. 25, 1923. Serial No. 670,701. 26 Claims. (Cl. 246—63.)



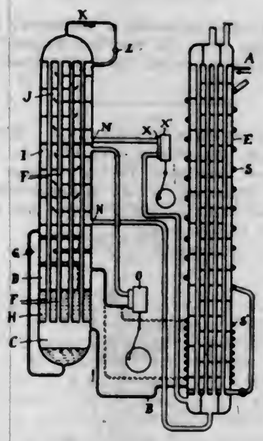
1. In an automatic train control system, the combination of a normally energized control relay on a railway vehicle and means for deenergizing and again restoring said relay from the trackway through an intervening air-gap comprising, an alternating current influence communicating device including a source of alternating current carried on the vehicle and an inert traffic controlled trackway device including a magnetizable core having a coil thereon for transmitting a control influence which will deenergize said relay, a direct current influence communicating device including a track magnet energized under clear traffic conditions ahead by a direct current source located along the trackway, and car-carried means effective when passing by said energized track magnet for restoring said control relay to normal.

1,620,189. DETACHABLE SUSPENSION HINGE. WILLIAM C. CANFIELD, Philadelphia, Pa. Filed Feb. 18, 1926. Serial No. 89,020. 2 Claims. (Cl. 16—172.)



1. A detachable suspension hinge comprising an upper member having a flat body adapted to be secured to a fixed frame, a hook formed on the lower edge of the body, and a hump formed in the body above the heel of the hook and projecting into the space between the body and the upwardly extending part of the hook; and a lower member having a flat body adapted to be secured to the frame to be suspended, an extension on the lower member having an eye near its upper end adapted to register with the hook on the upper member, the portion of the extension above the eye being greater than the distance between the hump and the upwardly extending part of the hook, whereby the hinge cannot be separated until the suspended frame is swung to a certain angle relative to the fixed frame.

1,620,190. APPARATUS FOR ELEVATING AND LOWERING OIL-WELL TUBING. ANTHONY E. CARLSON, Los Angeles, Calif. Filed Feb. 6, 1926. Serial No. 86,627. 9 Claims. (Cl. 24—249.)

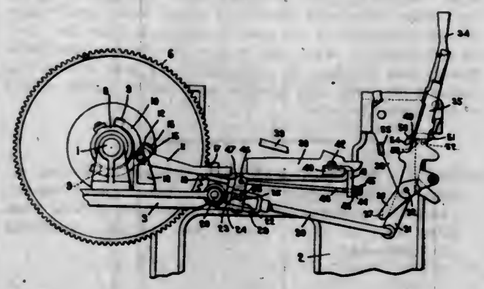


9. An apparatus as disclosed including a spider, said spider comprising a base, a pair of jaws pivotally mounted on said base for engaging the well tubing under a coupling thereof, and a pair of levers pivotally connected together and to said jaws respectively.

1,620,191. PULVERIZED FUEL COMBUSTION SYSTEM. CHARLES W. E. CLARKE, New York, N. Y. Filed Nov. 10, 1923. Serial No. 673,920. 6 Claims. (Cl. 110—101.)

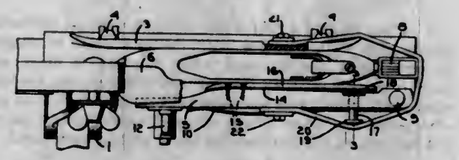
1. In a powdered fuel combustion system, the combination of a furnace, a green coal bunker mounted above said furnace, means for feeding coal to the furnace, and coal treating apparatus located between said feeding means and said bunker, said apparatus including a pulverizer into which the coal is fed by gravity from said bunker.

1,620,192. PROCESS FOR THE SEPARATION OF THE CONSTITUENTS OF GASEOUS MIXTURES SUCH AS THOSE CONTAINING HYDROGEN. GEORGES CLAUDE, Paris, France, assignor, by mesne assignments, to Layote Inc., a Corporation of Delaware. Filed Mar. 12, 1923, Serial No. 624,668, and in France Apr. 4, 1922. 11 Claims. (Cl. 183—115.)



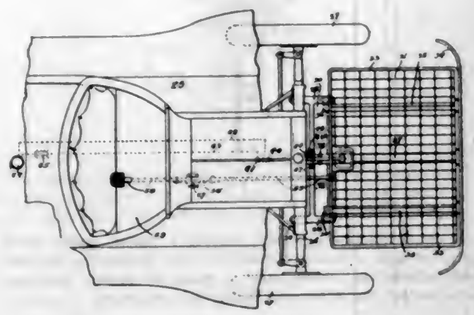
1. A process for the separation of the constituents of gaseous mixtures such as those containing hydrogen by liquefaction of all gases except hydrogen, in which process the vaporization of the liquefied portion or portions separated from the gaseous mixture is carried out under a pressure intermediate between the liquefaction pressure and atmospheric pressure, the gases produced by this or these vaporizations are expanded with production of external work and the cold thus produced is used for the partial liquefaction of the gaseous mixture at a temperature lower than that of the respective vaporizations, the hydrogen obtained being submitted to an expansion.

1,620,193. NAIL. FREDERICK COATES, Cincinnati, Ohio. Filed Nov. 24, 1925. Serial No. 71,137. 5 Claims. (Cl. 85—28.)



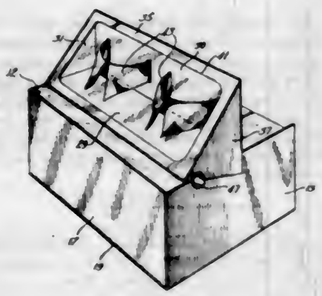
1. In combination, a nail having a shank and a head provided with a concave under surface forming a channel surrounding the shank, and a mass of plastic material surrounding the head and filling said channel.

1,620,194. STOP MECHANISM FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 22, 1925. Serial No. 45,425. 8 Claims. (Cl. 139—346.)



1. Stop mechanism for looms having protector mechanism including a movable frog, a driving clutch, clutch-actuating means, and a tension member connecting said frog and clutch actuating means and acting upon movement of said frog by the dagger of the protector mechanism to release said clutch, a shipper and means connecting said shipper to said clutch actuating means operable thereby upon release of said clutch to move said shipper to stopping position.

1,620,195. SHUTTLE-CHECKING MECHANISM FOR LOOMS. ALBERT E. DEAN, Fall River, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 2, 1926. Serial No. 133,254. 5 Claims. (Cl. 139—187.)



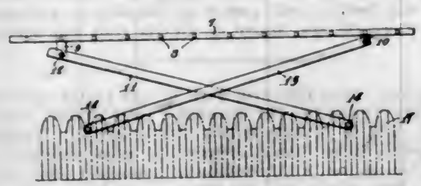
1. In a loom, shuttle checking mechanism comprising a shuttle binder pivoted at one end on the lay, a metal leaf spring swell secured at one end to the shuttle opposing face of the binder, a non-metallic facing on the swell, and means actuated by the shuttle as it is boxed for forcing the free end of the swell toward the shuttle.

1,620,196. VEHICLE FENDER. GEORGE F. EGAN, Jersey City, N. J. Filed July 3, 1923, Serial No. 649,321. Renewed Dec. 11, 1925. 7 Claims. (Cl. 293—37.)

1. In a vehicle fender, a basket member, mounting means for pivotally and slidably holding the basket member on a vehicle, a supporting device for holding the basket member in upright position, an interlocking element carried by said mounting means for receiving the hook when the basket member is raised, and a guide member for operation on the hook to release it from the interlocking element when the basket member is slid backwardly and arranged to guide said hook into interlocking engagement with said element upon a subsequent raising of the basket member.

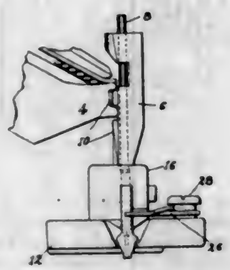
1,620,197. DISPLAY CARTON. BENJAMIN EVANS, Albany, N. Y., assignor to Fort Orange Paper Company, Castleton-on-Hudson, N. Y., a Corporation of New York. Filed June 2, 1924. Serial No. 717,245. 5 Claims. (Cl. 206—44.)

5. A box having a rear wall provided with an extension, which rear wall, together with the extension, is adapted to serve as a display rack when the box is open, said rack being adapted to display merchandise on the side toward the front wall and said rack being adapted to nest within the box when closed whereby substantially the entire bottom of the box may be filled with merchandise.



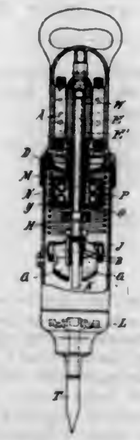
1,620,198. ROAD LIGHT. FAY G. FARWELL, Toledo, Ohio. Filed Mar. 25, 1926. Serial No. 97,161. 4 Claims. (Cl. 240—61.)

1. In a road light, a bracket, a swiveled lamp supported on the bracket, the bracket having a plane surface and a cam surface extending from the plane surface, the lamp having a bearing member for engaging the surfaces and



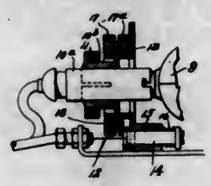
operating to tilt the axis of the lamp at an angle to a horizontal plane according to the position of the bearing member relative to the said surfaces.

1,620,199. CLOTHES RACK. JOHN B. FELICETY, Philadelphia, Pa. Filed Dec. 29, 1926. Serial No. 157,671. 8 Claims. (Cl. 34—26.)



1. A clothes rack including a horizontal bar, a row of pins extending from the bar, legs hinged to the bar, and feet at the bottoms of the legs extending parallel to the pins.

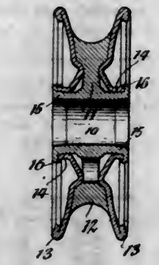
1,620,200. FASTENING-INSERTING MECHANISM. GEORGE GODDU, Winchester, and FRED L. MACKENZIE, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 11, 1923. Serial No. 612,026. 8 Claims. (Cl. 1—5.)



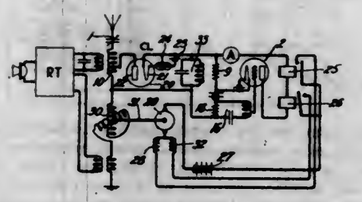
1. A fastening inserting machine having a nozzle comprising a pair of pivoted members for engaging the work and tapering towards their work engaging portion each of said members terminating in a substantially semi-cylindrical projection.

1,620,201. PERCUSSIVE HAND TOOL. RUDOLF GOLDSCHMIDT, Berlin, Germany, assignor to Det Tekniske Forsgsaktiesskab, Ordrup, Charlottenlund, Denmark, a Company of Denmark. Filed Jan. 3, 1924, Serial No. 684,262, and in Germany Jan. 17, 1923. 3 Claims. (Cl. 78—36.)

3. A percussive hand tool of the character described comprising a casing, a tup movable therein, a flyweight rotatably mounted on the tup, an electric motor mounted as a unit axially within said casing, a driving shaft, connections between said motor and said shaft, gearing between said shaft and flyweight such that the number of impacts of the tup becomes a fraction of the number of revolutions of the flyweight and a resilient transmission device interposed between the driving shaft and the flyweight.



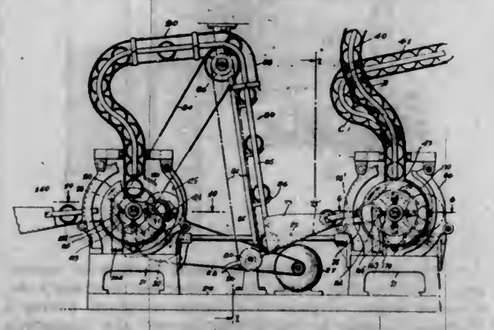
1,620,202. VEHICLE LAMP. ARNOLD GRAVES, Frinton-on-Sea, England. Filed July 19, 1922, Serial No. 575,996, and in Great Britain July 20, 1921. 3 Claims. (Cl. 240—44.)



1. A lamp of the class described including an outer shell, a main frame within said shell, a reflector carrying frame pivotally mounted in said main frame, screw means for adjusting the reflector carrying frame with reference to the main frame, a lamp carrying unit including a plate having a spindle, a fixed block on the main frame for receiving the spindle, a spring confined between the spindle and the block, a flexible connection for said spindle whereby the same may be shifted in the block to move the lamp carrier axially of the reflector, and means for moving said lamp radially to the axis of the reflector.

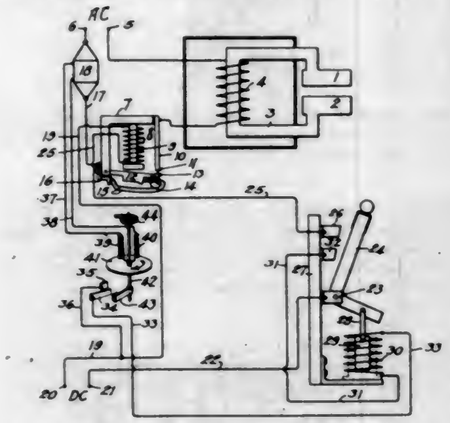
1,620,203. TROLLEY WHEEL. LAWRENCE E. HARMON, Buffalo, N. Y., assignor to Katrina T. Harmon, Buffalo, N. Y. Filed Jan. 28, 1924. Serial No. 688,963. 2 Claims. (Cl. 191—63.)

1. A trolley wheel comprising a tubular hub, a web arranged on the exterior of the hub between the ends thereof, an annular tread arranged on the outer edge of said web, disks engaging with opposite sides of the tread and having their outer edges projecting beyond the tread while their inner edges are provided with longitudinally projecting collars which surround the ends of said hub and which are expanded into outwardly flaring conical form, said collars and hub ends being interlocked by expanding the ends of the hub into outwardly flaring conical form and engaging the peripheries of the same with the bore of said outwardly flaring collars.



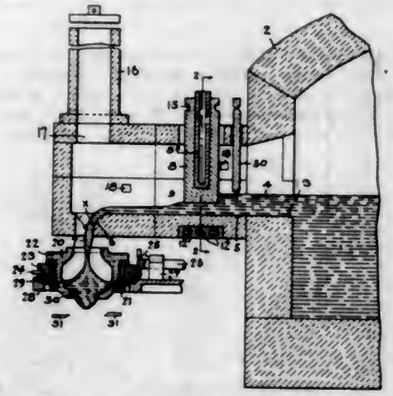
1,620,204. FREQUENCY INDICATION AND CONTROL. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1924. Serial No. 758,549. 15 Claims. (Cl. 250—17.)

1. In combination, a source of alternating current waves of varying frequency, and means responsive to changes in the frequency of said waves comprising a space discharge device having a space current circuit and a grid circuit, said space discharge device being supplied with space current from said source, and means to cause the space current in said device to vary in intensity directly in accordance with changes in the frequency of waves from said source, comprising a resonant circuit associated with said source and with said grid circuit.



1,620,205. SHEET-METAL ASSEMBLING AND WORKING MACHINE. HENRY HERMANI, Baltimore, Md., assignor to The Tin Decorating Company, Baltimore, Md., a Corporation of New Jersey. Filed May 26, 1926. Serial No. 111,699. 33 Claims. (Cl. 113—26.)

1. A machine for inserting and securing short annular sheet-metal collars in cylindrical sheet-metal can bodies, comprising means for positioning a collar in axial aline-



ment with an open end of a body, means then acting to move the collar axially and insert it within the body with the outward edges of the collar and body substantially in alinement, and means then acting to bead crease the inner margin of the collar and simultaneously crease the body wall to lock the collar in the body.

1,620,206. ELECTRIC WELDING AND THE LIKE. LE ROY H. HOFFER, Nyack, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Nov. 21, 1922. Serial No. 602,324. 2 Claims. (Cl. 219—4.)

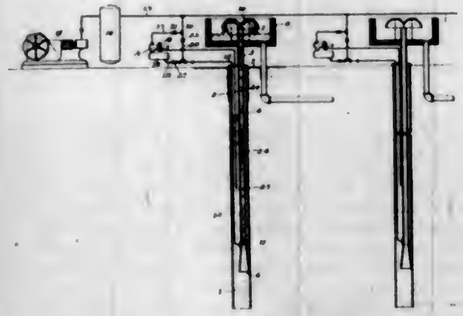
1. An apparatus for electric welding including in combination a main welding circuit, means controlled by one auxiliary electric circuit for closing the main welding circuit and means controlled by a second electric circuit for opening the main welding circuit by de-energizing the first auxiliary circuit, and a timing device controlling the second auxiliary circuit.

1,620,207. METHOD AND APPARATUS FOR FEEDING MOLTEN GLASS. GEORGE E. HOWARD, Butler, Pa., assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Feb. 20, 1922. Serial No. 537,873. 20 Claims. (Cl. 49—55.)

1. The method of producing mold charges of molten glass by centrifugal force, that comprises receiving a descending stream of glass in a heated receptacle having a discharge opening in the bottom thereof, and controlling the flow of glass from the receptacle by rotating said receptacle at periodically varying speeds to set up centrifugal forces in the glass.

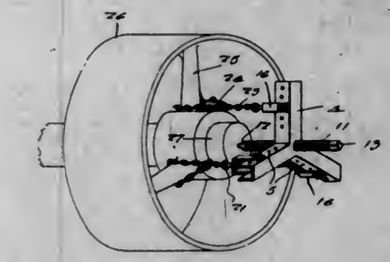
1,620,208. INSECTICIDE. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 15, 1924. Serial No. 737,914. 4 Claims. (Cl. 167—6.)

1. As an insecticide barium silicofluoride.



3. Method of protecting plant life against insects which comprises applying thereto barium silicofluoride.

1,620,209. SPRAY NOZZLE. CHARLES IHNE, Baltimore, Md. Filed May 24, 1924. Serial No. 715,744. 1 Claim. (Cl. 299—120.)

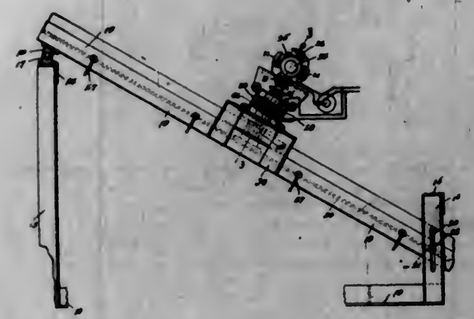


The mixing and spraying device which includes an internally threaded part, an externally threaded disc, and an externally threaded water supply pipe or tube; the internally threaded part having a plane surface which is centrally or axially apertured, this aperture being inwardly and outwardly flared from a definite plane; said disc being in said internally threaded part and having its threads meshing with those of the latter and thereby held spaced from the said plane surface and providing a centrifugal chamber, this disc having an imperforate center and a plurality of inclined ports in position to direct water onto the said plane portion, the inclination of each port being to a plane that passes therethrough and through the center of the disc; the said supply pipe having its threads intermeshing with those of the internally threaded part and having its inner end abutting against said disc, the capacity of said central aperture being greater than the combined capacities of said inclined ports for the purpose specified.

1,620,210. AUTOMATIC CONTROL FOR AIR LIFTS. CONRAD C. JACOBSON, Glen Ridge, N. J., assignor to The Artesian Well Engineering Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Oct. 6, 1923. Serial No. 667,049. 12 Claims. (Cl. 103—11.)

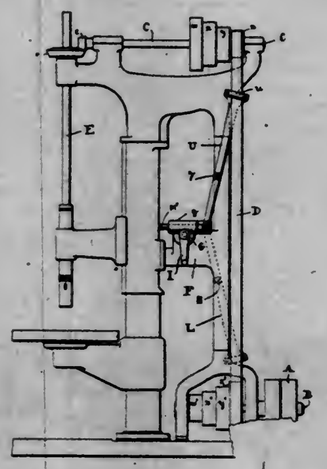
1. An air-regulator for air wells comprising a casing providing a chamber having an inlet connected with a pressure line and an outlet connected with said well; a valve mechanism for controlling the flow of air into said chamber; a second chamber adjacent said first-mentioned chamber; a diaphragm separating said chambers; and means for maintaining air pressure in said second chamber in proportion to the head of water in the well; said valve being connected with said flexible diaphragm and adapted to be opened and closed thereby to regulate the flow of air into said first-mentioned chamber in proportion to the differential in the pressures in the two chambers.

1,620,211. WHEEL PULLER. BENARD D. JERABEK, Hutchinson, Minn. Filed Mar. 3, 1926. Serial No. 91,979. 1 Claim. (Cl. 29—85.)



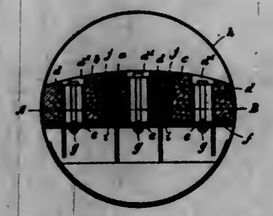
A wheel remover comprising in combination, an internally threaded boss like member, a screw threaded therethrough, a plurality of channeled shaped arms extending radially from the boss like member, a substantially U-shaped member having its arms straddling the sides of each of the channeled arms and attached thereto, an eye bolt carried by the crown portion of each of the U-shaped members, and wheel engaging elements attached to the respective eye bolts.

1,620,212. PROCESS FOR THE TREATMENT OF LEUCITE AND OTHER SODIUM AND POTASSIUM SILICATES WITH LIME FOR THE PURPOSE OF EXTRACTING POTASSIUM OR SODIUM AND ALUMINUM VALUES. FÉLIX JOURDAN, Rome, Italy. Filed Dec. 27, 1924, Serial No. 758,455, and in Italy Dec. 28, 1923. 1 Claim. (Cl. 23—80.)



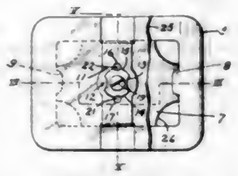
The process of producing potash and alumina from leucite treated with lime at a high temperature, until the mixture is caused to melt, which process consists in so casting the molten product that it will form big lumps, and then cooling these down in such a way as to cause them to disintegrate into a powdery mass.

1,620,213. VIBRATION MECHANISM FOR SCREENS. EDWARD T. KEENAN, Brewster, Fla. Filed Sept. 25, 1924. Serial No. 739,789. 21 Claims. (Cl. 209—368.)



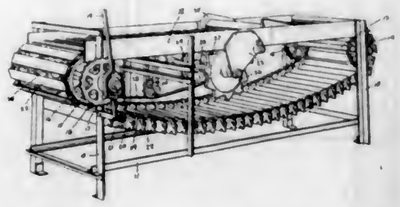
1. In combination, a supporting frame, a screen frame adjustably mounted on the supporting frame, a screen carried from the screen frame, a magnetizable plunger attached to the screen and electromagnetic means for vibrating the plunger, including a rotatable magnet structure bodily carried by the screen frame, said rotatable magnet structure alternately attracting and repelling the plunger.

1,620,214. BELT SHIFTER. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 8, 1921. Serial No. 513,637. 18 Claims. (Cl. 64—4.)



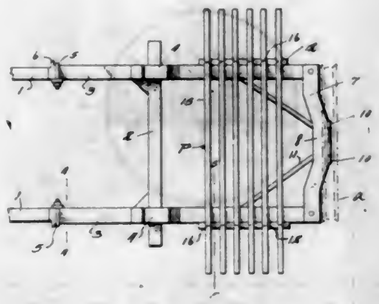
1. A belt-shifter combining a gear-segment; an interrupted rack adapted to be intermittently advanced thereby; a relatively stationary member having a socket; a detent normally engaging said rack and positioned by said socket; and means rotatable with said gear-segment for controlling the retreat of said detent to permit movement of said rack.

1,620,215. FIRE-BRIDGE. JULIUS LANGER, Hamburg, Germany. Filed Mar. 17, 1926, Serial No. 95,374, and in Germany Feb. 5, 1926. 1 Claim. (Cl. 110—82.)



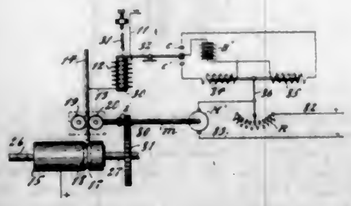
A fire bridge comprising a base having spaced openings, a plurality of pattern stones on said base arranged side by side and provided with coengaging tongues and grooves in their opposing sides, said stones being provided with vertical central openings, the dimensions of which transversely of the stones exceed the diameter of the openings in the base and bolts in said openings in the base and in the stones and having enlarged heads which bear on the upper sides of the stones.

1,620,216. BUCKLE. LOUIS LEHR, Brighton Heights, N. Y., assignor to Simon Bruner, Far Rockaway, N. Y. Filed May 25, 1926. Serial No. 111,500. 7 Claims. (Cl. 2—245.)



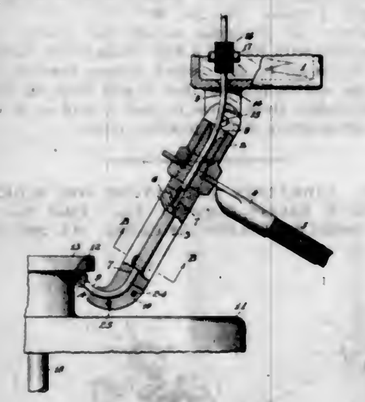
1. An ornamental device comprising a frame, a resilient member, a stem projecting from said member and means for engaging said stem when said member has been flexed to conform to the shape of said frame.

1,620,217. TURNOVER TABLE FOR VEGETABLES AND FRUITS. STACEY R. LINDLEY, Indianapolis, Ind., assignor to Indiana Canning Machinery Company, Indianapolis, Ind., a Corporation. Filed Mar. 13, 1925. Serial No. 15,392. 6 Claims. (Cl. 209—125.)



1. An endless conveyor for tomatoes, fruits or the like comprising a plurality of pivotally mounted slats for supporting and carrying the same, an actuating member, and means for operating said actuating member for causing said member to engage each of said slats and tilting the same and causing the articles carried by said conveyor to be turned over from one side to the other.

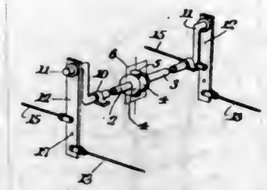
1,620,218. LUGGAGE CARRIER. EWEN MCPHAIL, Missoula, Mont. Filed June 22, 1926. Serial No. 117,807 3 Claims. (Cl. 224—29.)



1. In combination with the side members and an end cross member of a vehicle frame, a carrier comprising angle side members, each of said side members of the carrier having a portion resting upon a side member of the frame, each of said side members of the carrier having an upwardly disposed arch to bridge the cross member of the frame, means for securing the side members of the carrier to the side members of the frame, a cross member connecting the outer end portions of the side members of the carrier, the intermediate portion of said cross member of the carrier being outwardly arched, and means carried by the arch of the cross member of the carrier to engage a tire carrier.

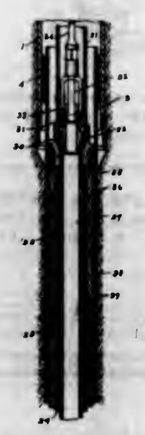
1,620,219. ARC-WELDING SYSTEM. HARRY D. MORTON, New York, N. Y., assignor to Automatic Arc-Welding Company, Detroit, Mich., a Corporation of Michigan. Original application filed Dec. 2, 1918, Serial No. 264,930. Divided and this application filed Dec. 24, 1920. Serial No. 432,951. 7 Claims. (Cl. 219—8.)

4. In an electric arc welding apparatus, means for conveying current to the welding strip at a point close to and at a fixed distance from the arc.



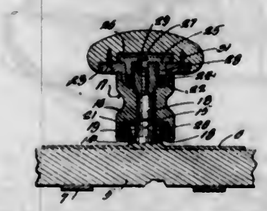
1,620,220. GUIDE AND CONDUCTOR FOR WELDING ELECTRODES. HARRY D. MORTON, New York, N. Y. Filed Feb. 5, 1924. Serial No. 690,701. 6 Claims. (Cl. 219—8.)

1. In a stationary metallic arc welding machine, means constructed and arranged to feed a welding strip downward, means operating at a constant distance from said feeding means for upwardly deflecting the end of the welding strip in order that an arc maintained between the end of said welding strip and work material may bisect the included angle of the seam to be welded.



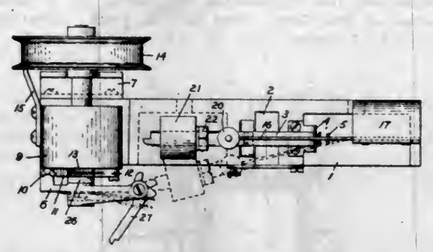
1,620,221. EQUALIZER FOR FOUR-WHEEL BRAKES. FYAN L. NELSON and JAMES A. HARMON, Uvalde, Tex. Filed July 28, 1926. Serial No. 125,428. 3 Claims. (Cl. 188—204.)

1. The combination with the front and rear brakes of a motor vehicle, of a transversely disposed differential including relatively rotatable shafts, means under the control of the driver for rotating the differential, a crank carried by each shaft of the differential, a floating lever suspended from each crank, and connections be-



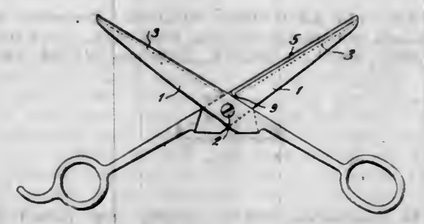
tween each lever and a front brake and a rear brake, the front brake connection being disposed below the rear brake connection.

1,620,222. PUMP. JEDDY D. NIXON and GERALD R. LIVERGOOD, Houston, Tex. Filed Nov. 29, 1924. Serial No. 752,856. 10 Claims. (Cl. 103—179.)



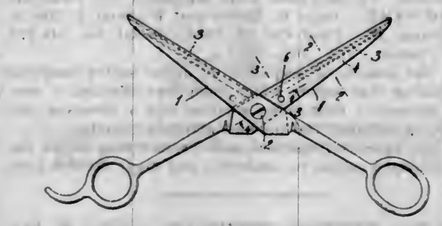
1. A pump including a working barrel, a plunger therein, packing in said barrel around the plunger, means abutting against the upper and lower ends of the packing, rotatable tubing for suspending the pump in a well bore, and operative connections through which the tubing may be employed by rotating the same to rotate the upper abutment and thereby to adjust said packing about the plunger, through said abutting means.

1,620,223. STEERING-WHEEL KNOB. DANIEL E. NORCROSS, Dallas, Tex. Filed July 8, 1926. Serial No. 121,212. 2 Claims. (Cl. 74—33.)



1. A steering knob for vehicle steering wheels, comprising a plate adapted to be attached to the rim of a steering wheel, a standard secured to and projecting upwardly from said plate, a sleeve mounted for rotatable movement on the standard, the said sleeve being recessed in its upper and lower ends, an anti-friction bearing mounted in the lower end of the sleeve, a second anti-friction bearing mounted in the upper sleeve recess, a cap engageable with the standard and bearing on the upper anti-friction bearing means, and a knob detachably mounted on the upper end of the sleeve.

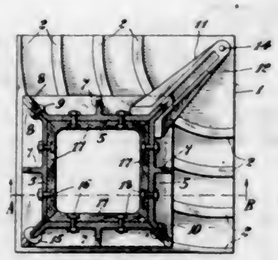
1,620,224. VELOCIMETER. WILLIAM C. PALMER, Davenport, Iowa. Filed Apr. 14, 1923. Serial No. 632,121. 6 Claims. (Cl. 234—1.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



5. A velocimeter embodying a record strip movable at a predetermined velocity ratio with respect to an object, the velocity of whose movement is to be measured and a vibratory member of a predetermined beat whose vibrations are recorded on the strip and means controlled by initial movement of the strip for releasing said vibratory member.

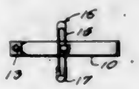
1,620,225. SCISSORS. MORGAN PARKER, New York, N. Y. Filed Aug. 20, 1921. Serial No. 493,934. 27 Claims. (Cl. 30—13.)

1. A blade adapted to be mounted on a scissors shank, having a cross-section of continuous uniform dimensions throughout substantially its entire length, and being universally flexible.



1,620,226. SCISSORS. MORGAN PARKER, New York, N. Y. Filed Aug. 20, 1921. Serial No. 493,935. 4 Claims. (Cl. 30—13.)

1. In removable blade scissors, the combination of a shank and a removable flexible blade, dovetail connection between the two along their outer lengths holding



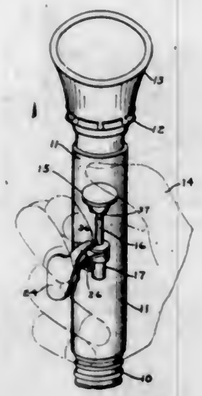
the blade in positive contact with the shank, an upstanding projection near the inner end of the shank, a hole in the inner end of the blade designed to cooperate with the pin to lock the blade against longitudinal displacement, the dovetail connection between the shank and the blade being cut away near their inner ends to permit the blade to flex and ride over the pin to locking position.

1,620,227. CORE BOX FOR INGOT MOLDS OR THE LIKE. JOHN E. PERRY, Sharon, Pa., assignor to Valley Monid and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed May 22, 1926. Serial No. 110,884. 7 Claims. (Cl. 22—13.)

1. In a core box for use in sanding core bars to be used in manufacture of ingot molds, the combination of supporting means, and liners supported by said supporting means, said liners having work faces adapted to form matrix side walls which predetermine the side wall faces on the sanded core bar.

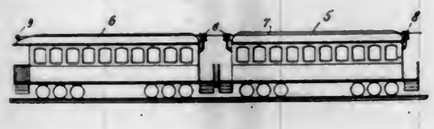
1,620,228. LINGERIE-STRAP HOLDER. ELIZABETH M. POLLOCK and MILTON POLLOCK, Flint, Mich. Filed Dec. 1, 1926. Serial No. 151,974. 2 Claims. (Cl. 24—73.)

1. In combination with a metallic strip formed to provide a clasp for receiving and holding the shoulder straps of undergarments, the material of the strip being longitudinally slit at transversely aligned points lying intermediate the ends of the strip, the metal of the strip at opposite sides of said slits being oppositely deformed to thereby provide an eye and a safety pin having an arm thereof directed through said eye whereby the pin is pivotally connected with and extends transversely of the clasp.



1,620,229. FUNGICIDE AND METHOD OF PREPARING SAME. JOHN H. REEDY and WILLIAM S. BROCK, Urbana, Ill. Filed Oct. 3, 1924. Serial No. 741,478. 5 Claims. (Cl. 167—6.)

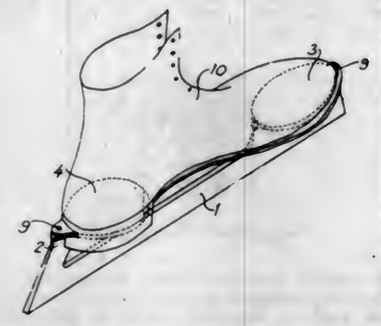
2. The process of preparing an active sulfur fungicide containing zinc sulfide which comprises effecting a reaction between a lime-sulfur solution and a dissolved zinc salt, and diluting the product obtained thereby.



5. An aqueous fungicidal mixture including active sulfur and zinc sulfide in suspended and finely divided form.

1,620,230. CONTROL MECHANISM. JOHN E. RENHOLDT, Stratford, Conn. Filed May 19, 1924. Serial No. 714,355. 4 Claims. (Cl. 74—39.)

1. In a device of the character described, a tubular handle; a manually operable rod movable in said handle; a tube secured to said handle and adapted to guide movement of said rod; a manually operable latch adapted to lock said rod in one of its positions; a bracket for said manually operable latch; and means for securing said bracket to said tube.



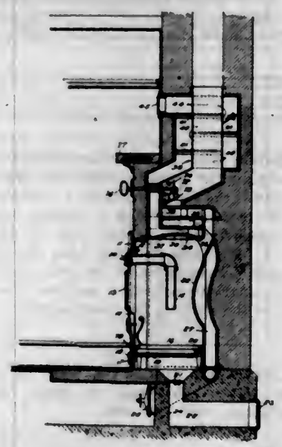
1,620,231. RADIO ANTENNA SYSTEM. DAVID WELLES RICHARDSON, Princeton, N. J. Filed Apr. 26, 1922. Serial No. 556,706. 9 Claims. (Cl. 250—33.)

1. In combination with a train of connected cars, a continuous unit antenna extending over more than one car and secured to said train only at the far ends of said antenna, the central portion of the antenna being loosely supported on intermediate cars.

1,620,232. SKATE. HERMAN RITOW, Chicago, Ill. Filed Aug. 20, 1925. Serial No. 51,407. 6 Claims. (Cl. 208—167.)

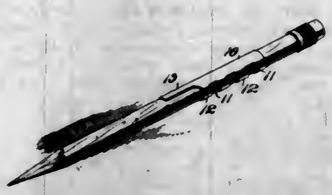
1. In combination a skate blade and shoe and means for removably attaching the two to each other, said means including a vertically curved groove permanently formed in said shoe, and a correspondingly curved edge on said skate, the curvature of the two being identical whereby the skate may be removably positioned within the groove.

1,620,233. PROCESS OF MAKING THREAD. FRANK ROSENTHAL, New York, N. Y. Filed Aug. 27, 1925. Serial No. 52,958. 11 Claims. (Cl. 18—54.)



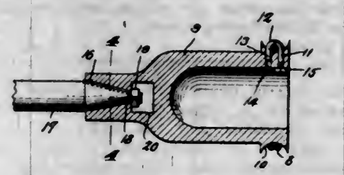
1. The herein described process of making thread for ornamental fabric, which consists in depositing viscose in substantial relief upon a base material in the form of a thread in accordance with a predetermined plan of treatment or relief ornamentation.

1,620,234. SHUTTLE TIP. ELLERY E. ROYAL, Worcester, Mass., assignor to United States Screw & Stamping Co., Worcester, Mass., a Corporation of Massachusetts. Filed July 20, 1925. Serial No. 44,766. 3 Claims. (Cl. 139—196.)



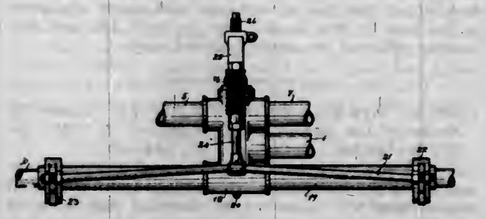
1. As an article of manufacture, a shuttle tip having a case hardened end portion and a superimposed plating of metal on the shank.

1,620,235. CONVERTIBLE BUILT-IN HOT-AIR FURNACE. GROVER C. ROYSE, Ogden, Utah. Filed Jan. 25, 1924. Serial No. 688,474. 9 Claims. (Cl. 126—121.)



1. A convertible built-in hot air furnace having a fire box, a grate in the bottom of said fire box, a heating chamber at the top of said fire box, a removable front closing the entire front of the fire box, a stationary built-in furnace frame to which said removable front is detachably secured, a tortuous passageway conducting air to said heating chamber, and a second tortuous passageway located in the flue for conveying the heated air from the heating chamber to the space to be heated.

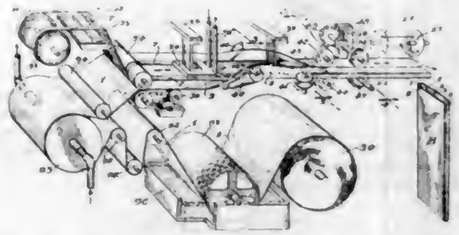
1,620,236. PENCIL KNIFE. JACOB SCHICK, Orange, N. J., assignor to Miller Reese Hutchison, West Orange, N. J. Filed Oct. 10, 1923. Serial No. 667,729. 2 Claims. (Cl. 120—84.)



1. A pencil knife comprising a cylindrical barrel portion to fit around a pencil and a blade of the same radius projecting from one end said blade having its edges ground on the inner face and in the same plane to provide a substantially flat bearing for the blade when sharpening a pencil.

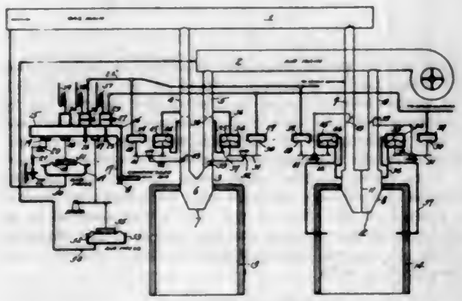
1,620,237. STEERING DEVICE. HERMAN SCHRODER, Capron, Okla. Filed Apr. 5, 1926. Serial No. 99,999. 1 Claim. (Cl. 74—79.)

In a device of the character described, a hollow head, said head having a socket formed at one end thereof, said socket being tapered to receive the tapered end of a steering rod, the wall of said socket and tapered end of said steering rod having aligning grooves, a key positioned in the aligning grooves, said steering rod having a threaded portion, said head having an opening disposed transversely therethrough, in which the threaded portion of the steering rod lies, a nut adapted to be positioned in the opening and positioned on the threaded portion of the rod, and said head having a pulley to accommodate a cable.



1,620,238. TEMPERATURE-CONTROLLED FLUID-MIXING DEVICE. ALLEN A. SMITH, Great Notch, N. J. Filed Jan. 10, 1925. Serial No. 1,604. 2 Claims. (Cl. 236—12.)

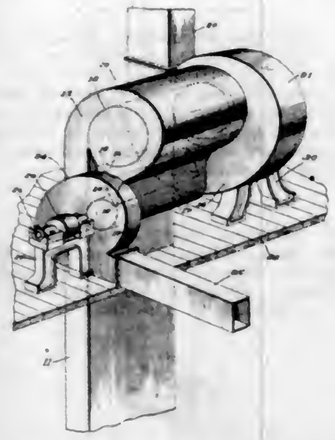
1. In a device of the character described, a fitting having a plurality of inlet passages and a discharge passage and an independently formed tubular passage therethrough, a valve for controlling both inlet passages, an expansible member extending through said tubular pas-



sage and having means connected thereto for controlling said valve, and means for causing the discharge from said fitting to pass through said expansible member.

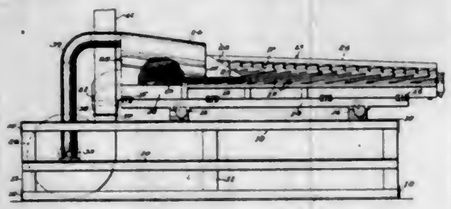
1,620,239. ART OF PAPER-WARE MANUFACTURE. HARRY BRIDGMAN SMITH, Brooklyn, N. Y., assignor to Lightship Cloth Board Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 1, 1922, Serial No. 548,625. Renewed July 29, 1926. 44 Claims. (Cl. 93—1.)

1. A method of making tubular articles of sheet material, comprising associating main body forming sheet material of substantial width and relatively narrow, spaced edge reinforcing strips, and shaping and securing the assembly in flattened tubular form.



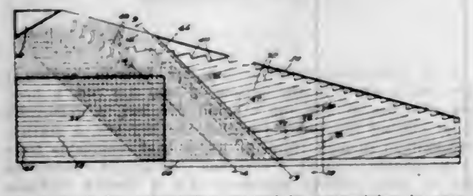
1,620,240. FLOW REGULATOR. CHARLES H. SMOOT, Maplewood, N. J. Filed May 27, 1926. Serial No. 112,188. 15 Claims. (Cl. 158—119.)

1. In a flow regulator for controlling the proportional flow of a plurality of constituents, the combination comprising a plurality of supply pipes one for each constituent, means in each pipe for controlling the flow therein, master control means, means responsive to the master control to vary the flow in each pipe, and means responsive to the rate of flow in each pipe to check the said flow varying effort of the master control means.



1,620,241. AIR-VOLUME DUST REDUCER. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Oct. 3, 1925. Serial No. 60,209. 6 Claims. (Cl. 183—83.)

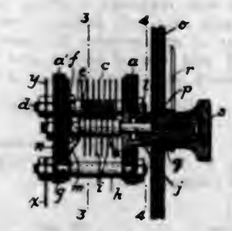
1. A device for reducing the volume of dust laden air, comprising in combination, an approximately cylindrical shaped receptacle, a conduit for directing dust laden air into the receptacles so that it whirls therein with a centrifugal force that throws the dust outwardly toward the wall of the receptacle, an outlet pipe mounted approximately centrally within the receptacle to extend longitudinally thereof and having an inlet opening to receive the dust freed air that moves inwardly toward the centre of the receptacle, a second outlet pipe extending lengthwise of the receptacle and having an inlet opening positioned to receive the dust laden air traveling adjacent said wall, and suction means for exhausting air from said



pipes so that the dust freed air travels lengthwise of its pipe in one direction and the dust laden air travels lengthwise of its pipe in the opposite direction.

1,620,242. CONCENTRATOR-TABLE FAN. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Jan. 20, 1926. Serial No. 82,407. 7 Claims. (Cl. 209—502.)

1. In combination with a table concentrator having a deck surface and an air chamber below the deck surface and a hood above the deck surface, a combined blast and exhaust fan unit comprising a casing having two separate fan compartments, a blast fan in one of the compartments, a blast pipe leading from the blast fan compartment to the chamber below the deck, a suction fan in the other compartment, and a suction pipe leading from the hood to the suction fan compartment.



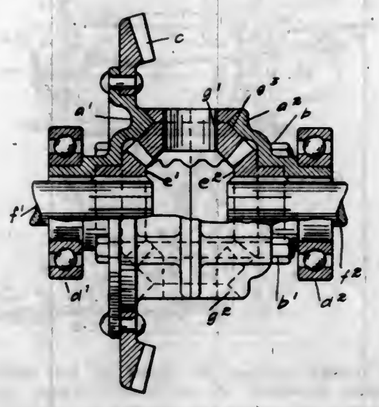
1,620,243. CLASSIFIER DECK. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Jan. 20, 1926. Serial No. 82,408. 19 Claims. (Cl. 209—467.)

1. A deck for separating materials, comprising in combination, a deck casing that is supported at a transverse inclination and has a feed hopper at the juncture of the

upper side and one end of the deck, a deck surface which is provided with apertures in only that portion of the deck disposed near the feed hopper, said apertures being largest in the vicinity of the feed hopper and decreasing in size downwardly across the deck, riffles extending over the deck surface, means for forcing air upwardly through the apertures to effect a classification of the materials in the vicinity of the feed hopper, and means for vibrating the deck to advance the materials over the deck surface and to effect a movement stratification of the materials as they travel over the unapertured portion of the deck surface.

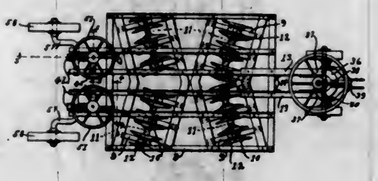
1,620,244. VARIABLE CONDENSER. FREDERICK E. SWOPE, Jr., Philadelphia, Pa. Filed May 18, 1923. Serial No. 639,731. 8 Claims. (Cl. 175—41.5.)

1. A variable consenser comprising oppositely disposed heads, a solid rod provided with a circumferential slot extending between the heads and a condenser plate having a laterally opening slot engaged within the slot in said rod, the material forming the rod being expanded longitudinally adjacent opposite sides of the plate to secure the plate in the slot.



4. A variable condenser comprising oppositely disposed heads of insulating material, a plurality of fixed plates mounted between said heads, a movable plate adapted to be moved between said fixed plates, and a spring secured to one of said heads and acting on said movable plates in a direction away from the opposite head, whereby said movable plates are positioned between said heads.

1,620,245. DEVICE FOR CLOSING THE AIR BLADDERS OF SPORT BALLS OF ANY KIND. ALBERT WILHELM TURNER, Hamburg, Germany. Filed Aug. 2, 1926, Serial No. 126,566, and in Germany Jan. 2, 1926. 7 Claims. (Cl. 273—65.)

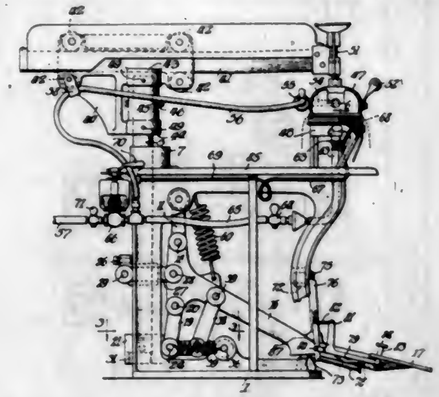


1. A device for closing the air bladder for sport balls or the like, comprising in combination with the air bladder, a projecting tubular extension of said air bladder, an air tube in said extension of the bladder, said extension and air tube adapted to be telescoped from a position outside the air bladder to a position inside the air bladder, a stopper to be inserted into the upper end of said air tube, and an elastic cap on said stopper adapted to be slipped down over upon said air tube so that when the cylindrical extension and air tube are forced into the filled bladder the cap will lie between said air tube and said extension.

1,620,246. DIFFERENTIAL GEARING. MAURICE WALTER, New York, N. Y. Filed Feb. 10, 1923. Serial No. 618,218. 6 Claims. (Cl. 74—99.)

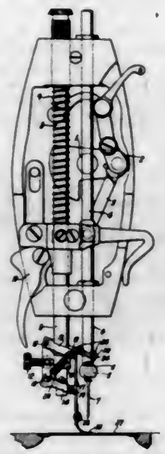
1. In differential gearing, in combination with a rotatable housing, planet pinions each having the hub formed exteriorly with out-board bearing surfaces on which the pinion is journaled in the housing, said bearing surfaces formed to maintain the pinion against axial displacement in both directions within the housing.

1,620,247. ROAD TOOL. DANIEL M. WATTERS, Los Angeles, Calif., assignor to Killefer Manufacturing Company, Los Angeles, Calif., a Corporation of California. Original application filed Feb. 16, 1922, Serial No. 537,111. Divided and this application filed May 4, 1926. Serial No. 106,660. 2 Claims. (Cl. 280—6.)



1. An implement of the character described comprising a frame, posts mounted on the frame and each provided with a trunnion nut, screws having upper and lower series of screw threads of reverse construction, said upper screw threads engaging the trunnion nuts, nuts engaging the lower screw threads, means to turn the screws, wheels shiftably connected with the frame, and means operable by movement of the last mentioned nuts along the screws to elevate the frame relative to said wheels.

1,620,248. PRESSING MACHINE. ANTON ZEMAN, Chicago, Ill., assignor to Joseph Saltzman, Chicago, Ill. Filed Jan. 16, 1924. Serial No. 686,479. 17 Claims. (Cl. 68—9.)



1. In a pressing machine, the combination of a main frame having a pressing table thereon, an upright shaft mounted to swing on the frame and having a pressing element thereon to one side of the shaft for pressing

articles on the pressing table, a treadle and mechanism operated thereby for raising and lowering the shaft, and means operated by the treadle to swing the shaft

and thereby increase the extent of the raising and lowering movement of the presser element which is effected by the raising and lowering of the shaft.

1,620,249. SEWING-MACHINE ATTACHMENT. HERBERT CORRALL, Helensburgh, and JAMES HEGGIE, Clydebank, Scotland, assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Feb. 23, 1924, Serial No. 694,493, and in Great Britain Mar. 5, 1923. 5 Claims. (Cl. 112—239.)

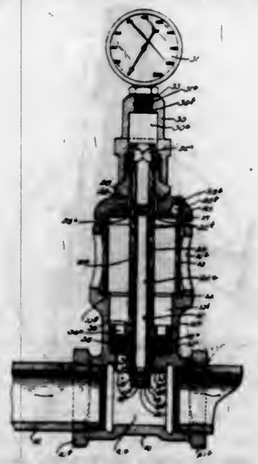
1. In a sewing machine, in combination with a vertically reciprocating needle-bar and a presser-bar, a jointed structure including a part detachably carried by the presser-bar, a foot-supporting member, and spaced links connecting said part and said member, said links being at all times disposed transversely of the presser-bar, spring means tending to depress said member, and means for lifting said member in opposition to said spring means at each ascent of the needle-bar.

1,620,250. DITCHING PLOW. FLOYD E. DUNCAN, Escondido, Calif. Filed June 30, 1925. Serial No. 40,556. 3 Claims. (Cl. 37—98.)

1. In a ditching plow, side wall members secured together at one end and positioned angularly with each other, said side wall members being provided with substantially horizontal lower edges extending from their head ends to a short distance backwardly therefrom and merging into upwardly inclined ditch-side-forming lower edges at their rear portions forming a fulcrum at the point of mergence of said edges, a runner means posi-

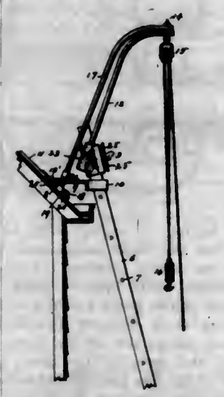
tioned at the rear portions of and between said side wall members, a rod pivotally connecting said runner means with said side wall members, a crank means pivotally supported by said side wall members and positioned at the rear portion of and between the same and pivotally connected with said runner means, and means for retaining said crank means in various shifted positions.

1,620,251. VANITY CASE. CHARLES N. CORYELL, Mamaroneck, N. Y. Filed July 30, 1926. Serial No. 125,851. 12 Claims. (Cl. 132—83.)



4. A vanity case comprising a pair of duplicate cover members, each cover member having a dished bottom with its rim curled inwardly to form an annular inwardly projecting flange, each flange having a cut-away portion, a bezel ring having an upstanding wall abutting the inturned flange of one cover and a lower inturned annular wall, a toilet article between said lower wall and said cover, an arcuate member having an annular lateral wall with an inner depending portion and sprung under the flange of the second cover member, a hinge connecting said bezel ring and arcuate member, a dish shaped compact holder held in said second cover by said depending portion, said upstanding wall having a catch projection to engage the annular flange of the other cover.

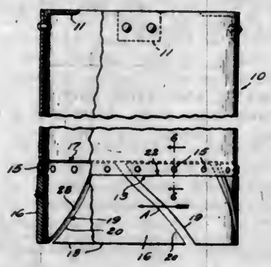
1,620,252. MOUNT FOR FINGER-RING FACINGS. CHARLES FISCHER, New York, N. Y. Filed Mar. 17, 1926. Serial No. 95,268. 1 Claim. (Cl. 63—29.)



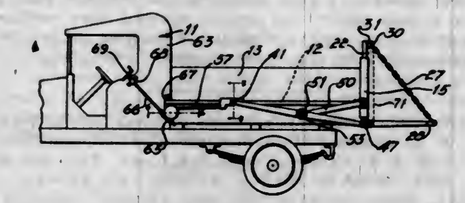
A finger ring facing mount of the character designated, comprising a casing for insertion in a ring mortise, the base plate of said casing being formed with recesses the side walls of which are flanged, shouldered and rotatable nuts fitting in said recesses and against the flanges thereof and formed with rigidly attached retaining collars which also contact with said recess flanges, a perforated cover plate rigidly attached to the flanges of the base plate, and an emblem formed with screw studs for engagement with said nuts, as and for the purpose set forth.

1,620,253. LUBRICATOR. PHILETUS W. GATES, Chicago, Ill., assignor to Hanna Engineering Works, Chicago, Ill., a Corporation of Illinois. Filed Feb. 27, 1922, Serial No. 539,337. 7 Claims. (Cl. 184—76.)

1. In a device of the class described, a lubricator comprising a body portion having a lubricant reservoir therein, a transverse actuating fluid passage, an apertured partition separating said reservoir from said passage, fibrous means located in said reservoir to normally prevent the flow of the lubricant therefrom, means to maintain said fibrous means in compressed condition comprising an apertured disk, a fluid supply tube extending from said passage into said reservoir.



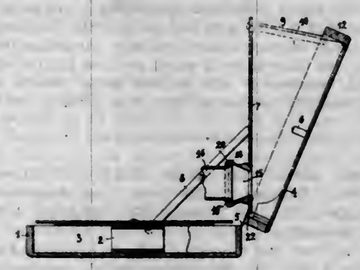
1,620,254. LADDER-PULLEY-BLOCK SUPPORT. PAUL G. GAUSS, Indianapolis, Ind. Filed July 19, 1926. Serial No. 123,518. 3 Claims. (Cl. 228—60.)



1. The combination, with a ladder adapted to be supported from a house, a clamp on the ladder having a socket extending obliquely of the ladder, a bar seated in the socket and extending on the side of the ladder remote from the house, a block and tackle, and means for supporting the block and tackle from the outer end of the bar.

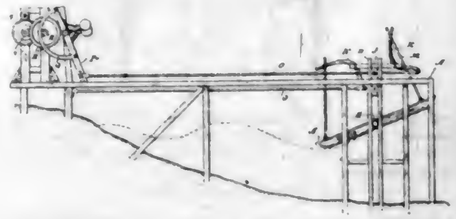
1,620,255. TUBULAR STONE SAW. JOHN A. HALL, Seattle, Wash. Filed July 11, 1925. Serial No. 42,921. 4 Claims. (Cl. 125—20.)

1. A tooth for a tubular stone-saw, said tooth having parallel upper and lower edges and substantially parallel front and rear edges disposed obliquely with respect to the first named edges, said tooth being curved horizontally to the curvature of the saw's circumference and having a rabbet in the upper portion of its convex side to provide a bearing shoulder and a tongue at the concave side of the tooth and protruding above the plane of said shoulder.



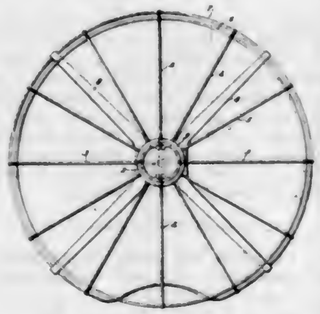
1,620,256. TRUCK ELEVATOR UTILIZING PARALLEL MOTION. WILLIAM H. HEISE, Los Angeles, Calif. Filed Mar. 20, 1926. Serial No. 96,168. 9 Claims. (Cl. 214—75.)

1. In combination: a structure forming part of a vehicle; a horizontal platform; means for attaching said platform to said structure so that said platform may be moved between raised and lowered position; a guide supported by said structure; a block adapted to slide along said guide; means whereby said block may be moved along said guide; and parallel motion mechanism connected to said block and to said platform whereby said platform is moved when said block is moved without swinging it from horizontal position.



1,620,257. TALKING MACHINE. KARL HOLTZ, Berlin, Germany, assignor to Carl Lindström Aktiengesellschaft, Berlin, Germany. Filed Mar. 10, 1924, Serial No. 698,204, and in Germany Aug. 17, 1923. 2 Claims. (Cl. 274—2.)

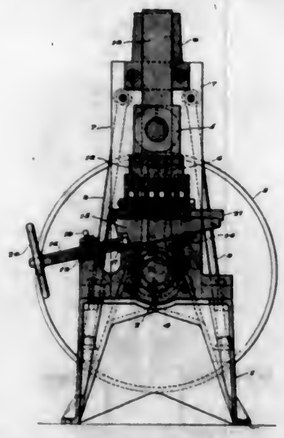
2. In a talking machine, the combination with a relatively shallow base member having a bottom panel and sides and containing a turn table and driving means therefor, of a cover member hinged to the base and comprising a top and sides, the sides being approximately of the same depth as the sides of the base, a wall



hinged to one side of the cover member at the margin thereof, means carried by said wall for supporting the tone arm of the machine, and two substantially triangular walls hinged to the cover member for movement into position to cooperate therewith to convert the cover member into a sound amplifier.

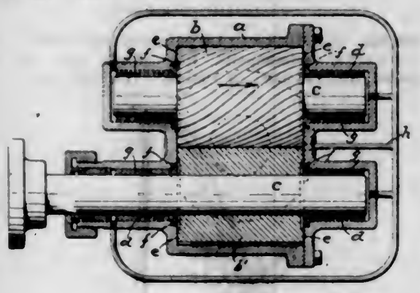
1,620,258. WAVE AND TIDE MOTOR. NISHAN HOSHAFIAN, Forest Hills, N. Y. Filed May 2, 1924. Serial No. 710,638. 5 Claims. (Cl. 253—11.)

1. Means for guiding a buoyant element in wave and tide motors of the character described, comprising a vertical guideway, a plate slidable in said guideway, having an annular opening and means comprising roller bearings carried by the buoyant element and engaging the annular opening to pivot the buoyant element in the plate.



1,620,259. MEDALLION. JOHN D. KARLE, Roselle Park, N. J., assignor to Diehl Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 5, 1924. Serial No. 684,513. 8 Claims. (Cl. 230—1.)

1. A fan-guard medallion comprising a one-piece sheet-metal member formed with flat peripherally disposed hook-shaped tangs having circumferentially extending free end-portions, the inner edges of which portions and the adjacent peripheral portions of said member define throats for embracing radially extending face-wire portions of a fan-guard.

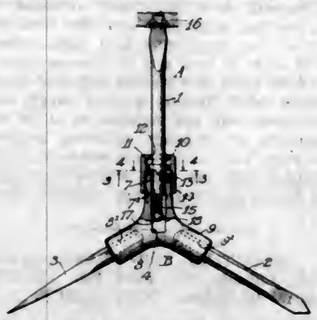


1,620,260. BOLT OR ROD STRAIGHTENING MACHINE. DANIEL P. KELLOGG, Los Angeles, Calif. Filed Dec. 19, 1921. Serial No. 523,407. 4 Claims. (Cl. 153—48.)

1. A machine for reforming rods or cylindrical objects, including a pair of die blocks having correspondingly alined angular intermeshing die elements adapted to receive the objects to be reformed between them, and means for applying pressure to the die blocks to reform the object, each die block having a series of similar recesses of equal width and parallel sides alternating with the recesses in the other die block so that the portions of one die block will be received within the recesses of the other, said recesses extending through the sides of their respective die blocks, the bottoms of the recesses in one block extending as prolongations of the surfaces of the angular

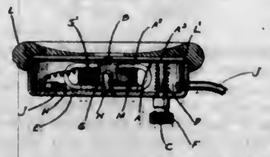
die elements and the other block being formed with the bottoms of the recesses parallel to the apices of the angular die elements thereof.

1,620,261. ROTARY GEAR PUMP. FRANK W. KENNEDY, Trenton, N. J., assignor to De Laval Steam Turbine Company, Trenton, N. J., a Corporation of New Jersey. Filed June 11, 1924. Serial No. 719,237. 3 Claims. (Cl. 103—128.)



1. A pump having a casing with an inlet and discharge outlet for the fluid to be pumped, intermeshing pump gears in the casing between the inlet and discharge sides of the casing, there being a slight clearance space between the ends of the gears and the walls of the casing, there also being fluid delivery conduits for delivering fluid from the discharge side of the pump to the clearance spaces between the ends of the gears and the casing, whereby a flow of fluid is maintained between the ends of the gears and casing from the discharge side of the pump to counterbalance the end thrust of the gears by the flow of such fluid.

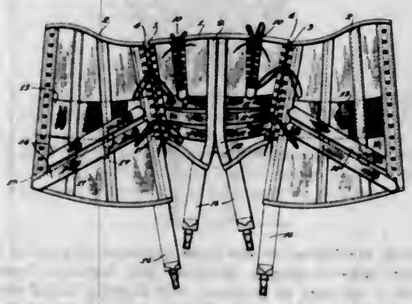
1,620,262. COMBINATION TOOL. RALPH KLABOE, Chicago, Ill. Filed Aug. 12, 1925. Serial No. 49,760. 5 Claims. (Cl. 7—15.)



1. A combination tool comprising a body portion provided with a plurality of sockets, and individual tools secured in said sockets, the relation being such that said individual tools will diverge from one another and any two of them with said body portion will form a handle for manipulating another tool, said combination tool comprising an individual tool secured in its socket so as to

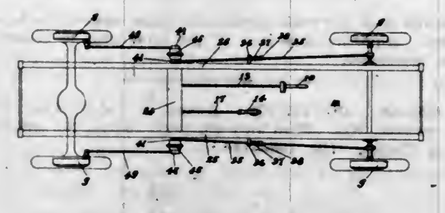
be rotatable and endwise movable, a clutch adapted for locking said tool to and releasing it from said body portion, endwise movement of said tool produced by pressure

on said tool in operation effecting engagement of said clutch, and a spring applied to said tool adapted to impart endwise movement thereto to disengage said clutch.



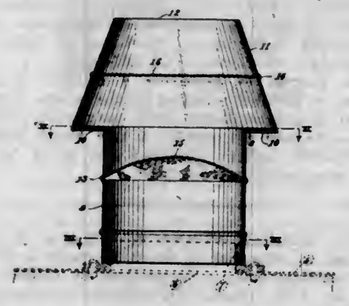
1,620,263. TELEPHONE RECEIVER. JACK KLEINMAN, Bronx, N. Y., assignor to Henry Hyman & Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 24, 1923. Serial No. 627,519. 3 Claims. (Cl. 179—114.)

1. In a telephone receiver, a casing, an electro-magnet therein, a non-magnetic diaphragm in the casing and centrally disposed over the magnet, a magnetic ring concentric with the diaphragm and having its periphery held in the casing, said ring having a tongue extending to the center of the diaphragm with its inner end attached to the diaphragm and an adjusting member attached to the tongue and extending through the casing at one side of the magnet and arranged to adjust the tongue and the diaphragm toward and away from the magnet.



2. In a telephone receiver, a casing, an electro-magnet secured within said casing, and a wire-securing member clamped between the magnet and casing and having arms arranged to hold wires connected to the magnet.

1,620,264. MATERNITY CORSET. ALEATHA H. LOCKWOOD, Hartford, Conn. Filed Aug. 29, 1921. Serial No. 496,205. 14 Claims. (Cl. 2—41.)

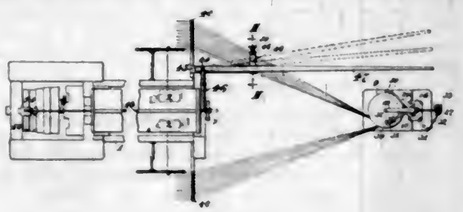


1. A corset embodying a closed front portion and a back portion adapted collectively to encircle the torso of a wearer, a belt section positioned at the waist line and incorporated in the back portion, and weight carrying bands incorporated in and extending across the front portion of the corset over the lower abdomen, said bands extending between the termini of the belt section where they are secured and being fanned out toward the medial line of the front portion whereby a sling is provided which transmits the strain to the belt section above the hips.

1,620,265. BRAKE-APPLYING MECHANISM FOR MOTOR VEHICLES. HERBERT V. LUDWICK, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 24, 1923. Serial No. 641,109. 13 Claims. (Cl. 188—10.)

1. Brake-applying mechanism for motor vehicles comprising four-wheel brakes, a brake lever for simultaneously operating all of said brakes, flexible connections between the brakes on opposite sides of the vehicle, and connections including differential gearing between the brakes on the same side of the vehicle.

1,620,266. MEANS FOR EXTRACTING SOOT AND GREASE FROM FLUE GASES. JOSEPH A. MCCARTHY, Jamaica, N. Y. Filed Mar. 3, 1925. Serial No. 12,987. 3 Claims. (Cl. 183—74.)



1. A device for extracting soot and grease from the flue gases emitted by a cooking stove, comprising a flue pipe adapted to be fitted at its lower end over the flue outlet flange of the stove and having an outturned continuous flange at its upper end provided with air inlet openings, a foraminous partition in the flue pipe below said inlet openings, a hood attached at its lower end to the outer edge of said flange and open at its upper end, and a foraminous partition for the hood above said inlet openings.

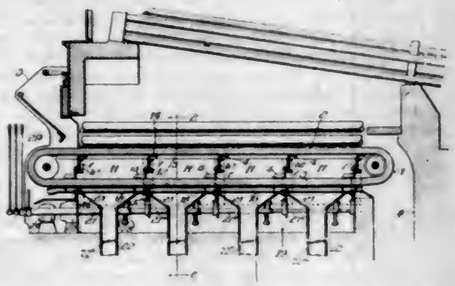
1,620,267. WINDING MACHINE. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Original application filed Oct. 1, 1924, Serial No. 740,979. Divided and this application filed June 11, 1925. Serial No. 36,405. 5 Claims. (Cl. 64—4.)

1. In a manually operated belt shifter, a support and a belt shifting lever pivoted thereon, said support being

provided with stops for limiting the movement of the lever and an intermediate adjustable stop mounted on said support in position to engage the lever when the lever is

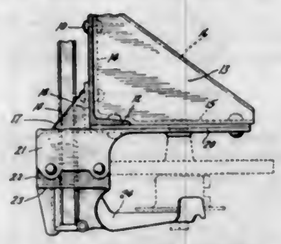
moved from one limit toward the other limit of its movement, requiring deflection of the lever arm to complete its movement.

1,620,268. CONVEYER. EMERY M. MCVICKER, Milwaukee, Wis. Filed July 29, 1921. Serial No. 488,308. 4 Claims. (Cl. 198—146.)



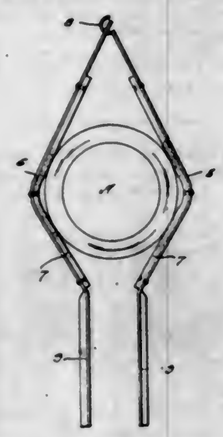
1. In an endless conveyer, the combination of an endless chain, means for driving said chain, a plurality of material sustaining sections pivotally connected with said chain, and latches carried by said chain for releasably supporting said sections in material sustaining position.

1,620,269. COMBINED FACE POWDER AND SKIN BLEACH. FREDERICK A. MARSEK, Milwaukee, Wis., assignor to Kolmar Laboratories, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 12, 1922. Serial No. 581,551. 3 Claims. (Cl. 167—9.)



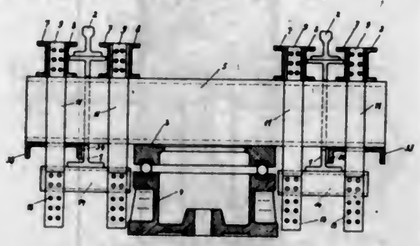
2. The process of preparing a cosmetic compound, consisting in suitably mingling a face powder containing powdered talc, precipitated chalk, magnesium carbonate, zinc stearate and zinc oxide; a skin bleach containing zinc perborate, sodium peroxide; and oil of lemon, in suitable proportions as described.

1,620,270. STOKER FURNACE. THOMAS A. MARSH, Chicago, Ill., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Jan. 29, 1923. Serial No. 615,485. 1 Claim. (Cl. 110—40.)



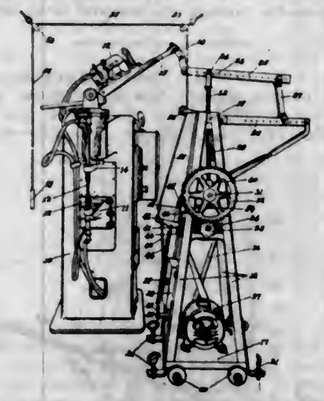
In a stoker, the combination of an endless chain grate having upper and lower leads, an upper set of cross-members dividing the space between said leads into a plurality of transverse compartments open to both leads, skids beneath the lower lead and extending lengthwise thereof for supporting the same, a lower set of cross-members beneath said skids and arranged transverse thereto in vertical alignment with the cross-members of the upper set for supporting said skids, shoes bearing against said leads at both sets of cross-members, ducts at the sides of the grate and opening into said compartments for supplying draft thereto, a main supply conduit beneath said lower lead and common to all of said ducts, and a plurality of droppage collecting hoppers in the spaces between the lower cross-members, said hoppers being arranged one for each compartment and having outlets to discharge the droppage collected thereby.

1,620,271. MOUNTING FOR BRAKE GEARS. FRED MATHEWS, Chicago, Ill. Filed Feb. 11, 1926. Serial No. 87,594. 10 Claims. (Cl. 74—121.)



1. In combination with a car end sill of channel section, of a gusset secured to the end-sill and extending inwardly therefrom longitudinally of the car, a top casting consisting of a plate disposed underneath the lower flange of the sill, an extension projecting inwardly from said plate and connected to said gusset, an upstanding member on said plate outside said sill and engaged therewith and a bottom casting connected to said top casting and cooperating therewith to mount a gearing mechanism between the same.

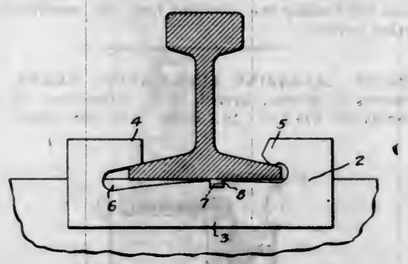
1,620,272. JAR HOLDER. CHARLES J. MAY, Mishawaka, Ind. Filed Dec. 17, 1925. Serial No. 75,989. 1 Claim. (Cl. 81—3.2.)



In a jar holder of the class described a pair of relatively wide V-shaped metallic jaw members between which a jar may be disposed, anti-slipping lining secured upon the inner faces of said jaws, means at one end of the jaws whereby the same may be detachably pivoted together, said means comprising a hook formed on one jaw member and adapted for engagement within a slot formed within the end of the other jaw member, the other ends of the jaw terminating in horizontally extending handles, said handles being curved transversely throughout their length.

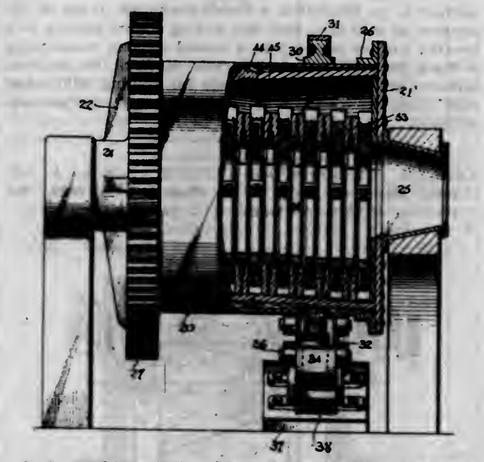
1,620,273. TURNTABLE. KARL MAYER, Vienna, Austria. Filed July 19, 1926, Serial No. 123,428, and in Austria July 21, 1925. 5 Claims. (Cl. 104—35.)

1. In a turn-table having subdivided main girders, the combination of a central bearing having a rotating plate, cross girders fixed to said rotatable plate, girder pieces removably supported by said cross girders, flexible lamels fixed with their upper ends to said girder pieces, and supporting pieces fixed to the lower ends of said lamels, each of said supporting pieces serving as a support for one of the ends of the main girder parts to be joined, said lamels together with said girder and supporting pieces being removable as a whole when the turn-table is dismounted.



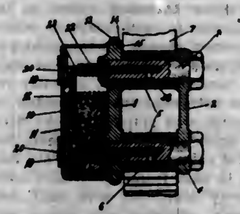
1,620,274. AUTOMATIC ELECTRIC WELDING MACHINE. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 17, 1921, Serial No. 501,274. Renewed Jan. 21, 1927. 22 Claims. (Cl. 219—4.)

1. A machine of the character described comprising a pair of electrodes connected in an electric circuit, motor means for automatically and continuously reciprocating one of said electrodes and means for automatically arresting the moving parts of said motor means only at such time when said electrodes are in separated position.



1,620,275. RAIL ANCHOR. GEORGE L. MOORE, Bethlehem, Pa. Filed Feb. 18, 1926. Serial No. 89,004. 4 Claims. (Cl. 238—329.)

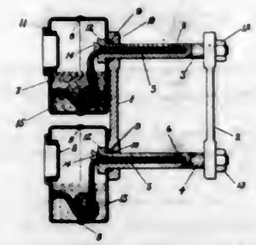
1. A rail-anchor comprising an integral member having an under-rail portion and inwardly extending long and short end jaws to bear upon the sloping tops of the two rail-base flanges, and a separate shoe adapted to occupy a definite position on said under-rail portion and bear against the bottom of the rail, the whole being



constructed and arranged to be driven transversely of the rail into strong gripping engagement therewith, substantially as set forth.

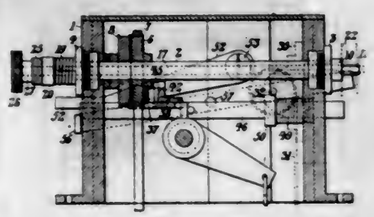
1,620,276. ORE-GRINDING MACHINE. GEORGE W. MORTHLAND, Lead, S. Dak. Filed May 10, 1921. Serial No. 468,360. 8 Claims. (Cl. 83—9.)

1. A crushing device for mills comprising a master ring, crushing shoes having openings receiving said ring, said shoes being provided with radial openings communicating with said first named openings whereby the material being ground will be packed within said radial openings and engaged with said ring, and fastening devices for securing said shoes to said ring.



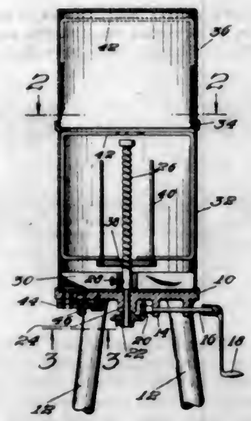
1,620,277. MAGAZINE LUBRICATING MEANS. CORNELIUS T. MYERS, Avenel, N. J. Filed Aug. 8, 1923. Serial No. 656,386. 10 Claims. (Cl. 308—120.)

1. In a magazine lubricating means for automotive vehicles, a shackle member adapted to aid in the support of a bearing having a surface to be lubricated, said shackle



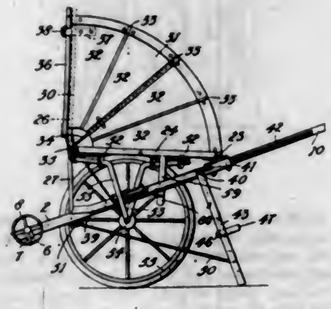
member serving as one part of a lubricant supply reservoir, a second member constructionally separate from the shackle member but adapted to be fastened thereto in a manner to form the remaining part of said reservoir and means for feeding the lubricant from the reservoir to the bearing surface.

1,620,278. MAGAZINE LUBRICATING MEANS. CORNELIUS T. MYERS, Avenel, N. J. Filed Nov. 15, 1923. Serial No. 674,872. 12 Claims. (Cl. 308—120.)



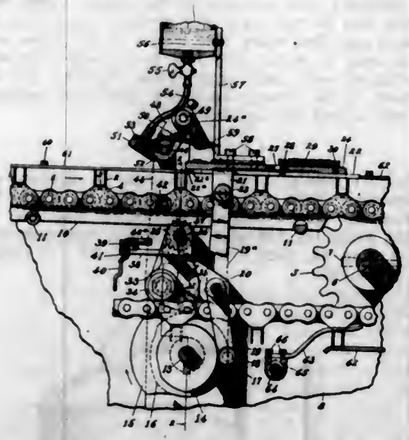
1. In a magazine lubricating means, a bolt having a surface to be lubricated, a member adapted to aid in the support of said bolt, said bolt having a port leading to a bearing surface on the bolt, a second member constituting a fluid lubricant supply reservoir fastened to the first member by said bolt, and means for feeding fluid lubricant from the reservoir to said port for the purpose described.

1,620,279. RIBBON-SPOOL CLUTCH. SAMUEL A. NEIDICH, Edgewater Park, N. J. Filed July 28, 1925. Serial No. 46,580. 5 Claims. (Cl. 242—68.)



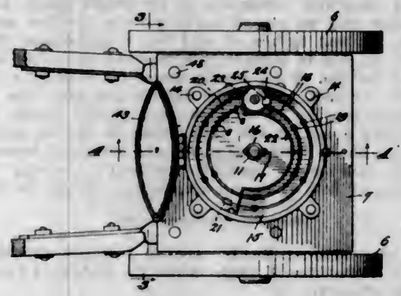
1. In ribbon spool clutch mechanism; the combination with a tubular winding shaft, having an internal screw thread, at one end; of a clutch sheath member having an external screw thread, at one end, detachably fitted in said shaft thread, and having a longitudinal groove for a clutch blade; a clutch blade fitted for longitudinal and radial reciprocation in said groove, and having a cam incline at its inner edge arranged to ride in the bottom of said groove, over the front end of the latter, and having an internally screw threaded socket, in its rear end; a clutch rod mounted to reciprocate in said winding shaft, and having a screw thread, at its front end, arranged to fit said socket, and a screw thread at its rear end, provided with a removable knob; a collar on said rod, in spaced relation with said knob; a spring on said rod, arranged to operate said clutch; a yoke fitted on said rod between said knob and collar; a chain bar rigidly connected with said yoke, parallel with said rod, and mounted to reciprocate in said frame, with said clutch rod; and a chain operatively connected with said chain bar, to release said clutch; whereby said clutch may be operated to detachably rigidly engage the cylindrical wall of an axial opening in a ribbon spool, and thus detachably operatively connect such spool with said winding shaft.

1,620,280. DISPENSER. CHARLES T. NEWTON, Glendale, Calif. Filed Sept. 21, 1925. Serial No. 57,801. 2 Claims. (Cl. 221—67.)



1. A dispenser, including in combination, a dispensing tank having a discharge opening therein, closure means for the opening, and manually operated means for forcing material through the opening, said means comprising a series of paddle blades rotatably positioned in the dispenser, and further means simultaneously operated with the discharge means for maintaining a uniform consistency in the material to be dispensed and for scraping the sides of the container, said means including a vertical screw, a crossbar on the screw, and mixing rods on the crossbar, the rotation of the screw forcing the said prongs upwardly through the material to be dispensed.

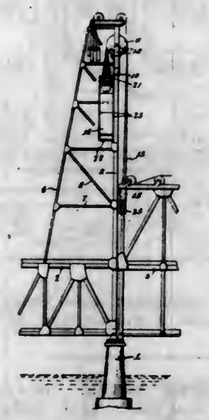
1,620,281. COLLAPSIBLE BABY CARRIAGE. WILLIAM ROBERT OYSTON, Sydney, New South Wales, Australia. Filed Nov. 2, 1925, Serial No. 66,376, and in Australia Feb. 26, 1925. 8 Claims. (Cl. 280—40.)



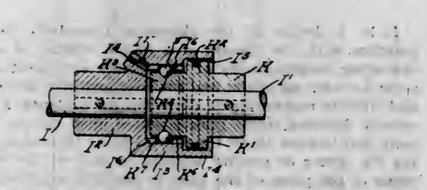
5. A collapsible baby carriage comprising a frame, a seat pivotally connected thereto, a body movably mounted on the seat, a handle slidable in the frame, lever connections intermediate the said seat and body, and means on the frame adapted to be operated by the sliding movement of the handle to collapse the body on the seat and lower the seat on the frame.

1,620,282. MACHINE FOR APPLYING AND GUMMING LABELS, WRAPPERS, AND THE LIKE. HAROLD H. PELZER, New York, N. Y. Filed Aug. 2, 1924. Serial No. 729,724. 8 Claims. (Cl. 93—7.)

1. In label applying or wrapping mechanism, the combination with a conveyer for conveying the articles to be wrapped successively to the labelling or wrapping devices, of a finger for folding a free end of the label or wrapper upon the article, a pad for gumming or moistening the underside of the other end of the label, a slide for folding down such other end, and mechanism for causing the folding finger to retreat as the slide advances, substantially as set forth.



1,620,283. DOUBLE-ROW GINSENG SEED DRILL. JAMES C. PETERS and JAMES BRICE PETERS, Reedsville, Pa. Filed June 13, 1924. Serial No. 719,843. 1 Claim. (Cl. 221—138.)

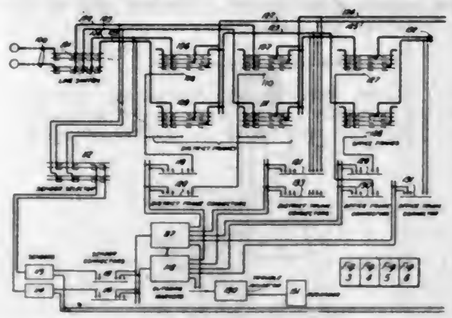


A drill including a wheel supported frame, said frame having a discharge opening, a seed box mounted on the frame, a partitioning member within the seed box and dividing the seed box into a receiving chamber and a curved passageway, a rotary member having spaced openings formed therein and having grooves establishing communication between the openings, means for rotating the rotary member, and a brush at one end of the passageway for sweeping seed resting on the upper surface of the rotary member.

1,620,284. METHOD AND APPARATUS FOR CHANGING MAIN SHEAVES AND CABLES ON LIFT BRIDGES. ERIC A. PEARSON, Portland, Oreg. Filed July 21, 1924. Serial No. 727,240. 6 Claims. (Cl. 14—42.)

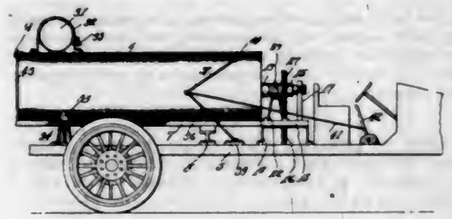
5. In a lift bridge of the character described, the method of repairing the suspending means of the counterweights consisting in placing a temporary sheave element adjacent the main sheave element to be repaired, mounting a movable girder at an end of the lift span below a fixed girder thereof, connecting said counterweights with said movable girders by a temporary auxiliary cable element, and then moving said movable girder from said fixed girder by an interposed mechanical power, thereby to suspend said counterweights by said temporary cable element.

1,620,285. FLEXIBLE COUPLING. SOLOMON POLLAK, San Francisco, Calif., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed July 2, 1925. Serial No. 41,041. 3 Claims. (Cl. 64—91.)



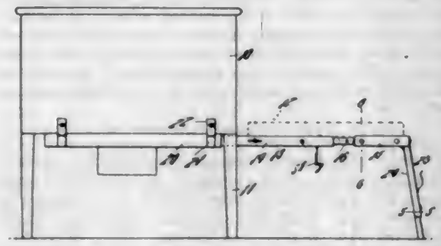
1. In a flexible coupling a pair of opposed, closely abutting shaft ends, coupling sleeves mounted on each of said shafts, one of said coupling sleeves being formed with a generally cylindrical portion adjacent the end of the shaft to which it is secured, an outwardly projecting flange about the intermediate portion of said sleeve, the cylindrical portion being penetrated by a plurality of spherically formed apertures, the other sleeve being provided with a generally cylindrical enclosing sleeve surrounding said first mentioned sleeve and provided with a plurality of axial grooves of generally arcuate cross section, and balls positioned in said cylindrical apertures and seated in said grooves, and a packing ring interpositioned between said outwardly projecting flange and the cylindrical enclosing sleeve.

1,620,286. TROUBLE-INDICATING SYSTEM. LOUIS M. POTTS, Tenafly, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 25, 1924, Serial No. 752,080. Renewed Jan. 3, 1927. 14 Claims. (Cl. 179—175.)



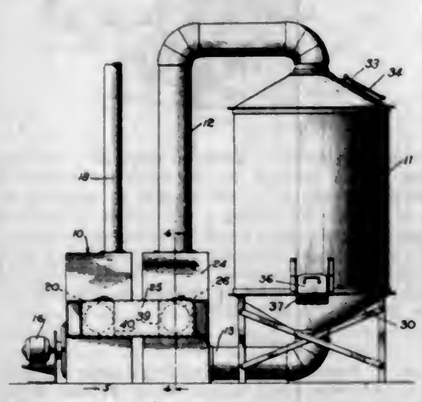
2. The combination in a telephone system of switching apparatus for extending connections, a switch controlling mechanism for governing the operation of said apparatus,

a recording device, and mechanically operated means for associating said device with said mechanism if it should fail to function properly for causing the operation of said



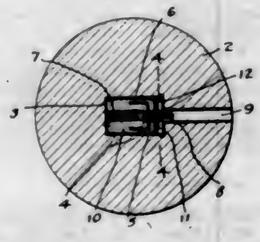
device to produce a permanent record giving information of the different degrees of progress made by such mechanism.

1,620,287. CONCRETE MIXER. HOWARD POWERS, Marietta, Ohio. Filed Feb. 1, 1926. Serial No. 85,147. 3 Claims. (Cl. 83—73.)



1. In a device of the character described, the combination wtih the chassis of a motor vehicle, of a body extending longitudinally of the chassis and pivoted at a point between its center and the rear and upon the chassis and tiltable rearwardly to discharge its contents, a transversely disposed water tank mounted upon the top of the body and located above the pivotal point thereof and having its center of gravity slightly in rear of the vertical plane of the pivot of the body to partially counterbalance the same and having means for discharging its contents into the said body, and means connected with the body in advance of the pivotal point for swinging the said body on its pivot to dump the body and return the same to its normal position.

1,620,288. SUPPORTING DEVICE. JOHN C. REINKE, Jr., Pulaski, Wis. Filed Mar. 27, 1925. Serial No. 18,876. 2 Claims. (Cl. 248—41.)

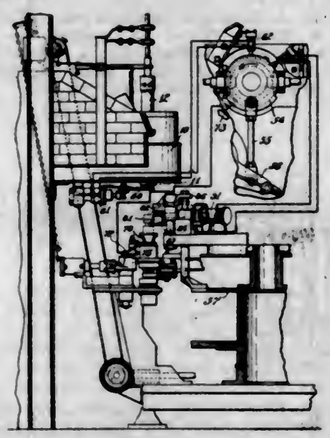


1. A tray supporting device of the character described comprising a frame mounted for sliding movement, and including extensible side and end members, an intermediate extensible member connecting the side members, extensible legs for supporting one end of the frame, oppositely located brackets extending inwardly from the side members near one end of the frame, curved connecting bars having their ends pivotally secured to the brackets and their other ends secured to the upper ends of the legs to permit said legs to be folded inwardly or extended with their upper ends engaging the end members of the frame, and means detachably engaging the legs to hold the legs folded.

1,620,289. DESICCATOR. GRAHAME B. RIDLEY, San Francisco, Calif., assignor to Edward B. Ward, San Francisco, Calif. Original application filed Oct. 22, 1924, Serial No. 745,103. Divided and this application filed July 13, 1925. Serial No. 43,197. 3 Claims. (Cl. 34—34.)

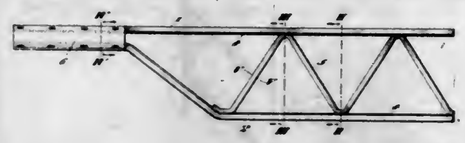
1. A desiccator comprising a bin within which bulk materials may be placed, induction and eduction ports in the top and bottom of said bin, a foraminous floor within the bin to support bulk material above the bottom of the bin, an air heater, means for creating a circulation of said heated air through the bin from an induction port to an eduction port, control means for permitting a mixing and replenishing of the air drawn from the bin by fresh air, and means interposed between the bin and the air heater for optionally reversing the direction of flow of the air circulating through the bin.

1,620,290. SIGNAL BALL. ADOLPH J. RUBIN, Brooklyn, N. Y. Filed Nov. 7, 1925. Serial No. 67,564. 1 Claim. (Cl. 273—62.)



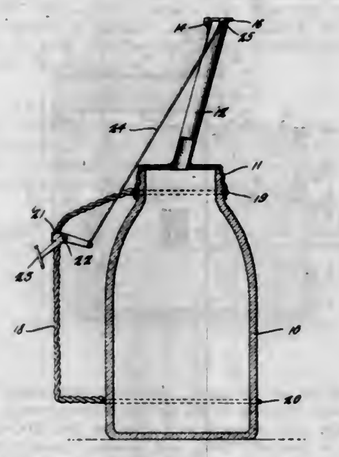
A golf ball containing a signal comprising a spring adapted to be wound, retarding means and sounding means to be actuated by the spring.

1,620,291. SWIVELING HEADLIGHT OF AUTOMOBILES. ESSINGTON ODERNHEIMER RUTTER, Bangaroo, near Canowindra, New South Wales, Australia. Filed Apr. 24, 1925. Serial No. 25,504. 7 Claims. (Cl. 240—62.)



1. A swiveling mount for automobile headlights including a stem for each light pivotally supported, a linkage between said stems to maintain the lights in approximately parallel relationship, an extension on the supporting stem of one light, a crank arm thereon, a shaft mounted parallel to said stem, a crank thereon, a linkage connecting said cranks for simultaneous operation therewith, a second crank on said shaft, a rod fixed on said second crank parallel to said shaft, a slotted bracket carried by a tie-rod associated between the steering mechanism and steering wheels of the automobile, said first rod being positionable between and spaced from the walls of said slot.

1,620,292. GLASS-WORKING MACHINE. ALEXANDER SAMUELSON, Terre Haute, Ind., assignor to Chapman J. Root, Terre Haute, Ind. Original application filed July 27, 1922, Serial No. 577,792. Divided and this application filed Jan. 9, 1924. Serial No. 685,151. 2 Claims. (Cl. 49—18.)



1. In a glass working machine, the combination of a vertical support, a blow-head-support pivoted on said support and vertically movable thereon, a blow-head carried by said blow-head-support, a cylinder-and-piston unit connected to said blow-head-support, to produce vertical movement thereof, a cylinder-and-piston unit connected to said blow-head-support to produce swinging movement thereof, supply pipes leading to said two cylinder-and-piston units, means for controlling flow of motive fluid therethrough, and intermediate connections between the two cylinders and controlled by the relative movement of their pistons whereby successive lateral and vertical movements of the blow-head are obtained.

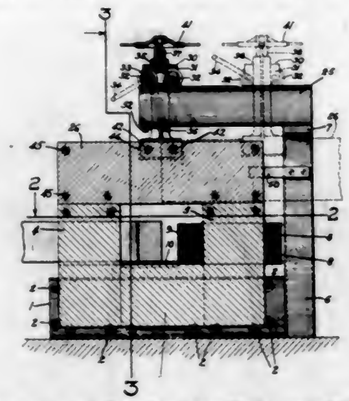
1,620,293. WELDED BEAM. CHARLES SCHENCK, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed Apr. 27, 1926. Serial No. 104,871. 6 Claims. (Cl. 189—37.)

1. A structural beam comprising two longitudinal members, the opposing faces of each provided with a plurality of longitudinal ribs, an integral, continuous zig-zag web member welded at its bends alternately to the ribs on the longitudinal members and staggered relative to the general direction of the beam.

1,620,294. OIL HOLDER. JOHN LOUIS SCHNEIDER, Charles City, Iowa. Filed July 27, 1925. Serial No. 46,414. 1 Claim. (Cl. 221—23.)

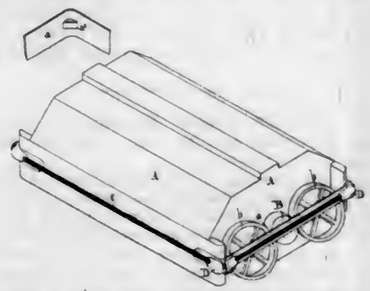
In a dispensing device for jars, the combination with a jar having an externally threaded mouth and provided with a cap having a threaded engagement with said mouth, of a handle formed of twisted wire to provide a closed ring at one end engaging around the threaded wall of the jar cap and a ring at its other end rotatably engaging around the body of the jar, a spout extending from the jar cap, a spring actuated closure for the outlet end of the spout, a bell crank actuator operatively supported upon the handle remote from the closure and a rod connecting the closure and bell crank actuator, whereby pressure upon the bell crank actuator will open the closure.

1,620,295. TICKET CASE. WALTER J. SCHRAMM, Chicago, Ill. Filed Apr. 20, 1921. Serial No. 462,828. 1 Claim. (Cl. 211—38.)



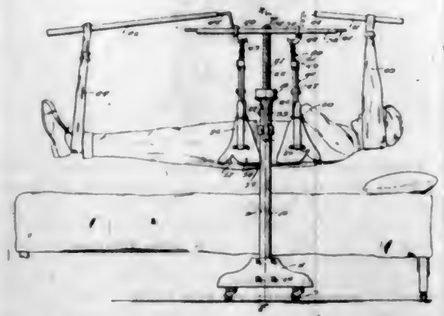
A ticket case including a supporting frame, a plurality of rectangular ticket tubes carried thereby at an angle inclined sufficiently so that a stack of tickets placed in a tube will feed downwardly by gravity without the use of weights or the like, the lower ends of the tubes being provided with bottom flanges to hold the tickets substantially horizontal and with a slot through which the lowermost ticket may be drawn forwardly, and means for holding a designating ticket on the top side of the lower

end inside of each tube by the tickets in the tube whereby the designations are discernible with the tubes mounted closely one above the other, and whereby said designating



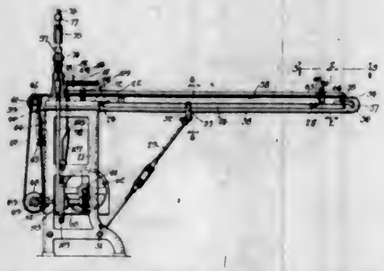
tickets tilt downwardly at the rear end as the stacks decrease sufficiently below the top of the designating ticket to indicate that refilling is required.

1,620,296. ELECTRIC HEATER. JOHN E. SEDERHOLM, St. Paul, Minn., assignor to American Hoist & Derrick Company, a Partnership composed of F. J. Johnson and W. O. Washburn, St. Paul, Minn. Filed July 3, 1926. Serial No. 120,432. 8 Claims. (Cl. 219—47.)



1. A device of the class described, comprising a stationary core, an open frame arranged transversely at one end of said core, a track supported by said frame above the core, a movable core, and means translatably supporting the core upon the track for movement longitudinally of the stationary core and track, through the frame.

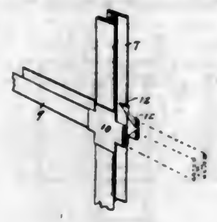
1,620,297. CARPET SWEEPER. JAMES LIGHTFOOT SHORROCK, Accrington, England, assignor to Entwisle & Kenyon Limited, Ewbank Works, Accrington, England. Filed June 2, 1925. Serial No. 34,448, and in Great Britain Feb. 18, 1925. 1 Claim. (Cl. 15—45.)



In a carpet sweeper having a case, end irons, and a furniture guard the combination of a corner buffer provided with a longitudinal central bore through which the furniture guard is passed and a transverse groove disposed centrally of its length fitted at each corner and a metal clip within the transverse groove of each buffer and extending around the adjacent end iron substantially as described.

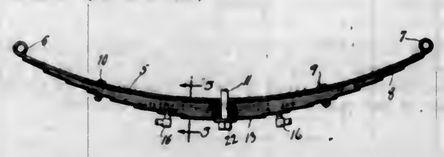
1,620,298. BODY LIFTER AND CARRIER. CHARLES W. SMITH, Banner, Okla. Filed May 6, 1925. Serial No. 28,497. 12 Claims. (Cl. 5—86.)

1. A body lifting device, comprising a base, a standard at one side of the base, a supporting member at the upper end of the standard projecting laterally therefrom in every direction, arms overhanging the base and slidably connected at one end to the said support at one side of the standard and engaging the support at the opposite side of the standard and adjustable laterally towards and from each other and the standard, and suspending means at the free ends of the arms.



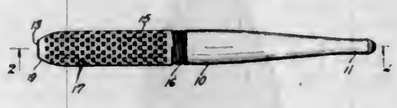
1,620,299. THUMB-HOLE-CUTTING MACHINE. JULIUS A. STOCK, Cicero, Ill., assignor to W. C. Ritchie & Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 15, 1925. Serial No. 2,597. 4 Claims. (Cl. 93—58.)

1. In a thumb-hole cutting appliance of the character described, the combination of a substantially-horizontal conveyor adapted to transport a series of flanged box elements with their flanges projecting upwardly, means to drive said conveyor continuously, means to intermittently arrest the movement of the series of box elements while one of them is being acted upon by the thumb-hole cutting means, and means to cut out thumb-hole sections from the flanges of said elements in succession.



1,620,300. ART-GLASS JOINT. JOHN G. SUSMAN, Indianapolis, Ind. Filed Sept. 7, 1926. Serial No. 133,932. 2 Claims. (Cl. 189—77.)

1. In a corner fastener for window mullions, a substantially rectangular plate slotted from each corner toward the middle of the plate forming a pair of angular ears at each corner, the ears of each corner pair being

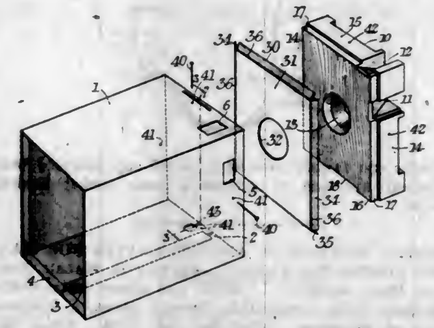


bent on the same side of the plate but in opposite directions from each other to receive the flanges of mullions with a sliding fit.

1,620,301. SELF-LUBRICATING AND INTERNAL-PRESSURE SPRING. CHARLES THIDE, Brooklyn, N. Y. Filed May 11, 1925. Serial No. 29,525. 5 Claims. (Cl. 267—50.)

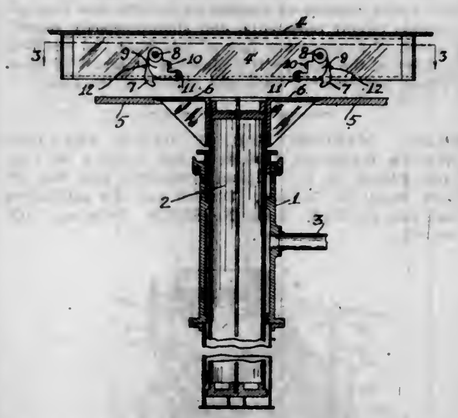
1. A leaf spring comprising a plurality of superimposed leaves having a central connecting element, each of said leaves, except the top leaf, being slotted longitudinally throughout its length forming a lubricating chamber on each side of the connecting element, the bottom walls of said slots slanting upwardly at the ends of the leaves, and compensating slots in the ends of said leaves.

1,620,302. CIGARETTE HOLDER. PHILO B. TINGLEY, Glen Ridge, N. J. Filed May 26, 1926. Serial No. 111,777. 4 Claims. (Cl. 131—51.)



4. In a cigarette holder, a body including a mouth piece at one end and having a recess at the other end to receive the end of a cigarette, and a foraminous guard having threaded engagement with said body, said guard being of a larger diameter than the cigarette so that the walls thereof are spaced from said cigarette and having an outer open end contracted to substantially the size of the cigarette arranged to engage it adjacent its free end to center it in the holder, and said guard having portions of its wall extending inwardly from one side of the openings and inclined over the openings to reduce direct radiation through the openings.

1,620,303. PROCESS FOR PREPARING FEATHERS FOR BEDDING AND THE LIKE. WILLIAM H. UHRIG, St. Louis, Mo. Filed Sept. 8, 1924. Serial No. 736,664. 6 Claims. (Cl. 19—4.)

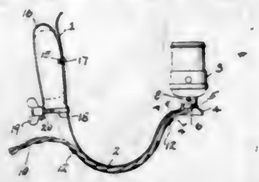


1. The process of preparing feathers for bedding and the like, comprising, treating the feathers so as to render the quills brittle, grinding the feathers so as to detach the barbs from the quills and pulverize the quills and separating the barbs from the quills.

1,620,304. PHOTOGRAPHIC-CAMERA CONSTRUCTION. ERNEST E. UNDERWOOD, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 24, 1925. Serial No. 58,284. 10 Claims. (Cl. 95—11.)

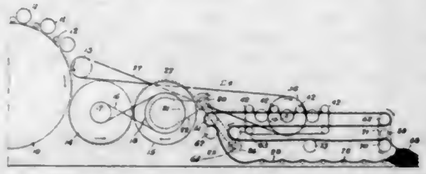
1. In a camera, the combination with a body tube, of a lens board inserted into the tube, and means for forming a light tight joint between the tube and the lens board including a resilient member adapted to cooperate with the tube and the lens board forming light tight connections therewith.

1,620,305. ELEVATOR. BURTON CHARLES VAN EMON, San Francisco, Calif., assignor to James M. Koford, trustee, Oakland, Calif. Filed Oct. 4, 1926. Serial No. 139,299. 4 Claims. (Cl. 187—1.)



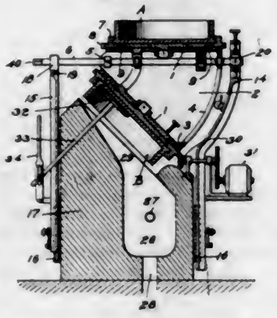
3. In an elevator, the combination of a platform; a ram having a head plate adapted by contact to raise and lower said platform; and means carried by said platform for automatically clamping the head plate upon and during the imposition of the platform's weight thereon, and automatically releasing said head plate when relieved of said weight, said means comprising swinging dogs, and gravity levers actuated by said head plate, for controlling said dogs.

1,620,306. LIGHTING FIXTURE. FREDERICK W. WAKEFIELD, GERALD L. BASIL, and CARL A. SCHROEDER, Vermilion, Ohio, assignors to The F. W. Wakefield Brass Company, Vermilion, Ohio, a Corporation of Ohio. Filed Dec. 6, 1923. Serial No. 679,014. 1 Claim. (Cl. 240—73.)



A lighting fixture comprising a single sheet of material formed with an attaching plate at one end and having

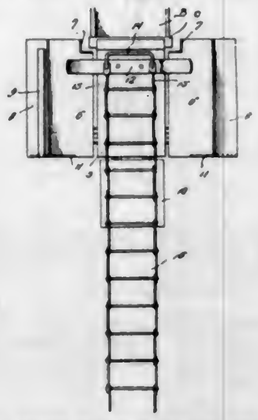
an outwardly extending arm bent to form a tubular arm open at the bottom and provided with ears adapted to be bent to hold the wires in said tube, said arm having



its outer end formed into an inverted cup provided with a central aperture to act as a lamp socket holding member.

1,620,307. METHOD OF AND APPARATUS FOR MAKING COMPOSITE FABRIC. PATRICK H. WALSH, Newton, Mass., assignor, by direct and mesne assignments, to Caro Cloth Corporation, Boston, Mass., a Corporation of Delaware. Filed Jan. 31, 1924. Serial No. 689,714. 8 Claims. (Cl. 28—4.)

1. That improvement in methods of making composite fabric, which consists in feeding an endless base through an endless circuit repeatedly, and simultaneously supplying a web of fleece to one face of said base and needling said fleece to the base until a plurality of layers of fleece have been accumulated upon and needled to the base.

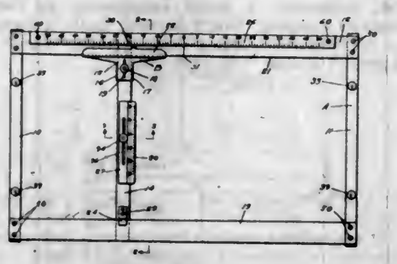


1,620,308. MANUFACTURE OF GLASS ARTICLES. WILLIAM WESTBURY, Canastota, and PATRICK W. COLLINS, Elmira, N. Y. Original application filed May 20, 1924, Serial No. 714,680. Divided and this application filed Jan. 21, 1926. Serial No. 82,879. 5 Claims. (Cl. 49—83.)

1. The method of manufacture of glass articles, which consists in supplying molten glass to a pot, drawing and severing the article therefrom, then reheating and discharging the glass residue, and axially turning the pot during the reheating operation.

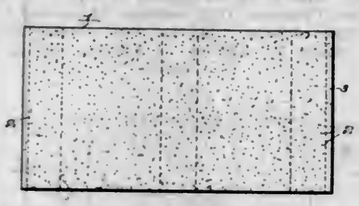
1,620,309. FIRE ESCAPE. JOHN W. WETZEL, Allentown, Pa. Filed Apr. 21, 1926. Serial No. 103,535. 2 Claims. (Cl. 228—42.)

1. In a fire escape of the class described, a foldable ladder and a casing therefor, said casing comprising a back wall adapted to be rigidly secured to a part of a building, combined side and front walls hingedly connected to the back wall, a bottom hingedly connected to said back wall, means on the side and front walls for supporting said bottom in casing-forming relation, and a removable cover having a marginal flange adapted to embrace the side and front walls for maintaining all of the walls of the casing in ladder enclosing position.



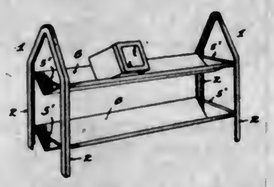
1,620,310. BOWLING PIN. MICHAEL J. WHELAN, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 27, 1922. Serial No. 546,965. 13 Claims. (Cl. 273—82.)

2. As a new article of manufacture, a bowling pin having a contact portion normally engageable by a bowling ball, consisting of a plastic compound having pieces of wood thoroughly incorporated therewith substantially all of said pieces being short and straight.



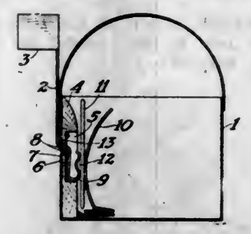
1,620,311. BASE-ATTACHED PLOTTING INSTRUMENT. ALVIN C. WHITE, Austin, Minn. Filed Mar 22, 1923. Serial No. 626,768. 1 Claim. (Cl. 33—80.)

A plotting instrument comprising a pair of spaced parallel vertical frame members, a second pair of spaced horizontal frame members secured to said vertical frame members at right angles thereto to form a rectangle, said horizontal frame members being positioned on and above said vertical frame members, a vertical bar positioned to extend between said horizontal frame members, a rider adjustably secured to said bar adapted to slide along the edge of one of said horizontal frame members and to hold said bar in contact therewith at one end, a clip positioned in the other end of said bar, said clip having a shoulder adapted to ride or engage against the edge of the lower horizontal frame member and a finger extending over and



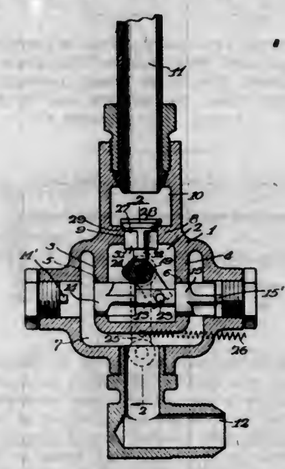
coming in contact with the upper surface of the lower horizontal frame member, a scale detachably secured to one of said horizontal frame members for positioning said bar and a second scale adjustably positioned upon said bar having a groove therein for slidably fitting said bar and means for holding said second scale in adjusted position on said bar.

1,620,312. COMPOSITION OF MATTER ADAPTED TO BE USED FOR BUILDING MATERIAL. HARVEY B. ABBOTT, Glassboro, N. J. Filed Oct. 26, 1925. Serial No. 65,032. 2 Claims. (Cl. 106—24.)



1. The composition of matter for building blocks consisting of proportions by weight of ground soft coal cinders to the quantity of approximately 19 parts, sand to the quantity of approximately 12⅜ parts, cement to the quantity of approximately 8⅛ parts, water to the quantity of approximately 2⅝ parts.

1,620,313. DISPLAY RACK. THEODORE J. ABELE, Peoria, Ill., assignor to Stuber & Kuck Co., Peoria, Ill., a Corporation of Illinois. Filed May 15, 1925. Serial No. 30,462. 2 Claims. (Cl. 211—14.)

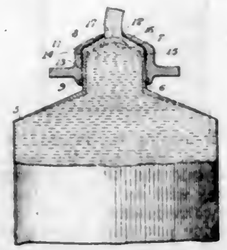


1. A knock-down rack of the character named, including in combination a pair of independent standards forming the supports of the rack, each comprising a substantially U-shaped member of angle iron whose extremities form legs, a bracket extending from the inner surface of one of the limbs of the angle and including an upturned portion spaced from that surface and from the other limb of the angle, and a frame adapted to engage upon the brackets between the upturned portions thereof and said legs snugly fitting between the several limbs of the said legs.

1,620,314. RURAL-MAIL-BOX INDICATOR OR FLAG. IRA D. ALDERMAN, Clinton, N. C. Filed July 19, 1926. Serial No. 123,258. 1 Claim. (Cl. 232—34.)

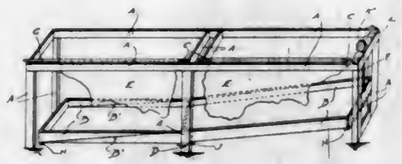
In a device for indicating the presence or absence of mail matter in a rural mail box, the combination of a plate positioned in said box having provided therein a recess communicating with an aperture therein, said box having an aperture corresponding to said aperture in said plate, a staff rotatably positioned in said recess and extending through said apertures, said staff having at its outer end a suitable flag or marker and at its inner end a cam, springs positioned on the inner side of said plate and acting in conjunction with the said cam to cause the rotation of the said staff, when mail matter is deposited in said box between said springs and the lower end of the signal flag and coincidently forming the means of holding said mail matter within said box.

1,620,315. VALVE. WILLIAM E. BAKER, Cleveland, Ohio, assignor to William Edgar Baker and George Alton Frantz, trustees of The Web Engineering Company, Cleveland, Ohio. Filed Nov. 21, 1925. Serial No. 70,472. 19 Claims. (Cl. 277—26.)



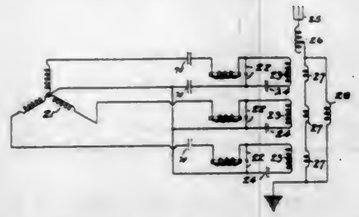
2. In a device of the class described, a valve casing having a chamber therein, said chamber having passages forming an inlet and a double outlet, a substantially balanced valve controlling two of said passages, and an auxiliary valve operated by the first-named valve and controlling the other of said passages.

14. In a device of the class described, a casing having a chamber therein, said chamber being of general rectangular shape, opposite walls of said chamber having aligned apertures therein forming a double outlet from said chamber, an inlet in another of said walls for the



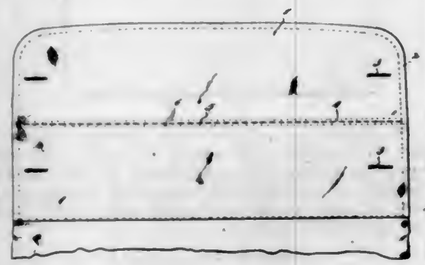
passage of steam into said chamber, a substantially balanced valve controlling the passage of steam through said outlet, a shaft disposed transversely of said chamber, an auxiliary valve disposed in said inlet, means on said shaft to operate both of said valves in unison in one direction, and a spring normally holding said operating means in position wherein both of said valves are closed.

1,620,316. CLOSURE. LOUIS E. BALTZLEY, Glen Ridge, N. J.. Filed June 1, 1926. Serial No. 112,742. 4 Claims. (Cl. 221—60.)



1. In a closure structure, a discharge neck closed in its central portion and open at one side of such central portion, a cap open at the center and closed over the open side portion of the neck, said cap being internally screw threaded and the neck being externally screw threaded to match the threads of the cap, said neck further having a smooth cylindrical portion beyond the screw threads thereon, a seal within the cap above the screw threaded portion therein and engaging over the smooth cylindrical portion of the neck in both the open and closed positions of the cap to prevent material from within the neck reaching said screw threads.

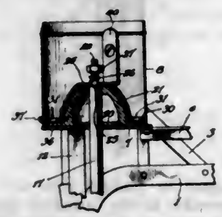
1,620,317. MEANS FOR AGITATING WASHING, LIMING, OR TANNING SOLUTIONS. BENJAMIN RALPH BAXTER, Goulburn, New South Wales, Australia. Filed Sept. 24, 1923, Serial No. 664,613, and in Australia Oct. 6, 1922. 1 Claim. (Cl. 259—101.)



Means for agitating washing, liming or tanning solutions in tanning pits constructed with a horizontal floor surface, comprising a supporting frame arranged to be placed in the bottom of a pit and provided at its upper side with removable hide hanging bars, a rocking member positioned midway in the supporting frame at the base thereof, having a centrally arranged pivot axis and adapted to rock on the floor of the pit and make actual contact therewith, the opposite end portions of said rocking frame being at an angle to each other, said rocking member having a bottom composed of spaced grate bars, the opposite end portions of the bottom being also at an angle to each other so that when one is in horizontal position the other is upwardly inclined, and the said pivot axis of said member being slightly below the angle between the end portions of the bottom so that at each movement of said member one bottom portion thereof contacts with the pit bottom in reaching a horizontal position and said end portions agitate and displace the sediment and lime with a surging wave effect alternately in opposite directions and in the same plane.

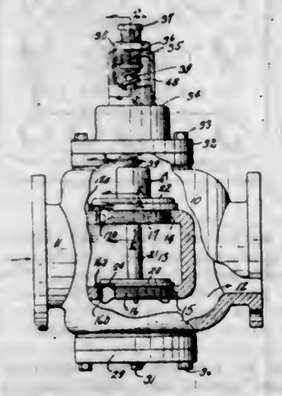
1,620,318. HIGH-FREQUENCY ARC CONVERTER. RALPH R. BEAL and HAROLD F. ELLIOTT, Palo Alto, Calif., assignors, by mesne assignments, to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Jan. 9, 1922. Serial No. 528,070. 7 Claims. (Cl. 250—36.)

7. In an oscillation generator, a source of polyphase alternating current, a plurality of high frequency generator elements energized from said source by currents differing in phase, an oscillation circuit, means whereby all of the generator elements supply the oscillation circuit, and additional means for synchronizing the oscillations of the generators.



1,620,319. REENFORCED SHIRT CUFF. GUY IRVING BENNETT, Columbus, Ohio, assignor of one-half to William Clyde Frieze, Columbus, Ohio. Filed July 17, 1926. Serial No. 123,164. 3 Claims. (Cl. 2—123.)

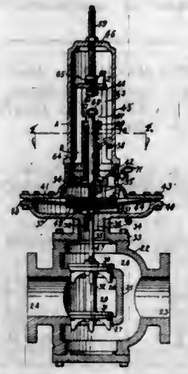
3. A shirt cuff comprising the usual plies of material and having the usual fold, a line of relatively long stitches extending through the plies along said fold, the stitches being exposed for the greater portion of their length at the exterior of the fold, and other lines of relatively short stitches at opposite sides of the first mentioned line of stitching and parallel thereto.



1,620,320. FERTILIZER DISTRIBUTOR. GEORGE LANSDEN BILBREY, Hermitage Springs, Tenn., assignor of one-half to J. B. Freeman, Lafayette, Tenn., and one-fourth to James R. Vaughn, Red Boiling Springs, Tenn. Filed June 3, 1925. Serial No. 34,717. 2 Claims. (Cl. 221—120.)

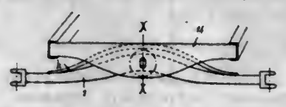
1. A fertilizer distributor comprising a hopper, a hub member rising centrally within the hopper, a vertically disposed shaft rotatably fitted in said hub member, means carried by the under side of the hopper to rotate said shaft, a stirrer carried by said shaft and extending over and conforming to the hub member, a distributor ring fitted in the hopper between said hub member and the wall of the hopper and engageable by said stirrer whereby to rotate therewith, said distributor ring being provided with arcuate slots whereby to feed fertilizer to discharge

openings in the bottom of the hopper, and a governor ring fitted on the bottom of the hopper under the distributing ring and between the hub member and the wall of the hopper and shiftable to permit or prevent the entrance of fertilizer into said discharge openings.



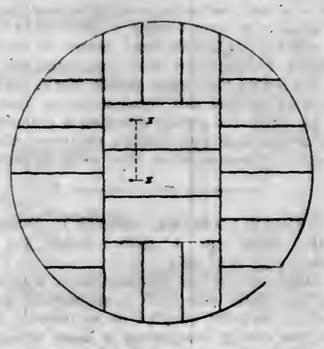
1,620,321. AUTOMATIC RELIEF VALVE. LYLE W. BROWNE, Marshalltown, Iowa, assignor to The Fisher Governor Company, Marshalltown, Iowa. Filed Oct. 26, 1925. Serial No. 64,807. 4 Claims. (Cl. 137—53.)

3. A valve structure comprising a casing, a valve therein, a connecting means comprising a stem on said valve, a valve stem plunger having a groove, a plural part ring in said groove, a shouldered sleeve covering said ring, the shoulder of the sleeve being adjacent the ring and the end of the sleeve engaging the valve stem, a retainer covering said sleeve and adapted to engage the valve stem and maintain the sleeve in engagement therewith whereby slight movement of the valve stem plunger relative to the valve stem is accomplished, a cup covering but spaced from said connecting means, a spring for closing said valve, said spring coacting with said cap.



1,620,322. PRESSURE AND VACUUM CONTROL VALVE. LYLE W. BROWNE, Marshalltown, Iowa, assignor to The Fisher Governor Company, Marshalltown, Iowa. Filed Nov. 5, 1926. Serial No. 146,418. 2 Claims. (Cl. 137—153.)

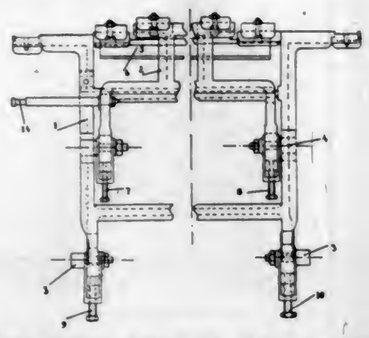
1. In a pressure and vacuum control valve, a valve casing, a partition therein, dividing the casing into inlet and outlet compartments, having a valve port and seat, a valve for cooperating with said seat, a casing having therein a pressure sensitive member connected with the valve and subject on one side to the pressure in one compartment of the valve casing, a spring operatively connected with the pressure sensitive member, and adjustable means for causing the spring to push or pull on such



member, according to its adjustment for resisting pressure or suction from the valve casing on said pressure sensitive member.

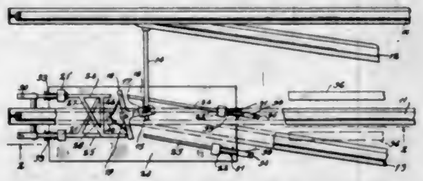
1,620,323. ELASTIC AXLE FOR MOTOR VEHICLES. ETTORE BUGATTI, Molsheim, France. Original application filed Oct. 5, 1923, Serial No. 666,768, and in France Oct. 13, 1922. Divided and this application filed June 1, 1925. Serial No. 34,244. 3 Claims. (Cl. 280—112.)

1. The combination of an axle for motor vehicles, a cross-piece of the vehicle frame situated at the level of the axle and having the form of an inverted U throughout its whole length and surrounding for a considerable length the axle disposed in the said cross piece, the axle being mounted without play and with easy friction in the interior of the cross-piece.



1,620,324. WELDED STRUCTURE AND PROCESS OF MAKING SAME. GLENN OWEN CARTER, New Rochelle, N. Y., assignor to The Linde Air Products Company, a Corporation of Ohio. Filed Apr. 28, 1924. Serial No. 709,690. 3 Claims. (Cl. 113—112.)

1. Process of forming built-up structures comprising steel plates or shapes, consisting in uniting contiguous edges of the same by means of a substantial quantity



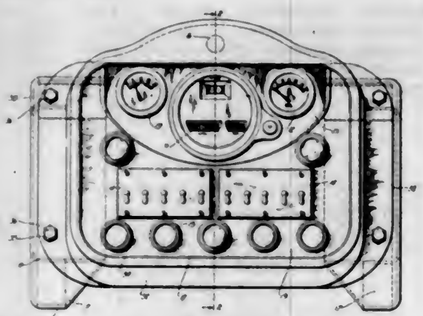
of non-ferrous metal having a lower melting point and higher plasticity than steel, said non-ferrous metal being rapidly fused into place by application of a high-temperature source of heat, whereby distorting stresses in the structure are avoided or minimized.

1,620,325. COMBING MACHINE. JEAN JOSEPH GUSTAVE GODFROID CORMAN, Verviers, Belgium. Filed Aug. 20, 1924, Serial No. 734,349, and in Belgium Sept. 1, 1923. 1 Claim. (Cl. 19—120.)

1. In a combing machine, two frames, a stationary top comb carried by each frame, in such a manner that the spacing between the two top combs may be regulated according to the nature of the material to be combed, the said combs working in parallel planes, and in the same direction and simultaneously, and regulating means provided on each comb frame.

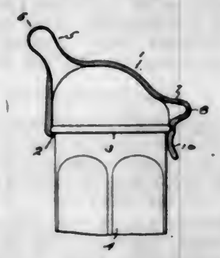
1,620,326. RAILROAD-SWITCH-OPERATING DEVICE. JOZEPH CZERNIAK and CASIMIR CZERNIAK, South Chicago, Ill. Filed Nov. 12, 1926. Serial No. 147,970. 4 Claims. (Cl. 246—278.)

1. In a railroad switch operating device, bell crank-levers having upper arms with bevelled edges fulcrumed to the side of a rail, normally projecting into the path of operating shoes on a train having bevelled edges to engage the bevel edges of said bell-crank levers to depress the upper arms, a rock-lever, a draw rod connected to said rock-lever to operate the switch points, means operated by the other arms of said bell crank-levers to operate said rock-lever to throw the switch allowing a transfer of the train to a siding, and a means for returning the switch into its normally open position after each operation.



1,620,327. CIGAR LIGHTER. OLIVER C. DENNIS, Wilmette, Ill. Filed Apr. 7, 1926. Serial No. 100,219. 6 Claims. (Cl. 219—32.)

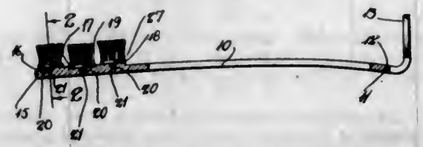
1. In a cigar lighter, the combination of a tubular casing having one of its ends open, a supporting member of non-conducting material adapted to be inserted into and secured in the casing, comprising a head fitting in the open end of the casing, and a reduced shank, a resistance element mounted on the outer end of the head, rivets extending through the shank and to which the terminals of the resistance element are respectively connected, flexible conductors extending through and into the casing, one switch mounted on the shank, connected to the other con-



ductor and adapted to contact with one of the rivets, and a button movable in the casing to shift the strip to close the circuit through the resistance element.

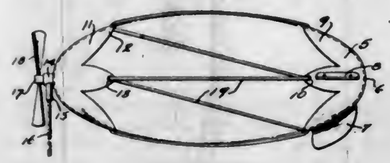
1,620,328. INSTRUMENT PANEL. THOMAS C. DINOMAN, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 27, 1926. Serial No. 112,047. 4 Claims. (Cl. 240—8,16.)

2. In an instrument panel of the class described, an instrument supporting member comprising a plate apertured to receive indicating instruments, brackets for supporting the plate and means for securing the plate to said brackets and spacing it therefrom, said plate having a depressed surface in one portion obliquely disposed and rearwardly inclined to the face of the plate, an instrument having an indicating face supported within the said depressed surface, an electric lamp in juxta-position with said instrument, a housing encasing the sides of said plate and a forwardly disposed extension of one of the walls of the housing encasing the said electric lamp.



1,620,329. NIPPLE FOR NURSING BOTTLES. GEORGE H. DONALDSON, West Hartford, Conn. Filed July 6, 1926. Serial No. 120,577. 1 Claim. (Cl. 128—252.)

A nipple formed of elastic material and adapted to be applied to the neck of a wide mouth bottle, which nipple comprises a cap-shaped body portion, a perforated feeding



teat extending obliquely with relation to the axis of the cap from the closed top near one edge of the body portion, a protuberance with a perforation in its end extending at right angles with relation to the axis of the cap from the body portion near the rim at the open end on the side opposite from the feeding teat, and means extending from the edge of the body portion near the protuberance for facilitating the application to and removal from a bottle of the nipple.

1,620,330. TOOTHBRUSH. SAMUEL E. DOUGLASS, Raleigh, N. C. Filed Feb. 24, 1926. Serial No. 90,340. 1 Claim. (Cl. 15—147.)

A tooth brush having a head with a recess on the bristle side thereof, the said head having a plurality of threaded seats, anchoring members threaded therein, brush sections rotatable on the anchoring members, each of said brush sections comprising superimposed plates connected together, the outer of said plates being apertured, and bristle holding sockets in the said apertures.

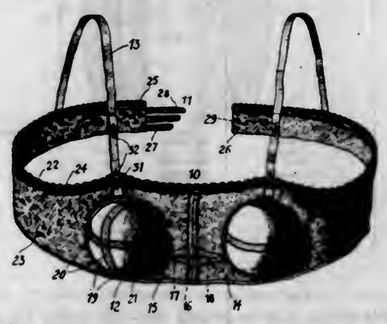
1,620,331. TOY-BALLOON FRAME. EDWARD S. EICHENLAUB, North Fairfield, Ohio. Filed Dec. 20, 1923, Serial No. 681,767. Renewed June 30, 1926. 1 Claim. (Cl. 46—37.)

A balloon frame comprising concaved end members one of which is provided with outstanding fins, blades rotatably mounted upon the other member and a lace flexibly connecting the end members together.

1,620,332. PROCESS OF TREATING LIQUIDS. WILSON EVANS, Chicago, Ill., assignor to Aluminate Sales Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1925. Serial No. 33,654. 9 Claims. (Cl. 210—23.)

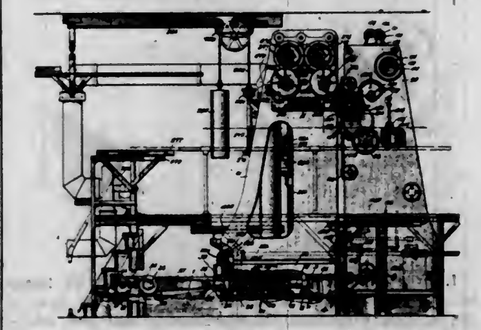
1. The process of treating liquids which consists in mixing in solution lime, soda ash and sodium aluminate and then mixing the resultant product with the liquid to be treated and then separating the resultant precipitates from the liquid.

1,620,333. PROCESS OF TREATING LIQUIDS. WILSON EVANS, Chicago, Ill., assignor to Aluminate Sales Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1925. Serial No. 33,655. 7 Claims. (Cl. 210—23.)



1. The process of treating liquids which consists in mixing in solution lime, soda ash, mixing the resultant product with the liquid to be treated, and then adding sodium aluminate and separating the resultant precipitates from the liquid.

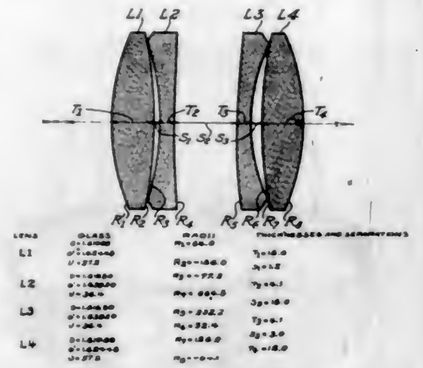
1,620,334. MULTIBAR BUMPER. ROLLIE B. FAGEOL, Los Angeles, Calif., assignor to American Chain Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed June 10, 1925. Serial No. 36,097. 4 Claims. (Cl. 293—55.)



1. An automobile bumper comprising a pair of parallel impact bars formed of flat strip material and arranged in a common vertical plane transversely of an automobile, the ends of said impact bars being free and being twisted to lie in parallel horizontal planes, means spacing covering and connecting said ends, and resilient supporting means for said bumper.

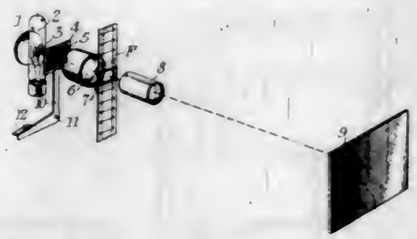
1,620,335. BUST SUPPORTER. LOUIS FARKAS, New York, N. Y. Filed Mar. 26, 1925. Serial No. 18,624. 2 Claims. (Cl. 2—42.)

1. A bust supporter comprising a belt like body having breast pockets, each having crossed reinforcing strips, said body being further reinforced between the breast pockets by an inverted cross-like thickened portion, the horizontal portion of the reinforce being wider toward the center to stiffen the structure at that point.



1,620,336. STEP AND REPEAT MACHINE. OSCAR FOURNIER, Symmes Township, Hamilton County, Ohio, assignor to The United States Playing Card Company, Norwood, Ohio, a Corporation of Ohio. Filed Sept. 2, 1924. Serial No. 735,277. 54 Claims. (Cl. 95—73.)

1. In a centering device in combination with means for supporting a negative, a frame supporting on its opposite faces in parallelism respectively translucent plates and n



sensitized plate, said frame symmetrically rotatable for alternately opposing said plates to the negative, means for positionally adjusting the negative relative to the plates, mechanism for translating the negative supporting means from a given point toward and away from the frame in predetermined degree, means for connecting and disconnecting the negative supporting means respectively with and from the translating mechanism at the predetermined point, and mechanism for timing periods of movement of said translating mechanism in reverse directions and between movement periods.

1,620,337. OBJECTIVE. CHARLES W. FREDERICK and FRED E. ALTMAN, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 17, 1923. Serial No. 613,270. 9 Claims. (Cl. 88—57.)

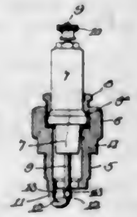
1. An objective comprising four air-spaced lenses, the outer ones being similar and positive and the inner ones being negative, one of the negative lenses being biconcave and the other being of meniscus form and each of the surfaces having a radius of curvature greater than .5 of the focal length of the objective.

1,620,338. PROJECTION SYSTEM. CHARLES W. FREDERICK, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 4, 1925. Serial No. 48,160. 5 Claims. (Cl. 88—24.)

1. In a projecting system, a gate whereat an image bearing element may be positioned, a source of light of the straight band type, for illuminating said gate, and a heat absorbing screen positioned between the source of light and the gate and comprising a metallic net work, the strands of which are inclined with respect to the straight band formation of the light source.

1,620,339. PROJECTION OBJECTIVE. CHARLES W. FREDERICK and DONALD L. WOOD, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 20, 1926. Serial No. 110,533. 6 Claims. (Cl. 88—57.)

Lens	Radii	Thickness & Separation	D Line	V
L^1	R^1 · 825 R^2 · 692	T^1 · 94	1.523	590
L^2	R^3 · 6019 R^4 · 407	T^2 · 38	1.617	364
		S · 967		
L^3	R · 2207	T^3 · 80	1.523	590

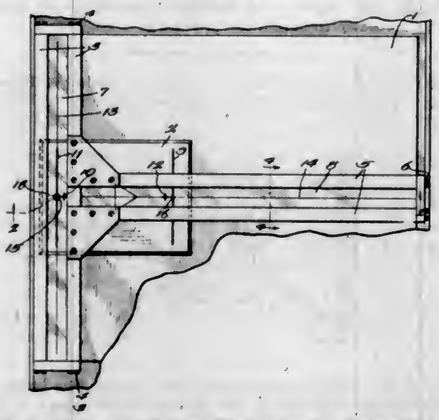


1. An objective comprising a positive front component consisting of a positive lens of crown glass and a negative lens of flint glass cemented together and a rear component consisting of a positive meniscus lens of crown glass with the convex surface facing the front component.

1,620,340. PILE TEXTILE FABRIC. SARAH FREUDENBERG, Brooklyn, N. Y. Filed Oct. 22, 1925. Serial No. 64,176. 3 Claims. (Cl. 139—391.)

1. In the process of making a hair fabric, the steps which comprise securing individual hairs to an extended strand by twining the ends of the respective hairs remote from their points around the component threads of said strand, leaving the points free, and then incorporating said strand with a backing of fabricated material with said hairs extended therefrom in closely associated relation to constitute a pile fabric.

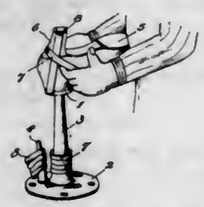
1,620,341. SPARK PLUG. GEORGE W. GARDNER, Flint, Mich. Filed Feb. 1, 1926. Serial No. 85,177. 1 Claim. (Cl. 123—169.)



In a spark plug, the combination with a plug having means to secure it to a cylinder of an engine, of primary

and secondary electrodes mounted thereon and having one of their ends in juxtaposition and substantial alignment with each other, each of said adjacent ends of said electrodes having a pair of divergent prongs having their portions adjacent their tips reduced.

1,620,342. COMPOSITION FOR TREATING INNER TUBES. ALONZO L. GIBBS and JOSEPH A. GILL, Tulsa, Okla. Filed Apr. 23, 1925. Serial No. 25,426. 2 Claims. (Cl. 134—175.)

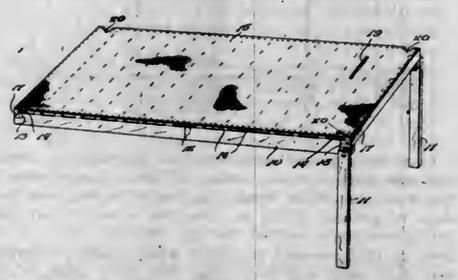


1. A composition for treating inner tubes comprising ground mica, shredded cork, non-frictional graphite, fine sodium of chloride, wood fibre, ground slippery elm bark, and aqua ammonia.

1,620,343. METHOD OF AND APPARATUS FOR MARKING OBJECTS. HORACE W. HACKER, Chicago, Ill. Filed May 9, 1923. Serial No. 637,679. 12 Claims. (Cl. 77—62.)

1. An implement for marking objects including a bed for supporting an object to be marked, a marking element in fixed relation to the bed, a pair of sighting indices at a distance from each other located over and spaced from the upper face of the bed, said upper face having an unobstructed portion permitting an object to be shifted superficially thereon while disposed beneath both of said indices, whereby said object may be positioned with the sighting indices in visible register respectively and simultaneously with correspondingly spaced apart indices on the object, thereby to position said object in predetermined relation to the marking element.

1,620,344. METHOD OF APPLYING HEELS TO SHOES. CHARLES N. HAHN, Binghamton, N. Y. Filed Mar. 17, 1926. Serial No. 95,379. 1 Claim. (Cl. 12—147.)



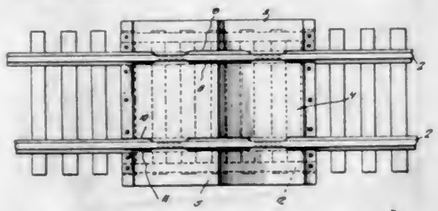
The method of binding a shoe heel to a shoe, during the drying of the uniting adhesive, which comprises stretching an elastic band of substantial width about the heel and a last within the shoe to extend over the tread of the heel and over the end of the cone of the last and along the sides of the shoe counter, and stretching a second band of substantial width to the shoe to extend about the rear side of the heel and the front portion of the upper and diagonally along the sides of the upper in intersecting relation to the first mentioned band at the heel seat of the shoe, and permitting the bands to contract and exert such a binding force that the heel will be held against accidental displacement until the adhesive has set.

1,620,345. FOUNTAIN PEN. CHARLES A. HAIST, Fresno, Calif. Filed May 20, 1926. Serial No. 110,420. 2 Claims. (Cl. 120—47.)

1. A fountain pen having a hollow barrel and a pen point carried at one end thereof and in communication with the interior of the barrel, a plunger mounted in the barrel, actuating means for the plunger comprising an interiorly threaded sleeve connected with the plunger and a screw engaging and telescoping said sleeve, a plug in the barrel at the remote end from the pen and supporting one end of the screw, and means for actuating the screw, said means comprising a key permanently mounted on the screw and axially movable thereof to lock it against angular movement with respect to the screw or to free it from such movement.

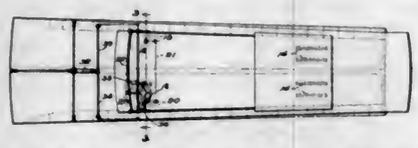
1,620,346. AUTOMOBILE BED. OSWALD CHARLES HARPER, Saskatoon, Saskatchewan, Canada. Filed Feb. 14, 1925. Serial No. 9,174. 1 Claim. (Cl. 5—118.)

An automobile bed including side rails having notches in their ends, a fabric strip, cross slats extending transversely beneath said strip and secured against the under face of the strip in spaced relation to each other and resting at their ends upon the upper edge faces of said



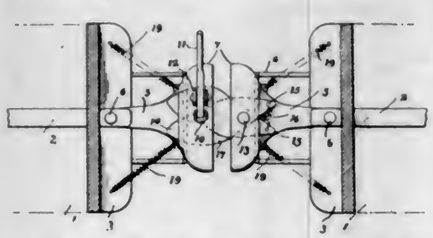
side rails, end bars secured to the ends of the fabric strip transversely thereof and at their ends resting in the notches of the side rails, said bars having their outer strip engaging portions extending above the side rails and their inner portions flush with the upper edges of the side rails, and fasteners carried by said side rails and movable into position to overlie the inner portions of the end bars and releasably secure the end bars, the corner portions of said fabric strip being recessed above the fasteners to permit access to the fasteners.

1,620,347. OIL-WELL PUMP. JEPSON M. HAWKINS and SYLVESTER LOSEY, Covington, Okla. Filed Oct. 27, 1923. Serial No. 671,245. 2 Claims. (Cl. 103—179.)



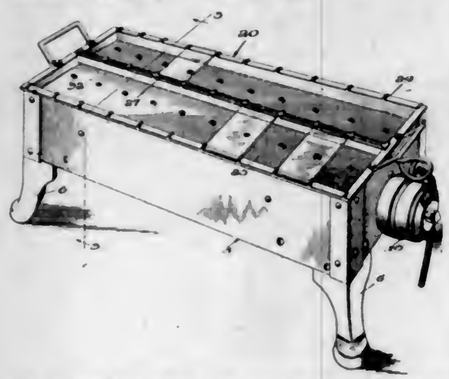
1. The combination with a pump of a standing valve for the same, a gas dissipating attachment connected to said pump below the standing valve and comprising an elongated barrel, a tapered nipple connecting the upper end of said barrel to said pump below said standing valve, the lower end of said elongated barrel being reduced, and automatically operable valve means arranged in said reduced portion of the elongated barrel and controlling the inlet thereof.

1,620,348. CATTLE GUARD. PETE HEARNTON, Hulbert, Ark. Filed Jan. 28, 1926. Serial No. 84,362. 3 Claims. (Cl. 256—14.)



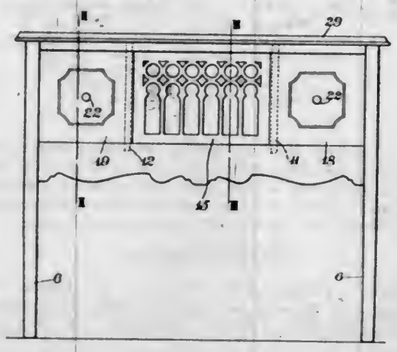
1. A cattle guard comprising an intermediate section and side sections, each section of obtuse angle form in the direction of its length and each having end portions of reduced width to clear the bases of rails and the intermediate section having the side edges of its apex portion recessed to afford wheel flange clearances and each side section having the inner edge of its apex portion recessed for the same purpose, the apices of the sections being arranged substantially flush with the treads of railway rails, transverse members extending below railway rails and to which the intermediate and side sections are connected, and body bars arranged under the side sections and superposed on and connected to sleepers or ties below said side sections and having end portions interposed between the ends of the side sections and the said transverse members.

1,620,349. BOAT. WILLIAM ALBERT HICKMAN, West Mystic, Conn. Filed Jan. 10, 1923. Serial No. 611,888. 20 Claims. (Cl. 114—66.5.)



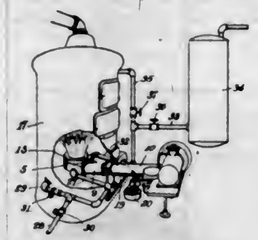
1. A boat having sides and a bottom, said bottom presenting an inverted V section adjacent the longitudinal center line thereof and bottom surfaces adjacent the sides of said V section sloping upwardly and outwardly at angles such that on lateral movement of the boat through the water a substantial component of force in an upward direction is produced.

1,620,350. CAR COUPLING. LEWIS W. HIGGINS, Bulan, Ky. Filed July 21, 1926. Serial No. 124,038. 3 Claims. (Cl. 213—180.)



1. A car coupling comprising a pair of coupling heads, a coupling pin mounted in one of said heads, a pair of cooperating grippers pivoted within the other coupling head and extending therefrom to project into the first described coupling head and engage the coupling pin therein, and a contractile spring connecting the opposite ends of the grippers.

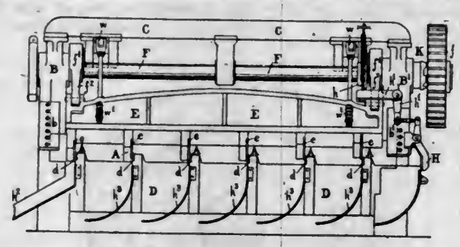
1,620,351. MICROSCOPIC-SLIDE STAINING AND DRYING APPARATUS. FRANK HNILO and JOHN SCHULTZ, Cicero, Ill. Filed Oct. 30, 1925. Serial No. 65,901. 14 Claims. (Cl. 34—21.)



10. A slide staining and drying apparatus comprising a body having a slotted bottom and a lining, said lining terminating below the upper edge of said body to define a ledge, a partition mounted on said ledge and having a plurality of spaced heat passages, the walls of which are extended upwardly, the edge portions of said partitions being extended upwardly to cooperate wtih the upwardly directed walls of said heat passages in defining a shallow receiver for drops which fall from objects above.

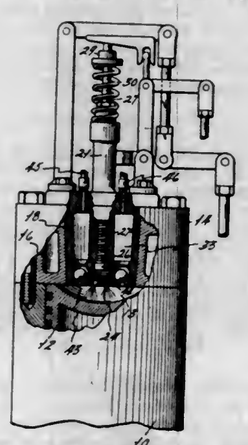
1,620,352. RADIOTABLE. MINARD HOLTEMAN, Bexley, Ohio. Filed June 11, 1925. Serial No. 36,360. 3 Claims. (Cl. 45—52.)

1. An article of furniture having parallel grooves for the reception and retention of a sliding door, a portion of one of said grooves being deeper than the rest of the groove to admit the initial insertion of the door and means added to said deeper portion after the insertion of the door to prevent the removal of the door from the grooves at said deeper portion, said doors being slidable beyond said added means to open and close an opening in the article of furniture.



1,620,353. FIREPOT. JOHN R. JOHNSON, Greenwich, Conn. Filed May 22, 1925. Serial No. 32,054. 2 Claims. (Cl. 122—20.)

1. The combination with a burner, of a fire pot positioned to receive the discharge of said burner, a cooling jacket surrounding the bowl of such fire pot, a boiler heated from said fire pot, means for circulating fluid from the boiler through the cooling jacket of the fire pot and back into the boiler, a hot water storage system connected with the cooling jacket and means for selectively controlling connection of the jacket with the boiler and with the hot water storage system.

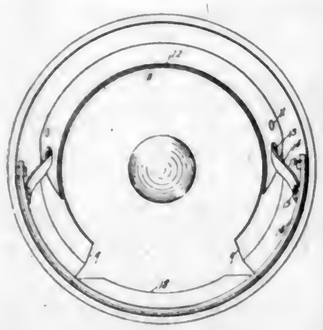


1,620,354. MACHINE FOR SHEARING METAL BARS. EDWARD PETER JONES, Ellesmere Port, and ARTHUR HENRY JACKSON, Manchester, England. Filed June 26, 1925, Serial No. 39,826, and in Great Britain Sept. 3, 1924. 12 Claims. (Cl. 164—47.)

1. Apparatus for shearing metal bars into short lengths constructed with a plurality of shearing cutting heads the blades of which are disposed transversely to the longitudinal axis of the machine, a stationary cross bed upon which all the lower blades are set to the same level to receive a long bar, a reciprocating cross-head to which the upper cutting blades are affixed, each blade in

succession a greater distance from the corresponding lower blade to cut a long bar into a plurality of short lengths by successive cuts at a single stroke of the machine.

1,620,355. VALVE FOR ENGINES AND MOTORS. JOHN U. JONES, Dallas, Tex. Filed June 24, 1925. Serial No. 39,395. 12 Claims. (Cl. 123—33.)



1. In an engine valve mechanism, the combination with a cylinder having an exhaust port, and a piston working in said cylinder, of a valve device operative on the suction stroke of the piston for admitting a fuel charge to the cylinder, said valve device being provided with a fluid storage chamber and means governing the flow of fluid back and forth between said storage chamber and the cylinder, said means coacting with the piston, in the movements of the latter, for establishing communication between the storage chamber and cylinder and supplying fluid independent of the fuel charge to the cylinder on the suction stroke of the piston, for maintaining communication between the storage chamber and cylinder during a portion of the compression stroke of the piston for storing up such fluid under piston pressure in said chamber and then closing communication between the chamber and cylinder, and for releasing said pressure on the working stroke of the piston and when the exhaust port is open to blow out the gases remaining in the cylinder.

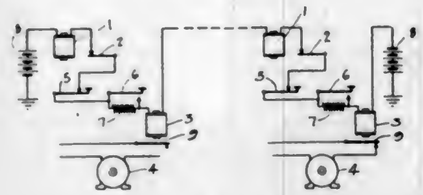
1,620,356. AUTOMOBILE HEADLIGHT. WILLIAM E. JORY, Martinez, Calif. Filed Feb. 24, 1926. Serial No. 90,260. 1 Claim. (Cl. 240—45.)

The combination with an automobile headlight having a casing, a reflector and a source of illumination within the reflector, of a circular shell adapted for attachment to the front part and to serve as an extension of the

casing, a lens carried by the shell, a shield in said shell the inner end of which shield is contiguous with the forward edge of the reflector, said shield being reduced towards its forward end to obstruct certain light rays directed from the reflector, a similarly shaped shield pivoted on the first named shield, a pendulum pivoted

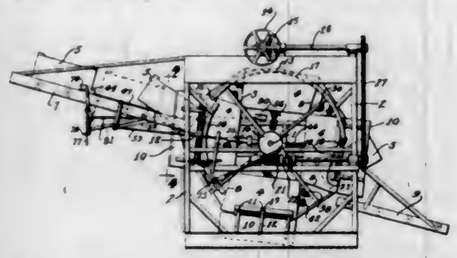
within the shell and arranged to swing rearwardly on tilting forward of the forward end of the headlight and a link pivotally connected with the pendulum and second named shield providing for the swinging of the shield forward and downward on rearward movement of the pendulum.

1,620,357. AUTOMOBILE BUMPER. MAX JUBLONSKY, San Francisco, Calif. Filed May 22, 1926. Serial No. 110,914. 13 Claims. (Cl. 293—55.)



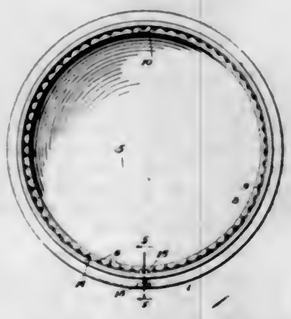
1. An automobile bumper having an impact member extending to the tip of the bumper, a support member, and means interconnecting the impact and support members for causing the impact member to move in the direction of the tip in resisting impacts.

1,620,358. CARPET SWEEPER. WILLIAM HENRY KENYON, Accrington, England, assignor to Entwisle & Kenyon Limited, Accrington, England. Filed Oct. 22, 1923, Serial No. 670,039, and in Great Britain Nov. 7, 1922. 1 Claim. (Cl. 15—48.)



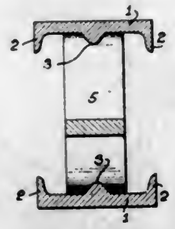
In a carpet sweeper having a case and a horizontal cylindrical brush, a clearer positioned above said brush and provided with blades to engage the periphery of the brush, said blades extending downwardly from the centre of a strip of metal and set at an inclination to the longitudinal axis thereof whereby one edge of each blade will contact with a specific part of the brush periphery when rotating in one direction and the other edge with a different part of the brush periphery when rotating in the reverse direction.

1,620,359. MOTOR-CONTROL SYSTEM. EDWARD E. KLEINSCHMIDT, Long Island City, N. Y., assignor to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed May 21, 1923. Serial No. 640,630. 9 Claims. (Cl. 178—2.)



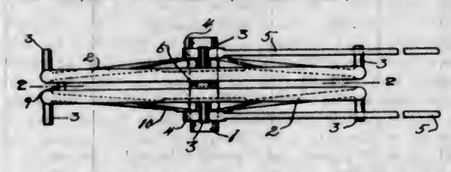
1. A printing telegraph system comprising transmitting apparatus, receiving apparatus controlled by said transmitting apparatus, a motor for said receiving apparatus, a marginal relay controlling said motor and controlled by said transmitter, and control means for said relay.

1,620,360. STERILIZER. THOMAS R. KRAGEN and THOMAS A. EBRETT, Los Angeles, Calif. Filed July 30, 1924. Serial No. 729,015. 18 Claims. (Cl. 167—3.)



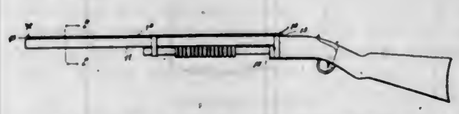
1. A sterilizer comprising a sterilizing receptacle, means for moving said receptacle from a point of supply to a point of discharge, and means for engaging the receptacle so that it is opened by its movement relative to the engaging means as it alines with the point of discharge.

1,620,361. BIRDCAGE. ANTON M. KROCZEK, Chicago, Ill. Filed Sept. 11, 1926. Serial No. 134,793. 3 Claims. (Cl. 119—17.)



1. A bird cage, comprising a separable cage body and a base, said cage body having a band at its lower extremity, said base being of integral construction and formed with a top providing a floor for the cage, a hollow rim formed on the base, a shoulder between the rim and the top of the base upon which the band is adapted to be seated, and a plurality of catches for engaging the band of the cage body to retain the cage body on the base, said catches having appreciable portions thereof retained and wholly concealed within the hollow rim, and lying below said rim at their points of engagement with the band of the cage body.

1,620,362. GIRDER. MAURICE LACHMAN and LAURENCE S. LACHMAN, New York, N. Y., assignors to Universal Electric Welding Company, a Corporation of New York. Filed June 27, 1924. Serial No. 722,635. 4 Claims. (Cl. 189—37.)

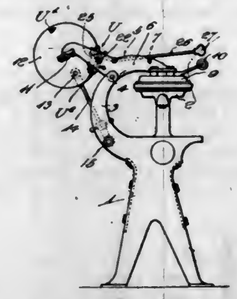


1. In a metallic structural element, the combination of outside members having inner opposed flat surfaces with longitudinal ribs protruding therefrom and toward each other and a middle member disposed between planes of the side edges of the outside members and having angular portions disposed transversely of the ribs and welded thereto at the angles so that said angular portions rest flush against said surfaces.

1,620,363. POWER WHEEL. ARTHUR J. LARKIN, Council Bluffs, Iowa, assignor of one-third to Joseph J. Dodds, Omaha, Nebr. Filed June 22, 1926. Serial No. 117,844. 3 Claims. (Cl. 254—164.)

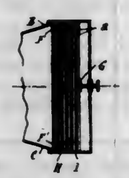
1. A device of the class described comprising an axle, spaced wheels fixed thereto, a flexible member having an intermediate portion fixed to the axle between the wheels to effect a double winding of the member on the axle when rotated, means for rotating the wheels and axle, an arm pivotally engaged with one of the wheels and normally bridging the space therebetween, and means for maintaining the arm in such position.

1,620,364. GUN SIGHT. CHARLES H. LATOURELL, Heppner, Oreg. Filed July 22, 1924. Serial No. 727,508. 1 Claim. (Cl. 33—52.)



A sight aiding attachment and glare shield for firearms comprising a flat strip consisting of a strand of metal bent back and forth upon itself and having its bends closely related, said strip being flexible and extensible for the purpose stated, and the terminals of said strip provided with means adapted to removably engage securing means on the top side of a gun.

1,620,365. PROCESS FOR THE EVOLUTION OF HYDROCYANIC ACID. HANS LEHRECKE, Frankfort-on-the-Main, Germany, assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Oct. 20, 1925, Serial No. 63,790, and in Germany Nov. 6, 1924. 6 Claims. (Cl. 23—151.)

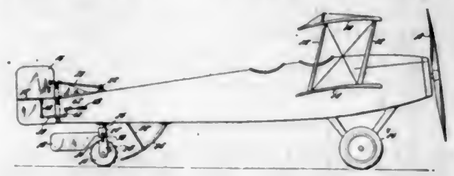


1. Process for the evolution of HCN which consists in exposing an addition product of zinc chloride and HCN to moisture.

1,620,366. GARMENT PRESS. FREDERICK W. LINDEMANN, St. Paul, Minn. Filed Jan. 28, 1926. Serial No. 84,395. 4 Claims. (Cl. 68—9.)

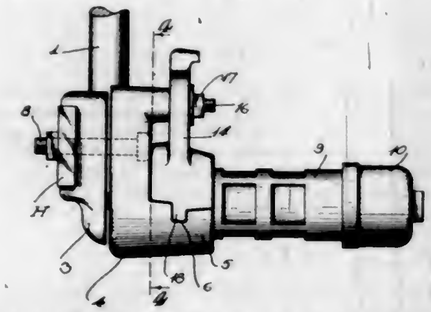
1. In a garment press, the combination with a movable pressing head, a fly wheel, means connecting said fly wheel with said head, and means operating to rotate said fly wheel to effect operation of said head; of means for limiting the rotary movement of said fly-wheel comprising a fly-wheel-carried unit and a stationary unit, one of said units having yieldable means to engage and yieldably hold the other unit.

1,620,367. SOUND-PURIFYING DEVICE. HENRY LION, Paris, France. Filed Apr. 18, 1925, Serial No. 24,078, and in France Apr. 23, 1924. 2 Claims. (Cl. 181—32.)



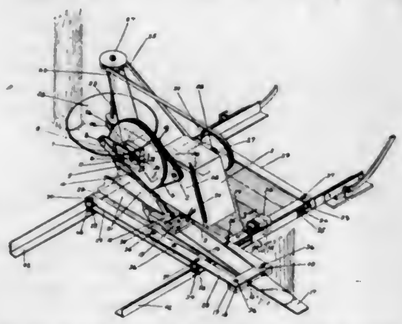
1. A purifier of sounds, adapted to be juxtaposed or combined with an acoustic emitter, comprising a box made of light material which is but little susceptible of vibration and having apertures formed in the lateral faces thereof, a plurality of corrugated diaphragms made of a light and strong substance and disposed within the said box, the directions of the corrugations of each diaphragm making a certain angle with the direction of the corrugations of the adjacent diaphragm.

1,620,368. AEROPLANE. FRANK MCELHANEY, Morgantown, W. Va. Filed June 12, 1926. Serial No. 115,575. 5 Claims. (Cl. 244—2.)



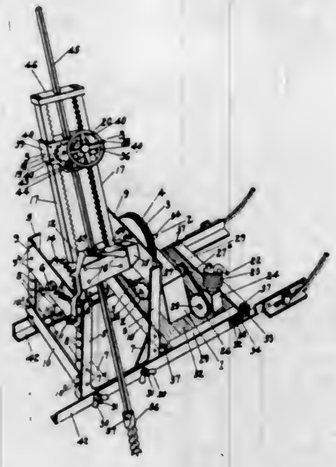
1. In an aeroplane, a body portion, planes mounted thereon, propelling mechanism, a vertical shaft mounted for rotatable and vertical movement, a stem rotatable with the shaft and slidable vertically with relation thereto, a rudder carried by the stem and means for shifting the rudder and shaft simultaneously, a ground engaging wheel carried by said shaft, means for adjusting the shaft vertically independently of said rudder

and holding said shaft in a given vertical position, means disposed in the path of vertical movement of the wheel and cooperating therewith to hold the wheel against



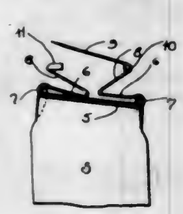
rotation, whereby the latter serves as a brake or skid, a horizontal rudder, and means for controlling the movements of the latter.

1,620,369. LOCK FOR THE WHEELED AXLES OF STALK CUTTERS AND OTHER WHEELED AGRICULTURAL IMPLEMENTS. JOHN A. MCKAY and PATRICK H. LYNCH, Dunn, N. C., assignors to The John A. McKay Manufacturing Company, Inc., Dunn, N. C., a Corporation of North Carolina. Filed Jan. 29, 1926. Serial No. 84,688. 7 Claims. (Cl. 301—122.)



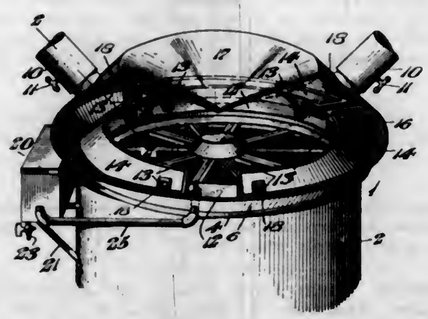
1. A device of the character described including an axle having a portion bent at an angle thereto, castings secured together substantially at the angle, a wheel-box adapted to be mounted on the axle and having a circumferential groove, a lock having a tongue adapted to enter the groove, the lock having a slotted shank, and a bolt extending from at least one of the castings through said slot, and a nut on the bolt for securing the lock in locked position.

1,620,370. ADJUSTABLE SAWING MACHINE. NOTLEY MADDOX, Los Angeles, Calif. Filed Apr. 28, 1924. Serial No. 709,587. 1 Claim. (Cl. 143—1.)



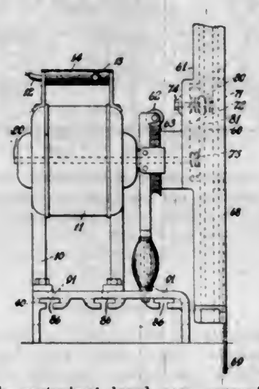
In an adjustable sawing machine the combination of a horizontally reciprocating saw in a horizontal plane, which is adjustable on a sliding table, the said sliding table having a free shifting movement upon a supporting guide frame and a wedge pivotally connected to the sliding table so that it may be forced between the table and guide frame to clamp the same in any desired position.

1,620,371. ADJUSTABLE BORING MACHINE. NOTLEY MADDOX, Los Angeles, Calif. Filed Aug. 6, 1925. Serial No. 48,581. 2 Claims. (Cl. 144—106.)



1. An adjustable boring machine comprising a framework consisting of two parallel U-shaped upright members transversely connected by top and bottom side frame members, the top side frame members of said framework supporting the trunnions of a split housing, rotatively supporting two parallel upright racks terminating into an end bearing; a carriage supported by said racks and longitudinally adjustable between aforesaid housing and end bearing; a boring bar and tool, the bar of said boring bar and tool of extendable length being intermediately positioned in a plane between and in parallel relation to aforementioned parallel racks and adapted to be raised and lowered through engagement to aforesaid carriage, substantially as herein set forth.

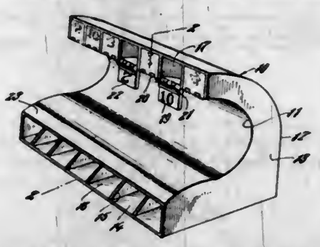
1,620,372. SHOULDER-STRAP FASTENER. MARTHA M. MAIDER, Akron, Ohio. Filed Nov. 17, 1926. Serial No. 148,851. 5 Claims. (Cl. 24—73.)



1. A shoulder strap fastener comprising a clasp embodying a strap bar and clasp arms overlying the strap bar and resiliently connected at their outer ends to the ends of said strap bar, the inner ends of said clasp arms normally engaging the intermediate portion of the strap bar and terminating in spaced relation, and a pin fastener carried by said arms.

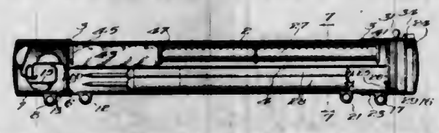
1,620,373. AUTOMATIC HUMIDIFIER. JOHN S. MAKIN, Philadelphia, Pa. Filed Dec. 11, 1926. Serial No. 154,090. 6 Claims. (Cl. 126—113.)

1. In a device of the character stated, a hot air furnace, a plurality of troughs located in the upper portion thereof, open at their top and closed at their ends, and flexible communicating joints having water passages therethrough connected to the juxtaposed ends of said troughs.



1,620,374. MOTORIZED HANDSAW. EDWARD J. MALONEY, Long Island City, N. Y. Filed Mar. 28, 1925. Serial No. 18,964. 1 Claim. (Cl. 143—68.)

A portable motorized hand saw, comprising a carrying frame with handle for transporting the saw and for steadying the same when in use, a driving motor supported thereby and having a hub projecting axially therefrom, a saw supporting frame mounted on the carrying frame and slide for a saw carried thereby, said frame having a hub fitting over and rotatable on the said motor hub, a worm wheel on the saw frame hub and a worm on the motor hub and meshing with said worm wheel to lock the two hubs to each other and to afford means for effecting an angular adjustment of the saw carrying frame, an internal gear rotatably mounted within the saw supporting frame, the shaft of the driving motor extending within said saw supporting frame, and a pinion thereon meshing with the internal gear, and a wrist pin and block thereon carried by the internal gear and engaging the saw slide to reciprocate the saw.



1,620,375. AMUSEMENT DEVICE. GUSTAVE MELING, Flushing, N. Y. Filed Aug. 20, 1926. Serial No. 130,499. 2 Claims. (Cl. 273—126.)

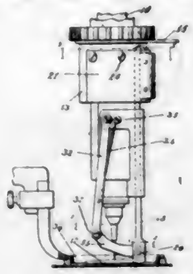
1. An amusement device comprising a housing having transversely aligned curved passages therein, the exits of which are disposed above the entrances, and doors hingedly connected to the lower walls of the respective passages to swing downward therefrom, numbers arranged on one side of said doors and normally concealed when said doors are in a closed position, means for supporting said doors in closed position, and a spherical member adapted to be rolled into either of said passages with sufficient force to carry the same therethrough when

entering said passage through the entrance thereof, whereby to strike the respective door to cause the same to drop to an open position to expose the numeral thereon, said spherical member passing out of the exit and being projected forward in the direction from which it was originally rolled.

1,620,376. ACCESSORY CONTAINER FOR RAILWAY USE. FRANK P. MILLER, Chicago, Ill. Filed July 17, 1925. Serial No. 44,168. 7 Claims. (Cl. 246—488.)

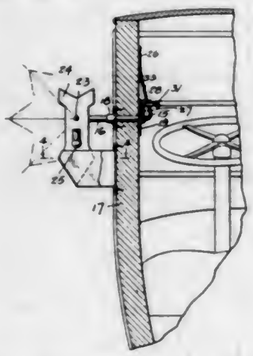
3. In a railway appliance, the combination with an elongated tube internally divided into longitudinal compartments by a longitudinal partition element, said tube having a closed end and an open end, and removable caps adapted to have engagement with both the open and closed ends of the tube, one of said caps being provided with means whereby it serves as an auxiliary compartment for holding small accessories.

1,620,377. AUTOMOBILE LADDER. GEORGE MILLWARD, Marquette, Mich. Filed May 25, 1925. Serial No. 32,773. 3 Claims. (Cl. 238—14.)



1. A device of the character described, including spaced parallel plate members having openings in their inner edges, links loosely engaged with said openings and adapted to span the distance between the said plates whereby to form an anti-skid trackway for vehicle wheels.

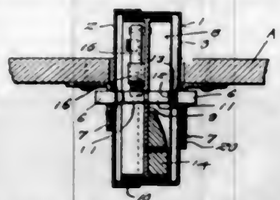
1,620,378. TRIMMING DEVICE FOR EMBROIDERY MACHINES. ANTONIO MISTRETTA, New York, N. Y. Filed Feb. 19, 1926. Serial No. 89,465. 6 Claims. (Cl. 112—127.)



1. In a machine of the character specified, the combination with a needle bar capable of axial reciprocating motion and capable of angular movement about its own axis, an axially stationary member coaxial therewith and adapted to rotate therewith, and a stationary blade mounted on said member, of a movable blade hinged at the

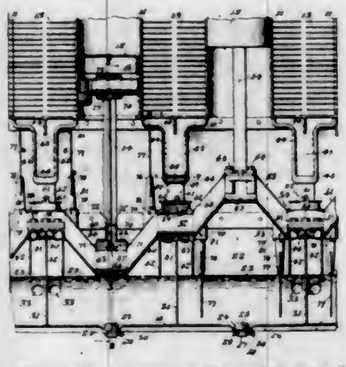
inner side of said stationary blade, means associated with said needle bar adapted to cause motion of said movable blade, and means connecting said movable blade to said

associated means the outer end of said movable blade being positioned so that it will not cross the stationary blade during its movement, permitting said connecting means to project transversely of the stationary blade.



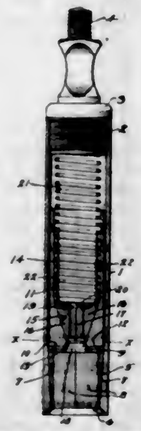
1,620,379. DIRECTION SIGNAL FOR MOTOR VEHICLES. CHARLIE BARRETT MITCHELL, Los Angeles, Calif. Filed Sept. 30, 1924. Serial No. 740,771. 1 Claim. (Cl. 116—51.)

A direction signal comprising a shaft housing, a flanged collar secured to the housing intermediate its ends and adapted to be secured to the body post of a motor vehicle, a tubular shaft rotatably mounted in the housing through which a conducting wire is adapted to extend, said shaft projecting beyond opposite ends of the housing, a pinion fixed to the outer end of the shaft, a casing enclosing the pinion and secured to the outer end of the housing, a stub shaft rotatably mounted in the casing at an angle to the first shaft, a pinion fixed to the stub shaft within the casing and meshing with the first pinion, a signaling arm fixed to the stub shaft and having an opening in which a lamp is adapted to be received so as to be visible from both sides of the arm, means for actuating the first shaft to effect movement of the arm to occupy any one of a plurality of signaling positions and a non-signaling position, and a shield of U shaped cross section adapted to be secured to the body post and in which a portion of the arm is received and concealed when the arm occupies its non-signaling position.



1,620,380. GRADOMETER. SAMUEL E. MORRISON, Lynn, Mass. Filed Feb. 18, 1926. Serial No. 89,117. 3 Claims. (Cl. 33—220.)

3. A gradometer, comprising a casing, brackets adapted to mount the casing on a vehicle, one of said brackets having a semi-circular flange, means on said casing engaging said flange to hold the casing in a fixed position relatively to the brackets, a weighted cylinder in said casing, said casing and cylinder being relatively rotatable, weighted arms pivotally mounted on the cylinder on opposite



sides of the center of gravity thereof, and a stop on the cylinder and arranged between the arms to limit their movement towards each other.

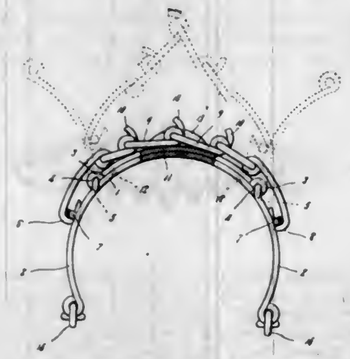
1,620,381. LUBRICATOR. SWENEY MUNSON, Scammon, Kans. Filed June 26, 1926. Serial No. 118,802. 4 Claims. (Cl. 184—13.)

1. In a lubricating system of the splash type for crank shaft and connecting rod bearings the combination with the crank of a crank shaft, and a pair of spaced interiorly threaded collars carried by said crank, a holder secured in each of said collars and projecting therefrom, and a splasher finger secured to each holder and extended therefrom.

1,620,382. MULTIPLE SUCKER-ROD SOCKET. WALTER A. O'BANNON, Tulsa, Okla. Filed Nov. 13, 1925. Serial No. 68,845. 15 Claims. (Cl. 294—102.)

1. In a socket of the class described, the combination with a barrel having a tapering bore and slips in said bore, of holding means having interlocking connection

with the slips to hold them together free to open and close, said holding means having gripping means for engaging an object passing thereinto.



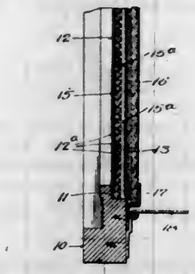
8. A socket comprising a barrel, a set of slips mounted in said barrel, and yieldable means coacting with said slips and adapted to engage the walls of the barrel incident to movement of the slips relative to the yielding means.

1,620,383. SUCKER-ROD SOCKET. WALTER A. O'BANNON, Tulsa, Okla. Filed Dec. 4, 1925. Serial No. 73,169. 13 Claims. (Cl. 294—102.)

1. A slip body or unit composed of superposed sections; and means interlocking the sections together for simultaneous movement in a rod socket.

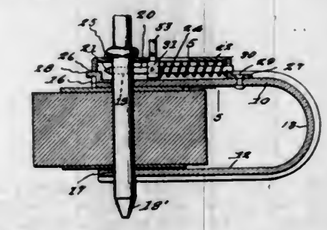
1,620,384. RESILIENT-TIRE TRACTION DEVICE. DAVID W. OHAVER, Rockville, Ind. Filed May 23, 1925. Serial No. 32,337. 6 Claims. (Cl. 152—14.)

4. In resilient tire armor, the combination of a cross tread plate, side plates hinged to the ends of the cross plate, and a cable pivoted at its ends to the side plates, each of the said side plates having a portion formed from the material of the plate for affording pivotal connection of the cable.



1,620,385. SIGNAL FOR MOTOR CARS. THOMAS J. O'LEARY, St. Paul, Minn. Filed July 29, 1925. Serial No. 46,856. 1 Claim. (Cl. 116—50.)

A device of the class described, comprising a tubular element formed in two aligned sections, a coupling connecting the sections, said coupling having an outlet connection, a second tubular element operating within that first named, a signal carried by the second tubular element, a flexible device extending thru the outlet connection of the coupling and having connection with the sec-

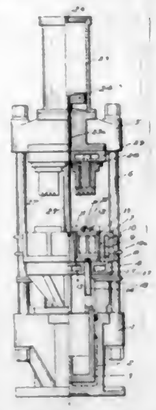


ond tubular element at a point near its inner end, and a spring connected with the inner end of the second tubular element and secured at a point near the inner end of the tubular element first named.

1,620,386. ILLUMINATED SIGN. HAROLD C. OSBORN, Chicago, Ill. Filed Jan. 25, 1926. Serial No. 83,442. 3 Claims. (Cl. 40—140.)

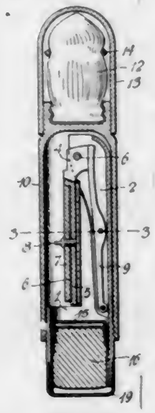
3. An illuminated sign, comprising a frame, oppositely disposed channel shaped metal strips secured to said frame, a multiplicity of parallel, superimposed, round glass rods extending from side to side of said frame with their ends contained in the slots of the channel strips, each rod supporting those above it, character displaying members, each having tabs insertible between contiguous rods, and frictionally held therebetween a lamp and lamp casing supported by said frame behind the rods, and a translucent plate interposed between the lamp and glass rods.

1,620,387. CLEVIS. DAVID PALMER, Sharon, Kans. Filed June 7, 1926. Serial No. 114,333. 3 Claims. (Cl. 278—96.)



1. In a clevis, a yoke member of channel iron construction, a housing mounted on the upper side of the yoke member and within the channel, said housing and yoke member being apertured, a clevis pin passing thru the apertures, and means operating in the housing for engaging and retaining the pin against displacement.

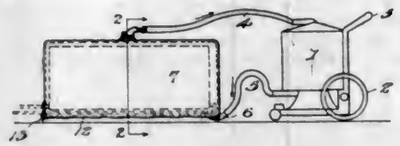
1,620,388. APPARATUS FOR MOLDING BATTERY BOXES. THEBON R. PALMER, Erie, Pa. Filed Mar. 6, 1925. Serial No. 13,640. 1 Claim. (Cl. 18—17.)



In a battery box molding apparatus, the combination of a mold having separable side and end plates, said end

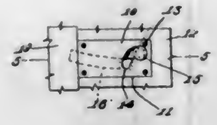
plates having handle-forming mold pockets and mold walls completing the mold form having portions opening in the mold forming pockets; a core having a closure surface slidably movable over the handle-forming mold pockets; and pressure means forcing the mold and core

together, closing the handle pockets by the sliding movement of the closure surface over the handle-forming pockets and filling the handle-forming pockets from the stock flowing from the wall forming portion of the mold, said core seating on the side plates.



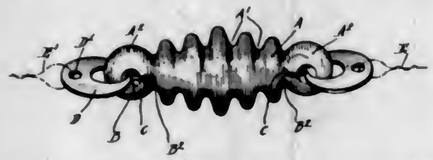
1,620,389. RAZOR COMPACT. VICTOR R. PAYTON, Ardmore, Okla. Filed Feb. 2, 1926. Serial No. 85,556. 2 Claims. (Cl. 30—12.)

1. A razor outfit, comprising a body having an extension at one end thereof, said extension terminating in a pair of prongs, a blade holder having a portion extending between said prongs, a pivot pin passing through the prongs and said portion, a spring lever carried by the extension and having its free end engaging said portion, said portion having flattened side edges engaged by the spring lever for holding the blade holder in either folded position, in an angular position or in a straight position.



1,620,390. DUST HOOD. HENRY W. PETERS, Columbus, Ohio. Filed Nov. 18, 1925. Serial No. 69,916. 1 Claim. (Cl. 15—14.)

The combination with a vacuum cleaning machine having an air blast pipe and a suction pipe, of a flexible, non-porous hood adapted to enclose a structure to be cleaned, means for closing the free edge of the hood about the

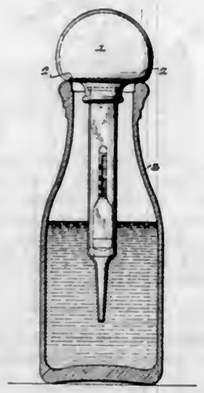


enclosed structure, a detachable connection between the hood and suction pipe, and a nozzle on the air blast pipe for introducing air currents to the interior of the hood.

1,620,391. FASTENING DEVICE. CARL N. RAMSTAD, Valdez, Territory of Alaska. Filed Jan. 31, 1925. Serial No. 6,035. 1 Claim. (Cl. 292—67.)

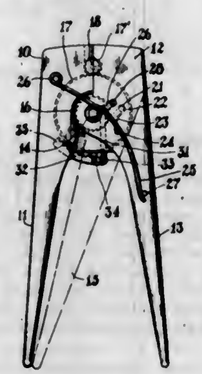
A fastening device comprising in combination with a member having a recess therein, a plate having an arcuate transversely extending slot therein, a bolt comprising a flat elongated member having a curved edge and having one of its flat faces adapted to engage the inner face of the plate, a chisel-shaped penetrating end at the outer end of the bolt, the bevel of said chisel-shaped end being upon the face of the bolt remote from the plate so as to present a flat wide resisting surface, a headed operating stud carried by and extending outwardly from the bolt through the slot, and the curved edge of the bolt being adapted to ride upon one wall of the recess to project one corner of the chisel-shaped penetrating end in advance of the other corner to facilitate penetration.

1,620,392. INSULATOR. HERBERT E. RIDER, New York, N. Y., assignor to Edward L. Hall, New York, N. Y. Filed Jan. 29, 1925. Serial No. 5,438. 1 Claim. (Cl. 173—28.)



An insulator comprising a body portion having an annular groove near one end thereof and detents located adjacent thereto and disposed diametrically opposite to each other, and having a slot extending from each detent to said groove, and a clasp having its ends spaced apart a distance corresponding to the diameter of said body portion at the bottom of said groove and adapted to pass through said slots and rest in contact with the body portion at the bottom of said detents at a single point, said clasp adapted to serve as a bracket for the purpose set forth, and in swinging relation thereto.

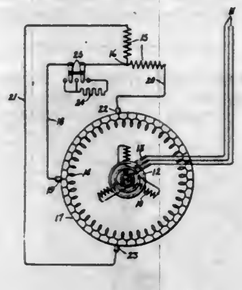
1,620,393. HYDROMETER. WALTER RIPPIEN, Philadelphia, Pa. Filed July 18, 1925. Serial No. 44,515. 1 Claim. (Cl. 265—45.)



A hydrometer comprising an open-ended tubular body having attached to one end a hollow bulb, the interior

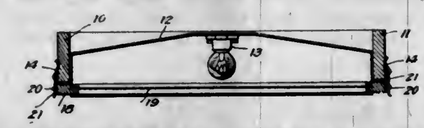
of which communicates directly with the hollow tube, the wall of said bulb where the latter joins the said tube being extended transversely in a plane substantially perpendicular to the longitudinal axis of said tubular body

to thereby form a flat surface adapted to seat squarely upon the top edge of a suitable container to support the tubular body within the container and to effectively seal the latter.



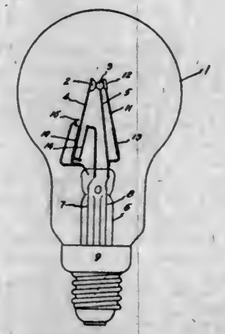
1,620,394. HAND FAN. ALFREDO RODRIGUEZ, Angiola, Calif. Filed Feb. 23, 1926. Serial No. 89,831. 4 Claims. (Cl. 230—33.)

1. A hand operated fan comprising a plurality of radial fan blades, operating mechanism for alternately driving said fan blades in one direction and in an opposite direction thereafter for alternating the direction of a draft of air, and operating mechanism for rotating said fan blades continuously in one direction for providing a continuous draft of air, said driving mechanism being adapted to be disengaged for permitting individual application of either one thereof.



1,620,395. ALTERNATING-CURRENT COMMUTATOR MOTOR. PAUL ROHDE, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Oct. 17, 1925, Serial No. 62,988, and in Germany Dec. 19, 1924. 3 Claims. (Cl. 172—274.)

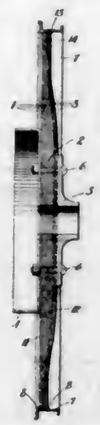
1. An alternating current motor comprising relatively rotatable primary and secondary members, the primary member having a polyphase winding connected to a commutator and the secondary having a two phase winding with the neutral points interconnected, a brush on said



commutator connected to said neutral point, and movable brushes on said commutator individually connected to the outer ends of said two phase winding.

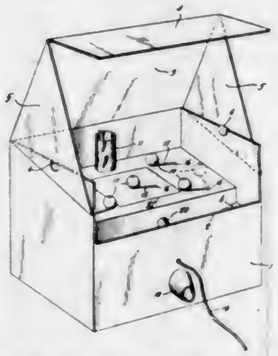
1,620,396. ADVERTISING DEVICE. HERBERT S. SACKETT, Windom, Minn. Filed July 28, 1926. Serial No. 125,479. 2 Claims. (Cl. 40—132.)

1. An advertising device comprising an illuminated lamp box, a frame member, channeled portions provided upon the ends of the box for receiving the edges of the frame member therein, the forward edges of the top and bottom walls of the box protruding outwardly an appreciable distance beyond said channeled portions, the lower wall providing an upstanding flange portion, and a frame member carrying a placard thereon being disposed between the walls behind said flange portion.



1,620,397. INCANDESCENT ELECTRODE DEVICE. CURT SAMSON, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 20, 1925, Serial No. 17,062, and in Germany June 21, 1924. 6 Claims. (Cl. 176—1.)

1. An electric discharge device comprising main cooperating electrodes, an auxiliary electrode which is capable of more readily forming the seat of a discharge than one of said main electrodes, means for supporting said auxiliary electrode in electrical and thermal contact with one of said main electrodes, means for starting an arc between said contacting electrodes and another main

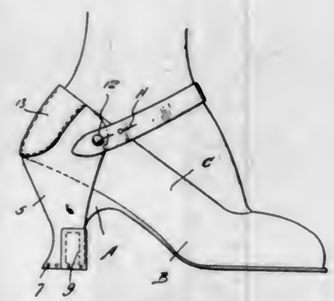


electrode and means for moving said auxiliary electrode away from the contacting electrode after the arc has been operating an appreciable interval, thereby rendering the auxiliary electrode inactive while permitting the arc to continue operating between said main electrodes.

1,620,398. WOOD DISK WHEEL. EDWARD C. SENDELBACH, Philadelphia, Pa. Filed May 28, 1925. Serial No. 33,343. 6 Claims. (Cl. 301—63.)

1. In a laminated wood disk wheel, the combination of a section built up of straight laminations certain of which are of gradually decreasing diameter to provide a a central hub portion of greater thickness than the outer portion, and another section built up of laminations curved to fit snugly over the graduated thickness of said straight laminations whereby to protect the joints and brace the wheel.

1,620,399. GAME. JAMES D. SMITH, Overall, Tenn. Filed June 21, 1926. Serial No. 117,497. 4 Claims. (Cl. 273—103.)

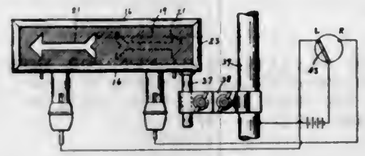


1. A game of the class described comprising a casing, a platform therein, a tubular member at the rear of the casing and passing through the platform, a chute in the casing for receiving objects passing through the tubular member and leading them through the front of the casing, an alarm in the chute adapted to be struck by an object passing through the same, pivoted arms on the platform, spherical members carried by the arms and adapted to be struck by objects thrown at them, which will cause the arms to swing rearwardly and cables attached to the arms for returning them to normal position.

1,620,400. CAP. MYRTLE E. SMITH, Glenwood, Wash. Filed Nov. 11, 1925. Serial No. 68,386. 1 Claim. (Cl. 132—49.)

A head covering comprising a head encircling beaded band having a marginal thread, a plurality of crown threads, beads upon the crown threads and split bendable beads connecting the crown threads to the thread of the band and to one another to provide an ornamental crown, the splits of said beads being substantially V-shaped with their ends abutting.

1,620,401. AUTOMOBILE DRIVER'S HEEL PROTECTOR. ELIZABETH MEARS SMOCK, Asheville, N. C. Filed Dec. 22, 1925. Serial No. 77,005. 1 Claim. (Cl. 36—72.)



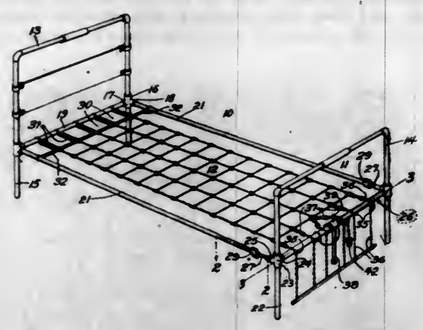
As a new article of manufacture, a ladies' shoe and heel protector of the class described comprising a pocket constructed of flexible material and shaped to conform to the rear portion of the shoe and rear and side portions of a high heel, a reinforcing patch on the upper part of the pocket and on the rear side thereof, a lift constituting the bottom of the pocket, a strip of flexible material extending across the open side of the bottom of the pocket and serving to confine the heel in said pocket and in engagement with said lift, and a retaining strap for the protector adapted to extend across the instep of the wearer.

1,620,402. DIRECTION INDICATOR FOR AUTOMOBILES. HAROLD H. SOPER, Medford, Mass., assignor, by direct and mesne assignments, to Somac Traffic Signal Co., Boston, Mass. Filed May 29, 1925. Serial No. 33,663. 2 Claims. (Cl. 177—329.)

1. A direction indicator comprising a casing composed of an oblong, open-sided frame containing lamps, and indicator plates confined by the frame in position to cooperate with the lamps, the frame being wholly of sheet metal and including a bottom member having integral upwardly opening longitudinal channeled flanges, a top member having integral downwardly opening longitudinal channeled flanges, an end member connecting the top and bottom members at one end of the frame, and having integral vertical channeled flanges closing the longitudinal flanges at said end, the longitudinal flanges being open at the opposite end of the frame, so that the indicator plates are slidable into said flanges until arrested by the vertical flanges, and a reinforced opposite end member including ears integral with the bottom and top

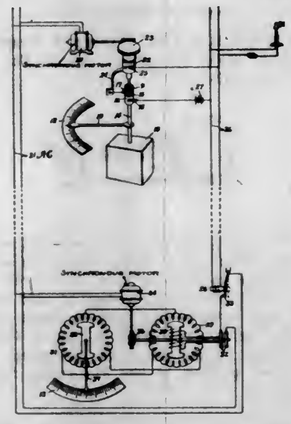
members, oppositely bent therefrom, and abutted together and united to form a web having a horizontal butt joint, the web being entirely between the open ends of the longitudinal flanges, so that it does not interfere with the sliding of the indicator plates, the reinforced end member including also plate retainers, extending across the butt joint and detachably secured

to the web, said retainers reinforcing the web and having vertical channeled flanges which close the open ends of the longitudinal channels and confine the indicator plates therein, the channeled flanges formed on the bottom and top members, the connecting end member, and the plate retainers, stiffening said parts and preventing racking and distortion of the frame.



1,620,403. CORRUGATED-WIRE ARTICLE. ROBERT P. SOUTHCOMB, Baltimore, Md. Filed Oct. 7, 1925. Serial No. 60,999. 2 Claims. (Cl. 220—19.)

2. A portable article of the class described comprising a wire fabric composed of crossed relatively movable corrugated wires and two hollow metal housings for the opposite edges of the fabric, one of said housings being tubular and the other U-shaped in cross section, and both of said housings having longitudinally spaced slots, said wires terminating adjacent corresponding crossing points and the adjacent ends of oppositely directed wires being bent in opposite directions and two of said oppositely bent ends being then inserted into each slot in said housings, said ends thereby interlocking with the housings adjacent the ends of the slots, and a strip of non-metallic material clamped between the sides of the U-shaped housing and extending beyond its edges.

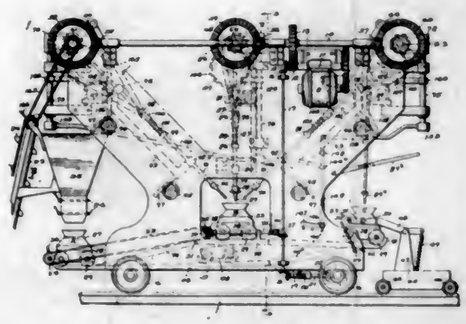


1,620,404. BED AND SPRING THEREFOR. ALONZO B. SPRAGUE, Brooklyn, N. Y., assignor of two-thirds to Relief Society for the Aged, a Corporation of New York. Filed Nov. 30, 1925. Serial No. 72,247. 2 Claims. (Cl. 5—184.)

1. A bed comprising a head frame section having removable tubular side bars, a foot frame section having removable side bars slidable within said tubular side bars, and a brace bar, adjustable stops carried by the side bars of said foot frame section for abutment against the ends of said tubular side bars for limiting the sliding movement of the same in one direction, a spring permanently attached at one end to said head frame section and adapted to be thrown over said section when the same is collapsed, and tension means on the foot frame section for engagement with the other end of said spring for holding said spring in a taut condition between said frame sections, said tension means including a hollow roller journalled for rotation on said brace bar, said roller having an opening therein for register with any one of a plurality of sockets provided in said brace bar,

and a removable locking pin passing through said opening and into the registering socket for locking said roller against the tension of said spring.

1,620,405. TELEMETRIC SYSTEM. GEORGE W. SPRENGER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 6, 1925. Serial No. 60,886. 8 Claims. (Cl. 177—351.)

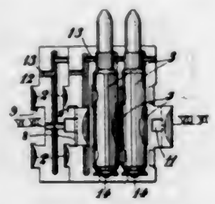


1. A signalling system comprising a transmitter and a receiver, each having a rotating part, means for establishing a synchronous relation between said parts, a signalling circuit between said transmitter and receiver, movable signalling means associated with said transmitter for closing said circuit once in each revolution of said rotating parts at a point in the revolution depending upon the positions of said signalling means, a position signalling generator having stationary and rotary members at the receiving station, one member of which constitutes the aforesaid rotating part of the receiver, means responsive to the closing of said signalling circuit at the receiving station for momentarily energizing said generator, and position signal receiving means energized by said generator for reproducing movements corresponding to the movements of said signalling means.

1,620,406. MOLD-RAMMING MACHINE. JOSEPH STONE, Bessemer, Ala. Filed Oct. 3, 1925. Serial No. 60,228. 12 Claims. (Cl. 22—41.)

1. A molding machine of the character described comprising a main supporting frame, a motor mounted there-

in, means for propelling the frame bodily by said motor, rammers actuated by said motor, pattern frames and flasks, trackways carried by the frame and constituting a passageway through the frame for the pattern frames and flasks, said trackways comprising sand receiving, ramming and take-off stations, a propelling means for causing the



pattern frames to travel along said trackways and a sand conveyor for delivering sand to the pattern frames, said conveyor projecting beyond one end of the machine frame in such manner as to be fed into a pile of sand by the bodily movement of said machine when propelled by said motor.

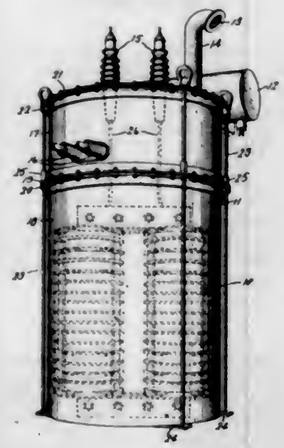
1,620,407. BOTTLE RACK. HAROLD R. STREIF, St. Paul, Minn. Filed Feb. 13, 1926. Serial No. 88,111. 3 Claims. (Cl. 211—17.)

1. A bottle rack adapted to be engaged with a table or other flat element, said rack comprising an elongated frame of L-shape in cross section, bottle retaining members fixed on the horizontal flange of said main frame, rearwardly and downwardly opening hook members extending from the upper portion of the vertical flange of the main frame, horizontal arms extending rearwardly from the lower portion of the horizontal flange of the main frame.

1,620,408. FEED STRIP FOR FIREARMS. CHARLES SUTTER, Suresnes, France, assignor to Societe Anonyme des Anciens Etablissements Hotchkiss & Cie., St. Denis, France. Filed Feb. 26, 1926, Serial No. 90,850, and in France Mar. 24, 1925. 10 Claims. (Cl. 89—35.)

4. A feed strip comprising a plurality of clips hinged together two by two by a cartridge, each clip having two open claws on one side, and a single open claw on the other and lugs on each clip adapted to abut against the claws of the adjacent clip.

1,620,409. PAINT AND VARNISH REMOVER. OWEN PARKER SWIFT, Halifax, England, assignor to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed Dec. 24, 1923. Serial No. 682,464. 3 Claims. (Cl. 87—5.)



1. A paint and varnish removing composition comprising wax, a relatively small volume of an alcoholic body and a relatively larger volume of wax solvent composed of approximately 4 volumes of benzol to 1 volume of toluol.

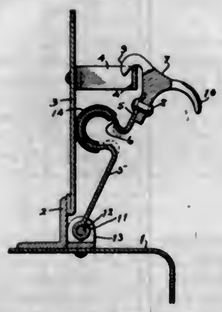
1,620,410. GAS-MIXING GASKET FOR INTERNAL-COMBUSTION ENGINES. CHARLES M. TANSILL, White Hall, Md. Filed Apr. 17, 1925. Serial No. 23,911. 1 Claim. (Cl. 48—180.)

A mixing device in the form of a gasket including thin copper side plates, a compressible body between said plates having a central opening with depressions in its sides surrounding the central opening, screens seated in said depressions and having their peripheral edges covered by the side plates, and a tube of fine wire mesh passing centrally through the body, between the screens and having its ends communicating with the atmosphere.

1,620,411. TRANSFORMER. ELMER J. TEMPLE, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 20, 1925. Serial No. 17,037. 4 Claims. (Cl. 220—85.)

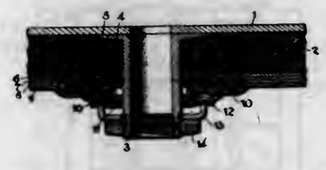
1. A transformer having an enclosing casing extending above the transformer to provide a space between the top of the transformer and the top of the casing, said casing comprising separable upper and lower sections, and a cover formed to fit upon the uper edge of said lower section with the upper section removed, the joint between said separable sections being sufficiently near the top of said casing to permit the transformer to be enclosed in said lower section with said cover assembled thereon.

1,620,412. LINER FOR OIL WELLS. JOHN TWEEDDALE, Torrance, Calif. Filed July 30, 1925. Serial No. 47,079. 6 Claims. (Cl. 166—5.)



1. An oil well liner unit comprising relatively spaced inner and outer pipes provided with perforations the perforations of one pipe being located in the upper half thereof and the perforations of the other pipe being located in the lower half thereof.

1,620,413. PROTECTOR FOR BOOTS AND SHOES. NORMAN WALTON URWIN, Annfield Plain, England. Filed Aug. 21, 1924, Serial No. 733,393, and in Great Britain Jan. 18, 1924. 1 Claim. (Cl. 36—73.)



A protector for foot wear comprising a rib having an inwardly projecting flange arranged flush with its inner face and provided with apertured securing lugs lying in the same plane as said flange and adapted to receive fastening elements, and integrally formed outstanding spikes on said lugs adapted to penetrate a top lift when inserted in the protector to hold the same in operative relation.

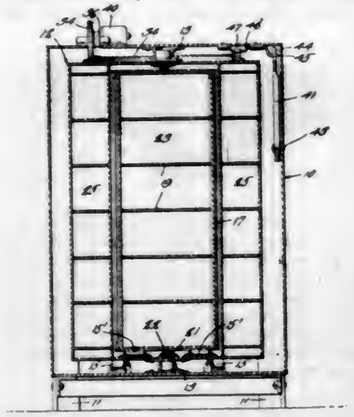
1,620,414. HOOD LATCH. LOUIS C. VANDERLIP, Elkhart, Ind. Filed May 24, 1926. Serial No. 111,137. 7 Claims. (Cl. 292—101.)

2. In an automobile hood-clamp, a unitary hold-down clamp and a resilient laterally projecting side engaging clamp rigid therewith, said hold-down clamp including a separate element latch member.

1,620,415. LEAKPROOF-TANK COVER. WARD T. VAN ORMAN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Apr. 28, 1921, Serial No. 465,164. Divided and this application filed July 17, 1925. Serial No. 44,246. 6 Claims. (Cl. 285—38.)

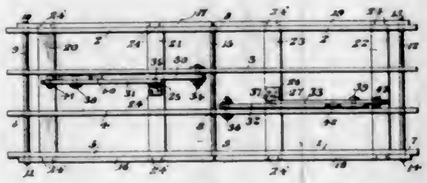
1. An outlet connection for a tank having a cover of fabric and rubber composition formed with reinforced openings through the fabric including a reinforcing loop, a member attached to the tank and extending through the openings, tongues formed by a series of radial cuts in said fabric pulled through said loop and a reinforcing washer fitted around the openings adapted to secure the tongues and fabric intermediate the reinforcing washer and the body of the fabric.

1,620,416. VALVED PISTON. VICTOR J. WATERS, Shidler, Okla., assignor of one-third to Henry S. Mercer, Shidler, Okla. Filed Oct. 1, 1925. Serial No. 59,956. 2 Claims. (Cl. 103—225.)



1. In a valved piston comprising a central tube supporting intermediate its ends a series of cup-like piston elements, and a valve at one end only of the tube, a sleeve of fibrous packing surrounding the tube adjacent the piston elements, the said sleeve being held against a fixed abutment at one end, and a sliding abutment at the opposite end which is guided by the central tube and yielding means effective at all times to move the sliding abutment toward the fixed abutment to compress the packing sleeve whereby its effective diameter is increased substantially throughout its length.

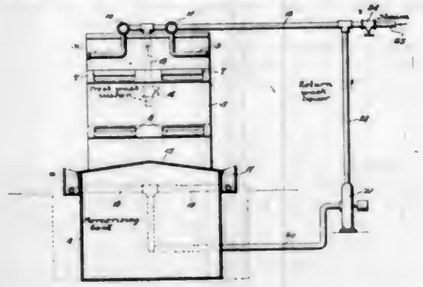
1,620,417. CASE. WASHINGTON WATT, Jr., Memphis, Tenn. Filed Dec. 26, 1924. Serial No. 758,247. 1 Claim. (Cl. 211—16.)



A cabinet comprising a casing open at one side, and including a top, a carrier mounted within the casing for rotation, a ring gear arranged upon the top of said casing, a crank shaft journaled on the underside of said top above said gear, and having an offset angular extremity,

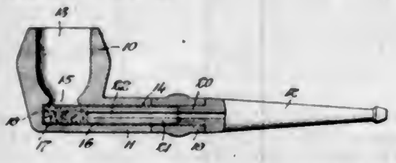
a vertical lever pivoted within the casing and having a bifurcated portion receiving said offset angular extremity of the crank shaft, a pawl carried by the crank shaft and arranged to engage the teeth of said gear, one wall of

the casing being slotted, and a manually operable lever connected with the first mentioned lever and projecting through said slot, whereby the pawl can be actuated to turn said carrier.



1,620,418. WASHBENCH. JERRY R. WIARDA, Coopersville, Mich. Filed Apr. 7, 1926. Serial No. 100,346. 1 Claim. (Cl. 68—35.)

A foldable bench comprising a series of horizontally disposed spaced parallel supporting bars, a transverse connecting member positioned at the vertical median of said bars, a pair of connecting rods extending through and each positioned adjacent to one end of said bars, each rod projecting laterally from the outer bars of the series to provide a pair of pivots, pairs of normally vertically disposed supporting legs, the legs of each pair mounted at their upper ends upon a pair of pivots, normally inclined oppositely disposed foldable brace elements, means for pivotally connecting the upper end of one of said brace elements to an intermediate bar of said series in proximity to one side of said member and the upper end of the other of said brace elements to another intermediate bar of said series in proximity to the other side of said member, a transversely extending cross bar secured against the outer side edge of each pair of supporting legs near the lower ends thereof for connecting them together, and means for pivotally connecting the lower ends of said brace elements to said cross bars.



1,620,419. MERCERIZING MACHINE. FRANK SEMPLE WILCOX, Union, S. C. Filed Feb. 6, 1926. Serial No. 86,489. 3 Claims. (Cl. 8—20.)

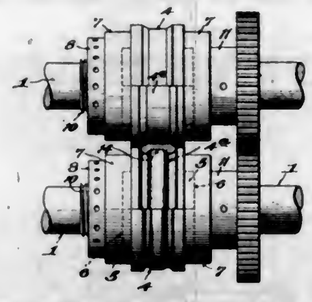
1. In combination with a mercerizing machine having a tank, skein racks above the tank, spraying pipes above said racks and troughs below the racks to receive wash water draining from the skeins, a pump connected to said troughs for withdrawing partially saturated wash water therefrom, a return pipe leading from the pump to said spraying pipes for redelivering the wash water thereto,

means for supplying fresh wash water to said return pipe, and means for supplying steam to said return pipe for heating the fresh and recovered wash water.

1,620,420. TOBACCO PIPE. JOHN M. WILSON, San Diego, Calif. Filed Apr. 16, 1926. Serial No. 102,501. 3 Claims. (Cl. 131—12.)

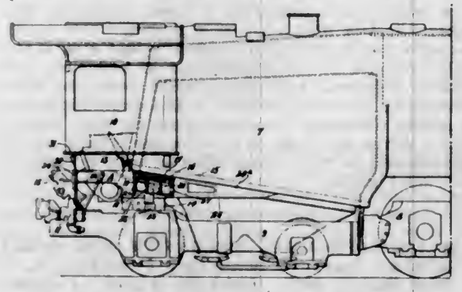
1. A tobacco pipe including a bowl provided with a tobacco chamber, a stem provided with a bore in communication with said tobacco chamber, a tube removably engageable in said bore, said tube being open at its inner end and having segmental cut out portions opening through the inner end thereof adapted to underlie said tobacco chamber, said cut out portions extending inwardly of said tube throughout only a portion of the length thereof, and filtering and residue collecting material removably engageable within said tube through the open inner end thereof.

1,620,421. LIFE PRESERVER. WILLIAM WILSON, New York, N. Y. Filed June 19, 1926. Serial No. 117,117. 4 Claims. (Cl. 9—17.)



1. A life preserver comprising a pair of inflatable members, nets surrounding said inflatable members for limiting inflation of the same and for confining said members to the shape of said nets, means for allowing said inflatable members to be inflated simultaneously, means for retaining said inflatable members in inflated condition and co-acting means carried by said inflatable members for housing the same in a collapsed condition.

1,620,422. METHOD FOR PREPARING ROLLS FOR ROLLED STEP-JOINT BARS. BENJAMIN WOLHAUPTER, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed June 22, 1925. Serial No. 38,815. 3 Claims. (Cl. 29—148.4.)

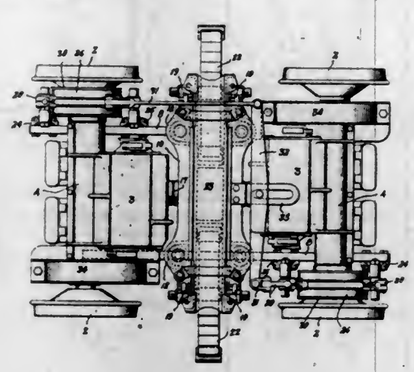


1. A method of preparing rolls for rolling step joint bars which consists first in turning the die grooves in

roll sections for one section and size of joint bar, separately turning die grooves in other roll sections for another section and size of joint bar, and subsequently assembling and mating dissimilar roll sections on the upper

and lower roll shafts of the mill, thereby to provide each roll with die grooves of substantially the same shape but of different dimension with offsets at the points of intersection of the two grooves.

1,620,423. LOCOMOTIVE-REAR-END SUPPORT. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed Apr. 27, 1925. Serial No. 26,012. 7 Claims. (Cl. 105—37.)



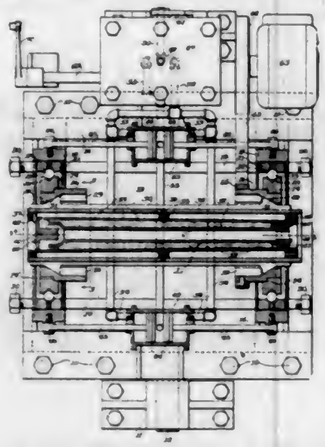
1. In combination in a locomotive, a fire-box having a mud-ring, a cab, ash pan means, and a combined cab and ash pan means support secured to the mud-ring.

1,620,424. VEHICLE SPRING SNUBBER. JAMES W. BARNES, Cleveland, Ohio. Filed Dec. 12, 1925. Serial No. 75,106. 1 Claim. (Cl. 267—10.)

A snubber comprising a housing adapted to be mounted on a vehicle frame, a brake drum secured in said housing, a segmental brake band on said drum, a flexible member secured adjacent one end of said brake band and adapted to engage a vehicle axle, a hub mounted for rotation within said brake drum, a stub shaft mounting said hub projecting from said brake drum, a helical spring connecting said hub and the brake band, the end of the spring engaging the brake band being bent back thereon and provided with a lug seating in a bayonet slot in the brake band, ratchet teeth on the hub, and a pawl pivoted in the brake drum and engaging said ratchet teeth to hold the hub from rotation in one direction.

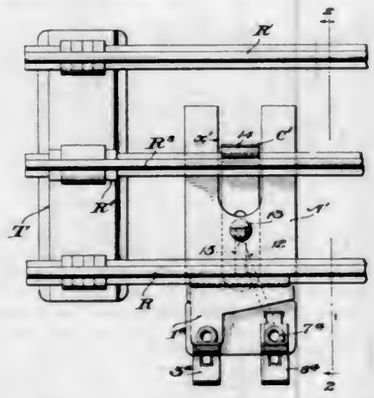
1,620,425. LOCOMOTIVE OR CAR TRUCK. ASA F. BATCHELDER, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 12, 1925. Serial No. 61,904. 15 Claims. (Cl. 105—139.)

1. A locomotive or car truck comprising wheels, an axle connecting the wheels, an electric motor supported at one side on the axle, bars pivotally attached to the motor at points below the axles, and means for supporting the motor at the other side on said bars connected to the motor at a point below the center-line of the axle.



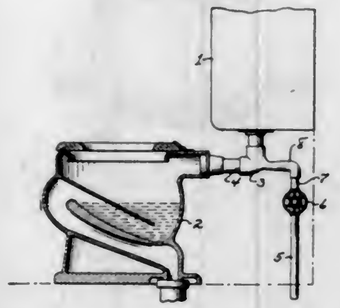
1,620,426. APRON. MABEL BAXTER, Belvidere, Ill. Filed May 26, 1926. Serial No. 111,844. 1 Claim. (Cl. 128—287.)

A sanitary apron comprising front and rear members fastened together at the top and sides to form a pocket, the front member having its top spaced below the top of the rear member, portions of the bottom of the two members being free to form a mouth of the pocket and the free part of the bottom of the front member being cut back to facilitate entrance to the pocket, a sheet of rubber or the like in the pocket, buttons at the upper end of the sheet and the front member having buttonholes at its upper edge for receiving the buttons, a tape extending across the rubber sheet adjacent its lower end, a button at each end thereof, the front member having buttonholes for receiving the last mentioned but-



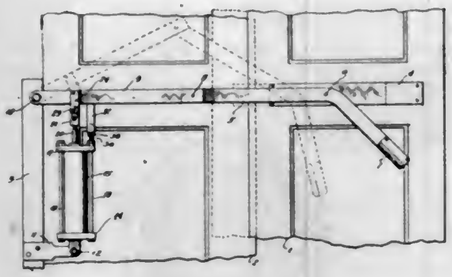
tons, an elastic tape engaging the last mentioned buttons, a waistband connected with the top of the rear member and a tape connecting the waistband with the elastic tape.

1,620,427. CENTRIFUGAL MOLDING MACHINE. WILLIAM H. BEATTY, Birmingham, Ala., assignor to James B. Clow & Sons, a Corporation of Illinois. Filed Oct. 31, 1925. Serial No. 65,920. 12 Claims. (Cl. 22—65.)



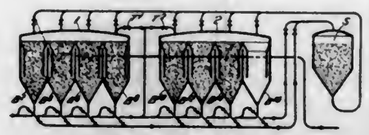
1. In an apparatus for centrifugally casting molten metal bodies, the combination of a mold, a transversely compressible mold carrier embracing said mold, bearings in which said carrier is journaled, means for shifting said bearings toward and from each other, and means for compressing said carrier on said mold actuated by a shifting movement of said bearings in one direction.

1,620,428. WIRE-TERMINAL CLIP FOR TOY TRACKS. HARRY S. BECKER, River Forest, Ill., assignor to American Flyer Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Apr. 25, 1925, Serial No. 25,908, Patent No. 1,610,033, dated Dec. 7, 1926. Divided and this application filed July 2, 1926. Serial No. 120,223. 4 Claims. (Cl. 191—29.)



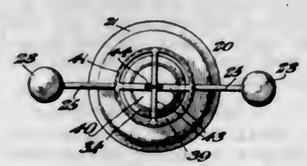
1. A detachable universal wire terminal clip device for toy railway track including an insulating base having a slot open at one edge thereof, a relatively fixed rail engaging contact element, carried by said base at the edge thereof opposite the slot, and a third rail engaging unit having shiftable third rail engaging means lying within the slot, and a terminal member carried by the base and connected with said third rail unit.

1,620,429. WATER-CLOSET. GORDON R. BELL, Englewood, Colo. Filed Dec. 1, 1926. Serial No. 152,001. 1 Claim. (Cl. 4—73.)



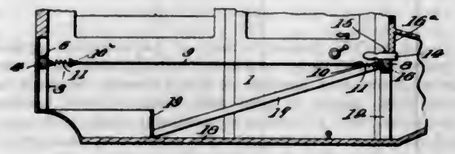
A water closet comprising a bowl, a vertical pipe adapted to lead from a source of flushing water supply, an elbow having one end connected to said pipe, a conduit connected to the opposite end of said elbow and leading therefrom for communication with the water closet bowl, a conduit arranged in said elbow and having a portion extending rearwardly from the head thereof, and a valved pipe connected to the end of said portion and adapted to be in communication with a source of hot water supply.

1,620,430. OPERATING MECHANISM FOR SHAFT DOORS. FRANZ A. BOEDTCHER, Bergenfield, N. J. Filed Mar. 9, 1925. Serial No. 14,344. 4 Claims. (Cl. 268—56.)



1. In an assembly of the character described, the combination with a door mounted for sliding movement, and a relatively fixed support in proximity to the door, of operative connections between the door and the fixed support for imparting movement to the door, a cushioning device associated with the fixed support and with the operative connections to cushion the operations of the door, and a stop member mounted on the cushioning device and adapted to be engaged by said operative connections for the purpose of arresting movement of the door at a predetermined point.

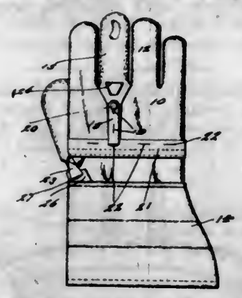
1,620,431. FILTERING APPARATUS. BALFOUR BRAMWELL, Belfast, Ireland. Filed June 14, 1926, Serial No. 115,900, and in Great Britain Feb. 11, 1925. 11 Claims. (Cl. 210—141.)



10. Filtering apparatus comprising in combination a filter chamber, a sand and water separator, means for ejecting the filtering material from said filter chamber and discharging it into said sand and water separator and means for maintaining the said separator at a lower pressure than the said filter chamber.

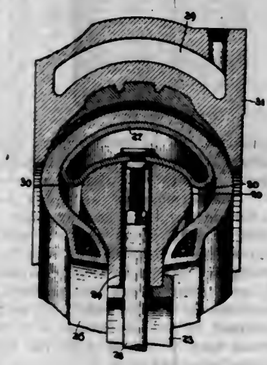
1,620,432. EMERGENCY HEATER. WILLIAM ALLEN BROWN, Philadelphia, Pa. Filed July 23, 1925. Serial No. 45,536. 6 Claims. (Cl. 219—45.)

4. In a device of the character stated, a base having supported thereon a socket, an electric heating element mounted vertically in said socket, an outer cylinder, an inner heat-resisting cone surrounding said heating element, means for securing the upper and lower ends of said cylinder and cone in concentric position, and branches extending from said base on each side of said cylinder and forming supports for electric lights.



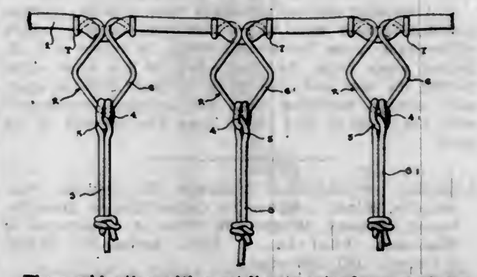
1,620,433. COT FOR AUTOMOBILES. WALTER C. BYRE, Knoxville, Tenn. Filed Aug. 29, 1925. Serial No. 53,312. 3 Claims. (Cl. 5—118.)

1. A cot for automobiles comprising front and rear end frames connected by flexible strips, means for supporting the rear frame, legs carried by the front frame and resting on the floor board of the automobile, and projections carried by said front frame and extending under the lower edge of the instrument board and freely contacting therewith to hold the cot against upward movement.



1,620,434. GLOVE. EVERETT BURDEN, East Liverpool, Ohio. Filed Feb. 26, 1924. Serial No. 695,814. 5 Claims. (Cl. 2—163.)

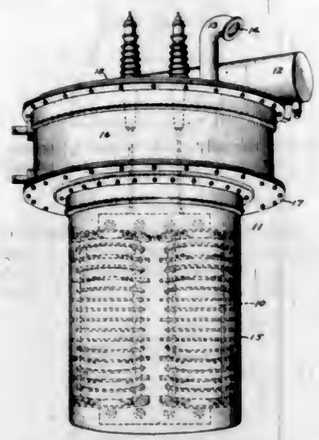
1. The combination with a glove, of removable reinforcing finger members, a reinforcing strip extending transversely across the glove and having spaced slits therein, tabs carried by the reinforcing members for



passage through the slits and means to secure the tabs in looped formation after the tabs are passed through the slits.

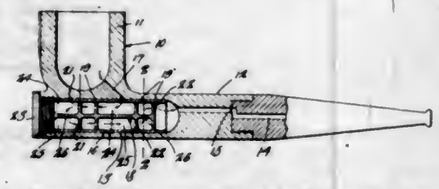
1,620,435. AIR BAG. RICHARD S. BURDETTE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 23, 1925. Serial No. 32,389. 4 Claims. (Cl. 18—45.)

4. A flexible core for use in vulcanizing tire casings comprising an annular member of crescent shaped cross section having cord fabric reinforcements disposed transversely of a rubber envelope, cross woven fabric disposed on the inner circumference and enclosing the cusps of the envelope, a valve secured to the envelope and fabric reinforcements for the valve disposed diagonally of the annular member, the entire assembly being vulcanized to form a unitary structure expansible in a circumferential direction.



1,620,436. STAGGING HOOK. CHARLES C. BURMEISTER, Davenport, Iowa. Filed Aug. 25, 1925. Serial No. 52,341. 1 Claim. (Cl. 43—28.)

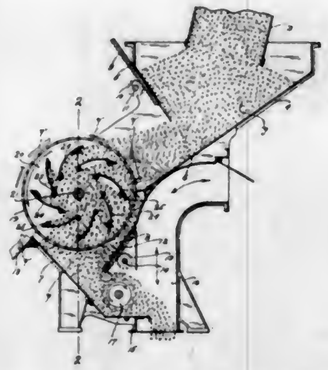
The combination with a set line to extend across stream, of a fishing line having an attached stagging hook, said



hook consisting of a loop with its arms provided with ram's horns extending spirally in directions away from each other, whereby upon imparting several twists to the hook, first one and then the other of the ram's horns may be connected to the set line.

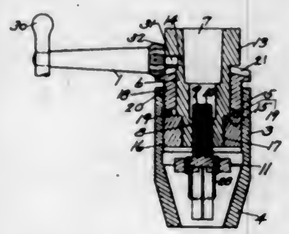
1,620,437. TRANSFORMER. LOCKE H. BURNHAM, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 14, 1925. Serial No. 23,118. 3 Claims. (Cl. 175—361.)

1. The combination of a transformer with a casing adapted to contain a body of oil for immersion of the transformer, said casing comprising a lower portion containing said transformer and an upper portion overhanging the lower portion, and cooling pipe coils in the overhanging part of said upper portion, said coils surrounding a central space of sufficient size to permit removal therethrough of said transformer wtihout disturbing said coils, said lower casing section being connected to said upper section by a separable joint and having its upper edge arranged to fit and receive a cover, whereby said lower section may be closed with the upper section and cooling coils removed.



1,620,438. SMOKING PIPE. JOSEPH F. BUSHEE, Jersey City, N. J. Filed June 12, 1925. Serial No. 36,731. 2 Claims. (Cl. 131—12.)

1. A smoking pipe comprising a bowl, a stem, a recess provided in said stem, and a removable member seated within said recess for causing smoke to travel in a direction away from the mouthpiece of the stem after leaving the bowl and prior to its entrance into the stem, said member including disks for scraping engagement with the walls of said recess upon the removal of the same.

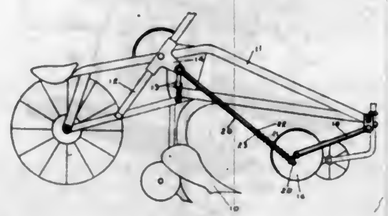


1,620,439. SCALPER. CLARENCE W. CARTER, Minneapolis, Minn., assignor to Carter-Mayhew Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 8, 1926. Serial No. 79,984. 6 Claims. (Cl. 209—285.)

1. In a scalping machine, an endless travelling screen, means for delivering commingled stock against said screen, flow-restraining baffle plates located within said screen and spaced in the direction of the travel thereof, said baffle plates being obliquely set in respect to the direction of travel, and means for imparting travelling movement

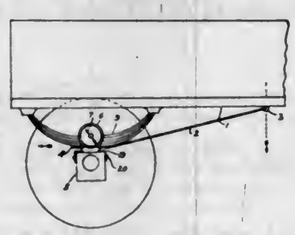
to said screen, whereby said baffle plates will retard the flow of the stock delivered against said screen and said screen will fall over large and long foreign substances while the main stock will pass through said screen and between said baffle plates.

1,620,440. DRILL CHUCK. GEORGE W. CARY, Greenfield, Mass., assignor to Goodell Manufacturing Company, Greenfield, Mass., a Corporation of Massachusetts. Filed Jan. 9, 1926. Serial No. 80,346. 6 Claims. (Cl. 279—60.)



1. In a drill chuck, a body, a jaw-carrying member carried by said body, outwardly spring-pressed jaws supported from said member, a sleeve loosely mounted on said body, means to hold said sleeve against endwise movement, and a shell in engagement with said sleeve and having a conical part with which said jaws are in engagement, said body and jaw-carrying member being provided with means to cause said member to be moved lengthwise of its axis, when said shell with said jaws is rotated in either direction, and the engagement between said jaws and sleeve being by friction only whereby both said jaws and sleeve rotate together to cause the jaws to move in and out of the sleeve.

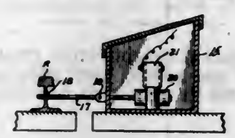
1,620,441. RIDGE-SPLITTER ATTACHMENT. LEON W. CHASE, Lincoln, Nebr., assignor to Chase Plow Company, Lincoln, Nebr., a Corporation of Nebraska. Filed Nov. 18, 1925. Serial No. 69,921. 3 Claims. (Cl. 97—140.)



1. An attachment for two rows lister plows, said attachment including a rearwardly and downwardly inclined support, said support being adapted to be detachably se-

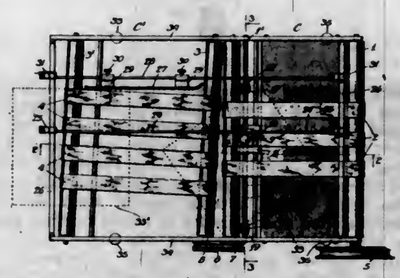
cured at its upper extremity to the front transverse beam of the lister plow frame and in pivotal relation therewith, furrow guiding means secured to said support at its lower extremity, a brace slidably secured in said support and extending rearwardly and upwardly therefrom, a coil

spring surrounding said brace and bearing against said support for yieldably holding said furrow guiding means in operative position, and means on said brace for securing said brace to the plow raising and lowering lever of the implement.



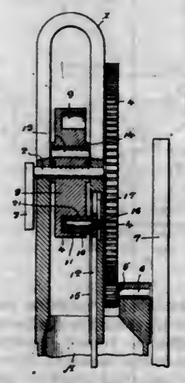
1,620,442. LOAD-INDICATING MECHANISM. WILLIAM JOHN COBB, Mokameh, British India, assignor of one-half to Hugh William McGuire, Bengal, British India. Filed May 17, 1926, Serial No. 109,794, and in British India Apr. 6, 1925. 5 Claims. (Cl. 265—42.)

1. In a weighing mechanism, the combination, with a vertically-movable receiving element, a stationary supporting element disposed beneath the receiving element and at one side of its center, and spring means intermediate said elements and connected with the same; of mechanism for indicating the weight of the material in the receiving element during loading, comprising an indicator and a downwardly-inclined operating rod therefor constituting companion parts, one of which is directly attached to the central portion of the supporting element and the other to the under face of the receiving element at its central portion; the rod having a pivotal mounting at one end and having at its other end a substantially horizontal member, whereby the descent of the receiving element toward the supporting element as loading proceeds will cause said rod to swing in a vertical plane about its pivoted end and its horizontal member to move endwise relatively to the indicating device; and means interposed between said horizontal member and said indicating device for transmitting the endwise movement of the former to the latter.



1,620,443. AUTOMATIC SWITCH. JULIUS D. COLLINS, Vineland, N. J. Filed Oct. 28, 1922. Serial No. 597,635. 1 Claim. (Cl. 246—251.)

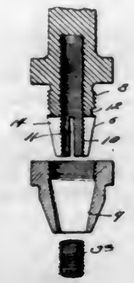
A switch structure for controlling the operation of railway gates, comprising in combination with a railway rail, a pair of spaced contacts, a lever having one end thereof extending freely thru the web of one of the rails, forming an accident proof and positively operating connection independent of slight lateral movement of the rail, means for pivotally supporting the lever independent of the rail or its mounting means, a bridging member carried by that end of the lever free from engagement



with the rail and movable in an unobstructed path into bridging engagement with said contacts upon depression of the rail by the weight of a train thereon.

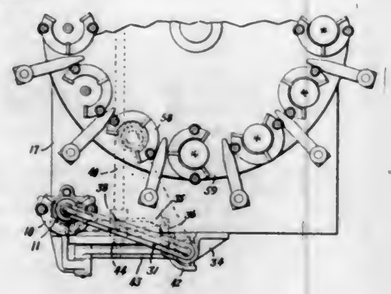
1,620,444. FOLDING MACHINE. WILLIAM WARD DAVIDSON, Evanston, Ill., assignor to Davidson Manufacturing Company, Madison, Wis., a Corporation of Wisconsin. Filed Mar. 3, 1926. Serial No. 91,945. 15 Claims. (Cl. 270—81.)

6. A folding machine as specified in claim 1, in which the turning means comprises a rotatable member in association with the conveying means, and supporting means therefor, constructed and arranged to hold the sheet traversing said turning means in contact with said conveying means and to permit turning thereof, and a stud positioned at a distance from said rotatable member which projects into the path of movement of the conveyed sheet.



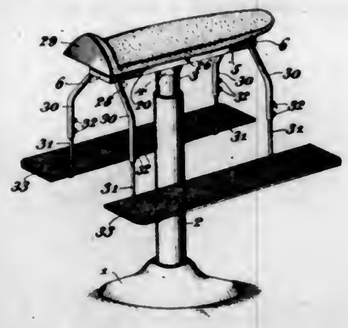
1,620,445. CAM DEVICE. WILLIAM MONROE DENSMORE, Montevideo, Minn., assignor of one-half to William Monthe, Montevideo, Minn. Filed May 19, 1926. Serial No. 110,290. 2 Claims. (Cl. 74—14.)

1. Transmission means comprising a shaft, means for rotating the same, a disk eccentrically mounted on the shaft and having a ring-shaped groove therein, a re-



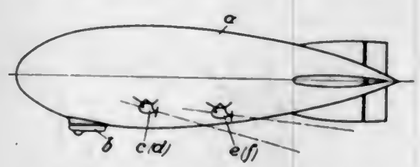
ciprocatory member, a projection thereon engaging the groove, said disk having a plurality of holes therein for receiving the shaft so that the stroke of the reciprocatory member can be adjusted.

1,620,446. INTERNAL-COMBUSTION ENGINE. HARRY E. DICKINSON, San Antonio, Tex. Filed Apr. 29, 1925. Serial No. 26,720. 1 Claim. (Cl. 123—90.)



Valve operating mechanism for internal combustion engines including a valve operating element subject to repeated impactive blows, longitudinally delivered, said element comprising a socketed section and a section telescoping therein, said sections being threadedly interengaged for varying the length of said element, said socketed section being formed with a tapered lower end longitudinally slotted at a plurality of points forming yielding jaws substantially surrounding the other section, for exerting resilient pressure laterally thereagainst from different directions, said socketed section being provided with a groove extending circumferentially thereabout adjacent the bases of said slots, and a nut having an internal taper of corresponding pitch to the tapered end of said socketed section, surrounding said other section and threadedly engaging said socketed section for drawing said jaws together in clamped relation to said other section.

1,620,447. APPARATUS FOR MAKING INCANDESCENT LAMPS AND SIMILAR ARTICLES. JOHN F. DONOVAN, East Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Apr. 9, 1925. Serial No. 21,952. 7 Claims. (Cl. 176—2.)



1. The combination of a machine for printing a mark on bulbs, a second machine for performing another operation on said bulbs, a transfer mechanism comprising means for automatically removing bulbs from said printing machine and delivering them to said second machine and means whereby the operation of said transfer mechanism is timed so that a portion thereof contacts with said bulb during the printing operation.

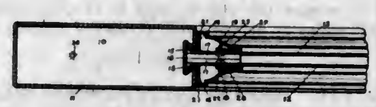
1,620,448. SADDLE SEAT. ALEXANDROS DOURDOUFIS, Philadelphia, Pa. Filed Apr. 10, 1925. Serial No. 22,031. 5 Claims. (Cl. 155—122.)

2. A saddle seat structure comprising, in combination, a base portion, a seat portion, means for slidably interlocking the said portions, and foot-boards adjustably supported upon the opposite sides of the said base portion.

1,620,449. AIRSHIP. LUDWIG DÜRR, Friedrichshafen, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Bodensee, Germany. Filed July 15, 1925, Serial No. 43,833, and in Germany July 31, 1924. 6 Claims. (Cl. 244—6.)

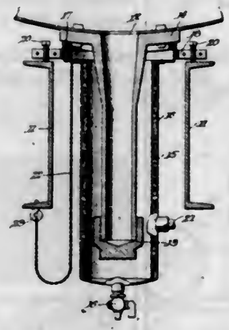
1. An airship comprising a hull; and a power car suspended from said hull in fixed relation thereto; the axis of said power car being vertically inclined so that said axis and the axis of said hull diverge towards the ship's tail.

1,620,450. CHANGEABLE SIGN. HARRY H. EARLY, Oshkosh, Wis. Filed Jan. 20, 1926. Serial No. 82,513. 3 Claims. (Cl. 40—65.)



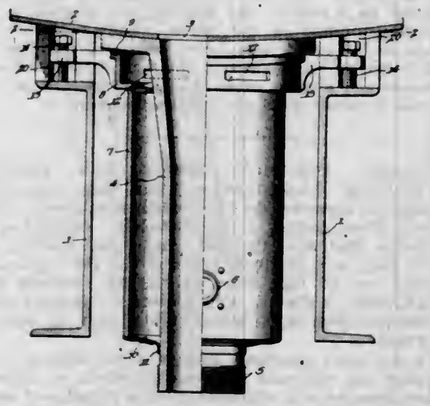
1. A changeable sign comprising a holder, and two slides movable longitudinally therein and each of shorter length than the holder to enable the adjacent ends of the slides to be moved past one another without withdrawing the slides from the holder, the slides having characters on the same sides thereof and being shiftable in the holder to enable either slide to overlap the side of the other slide having the characters, and the holder having an opening to expose one character of either slide.

1,620,451. METAL DOOR. EDWARD H. ELLISON and AUGUST W. BECKSTROM, Jamestown, N. Y., assignors to The Ellison Brass Manufacturing Co., Inc., Falconer, N. Y., a Corporation of New York. Filed Mar. 12, 1925. Serial No. 15,074. 3 Claims. (Cl. 189—46.)



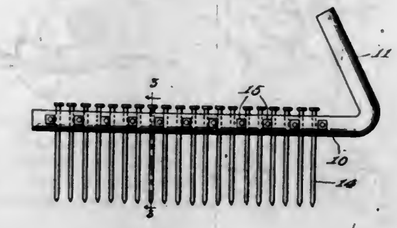
1. A metal door including a one piece stile, the ends of which stile are at the inner edge thereof and are bent

away from each other, separate panels, each provided with blocks which project beyond the edges of the panels into the space between the ends of said stile and a key



engaging said bent ends and clamping said blocks between the ends of the stile, thus fixing said panels in said stile.

1,620,452. HEATING HOOD FOR TANK-CAR OUTLETS. EDWARD A. FALL, Rutherford, N. J. Filed Aug. 2, 1922. Serial No. 579,230. 12 Claims. (Cl. 137—72.)

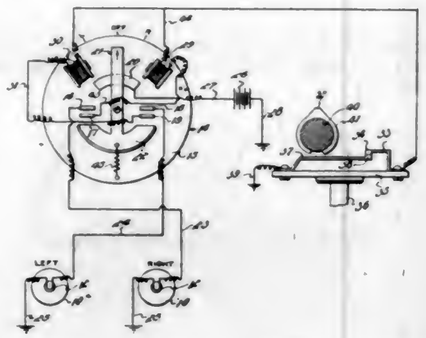


1. The combination with a tank car having an outlet extending downward from its body, and a removable closure for the lower end of said outlet, of a hood surrounding said outlet and forming therewith an annular chamber closed at its lower end, a fluid inlet extending through a wall of the hood, and means independent of the tank body and outlet for supporting the hood.

1,620,453. TANK CAR. EDWARD A. FALL, Rutherford, N. J. Filed June 27, 1923. Serial No. 648,171. 17 Claims. (Cl. 257—207.)

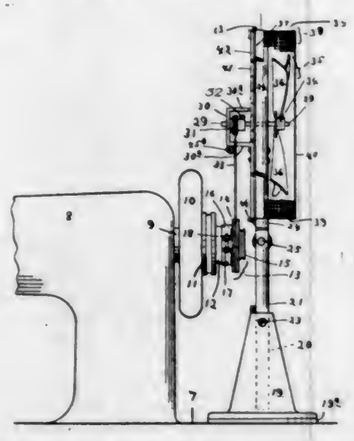
8. The combination with a tank car having an outlet for the contents of the tank depending from the tank body, a sleeve supported about the tank outlet with its upper end forming a fluid tight joint with the tank bottom, means closing the space between the lower end of said sleeve and the adjacent wall of the tank outlet, said sleeve being provided with an inlet for a heating medium and a discharge aperture for such medium, and means for conducting the heating medium from said discharge aperture along the bottom of the tank.

1,620,454. SAW. ROY FARREN, Lake Worth, Fla. Filed June 26, 1925. Serial No. 39,814. 1 Claim. (Cl. 125—18.)



In a saw for cutting cement blocks, bricks, tile and the like the combination with a back constructed from the length of pipe, said pipe having a handle at one end, said pipe being split longitudinally and provided with spaced openings, the split extending centrally across the diameter of the openings, of a plurality of pointed elements positioned within the openings and extending through the pipe and having substantially long resilient portions constituting teeth, and means passing through the pipe at right angles and intervening certain of the openings to connect the split portions of the pipe, the teeth being slightly larger in diameter than the diameter of the openings, whereby upon tightening up the connecting means of the split portions, the teeth may be clamped tightly in place.

1,620,455. REMINDER CLOCK. CHESTER R. GAINS, Muscatine, Iowa. Filed May 27, 1926. Serial No. 112,106. 9 Claims. (Cl. 161—6.)

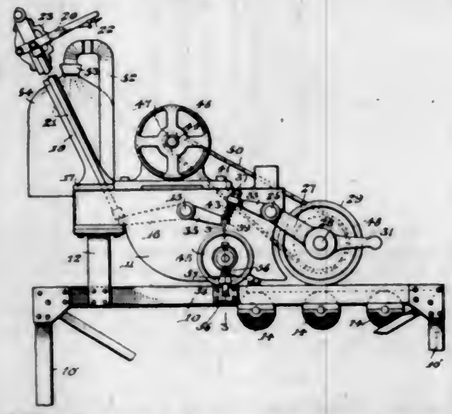


1. In a reminder clock, an enclosing casing having a view opening, alarm tripping means including a clock-driven control member instrumental to trip the alarm when said control member arrives at a predetermined position, an indicating dial rotatable simultaneously with said control member and mounted on an axis offset from said view opening, the peripheral portion of said dial extending behind said view opening and bearing all time interval numbers necessary in setting said control member, said numbers being successively visible through said view opening, a fixed pointer co-operable with said time interval numbers to permit proper setting of the control member, and a setting knob for said control member disposed at the exterior of the casing and offset from said view opening to prevent obscuring said time interval numbers or said pointer when setting the control member.

1,620,456. TRAFFIC-SIGNAL SWITCH. JOSEPH M. GALLUS and JACOB J. SCHEITS, Wrightstown, N. J. Filed Nov. 20, 1922. Serial No. 602,131. 1 Claim. (Cl. 200—87.)

A switch of the character described comprising a dielectric base, a substantially pendulum switch arm of magnetic material pivotally secured midway its ends and centrally on said base, said switch arm being formed with a curved portion at one end, a coil spring having its respective ends secured to the base and the curved portion to hold said switch arm in a normal inactive position, an arcuate shaped contact member secured to said base and adapted to be engaged by said arm, the opposite ends of said curved portion providing contacts, spaced pairs of contact members arranged in the path of the opposite ends of the curved portion and in a manner whereby the ends of the curved portion engage each contact of one pair simultaneously, electromagnets arranged in the path of the end of said arm opposite the curved portion thereof, and means extending laterally from the last mentioned end of said arm for arranging the latter in contact with either pair of contacts and either electromagnet whereby the latter will hold said arm therewith.

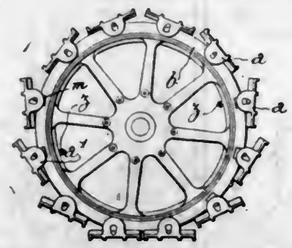
1,620,457. MACHINE-OPERATED PORTABLE FAN. HECTOR GATTI, Chicago, Ill. Filed Mar. 31, 1923. Serial No. 629,130. 1 Claim. (Cl. 230—9.)



A rotary fan for actuation by a sewing machine motor, comprising a weighted base adapted to be supported on a sewing machine table, a stem engaging the base and adjustable vertically relatively thereto, a fan head arranged for angular adjustment relatively to the stem, a fan shaft journaled in said head and carrying a fan, a pulley on said shaft adapted to be belt geared to a pulley driven by the sewing machine motor, and guide rollers to engage the belt to hold it in gear with the fan shaft pulley at different inclinations of the fan head.

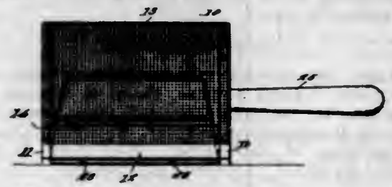
1,620,458. PROCESS OF IMPROVING MILLING PRODUCTS. HENRI C. J. H. GELISSEN, Rijswijk, Netherlands, assignor, by mesne assignments, to Novadel Process Corporation, Buffalo, N. Y., a Corporation of New York. Filed May 3, 1926, Serial No. 106,534, and in the Netherlands Mar. 11, 1925. 10 Claims. (Cl. 99—10.)

1. A method of improving a quality of a milling product of the character used in panification which comprises the step of forming in such milling product, a peroxid compound capable of improving a quality of said milling product.



1,620,459. SURFACING MACHINE. LESTER H. GRAY, Portage, Pa. Filed Feb. 28, 1925. Serial No. 12,406. 1 Claim. (Cl. 51—78.)

The combination with a surfacing element having a housing and carrier wheels, of a support comprising a frame having legs, brackets on the top of said frame, clamps on a pair of said brackets and adapted to embrace the treads of the carrier wheels to fasten the same to the top of said frame, a bearing plate on the other bracket for supporting the rear of said surfacing element and a series of idler rollers positioned on said frame to co-act with the surfacing element.

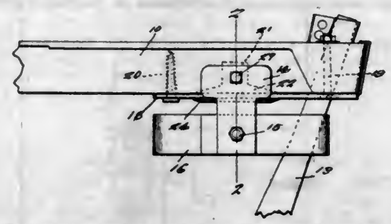


1,620,460. TRACTION DEVICE FOR VEHICLE WHEELS. LUIGI GUERRINI, Milan, Italy, assignor to Société Anonyme des Dispositifs d'Adhérence Guerrini, Paris, France, a French Society. Original application filed Jan. 12, 1921, Serial No. 436,752, and in Italy Apr. 16, 1918. Divided and this application filed Apr. 17, 1922, Serial No. 554,175. Renewed Mar. 29, 1926. 3 Claims. (Cl. 305—13.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. An easily removable tractive device adapted to be applied and tightened upon vehicle wheels of different sizes, comprising a belt made up of a plurality of parts, each of said parts comprising a series of hingedly connected members, and connecting parts of variable lengths carried by the free end members of each of said series of members for connecting the parts of said belt together and serving to vary the length of the belt and also to stretch said belt upon the wheel, a series of traction members mounted, respectively, on said hingedly-connected members, one of said series of members having mixtilinear holes and the other series of members

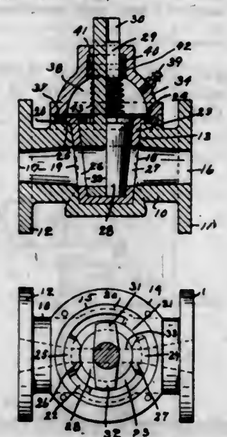
carrying pins cooperating with said holes for loosely attaching the traction members to the belt and for cogging the wheel with the belt.

1,620,461. FLYTRAP. RAYMOND J. HARRIS, Houston, Tex. Filed Jan. 23, 1926. Serial No. 83,272. 7 Claims. (Cl. 43—134.)



3. A fly trap comprising a receptacle having an opening therein, a member open at its opposite ends and having relatively inclined walls extending inwardly from the receptacle opening and defining an entrance passage, a gravity closed door for the inner end of the passage, means to hingedly connect one edge of said member at one edge of the opening of the receptacle and means to hold said member in position within said opening.

1,620,462. CONTROLLING DEVICE FOR BALLAST CONTAINERS IN AIRSHIPS. ERICH HILLIGARDT, Akron, Ohio, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschraenkter Haftung, Friedrichshafen, Germany. Filed Sept. 30, 1925, Serial No. 59,453, and in Germany Oct. 11, 1924. 3 Claims. (Cl. 244—3.)

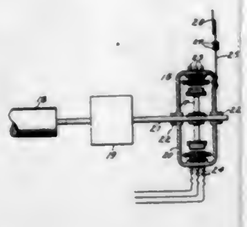


1. In an airship a container for ballast, a control car situated remote from said ballast container; an electric contact arrangement adapted to be operated by pressure resulting from the contents of said container and means for operating an indicator depending on said electric contact.

1,620,463. CHECKSTRAP HOLDER. ALBERT C. HUDGENS, Greenwood, S. C., assignor to Loom Lay Patch Company, Greenwood, S. C., a Corporation of South Carolina. Filed Oct. 26, 1925. Serial No. 64,979. 2 Claims. (Cl. 139—161.)

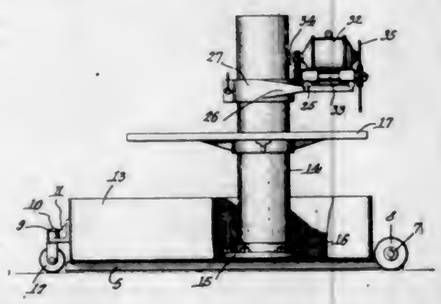
1. In combination with a loom lay and a check strap holder, a combined attaching and reinforcing plate extending longitudinally of the underside of one end of the lay, a lug extending from the plate into the lay and a fastening device connecting the strap holder and lug.

1,620,464. BLOW-OFF COCK. OMER HUFF, Fresno, Calif. Filed June 22, 1925. Serial No. 38,625. 4 Claims. (Cl. 277—41.)



1. A blow-off cock comprising a body member; a vertically extending, downwardly tapering recess in said body member centrally of the length thereof; longitudinally extending recesses in said body member; an annular recess surrounding the upper end of said vertical recess; a hollow cup revolubly mounted in said vertical recess having opposed apertures therein adapted to be brought into registry with said body recesses; a plug revolubly mounted in said cup having an aperture therethrough adapted to be brought into registry with the apertures in said cup; an annular ring mounted in said annular recess provided with oppositely disposed, inwardly projecting stops; outwardly projecting lugs on the upper end of said cup adapted to engage the stops on said ring; radially extending projections on said plug adapted to engage the lugs on said cup, whereby said cup and plug are rotated in unison; and means to rotate said plug.

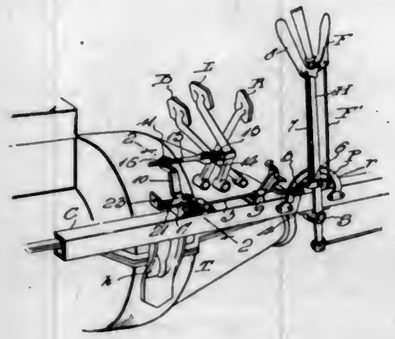
1,620,465. DISPLACEMENT-RESPONSIVE DEVICE. ERNEST E. JOHNSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 5, 1925. Serial No. 67,141. 1 Claim. (Cl. 171—119.)



In combination with a main synchronous dynamo electric machine, means responsive to the displacement angle

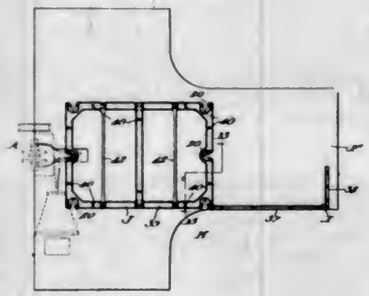
thereof comprising an auxiliary synchronous dynamo electric machine having freely rotatable cooperating parts, means for driving one of said parts in a synchronous relation with the rotating member of said main machine, circuits for electrically connecting the alternating current terminals of said machines in parallel relation,

the electrical and mechanical connections between said machines being such as to cause the non-driven part of said auxiliary machine to remain stationary when there is no change in the displacement angle of said main machine, but to rotate in a direction and by an amount dependent upon the direction and extent of change in the displacement angle of said main machine.



1,620,466. STONE AND MARBLE SAW. WILLIAM JOHN JONES, Carthage, Mo. Filed May 23, 1925. Serial No. 32,468. 1 Claim. (Cl. 125—14.)

In a device of the character described, a wheel supported frame, a tank mounted on the frame, said tank adapted to contain water, a column secured within the tank and rising above the upper edge of the tank, a work supporting table adjustably mounted on the column, a rack on the column, a clamping member, arms extending from the clamping member, a track having connection with the arms, a motor and saw mounted on the track and adapted to move longitudinally of the track, a pinion carried by the clamping member and cooperating with the rack for adjusting the clamping member and track longitudinally of the column, and means for clamping the clamping member into close engagement with the column.

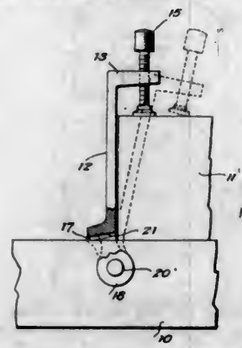


1,620,467. LOW-SPEED-PEDAL ACTUATING AND HOLDING MEANS. WILLIAM J. KIDD, Walnutport, Pa. Filed Dec. 23, 1926. Serial No. 156,640. 3 Claims. (Cl. 74—39.)

1. In an automobile having a low speed pedal, a hand lever behind said pedal for moving the same to neutral and for applying hub brakes, and means for holding said lever in adjusted position; an actuator for said pedal operatively connected therewith and mounted for forward and rearward movement, means for connecting said actuator with said hand lever to utilize rearward move-

ment of the latter for moving the pedal into low, and hand-actuated means on said hand lever for releasing said connecting means.

1,620,468. MECHANISM FOR SETTING CARPET FASTENERS. GEORGE A. KING, FRANK E. WARNER, and EMERSON H. TOMPKINS, Waterbury, Conn., assignors to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 4, 1925. Serial No. 20,711. 8 Claims. (Cl. 218—6.)



7. Mechanism for setting carpet and the like fasteners, including a setting machine having a fastener setting mechanism provided with an anvil, a fastener supporting surface on said anvil, a table arranged at a predetermined distance below the fastener supporting surface of the anvil, a template adapted to carry an article upon which fasteners are to be set, said template having means for supporting it at a height above said table substantially coincident with the fastener supporting surface of said anvil, and cooperating means on said anvil and template whereby said article may be positioned in predetermined relation to said setting mechanism.

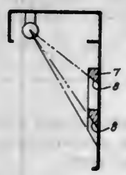
1,620,469. CLAMP. SAMUEL R. KIRKHOFF, Stowe, Pa. Filed Sept. 12, 1925. Serial No. 56,065. 1 Claim. (Cl. 144—297.)

A clamp for use in associating straight edges and spirit levels comprising a relatively flat bar having its upper free end substantially offset and a vertically disposed adjusting screw provided within the free end thereof, the lower end of the bar being substantially enlarged

and bifurcated for straddling the upper surface of the straight edge, fastening elements in the form of adjusting screws arranged within the opposite sides of the bifurcated portion for engagement with the corresponding side of the straight edge, the under side of the bifurcated portion being substantially inverted V-shaped and for-

wardly and upwardly converged providing knife edges for engagement with the upper surface and edges of the straight edge, and a swiveled disk mounted upon the lower free end of the first mentioned adjusting screw for engagement with the spirit level for rigidly holding the latter upon the upper surface of the straight edge.

1,620,470. ACTUATING ATTACHMENT FOR RIMS. LLOYD L. KLINGAMAN, Kelso, Wash. Filed Mar. 17, 1926. Serial No. 95,398. 1 Claim. (Cl. 157—1.)



A tire expanding device including an operating lever formed at its intermediate portion with oppositely disposed curved portions, one end of said lever being enlarged and longitudinally notched to form spaced ears, a cross bar connecting said ears, a pair of spaced parallel arranged links having one of their ends pivotally connected to the lever between the oppositely disposed curved portions, a cross bar connecting said links and permanently retaining them in equal spaced relation, a removable pin for insertion into the end of either link opposite its pivoted end and means connecting said pin with the cross bar to prevent accidental loss of same.

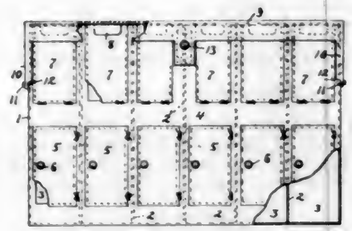
1,620,471. TANK. HERMAN F. KOEPPE, Detroit, Mich. Filed Sept. 29, 1926. Serial No. 138,491. 1 Claim. (Cl. 158—46.5.)

The combination with a gasoline supply tank for internal combustion motors, and a curved spring tube having straight ends, one of which is connected to the outlet for the tank and the other end designed to spring into frictional contact with the bottom of the tank and means for raising the last mentioned end, including a headed member having an elongated opening through which the last mentioned end of the tube is freely passed, a threaded shank extension on said headed member, a socket screwed on the stem, said socket having a reduced part that passes through the top of the tank, a dial on the tank surrounding the last mentioned part of the socket member and a head removably secured on the last mentioned part of the socket member and disposed over the dial.

1,620,472. ILLUMINATED SIGN. EDWARD J. KREISS and CHARLES F. KREISS, Buffalo, N. Y., assignors to Kreiss Sign Co., Inc., Buffalo, N. Y. Filed May 1, 1926. Serial No. 106,037. 3 Claims. (Cl. 40—130.)

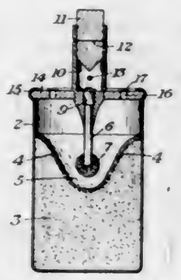
1. An illuminated sign using raised letters, comprising, in combination with a housed overhead source of light and a display panel having a light background, raised symbols mounted on the background of said panel having their lower side wall areas inclined towards the source of light substantially at the angle of the incident light ray to expose said side wall areas to the source of light and avoid symbol-blurring shadows being cast from said symbols onto said background by said source of light.

1,620,473. ILLUMINATED SIGN. EDWARD J. KREISS and CHARLES F. KREISS, Buffalo, N. Y., assignors to Kreiss Sign Co., Inc., Buffalo, N. Y. Original application filed May 1, 1926, Serial No. 106,037. Divided and this application filed Aug. 4, 1926. Serial No. 127,014. 3 Claims. (Cl. 40—130.)



1. An illuminated sign comprising, in combination with an overhead source of light, a panel having a light background onto which the light rays are directed from the source of light, and a plurality of raised letters mounted on the light background to receive the light rays at a shadow-casting angle, the marginal portions of said letters being beveled to reduce the casting of shadows by the light rays, said beveled marginal portions of said letters having a high light surface on which the light rays from said overhead source are directed for sharpening the outlines of the letters against the reduced shadows cast.

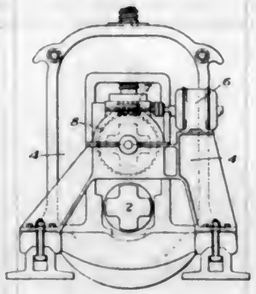
1,620,474. GANG MAIL BOX. HOMER KRICK, Fort Wayne, Ind., assignor of one-half to Edward N. Harber, Fort Wayne, Ind. Filed June 30, 1924. Serial No. 723,419. 2 Claims. (Cl. 232—25.)



1. A gang mail box comprising a case having a series of compartments; a series of receiving doors hinged to swing outwardly and downwardly, one for each of said compartments and being independently operable; a hinged cover on the case having limited movement, and being

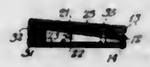
operable to sustain said receiving doors in open position, and to close said doors collectively when said cover is moved to closed position; a lock controlling said cover;

and a series of individually lock controlled removal doors, one for each of said compartments, each being operable independently of said cover.



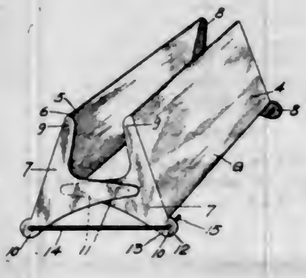
1,620,475. HAND GRENADE. RUBEN B. LAWRENCE, Bellevue, Pa., assignor to Federal Laboratories, Inc., Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 7, 1924. Serial No. 697,495. 1 Claim. (Cl. 102—29.)

A grenade comprising a container, a solidified mass of ignitible material therein adapted to emit a gas upon ignition, the mass having an exposed surface with a depression therein so as to give a greater exposed area than the cross sectional area of the container, and igniting means supported by the container and operable from outside the same for igniting the material at such surface, the igniting means being spaced away from the surface of the ignitible material.



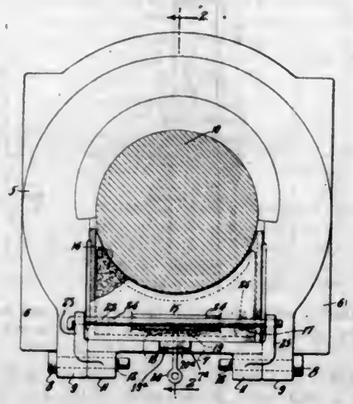
1,620,476. ROLLING MILL. LEIF LEE, Youngstown, Ohio. Filed Aug. 30, 1920. Serial No. 406,946. 14 Claims. (Cl. 80—54.)

14. The combination with a roughing mill of a finishing mill, said mills having their rolls in end to end relationship and having a single throw distance between the respective passes of the mills, a gear reduction intermediate the mills and operatively connected to the top roll of one of the mills, and means offset laterally relatively to the gear reduction and mills for driving the gear reduction, said means comprising an electric motor



operative for driving the top roll at a lower speed than that at which the bottom roll is driven, substantially as described.

1,620,477. SHIRT NECKBAND AND METHOD OF MAKING THE SAME. PHILIP LEICHTER, New York, N. Y. Filed June 25, 1926. Serial No. 118,408. 10 Claims. (Cl. 2—127.)

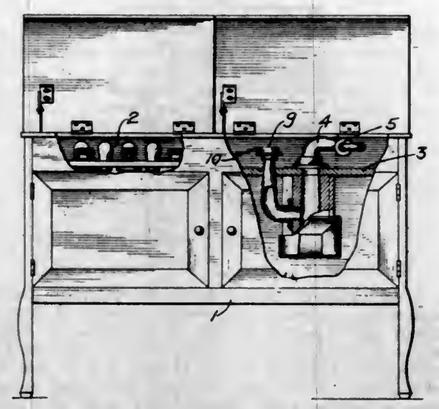


2. The method of making a neckband of a single blank comprising folding the blank to form a straight upper edge and seaming the blank along a line of predetermined shape spaced at varying distances from the upper edge of the blank and then reversing the blank about the seamed edge for giving the upper edge the predetermined shape.

1,620,478. TIRE HOLDER. FREDERICK A. LIND, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 10, 1923. Serial No. 656,663. 2 Claims. (Cl. 211—24.)

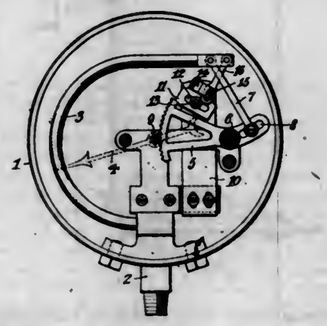
1. A tire holder consisting of two substantially similar units each comprising a side member and two end members disposed substantially normally thereto, each of said end members being provided with a tire clamping portion, a weight supporting portion, and a supporting leg portion at the lower extremity thereof having an arcuate end portion, and means pivotally attached to the centers of the arcs formed by the end portions to connect the two units.

1,620,479. LUBRICATOR. FREDERICK W. MARTIN, Brooklyn, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Oct. 12, 1923. Serial No. 668,049. 5 Claims. (Cl. 308—88.)



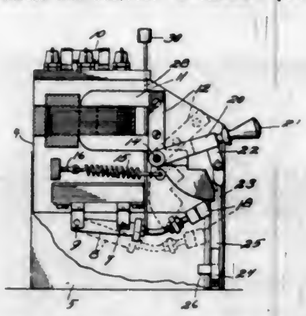
1. The combination with an axle box, its lubricating cellar, and the follower plate of the latter, of means for securing the cellar in the box, and means for removing the follower tension from the axle for insertion of the cellar in the box, said means being adapted to interfere with said securing means, so that the cellar cannot be secured until the tension has been established on the axle.

1,620,480. HANDLE FOR TOOLS. WILLIAM HOWARD MATTHAI, Baltimore, Md., assignor to The Homeland Mfg. Co., Baltimore, Md., a Corporation of Maryland. Filed Aug. 5, 1926. Serial No. 127,316. 2 Claims. (Cl. 294—49.)



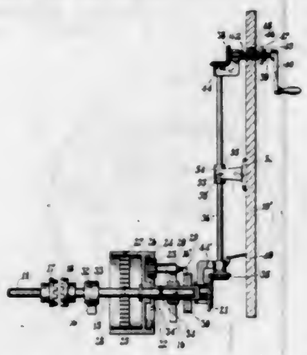
1. A hand tool having a tool-portion with a tubular handle extending laterally therefrom said tubular handle having a longitudinal seam extending to the outer end and at a point diametrically opposite the seam the extreme end of said tubular handle being made longer than the remainder thereof so as to provide material to form an end flap,—said end flap extending over the open end and across the axis of the tubular handle and lying in a crosswise position spaced beyond the outer end of the longitudinal handle-seam and also spaced beyond the rear edge of the shorter end portion of the handle-end.

1,620,481. COMBINED RADIO AND PHONOGRAPH APPARATUS. FRED G. MAYER, Richmond, Ind., assignor to Starr Piano Company, Richmond, Ind., a Corporation of Indiana. Filed June 24, 1924. Serial No. 721,976. 2 Claims. (Cl. 179—100.1.)



1. In a combined radio and phonograph apparatus, the combination of an amplifying horn, a radio loud speaker unit, a phonograph sound box, a tone arm permanently connecting said sound box with said amplifying horn, a tube permanently connecting said loud speaker unit with said amplifying horn and having substantially the same internal capacity as said tone arm whereby sympathetic vibrations are set up in the confined column of air in either said tone arm or said tube depending upon whether the vibrations originate in the loud speaker unit or in the sound box.

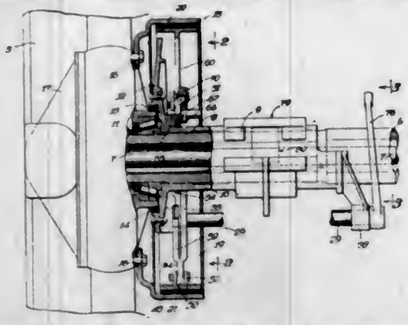
1,620,482. PRESSURE GAUGE. BERT MCCLELLAND, Sellersville, Pa., assignor to United States Gauge Company, New York, N. Y., a Corporation of Pennsylvania. Filed Nov. 18, 1921. Serial No. 516,012. 6 Claims. (Cl. 73—109.)



1. In a pressure gauge, the combination with a pointer, a Bourdon tube and intermediate means for imparting to the pointer movements corresponding to all of those of the tube under the influence of varying pressures, of a freely swinging link pivoted to the end of the Bourdon tube, and a fixed stop, said link being constructed for such engagement with said stop as to be capable of having a free movement of limited extent with relation to said stop which arrests the normal movement of the link and the tube at the end of such limited movement, whereby a further increase of pressure imparts to the tube at the pivotal point of the link, a movement in an arc of which the fixed stop is the center.

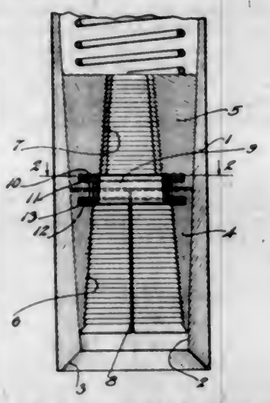
1,620,483. AUTOMATIC ALTERNATING-CURRENT CUT-OUT DEVICE FOR POLYPHASE CIRCUITS. MILOS N. MIKULIC, Kansas City, Mo. Filed June 3, 1922. Serial No. 565,703. 2 Claims. (Cl. 200—87.)

2. An automatic cut-out device for polyphase circuits comprising a normally open switch operative to close the circuit simultaneously through all its phases, an electromagnetic device included in each phase of the circuit, an independent armature associated with each of said electromagnetic devices, said armatures being each movable from a position some distance away from said switch into engagement with the latter, whereby each armature is operative automatically on release from its corresponding electromagnetic device to strike the switch and actuate the same by impact into open position, manually operable means for simultaneously reengaging said armatures with said electromagnetic devices and simultaneously actuating said switch into closed position, and an independent manually operable device for actuating said switch into either open or closed position.



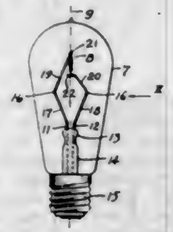
1,620,484. AUXILIARY MOTOR-DRIVE MECHANISM FOR PLAYER PIANOS. FRANCESCO MINUTILLO, New York, N. Y. Filed Nov. 6, 1924. Serial No. 748,044. 5 Claims. (Cl. 185—41.)

1. A spring motor, with associated transmission mechanism, for player pianos, or the like, comprising a shaft, a second shaft arranged to have a driving relation with the first shaft upon longitudinal movement of said second shaft in one direction, a spring motor for driving said second shaft, and a common means for winding said motor and moving the said second shaft longitudinally.



1,620,485. VEHICLE BRAKE. WILLIAM T. NORTON, Jr., Chicago, Ill. Filed Dec. 24, 1921. Serial No. 524,588. 10 Claims. (Cl. 188—78.)

1. In combination, a wheel, an axle for carrying the said wheel, a brake drum on said wheel, brake members selectively operable along substantially the same circumferential path on said drum, means for supporting and operating said brake members, said means permitting removal of the brake members from the wheel and axle without



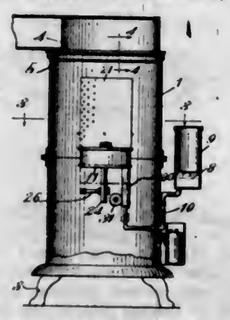
necessitating axial movement of the wheel, and means for applying said members uniformly to the drum.

1,620,486. MULTIPLE SUCKER-ROD SOCKET. WALTER A. O'BANNON, Tulsa, Okla. Filed Apr. 21, 1926. Serial No. 103,601. 8 Claims. (Cl. 294—102.)

1. A slip unit for sucker rod sockets composed of upper and lower sections, and separate annular means surrounding the contiguous ends of the section for connecting one to the other for vertical movement together but permitting relative independent movement laterally.

1,620,487. FILAMENT SUPPORT FOR SERIES LAMPS. ARTHUR LESTER POWELL, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 19, 1921. Serial No. 523,262. 3 Claims. (Cl. 176—39.)

1. An incandescent electric lamp having leading-in wires, a coiled filament, said leading-in wires being bent to angular form to provide relatively long lever members,

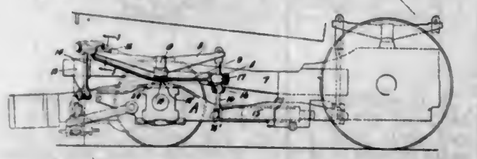


portions at the free ends of said members being positioned at right angles to each other and in spaced relation and having said filament secured to said ends.

1,620,488. STOKER-SIDE-WALL CONSTRUCTION. HERBERT E. PRESTON, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1924. Serial No. 754,704. 20 Claims. (Cl. 110—75.)

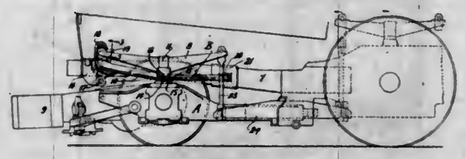
1. An air back comprising a chamber having a plurality of walls, one of which comprises a plurality of sections, another wall having a plurality of recessed portions, a plurality of said sections having recessed portions, and a sectional locking element positioned in said recessed portions.

1,620,489. OIL STOVE AND ELECTRICAL IGNITING MEANS. DAVID R. PRICE, Wellesley, Mass., assignor to Florence Stove Company, Gardner, Mass., a Corporation of Massachusetts. Filed Apr. 15, 1924. Serial No. 706,770. 8 Claims. (Cl. 175—115.)



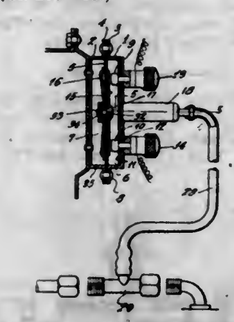
1. A heater comprising a burner bowl having a wick therein, a tank supplying fuel to said wick, an auxiliary wick within said first mentioned wick for isolating a portion of the fuel, and means for vaporizing and igniting said isolating fuel.

1,620,490. COPPER-LIME DUST. GEORGE E. SANDERS, Deloro, Ontario, Canada, assignor to Riches, Piver & Co., a Corporation of New Jersey. Original application filed Dec. 23, 1920, Serial No. 432,692, Patent No. 1,541,753. Divided and this application filed Aug. 9, 1924. Serial No. 731,202. 6 Claims. (Cl. 167—6.)



4. A method of producing a fungicide which comprises dehydrating copper salts by adding copper sulphate crystals to slaking lime.

1,620,491. SPRING SUPPORT. EUGENE L. SCHELLENS, Pointe Claire, Quebec, Canada, and JOEL S. COFFIN, Jr., Lisbon, N. H., assignors, by direct and mesne assignments, to C-S Engineering Company, a Corporation of Delaware. Filed Dec. 14, 1923. Serial No. 680,637. 19 Claims. (Cl. 105—82.)

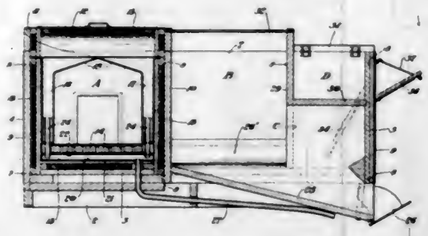


1. In combination, a locomotive having a main frame, a load carrying truck adapted to swing with respect thereto, a weight transmitting spring, a spring supporting member, and connecting means for the spring for the transmission of weight, cooperating with the supporting member and permitting the spring to move with the truck relative to the main frame without distortion of the spring.

1,620,492. SPRING SUPPORT. EUGENE L. SCHELLENS, Pointe Claire, Quebec, Canada, and JOEL S. COFFIN, Jr., Lisbon, N. H., assignors, by direct and mesne assignments, to C-S Engineering Company, a Corporation of Delaware. Filed Feb. 1, 1924, Serial No. 689,931. Renewed Aug. 16, 1926. 6 Claims. (Cl. 105—82.)

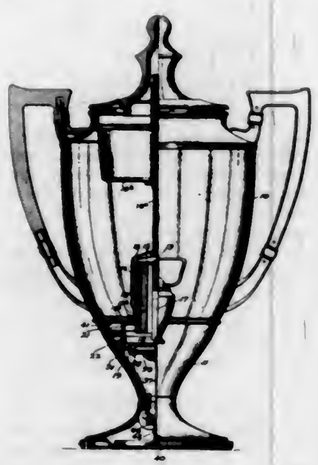
1. In a railway vehicle, a main frame, a swinging truck, a spring, and a spring support connected to the main frame to afford lateral support for the spring, said support having capacity for rocking movement in a vertical plane on an axis intermediate its ends.

1,620,493. SUCTION-OPERATED CIRCUIT CLOSER FOR MOTOR VEHICLES. PAUL SCHINDLER, Bayonne, N. J. Filed Apr. 9, 1926. Serial No. 100,807. 7 Claims. (Cl. 200—83.)



4. A circuit closer embodying a chamber, one side of which is closed by an elastic diaphragm, contacts spaced apart from one another and carried on the opposite side of the chamber, a bridge piece carried by the diaphragm, a suction inlet leading from the chamber, a valve casing forming part of the suction inlet and provided therein with a valve seat, a spring pressed valve normally seated to preclude retrograde passage of air through the valve casing, whereby the chamber may be exhausted to draw the bridge piece into a position to bridge the contacts, the valve thereupon seating to preclude the admission of air into the chamber, and means for slowly venting the chamber to break the vacuum therein after a predetermined interval.

1,620,494. VEHICLE BODY. PAUL R. SCHNABEL, Oakmont, Pa., assignor to The Schnabel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1924. Serial No. 707,377. 1 Claim. (Cl. 62—18.)

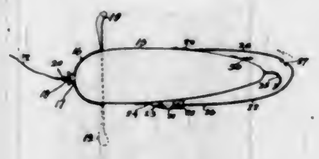


In a vehicle body for the transportation of frozen products, a product compartment having its back, front, side, bottom and top outer walls packed with heat insulating material, ice tanks extending from the bottom of said compartment upwardly along the back and front walls, said tanks being joined by a top wall which extends between the inside walls of said tanks and is inclined un-

wardly from each tank to the center of said compartment, said tanks and the space above said top wall jointing said tanks being adapted to be packed with a mixture of salt and ice, a drainage trough formed below the floor level of said compartment, extending centrally therein and inclined from front to back, a removable solid cover plate secured over said trough, vertically disposed overflow conduits rigidly mounted in said tanks and extending from a point within and approximately one-third the height of

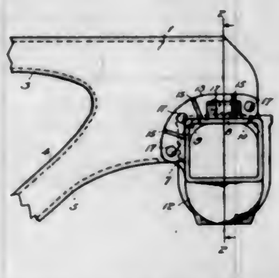
said tanks above the bottoms thereof, downwardly through said tanks and communicating with said drainage trough, said overflow conduits being adapted to permit the accumulation of a body of brine formed by the melting of the ice and salt mixture in said tanks entirely filling said tanks for approximately one-third their height, and a drainage conduit extending from the rear end of said trough to a point adjacent the rear of the body, said drainage conduit being adapted to discharge the excess brine beyond the chassis of the vehicle.

1,620,495. ELECTRIC URN. ALBERT H. SIMMONS, Oak Park, Ill., assignor to Edison Electric Appliance Company, Inc., Chicago, Ill., a Corporation of New York. Filed July 6, 1923. Serial No. 649,777. 8 Claims. (Cl. 53—3.)



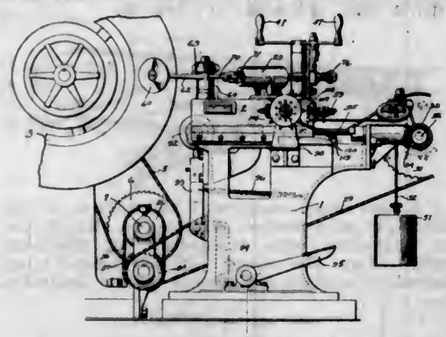
1. The combination in an electrically heated urn, of a vessel forming the upper part of said urn, electric heating means for said vessel, a hollow base member forming the lower part of said urn, a telescopic connection between said vessel and said base member, and means enclosed by said base member for securing said base member to said vessel.

1,620,496. IRON CONTACT RAIL WITH COPPER INSERT. KARL SPIECKERMANN, Dortmund, Germany. Filed Aug. 28, 1926. Serial No. 132,189, and in Germany Aug. 5, 1925. 3 Claims. (Cl. 191—22.)



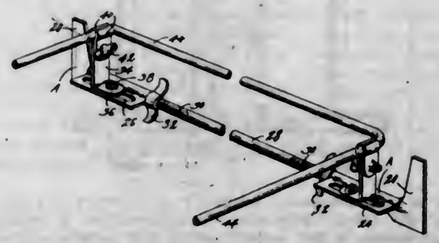
1. A power rail of the character set forth having ribs extending at right angles from its web to afford a longitudinal channel, and a strip of highly conductive metal fitting said channel and forcibly held therein by said ribs.

1,620,497. AUTOMATIC FISHHOOK. HOWARD M. SYKES, Valparaiso, Ind. Filed Dec. 30, 1922. Serial No. 609,826. 3 Claims. (Cl. 43—39.)



3. In automatic fish hooks, a floatable body, a line attachment at one end of the body, a plurality of hooks, a common shank for said hooks, means for pivoting the shank on the under side of the body, means for returning the hooks to their normal position, and flexible weed guards secured to the top side of the body said guards terminating above and beyond the normal position of the barbed ends of the hooks.

1,620,498. SIDE FRAME AND JOURNAL BOX THEREFOR. THOMAS H. SYMINGTON, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed July 12, 1923. Serial No. 651,078. 16 Claims. (Cl. 105—219.)



1. In combination, a car truck side frame having inner and outer side walls arranged in spaced relation, each of said walls being provided with portions forming open ended recesses at each end of the side frame, and journal boxes fitted within the open ended recesses and having portions connected to said inner and outer said walls.

1,620,499. TIRE MACHINE. EDWIN G. TEMPLETON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 20, 1921. Serial No. 462,969. 20 Claims. (Cl. 154—10.)
